PREFACE

The 1979 edition of the *Michigan Administrative Code*, published pursuant to Act No. 193 of the Public Acts of 1970, being §§8.41 to 8.48 of the *Michigan Compiled Laws*, is the third in a series of compilations of Michigan administrative rules.

The administrative rules of Michigan were first compiled in 1944 under the supervision of the Secretary of State by authority of former Act No. 88 of the Public Acts of 1943. The rules were arranged in alphabetical order by promulgating agency and published in one volume entitled *Michigan Administrative Code*.

A second compilation of administrative rules was completed in 1954 by the Michigan Compilation Commission under the supervision of the Secretary of State, again by authority of former Act No. 88 of the Public Acts of 1943. The 1954 compilation, also published in one volume, contained the rules of the 1944 compilation as amended, added to, or rescinded by rules appearing in 39 quarterly supplements to the 1944 edition of the *Michigan Administrative Code*.

A uniform numbering system was implemented in 1954, with each rule being assigned a compilation number, or "R" number, which appears in boldface type at the beginning of a rule. This system resulted in a change from an alphabetical arrangement of rules by promulgating agency to a sequential arrangement of rules by R number. The number to the left of the decimal point in the R number originally corresponded to the chapter of the *Michigan Compiled Laws* under which the promulgating agency was created, but the value of this taxonomy depreciated following the adoption of the *Constitution of the State of Michigan of 1963*, wherein Article 5, §2, required the allocation of executive and administrative agencies among and within not more than 20 principal departments. Since that time, the number to the left of the decimal point has generally corresponded to the chapter of the *Michigan Compiled Laws* containing the statutory authority under which an agency promulgates rules. Many

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

rules promulgated by the Department of Agriculture and by the Department of Natural Resources exhibit R numbers containing 2 decimal points. In the case of the Department of Agriculture, the number between the 2 decimal points corresponds to a general regulation number assigned by that department. In the case of the Department of Natural Resources, the number between the 2 decimal points corresponds to a regulation number assigned each county by that department.

The 1979 edition of the *Michigan Administrative Code*, published in 3 volumes, includes rules contained in the 1954 edition as amended, added to, or rescinded by rules appearing in 101 quarterly supplements to the 1954 edition, covering the filing periods for administrative rules beginning October 1, 1954, and ending November 30, 1979. No attempt has been made to indicate any implied effect which one rule may have upon another.

The origin and amendments of each rule are indicated in a history note following the text of the rule. The effective date of each rule promulgated after September 30, 1954, is also indicated in the history note, an editorial feature incorporated for the first time in the 1979 edition of the *Michigan Administrative Code*. Principal abbreviations used in history notes, as well as in editor's notes, are as follows:

AC	Administrative Code
ACS	Administrative Code Supplement
AACS	Annual Administrative Code Supplement
Eff.	Effective

Other editorial features include the appearance of uniform authority paragraphs at the beginning of each set of rules in the Code containing citations to acts authorizing the promulgation of those rules; boldface catchlines preceding each rule indicating major topics covered in the rule; editor's notes furnishing information considered helpful to the reader; and the conversion of internal references by rule number to the corresponding R number.

Editorial revisions mandated by §8.43 of the *Michigan Compiled Laws* include the addition of catchlines to rules that appeared without catchlines in the 1954 edition of the Code; changes in the form and style of rules to correspond to current drafting practices; modification of agency headings, when feasible, to reflect executive reorganization of agencies; and the correction of obvious grammatical, typographical, and clerical errors.

A table of contents for the 1979 edition of the *Michigan Administrative Code* appears at the beginning of each volume. This table is arranged

sequentially by R number, with principal executive departments highlighted in boldface capital letters.

Volume III contains a comprehensive index of all administrative rules appearing in the 1979 edition of the *Michigan Administrative Code*. Detailed index entries are arranged alphabetically under general subject matter headings and under principal executive department headings. Cross-references are liberally employed to aid the reader and to minimize unnecessary repetition of entries.

The 1979 edition of the *Michigan Administrative Code* will be updated each calendar quarter with the publication of a paperback supplement. This quarterly supplement will contain the full text of all permanent rules promulgated during the current quarter, together with notices of emergency rules promulgated during the same period.

In addition to quarterly supplements, an annual supplement will be published each year containing those permanent rules which previously appeared in the 4 quarterly supplements covering that calendar year. This annual supplement will also contain line references to all other permanent rules promulgated since the publication of the 1979 edition of the Code.

Both quarterly and annual supplements to the *Michigan Administrative Code* are published pursuant to Act No. 306 of the Public Acts of 1969, as amended, being §24.201 et seq. of the *Michigan Compiled Laws*.

To the People of the State of Michigan, who enact the laws pursuant to which the administrative rules of Michigan are promulgated, these volumes are respectfully dedicated.

Herbert A. Finnegan
Legal Editor

DEPARTMENT OF LABOR

GENERAL INDUSTRY SAFETY STANDARDS COMMISSION

SAFETY STANDARDS

(By authority conferred on the general industry safety standards commission by sections 16 and 21 of Act No. 154 of the Public Acts of 1974, as amended, being §§408.1016 and 408.1021 of the Michigan Compiled Laws)

PART 1. GENERAL RULES

R 408.10001 Scope.

Rule 1. This part sets forth general rules for the employer and the employee in, around and about a place of employment, except that where a specific rule is set forth in another standard, the general rule is preempted.

History: 1954 ACS 82, p. 85, Eff. Dec. 31, 1974.

R 408.10003 Definitions; A to M.

Rule 3. (1) "Aisle" means a designated path of travel for mobile equipment and employees.

(2) "Approved" means approval by the director of labor or his duly designated representative.

(3) "Confined space" means an enclosed space, such as, but not limited to, a bin, furnace, cupola, tank, vessel, vault, or well.

(4) "Equivalent" means an alternate design or feature which provided at least as effective or greater degree of safety.

(5) "Explosive atmosphere" means an atmosphere in which the contaminants are within the minimum and maximum range in air, oxygen, or other oxidizer which would explode on introduction of a source of ignition.

(6) "Flammable" means to ignite easily, burn intensely, or to have a rapid rate of flame spread.

(7) "Hazard" means an unsafe condition or procedure which could result in an injury.

(8) "Machine" means a powered instrument or device which transmits force or motion in a predetermined manner. It may be fixed in place or transportable but is not hand held.

History: 1954 ACS 56, p. 29, Eff. Nov. 14, 1968; 1954 ACS 74, p. 85, Eff. Mar. 13, 1973; 1954 ACS 82, p. 85, Eff. Dec. 31, 1974; 1954 ACS 97, p. 68, Eff. Dec. 13, 1978.

Editor's note: This rule formerly appeared as R 408.5103.

R 408.10004 Definitions; P.

Rule 4. (1) "Passageway" means a path of travel for an employee only.

(2) "Pinch point" means a point at which it is possible to be caught between the moving parts of a machine, or between the moving and stationary parts of a machine or between material and any part of a machine.

(3) "Point of operation" means the point on a machine where work is performed.

(4) "Power failure" means the loss of power from the energy source.

(5) "Power source" means the energy supplied by hydraulic, pneumatic, electrical, or other sources.

History: 1954 ACS 82, p. 85, Eff. Dec. 31, 1974.

R 408.10005 Definitions; S.

Rule 5. (1) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(2) "Shall" means mandatory.

(3) "Should" means recommended.

History: 1954 ACS 82, p. 85, Eff. Dec. 31, 1974.

R 408.10011 Employer responsibilities.

Rule 11. An employer shall comply with all of the following:

(a) Provide training to each newly assigned employee regarding the operating procedures, hazards, and safeguards of the job.

(b) Not knowingly authorize a process, machine, or equipment to be used which does not meet applicable state safety standards.

(c) Establish, maintain, and assure the utilization of a lockout procedure as prescribed in R 408.10032.

(d) Provide a chain, bracket, or other device and assure its use at all times to restrain compressed gas cylinders from falling.

History: 1954 ACS 82, p. 85, Eff. Dec. 31, 1974; 1954 ACS 97, p. 68, Eff. Dec. 13, 1978.

R 408.10012 Employee responsibilities.

Rule 12. An employee shall:

(a) Not operate a machine or equipment until trained in the operating procedures, hazards and safeguards and has been assigned to do so by the employer.

(b) Report to his supervisor any recognized hazard.

(c) Use required personal protective equipment or devices as prescribed in this part or a specific standard.

(d) Not remove a guard or other safety device except for authorized servicing purposes. The guard or other safety device shall be replaced or equivalent guarding provided before the machine or equipment is returned to normal operation.

History: 1954 ACS 82, p. 85, Eff. Dec. 31, 1974.

R 408.10013 Personal protective equipment.

Rule 13. (1) Personal protective equipment shall be maintained in a condition to protect the employee from a hazard which would cause an injury or disease. (See occupational safety standards commission standards, parts 31 to 35, being R 408.13101 to R 408.13569 of the Michigan Administrative Code.)

(2) The equipment shall be of safe design and construction to perform the intended function.

(3) Personal protective equipment required by applicable state safety standards and employee owned equipment shall be maintained by an established program to assure the continuing adequacy, condition, and sanitation of the equipment.

History: 1954 ACS 82, p. 85, Eff. Dec. 31, 1974; 1954 ACS 97, p. 68, Eff. Dec. 13, 1978.

R 408.10015 Housekeeping.

Rule 15. (1) Materials, including scrap and debris, shall be piled, stacked, or placed in a container in a manner that does not create a hazard to an employee. All

places of employment, aisles, passageways, storerooms, and service rooms shall be kept clean and orderly.

(2) Garbage capable of rotting or becoming putrid shall be placed in a covered container. Container contents shall be disposed of at frequent and regular intervals.

(3) The floor of a work area, passageway, or aisle shall be maintained in a manner that does not create a hazard to an employee, free of accumulations of scrap, debris, water, oil, grease, and other slip and trip hazards, except where an immediate emergency operation must be performed.

(4) Where a wet process, such as, but not limited to, plating operations, food processing, or car washing, is used, drainage shall be maintained or false floors, platforms, or mats used. Where an employee is required to work on a wet surface in a wet process, the surface shall be slip-resistant.

(5) Where vegetation is a hazard, an employee shall be protected by vegetation control or other means of protection, such as, but not limited to, a barrier, personal protective equipment, or medication.

History: 1954 ACS 82, p. 86, Eff. Dec. 31, 1974; 1954 ACS 88, p. 89, Eff. Aug. 18, 1976; 1954 ACS 97, p. 69, Eff. Dec. 13, 1978.

R 408.10016 Work in confined or hazardous spaces.

Rule 16. (1) This rule is intended to provide protection to an employee from traumatic injury. Where a health hazard such as possible toxic atmosphere or lack of oxygen may exist, reference is made to Michigan department of public health standards for tests and procedures to be followed before entry into a confined or hazardous space.

(2) When an employee enters a confined space, such as, but not limited to, a bin, silo, hopper, or tank, which contains bulk or loose material that could engulf the employee:

(a) The employee shall wear an approved safety belt attached to an approved lifeline.

(b) The lifeline shall be strung from the employee overhead and back down to the employee where it is tied to the employee's "D" ring, keeping the lifeline reasonably taut at all times. When this is done, another employee shall be in sight or within hearing distance. When this is not practical, the lifeline shall be snubbed overhead and kept reasonably taut at all times by a person stationed at a safe location who is capable of rendering assistance if required.

(c) Communications, such as visual, voice, or signal line, shall be maintained between the person outside the confined space and all employees in the confined space.

(d) If an employee working in a confined space must be lifted vertically to be removed from the space, there shall be not less than 1 employee working in the immediate vicinity to assist the employee stationed outside the confined space, or a mechanical means to lift the employee out of the confined space shall be provided before work starts.

(e) The supply of material shall be shut off, and the discharge shall be shut off, if feasible.

(3) Before an employee is permitted to enter a confined space which could contain an explosive atmosphere, the atmosphere shall be tested to determine if the atmosphere is within or above the explosive range.

(4) An employee shall not enter a confined space having an atmosphere in or above the explosive atmosphere unless involved in correcting a condition which

caused the explosive atmosphere and the condition cannot be corrected by any other means and the atmosphere cannot be purged below the explosive limit. All sources of ignition shall be prohibited in or around the space.

(5) An atmosphere which could be deficient in oxygen or contain harmful toxic substances shall be tested as prescribed by the department of public health in O.H. rule 3301 of its standards.

History: 1954 ACS 82, p. 86, Eff. Dec. 31, 1974; 1954 ACS 97, p. 69, Eff. Dec. 13, 1978.

R 408.10017 Lubrication.

Rule 17. (1) Lubrication shall be accomplished by 1 of the following:

(a) Manually, when the machine can be shut off and locked out.

(b) Automatic pressure or gravity feed system.

(c) Extension pipe or tube leading to an area outside of guards or away from any hazard.

(d) A means of lubrication which would provide equal or greater protection than subdivision (a), (b), or (c) for the employee.

(2) Where access through a guard is provided, and the opening exceeds the table 2 specifications, the opening shall be provided with a hinged or sliding self-closing cover.

History: 1954 ACS 82, p. 86, Eff. Dec. 31, 1974; 1954 ACS 97, p. 70, Eff. Dec. 13, 1978.

R 408.10021 Aisles and floors.

Rule 21. (1) When mobile equipment and an employee use the same aisle, dock or doorway, clearances shall be provided and maintained to assure safe passage for the equipment and employee.

(2) An aisle and passageway shall be marked or otherwise identified.

(3) A floor shall be maintained free of holes, loose boards, and protruding objects which would be a hazard to an employee.

(4) The maximum designed safe load limit of a floor or roof shall not be exceeded.

History: 1954 ACS 82, p. 86, Eff. Dec. 31, 1974.

R 408.10022 Dockboards.

Rule 22. (1) A dockboard shall be of an approved design and construction capable of supporting the imposed load.

(2) A portable dockboard shall be:

(a) Secured in position by anchoring or devices which will prevent its slipping.

(b) Provided with handholds or other means for placement which will protect the employee while handling the dockboard.

(3) A positive means, such as, but not limited to, chocks, blocks, or brakes, shall be used to restrict a vehicle or rail car from moving while a dockboard is in position.

(4) A dockboard used in connection with a powered industrial truck shall also comply with rule 2165 of the occupational safety standards commission standard, Part 21. Powered Industrial Trucks, being R 408.12165 of the Michigan Administrative Code.

(5) A powered dockboard shall be designed and constructed as prescribed in United States department of commerce commercial standard CS202-56 (1961), industrial lifts and hinged loading ramps, which is hereby incorporated by reference, and may be inspected at the Lansing office of the Michigan department

of labor. This standard may be purchased at a cost of $1.00 from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

History: 1954 ACS 82, p. 87, Eff. Dec. 31, 1974; 1954 ACS 88, p. 89, Eff. Aug. 18, 1976; 1954 ACS 97, p. 70, Eff. Dec. 13, 1978.

R 408.10026 Derailers, bumper blocks, and clearance signs.

Rule 26. (1) Where rolling railroad cars on a spur track could make contact with a railcar being loaded or unloaded, repaired or serviced, or enter a building, work or traffic area, derailers, bumper blocks, a blue flag or blue light, or other equivalent protection shall be used.

(2) A visible "Close Clearance" sign shall be used to indicate close clearance between a railcar and an adjacent fixed object if the fixed object is located less than 8½ feet from the center of a straight track and 9 feet from the center of a curved track.

History: 1954 ACS 82, p. 87, Eff. Dec. 31, 1974.

R 408.10031 Machine installations.

Rule 31. (1) Electrically powered machines shall be grounded as prescribed in article 250, paragraphs 42 and 43 of the national electrical code, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. The national electrical code may be purchased at a cost of $5.50 from the National Fire Protection Association, 470 Atlantic, Boston, Massachusetts 02210, or the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

(2) A machine shall be placed so that it will not be necessary for the operator or other employee tending the machine to stand in an aisle.

(3) A machine shall be located so that there will be space for the employee to handle the material and operate the machine with no interference to or from another employee or machine.

(4) A machine installed on a bench, table, or stand shall be designed or secured to prevent unintentional movement or tipping.

(5) A stationary machine shall be anchored or provided with antislip pads to prevent unintentional movement.

History: 1954 ACS 82, p. 87, Eff. Dec. 31, 1974.

R 408.10032 Lock out.

Rule 32. (1) A power source of any machine to be repaired, serviced, or set up, where unexpected motion, or an electrical or other energy source would cause injury, shall be locked out by each employee doing the work except when motion is necessary during setup, adjustment, or troubleshooting. Any residual pressure shall be relieved prior to and during such work. A machine connected to a 110 volt source by a plug-in cord shall be considered in compliance if the plug is disconnected and tagged. Tags are acceptable for utility companies when the work involves deenergized lines and equipment associated with generation, transmission, and distribution of energy.

(2) Where 1 or more crews are working on the same machine with a single energy source, 1 of the following shall be complied with:

(a) Each employee shall place his lock as prescribed in subrule (1).

(b) An authorized employee of each crew shall be responsible for placing the lock required in subrule (1) and ascertaining that his crew is clear of the machine before removing the lock.

Digitized by Google

(c) A supervisor shall place a departmental lock for which he has the only key, and he shall ascertain that all crews are clear from the machine before removing the lock.

(3) A knife switch on an open switchboard may be tagged instead of locked out. Access to a knife switch shall be restricted to an authorized employee by a barrier or enclosure.

(4) The tagging referred to in subrules (1) and (3) of this rule shall be as prescribed in Part 37. Accident Prevention Signs and Tags, being R 408.13701 et seq. of the Michigan Administrative Code.

History: 1954 ACS 82, p. 87, Eff. Dec. 31, 1974; 1954 ACS 97, p. 70, Eff. Dec. 13, 1978.

R 408.10033 Machine controls.

Rule 33. (1) When unexpected motion would cause injury, an actuating machine control, except an emergency device for a powered fixed or transportable machine, shall be guarded or so located as to prevent accidental actuation.

(2) Unless their function is self-evident, each operating control device shall be identified as to its function.

(3) A powered machine attended by more than 1 employee shall be equipped with an actuation device for each employee exposed to a point of operation hazard. The machine shall activate only after concurrent use of all actuation devices.

(4) When unexpected motion would cause injury, provisions shall be made to prevent a machine from automatically restarting upon restoration of power after a power failure.

(5) Where a machine work station is remotely located from the machine controls, an emergency stop device, colored red, shall be provided at the machine work station wherever a hazard exists which could cause an injury, or the actuation of the controls shall require continuous depression during the hazardous portion of the machine cycle.

(6) Equipment operated in series so that 1 automatically supplies another shall be interlocked so that when any equipment in the series is stopped for any reason, the initial stopping causes the upstream equipment to stop if continued operation would create a hazard. Reactivation shall require a separate positive action by the employee initiating the stop.

History: 1954 ACS 82, p. 88, Eff. Dec. 31, 1974; 1954 ACS 97, p. 70, Eff. Dec. 13, 1978.

R 408.10034 Machine guards and devices.

Rule 34. (1) Two hand-control devices shall be the anti-tie down type and located in a manner to prevent bridging. Operation shall require manual activation of both controls until a point is reached in the cycle where the operator cannot remove his hands and place them within a pinch point. If repeating would cause an injury, an anti-repeat device shall be incorporated into the control system.

(2) Guards shall be secured to the machine, if possible, or to other fixed objects. The guard shall not create a hazard in itself.

(3) A point of operation guard or device shall be as prescribed in a specific standard, or, in the absence of a specific standard, shall be designed and constructed, when required, to prevent the machine operator exposed to the hazard from having any part of his body in the hazardous area during the operating cycle. A guard or device for the point of operation of a nonproduction arbor press or straightening press is not required if the machine is equipped with a hand control that is designed to stop the ram action or return the ram to the up position when released.

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(4) Hand tools shall not be substituted for the required guarding or point of operation devices, except that a hand tool may be used as prescribed in subrule (5) for a press brake operation. Where hand tools are used for placing into, and removing material from, a point of operation, they shall be designed so that the operator is not required to place a hand within the point of operation.

(5) A bending operation on a press brake involving less than 25 pieces of 1 specific bend, if not guarded, shall require the use of a hand tool when the operator must hold the work piece within 4 inches of the point of operation, and a conspicuous sign shall be posted on the machine stating "Hand tools shall be used to hold stock."

(6) A revolving barrel, container, or drum exposed to contact shall be guarded by a standard barrier, an enclosure, or equivalent protection where a hazard exists. Access through a standard barrier or enclosure shall be by a gate equipped with an interlock, which shall disconnect the power when the gate is opened and require manual reactuation of a start button. A constant pressure jog control that bypasses the interlock may be used to aid loading and unloading.

(7) Blades of a fan, located within 7 feet of a floor or working level and used for ventilation or cooling of an employee, shall be guarded with a firmly affixed or secured guard. Any opening in the guard shall have not more than 1 of its dimensions more than 1 inch and the distance to the blade shall not be less than that prescribed in table 1.

(8) A fan used in process cooling whose blade is less than 7 feet above the floor or working level shall meet the distance requirements of table 2. Where the openings are larger than those shown in table 2, the distance from the guard to the blade shall prevent any part of the employee's body from making contact with the blade.

(9) When an employee is exposed to a hazard created by a pinch point other than point of operation, the hazard shall be guarded or the employee otherwise protected, except as permitted in R 408.10032(1).

(10) A band or circular saw shall be guarded as prescribed in general industry safety standards commission rules 2722 and 2732 of Part 27. Woodworking Machinery, being R 408.12722 and R 408.12732 of the Michigan Administrative Code.

(11) An extractor, parts washer, or tumbler, manually controlled and equipped with an inside revolving cylinder, shall be equipped with a cover or door interlocked in such a manner as to prevent opening the door when the inside cylinder is in motion, and to prevent power operation of the inside cylinder when the cover or door is open. An inch control or constant pressure control which bypasses the interlock may be used to aid loading and unloading.

(12) An employee shall not place his body beneath equipment, such as vehicles, machines, or materials, supported only by a jack, overhead hoist, chain fall, or any other temporary single supporting means, unless safety stands, blocks or other support system capable of supporting the total imposed weight is used to protect the employee in case of failure of the supporting system.

TABLE 1

Smallest dimension in guard (inches):	Minimum distance from guard to blade:
Greater than 0 up to ¼ inclusive	½ inch
Greater than ¼ up to ⅜ inclusive	1½ inches
Greater than ⅜ up to ½ inclusive	2½ inches
Greater than ½ up to ¾ inclusive	4 inches
Greater than ¾ up to 1 inclusive	6 times the smallest dimension

R 408.10036 Air under pressure.

Rule 36. (1) Air pressure at the discharge end of a portable air blowgun or portable air hose shall be less than 30 pounds per square inch gauge when dead-ended.

(2) When air under pressure is used to remove chips and dust, a chip guard, such as a fixed or removable shield, safely located, shall be provided to protect an employee in an adjacent area. The employee using air under pressure shall be provided personal protective equipment to protect against hazards created by the operation.

(3) Air under pressure, used in a manner which could cause injury, shall not be used for cleaning clothes while being worn or directly applied to any part of the body.

(4) Air under pressure shall not be used to move flammable dusts in an area containing open flames or spark producing equipment.

(5) Air under pressure shall not be used to remove toxic dusts in an employee environment.

(6) An employee shall be protected by guards or location when pressure tests are being performed on materials or equipment where rupture or failure would create a hazard.

History: 1954 ACS 97, p. 72, Eff. Dec. 13, 1978.

R 408.10051 Rescinded.

History: 1954 ACS 57, p. 13, Eff. Feb. 14, 1969; rescinded 1954 ACS 74, p. 85, Eff. Jan. 18, 1973.

PART 1A. ABRASIVE WHEELS

GENERAL PROVISIONS

R 408.10101 Scope.

Rule 101. This part sets forth rules and specifications for the safe use of abrasive wheels in, around and about places of employment. They include specifications for safety guards, flanges, chucks and rules for storage, handling, mounting and use of all grinding wheels, except natural sandstone wheels.

History: 1954 ACS 74, p. 86, Eff. Jan. 18, 1973.

R 408.10102 Definitions; A to C.

Rule 102. (1) "Abrasive wheel-wheel" means a cutting tool consisting of abrasive grains held together by a bonding material.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(2) "Blotter" means a flat disc of compressible material used to cushion the area of a grinding wheel coming in contact with a flange.

(3) "Centerless O. D. grinding" means the precision grinding of the outer surface of any cylindrical work piece which is rotated by a regulating wheel and supported by a work blade.

(4) "Concrete sawing" means the cutting or slotting of materials such as concrete or asphalt where the sawing machine rides upon the surface being sawed.

(5) "Cutting off" means slicing or parting of any material or part.

(6) "Cylindrical O. D. grinding" means the precision grinding of the outer surface of any cylindrical work piece which is supported at 1 or both ends.

History: 1954 ACS 74, p. 86, Eff. Jan. 18, 1973.

R 408.10103 Definitions; D to L.

Rule 103. (1) "Disc or plate mounted grinding" means the removal of material by use of an abrasive wheel fastened to a metal plate.

(2) "Flange" means a collar, disc or plate between which abrasive wheels are mounted.

(3) "Guard" means an enclosure designed to restrain pieces of abrasive wheel and protect the employee in event of wheel breakage.

(4) "Internal grinding" means the precision grinding of the inside surface of the hole in a work piece.

(5) "Lapidary" means to cut off, shape or grind precious or semiprecious gemlike materials.

History: 1954 ACS 74, p. 86, Eff. Jan. 18, 1973.

R 408.10104 Definitions; M to R.

Rule 104. (1) "Masonry cutting" means the cutting off, notching or slotting of units of materials such as brick, tile, block or refractory shapes where the work piece is brought to the machine.

(2) "Mounted wheels" means various shaped abrasive wheels not more than 2 inches in diameter and mounted on a plain steel mandrel.

(3) "Off-hand grinding" means the grinding of any material which is held in an employee's hand.

(4) "Portable grinding" means a grinding operation where the machine is designed to be hand-held and may be easily moved from 1 location to another.

(5) "Precision grinding" means the grinding operation performed by machines used to finish work parts to specified dimensions and finish requirements.

(6) "Revolutions per minute—rpm" means the number of complete turns that a grinding wheel makes in 1 minute.

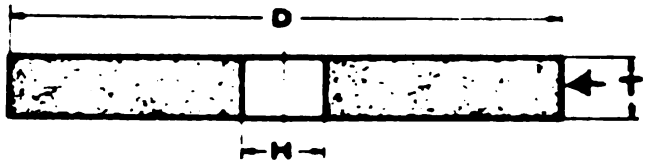
History: 1954 ACS 74, p. 86, Eff. Jan. 18, 1973.

R 408.10105 Definitions; S to W.

Rule 105. (1) "Snagging" means the grinding which removes relatively large amounts of material without regard to close tolerances or surface finish requirements.

(2) "Surface feet per minute—sfpm" means the distance in feet any 1 abrasive grain travels in 1 minute on a peripheral surface of a rotating grinding wheel.

(3) "Surface grinding" means the precision grinding of a plane or formed surface.



(4) "Tool or cutter grinding" means the precision grinding or sharpening of various types of cutting tools.

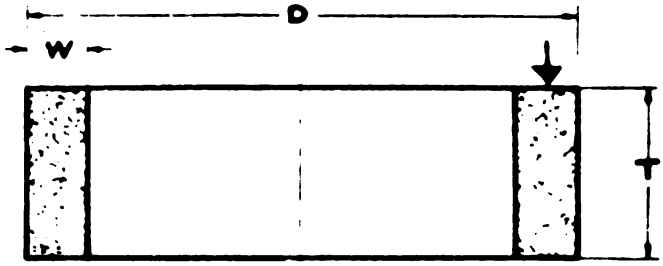
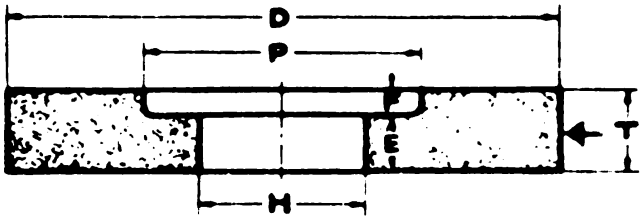
(5) "Tuck pointing" means the removal, by grinding, of mortar, cement or other nonmetallic material.



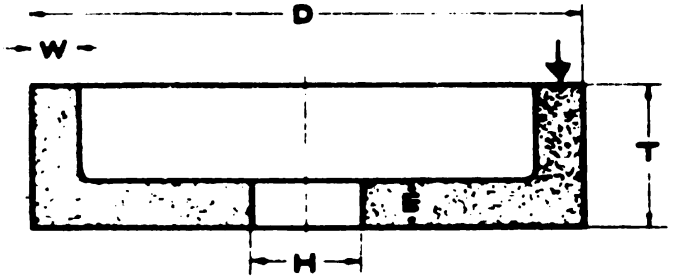
(6) "Wheel types" means the classification of abrasive wheels as listed in the following order:

SHAPE TYPES OF GRINDING WHEELS



Type 1—Straight wheel.

Peripheral grinding wheel having a diameter, thickness and hole.

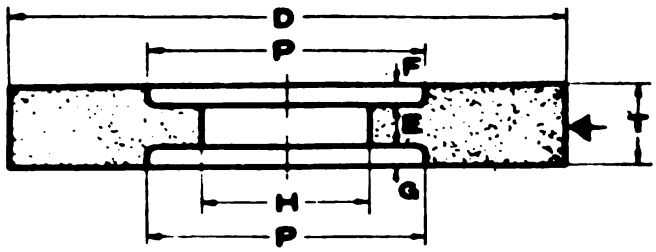


Type 2—Cylinder wheel.

Side grinding wheel having a diameter, thickness and wall—wheel is mounted on the diameter, or a similar wheel mounted in a chuck or on a plate.

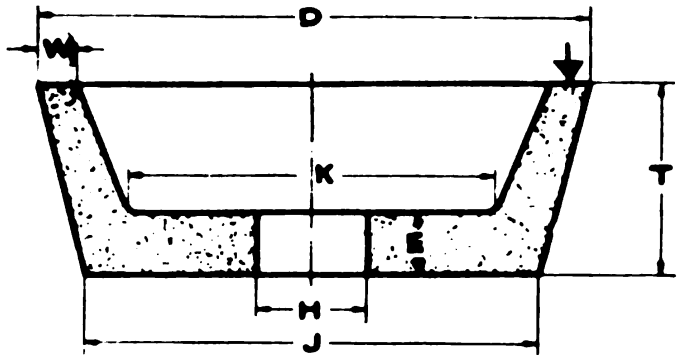
Type 5—Wheel, recessed one side.

Peripheral grinding wheel having one side straight or flat and the opposite side recessed. A recessed wheel allows a wider faced grinding wheel to be used when the available mounting thickness (E) is less than the required overall thickness (T). The recess allows grinding clearance for the nut and flange.



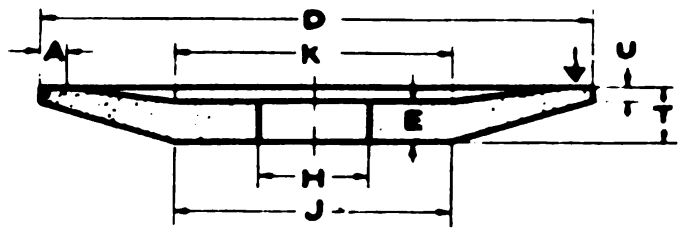
Type 6—Straight-cup wheel.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google



Side grinding wheel having a diameter, thickness and hole with one side straight or flat and the opposite side recessed. This type, however, differs from type 5 in that the grinding is performed by the wall (W). The wall dimension (W) takes precedence over the diameter of the recess as an essential intermediate dimension to describe this shape type.
NOTE: Arrows indicate grinding surface.

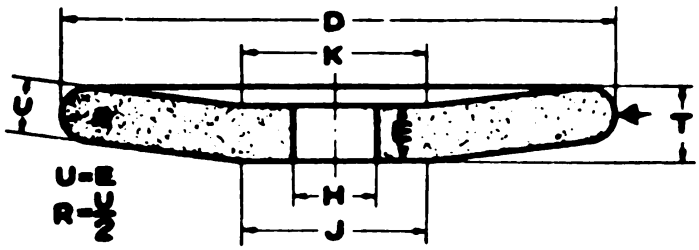
SHAPE TYPES OF GRINDING WHEELS



Type 7—Wheel, recessed two sides.

Peripheral grinding wheel having both sides recessed to allow grinding clearance for both flanges or recessed so that an unusually wide faced wheel may be mounted when the available mounting thickness (E) is less than the overall thickness (T).

Type 11—Flaring-cup wheel.



Side grinding wheel having a wall flared or tapered outward from the back. Wall thickness at the back is normally greater than at the grinding face (W).

Type 12—Dish wheel.

Side grinding wheel known as a dish, differing from a type 11 in that type 12 always has a (U) dimension. The (W) dimension of a type 11 becomes the (A) dimension of a type 12. The grinding may be performed by the (U) face.

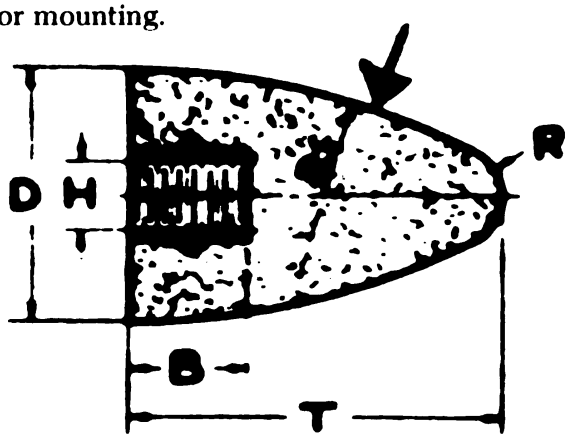
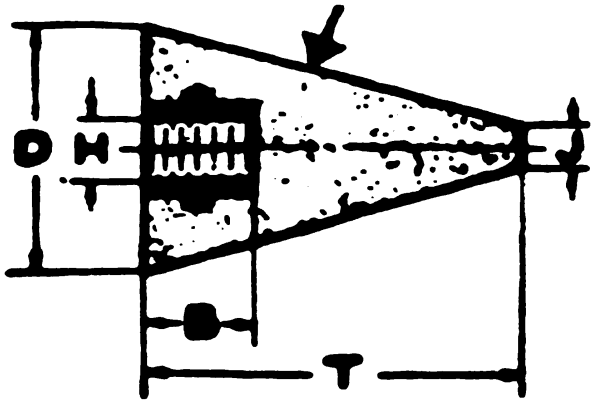
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google



Type 13—Saucer wheel.

Peripheral grinding wheel known as a saucer, differing from a type 12 in that the cross-section is equal throughout (U = E).

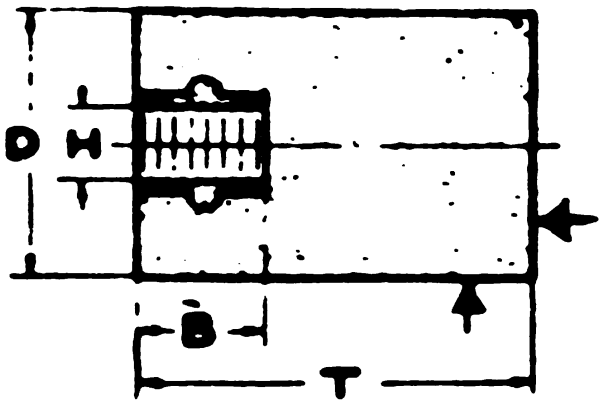
The face is always half-round with $R = \frac{U}{2}$.



SHAPE TYPES OF GRINDING WHEELS
Cones and Plugs

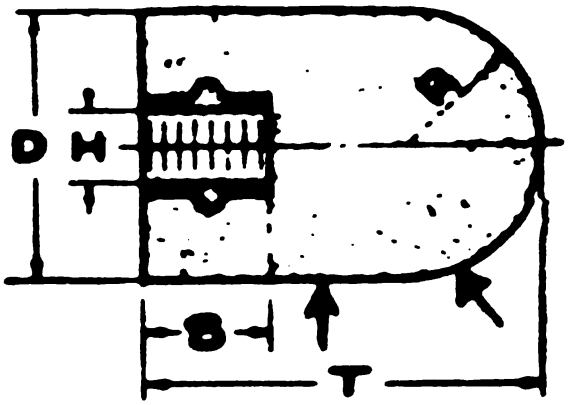
On all cones and plugs grinding is performed by all surfaces except the flat (dimension "D") on the mounting side. These shapes normally have a blind hole threaded bushing for mounting.

Type 16—Cone, curved side.



Curved sided cone with a radius nose sometimes referred to as "Bullet shape."

Type 17—Cone, straight side, square tip.



Cone with a straight side, square tip.

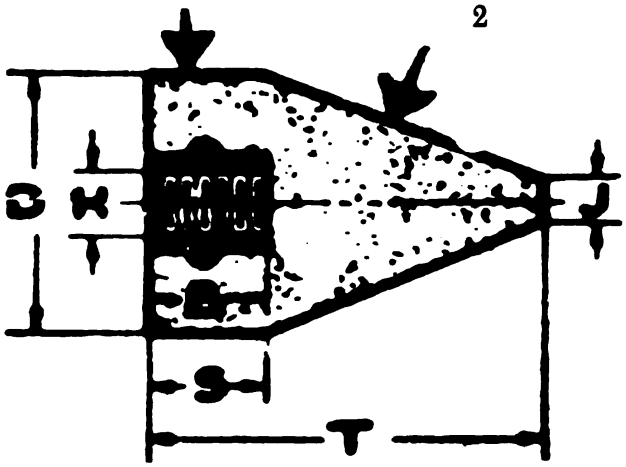
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

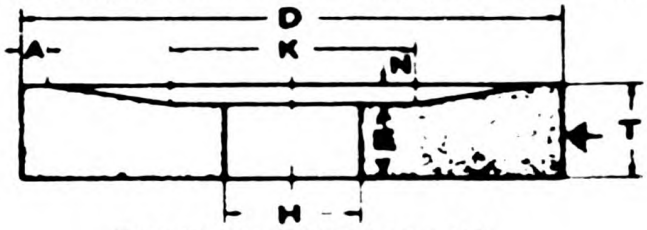


Type 18—Plug, square end.

Plug—Cylindrical in shape with a square end.

Type 18R—Plug, round end.

Plug—Cylindrical in shape with a radius nose. $R=\frac{D}{2}$



Type 19—Plugs, conical end, square tip.

Combination cone and plug with a square tip similar to type 17 and the cylindrical portion similar to type 18. The cylindrical portion (S) is normally equal to or greater than the depth of the blind hole threaded bushing (B).
NOTE: Arrows indicate grinding surface.

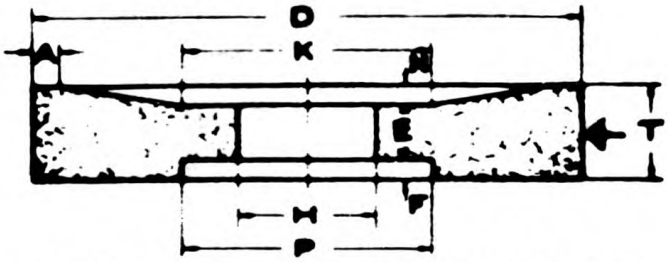
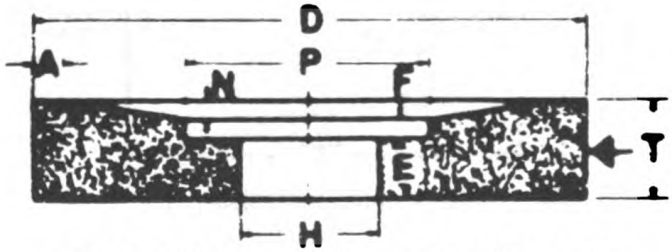
RELIEVED AND/OR RECESSED WHEELS

A relieved side is a depression in the side of a wheel which is tapered from a radial flat at the periphery (A) to an inside flat (K) or recess diameter (P).



Type 20—Wheel, relieved one side.

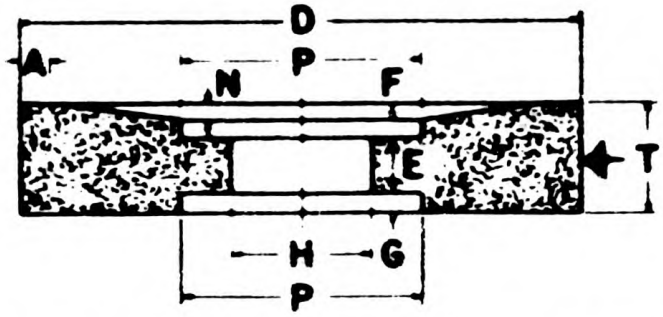
Peripheral grinding wheel having one side straight or flat and the other side relieved to a flat.



Type 21—Wheel, relieved two sides.

Peripheral grinding wheel having both sides relieved to a flat.

Type 22—Wheel, relieved one side, recessed other side.



Peripheral grinding wheel having one side recessed and the other side relieved to a flat.

Type 23—Wheel, relieved and recessed same side.

Peripheral grinding wheel having one side straight or flat and the other side relieved to a recess.

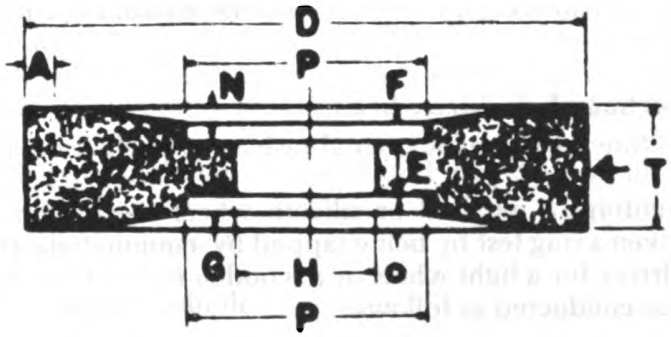
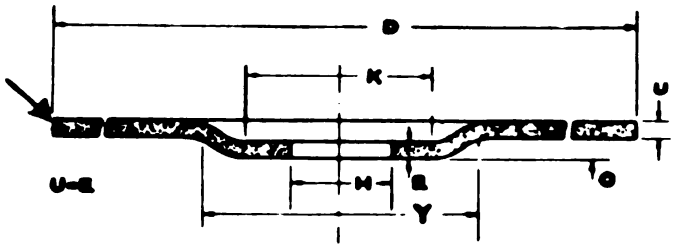
Type 24—Wheel, relieved and recessed one side, recessed other side.



Peripheral grinding wheel having one side recessed and the other side relieved to a recess.

SHAPE TYPES OF GRINDING WHEELS

Type 25—Wheel, relieved and recessed one side, relieved other side.



Peripheral grinding wheel having one side relieved to a flat and the other side relieved to a recess.

Type 26—Wheel, relieved and recessed both sides.

Peripheral grinding wheel having both sides relieved to a recess.

Type 27—Wheel, depressed center.

Portable grinding: Grinding normally done by contact with work at approximately a 15 degree angle with face of wheel.

Cutting-off: When used as a cutting-off wheel, the periphery is the grinding face.

Type 28—Wheel, depressed center (saucer shaped grinding face).

Portable grinding: Grinding normally done by contact with work at approximately a 15 degree angle with face of wheel.

Note: Arrows indicate grinding surface.

History: 1954 ACS 74, p. 86, Eff. Jan. 18, 1973.

R 408.10111 Handling and storage of abrasive wheels.

Rule 111. (1) An abrasive wheel shall not be dropped, bumped, or rolled.

(2) An abrasive wheel shall be stored in a rack, bin, box, or drawer in a manner to prevent damage to the wheel.

(3) An abrasive wheel shall be disbursed on a first-in first-out basis.

(4) An abrasive wheel shall not be stored subject to:

(a) Exposure to high humidity, water, or other liquids.

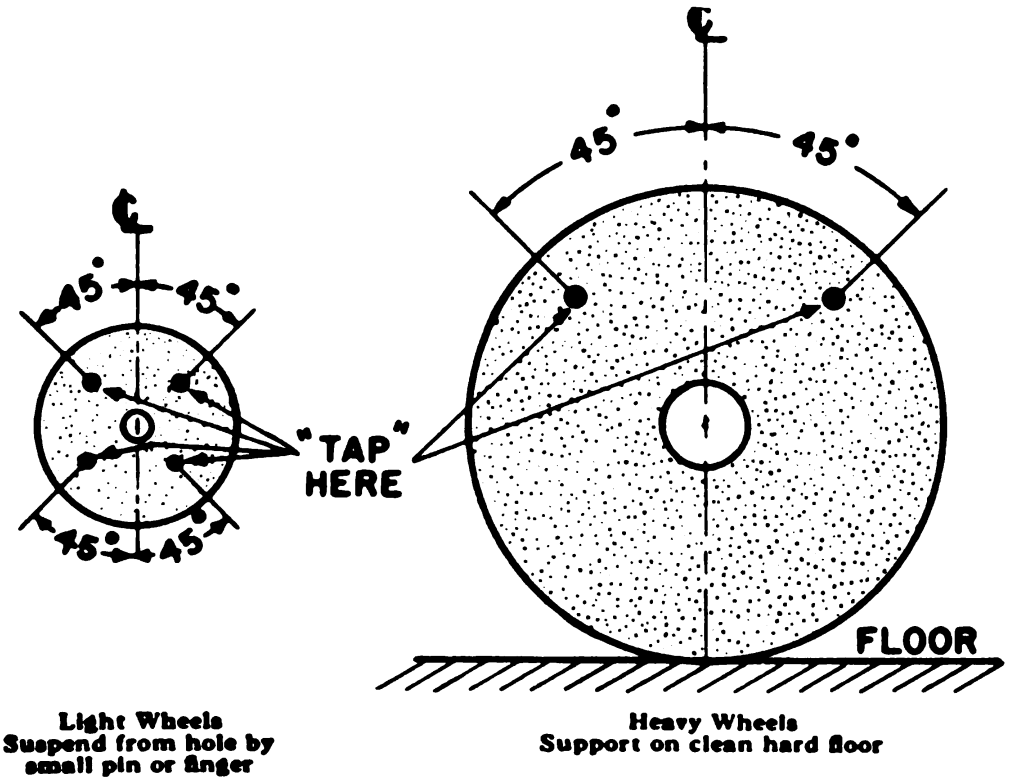
(b) Freezing temperatures, or any temperature low enough to cause condensation on the wheel when moving it from storage to an area of higher temperature.

History: 1954 ACS 74, p. 91, Eff. Jan. 18, 1973.

R 408.10113 Inspection of abrasive wheels.

Rule 113. (1) At time of unpacking, an abrasive wheel shall be inspected for damage.

(2) Prior to mounting, a vitrified or silicate wheel more than 4 inches in diameter shall be given a ring test by being tapped by a nonmetallic tool such as a handle of a screwdriver for a light wheel or a wooden mallet for a heavy wheel. The ring test shall be conducted as follows:



(a) Wheels must be dry and free from sawdust when applying the ring test, otherwise the sound will be deadened.

(b) Tap wheels about 45 degrees each side of the vertical center line and about 1 or 2 inches from the periphery as indicated by the spots in the figures below.

(c) Then rotate the wheel 45 degrees and repeat the test.

(d) A sound and undamaged wheel will give a clear metallic tone. If cracked, there will be a dead sound and not a clear "ring."

History: 1954 ACS 74, p. 91, Eff. Jan. 18, 1973.

R 408.10114 Work rests.

Rule 114. (1) An off hand grinder shall be equipped with either a work rest so located that the point of grinding is on a horizontal plane with the wheel spindle, or a device which shall prevent the work piece from jamming between the abrasive wheel and the wheel guard. Where a work rest or device is used at a height other than the horizontal plane with the spindle, a warning sign shall be installed to prohibit use of the grinder for other than the job for which the work rest or device was set.

(2) A work rest shall be adjusted and maintained to within ⅛ inch of the abrasive wheel. The adjustment shall be accomplished when the abrasive wheel is at rest.

(3) A work rest shall be designed and constructed of metal capable of supporting the work piece.

History: 1954 ACS 74, p. 92, Eff. Jan. 18, 1973.

R 408.10115 Machine spindles.

Rule 115. (1) A wheel or flange secured by a spindle nut shall have the direction of the thread opposite that of the spindle rotation so that the nut will tighten as the spindle revolves.

(2) A spindle shall be long enough to engage all the threads within the nut.

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(3) Spindle threads shall extend inside the flange but not more than halfway within the hole of the abrasive wheel.

(4) A spindle shall be made within a tolerance of plus .000 minus .002 inches from nominal size. A wheel which must be forced on a spindle shall not be used.

(5) A spindle on which a threaded-hole wheel is mounted shall be threaded to allow the abrasive wheel to be screwed flat against the back flange, and:

(a) The direction of the thread shall be such that to remove the abrasive wheel it must be rotated in the same direction that it turns when in use.

(b) A spindle shaft shall not touch the bottom of a blind hole in an abrasive wheel.

(c) A back flange specified in this rule shall be flat, unrelieved and square to the spindle axis.

History: 1954 ACS 74, p. 92, Eff. Jan. 18, 1973.

GUARDING PROVISIONS

R 408.10121 General requirements.

Rule 121. (1) An abrasive wheel shall be provided with a guard, except as noted below, which shall cover the spindle end, nut and flange projections as well as the periphery. Exceptions:

(a) Internal grinding while within the work being ground.

(b) Mounted wheels not more than 2 inches in diameter.

(c) Plug and cones not more than 3 inches in diameter or 5 inches in length.

(d) Type I reinforced. Not more than 2 inches in diameter and ¼ inch in thickness with safety glasses and face shield protection worn.

(e) Lapidary grinding. A metal diamond lapidary blade, either notched, segmented or continuous rim, used with a coolant deflector requires no guards for speed of not more than 3,500 sfpm.

(f) Tuck point wheel, masonry or concrete saws may have the spindle end, nut and flange exposed as per figures 1 and 2.

(2) The guard shall be constructed of material capable of retaining pieces of a broken wheel. See material tables. The guard shall be mounted so as to maintain alignment with the abrasive wheel to contain wheel breakage, and the strength of the fastenings shall exceed the strength of the guard. The guard shall be in position before starting the wheel.

(3) Where flying particles or fragments are a hazard to employees other than the grinder operator, an enclosure or barrier shall be provided to isolate the operation from the remaining working area.

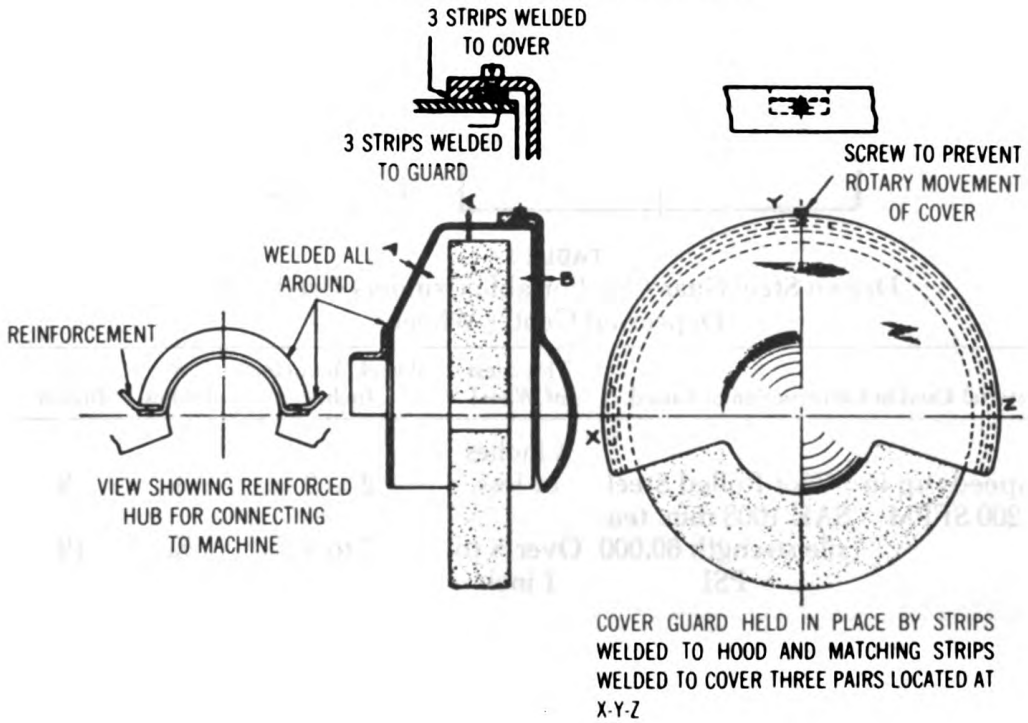
R 408.10122 Guard exposure angles.

Rule 122. The maximum angle of exposure in a guard opening shall be as prescribed in table 1.

TABLE 1
Guard Exposure Angle

Grinder Type	Exposure Above or Below Horizontal Plane	Total Exposure
Bench and floor	65 degrees above	* 90 degrees
Cylindrical grinder	65 degrees above	180 degrees
Surface grinder	15 degrees below	150 degrees
Cut-off machine	15 degrees below	150 degrees
Swing frame		180 degrees
Snagging		180 degrees
Top	30 degrees above	60 degrees
Portable		180 degrees
Masonry and concrete saws	35 degrees above	180 degrees
Tool and cutter grinder		180 degrees



*Whenever the nature of the work requires contact with the abrasive wheel below the horizontal plane of the spindle, the exposure shall not exceed 125 degrees.

History: 1954 ACS 74, p. 93, Eff. Jan. 18, 1973.

R 408.10123 Guard for portable grinders.

Rule 123. A guard on a right angle head or vertical portable grinder shall have the guard located so as to be between the operator and the abrasive wheel during use (See figure 3 and table 2). A portable grinder using a depressed center wheel shall have a guard as prescribed in figure 4 and table 3.

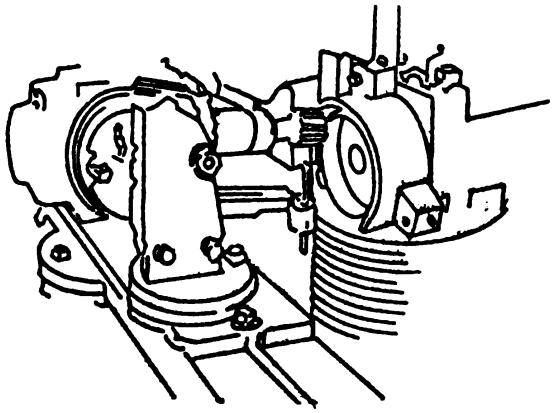
R 408.10124 Guarding cup wheels.

Rule 124. (1) A cup wheel on a portable grinder shall be protected by band-type or revolving cup guard.

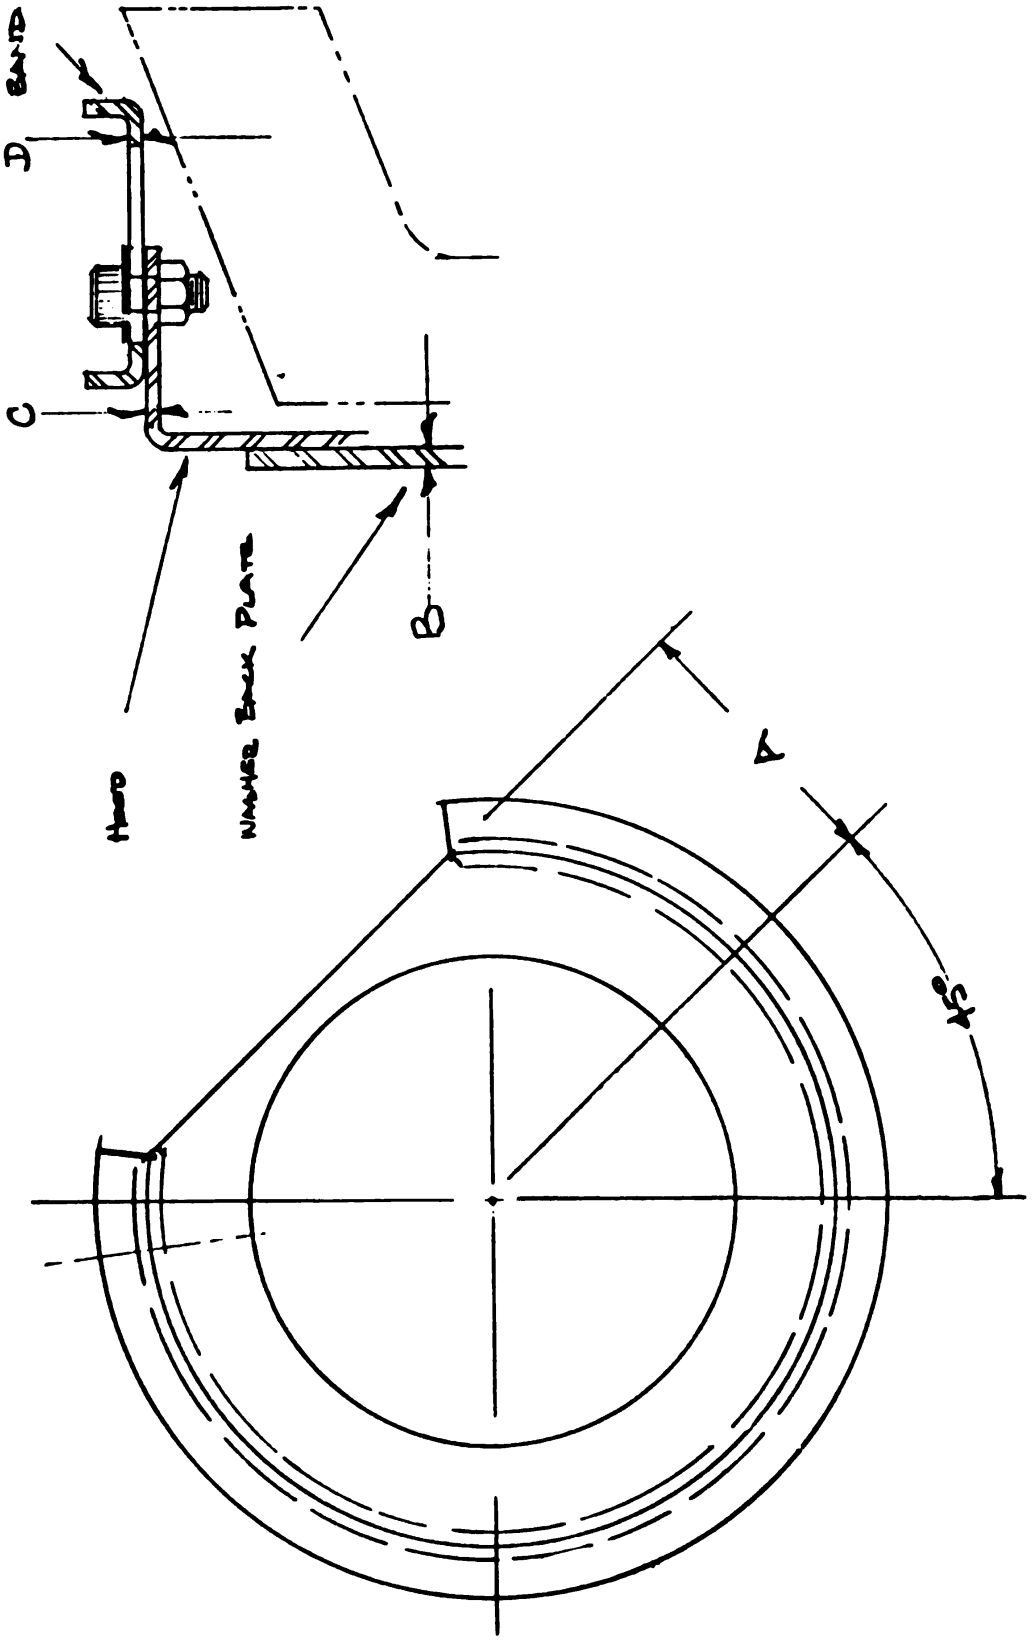
(2) A band-type guard shall be constructed as prescribed in figures 5 and 6 and tables 4 and 5 and adjusted within ½ inch of the working surface of the abrasive wheel.



(3) A revolving cup guard shall enclose the abrasive wheel for a distance of ⅓ the thickness measured from the back. A clearance of a minimum of 1/32 inch to a maximum of 1/16 inch shall be maintained between the guard and the abrasive wheel. The use of a revolving cup guard on cup wheels shall be discontinued 195 days after filing this part with the secretary of state.

(4) A guard for a tool and cutter grinder cup wheel shall be as follows:

(a) Not less than 180 degrees of the periphery and the back side of the wheel shall be guarded.



(b) The spindle end and nut and front of the wheel need not be guarded if the spindle end and nut are inside the plane of the working face of the wheel. See figure 5.

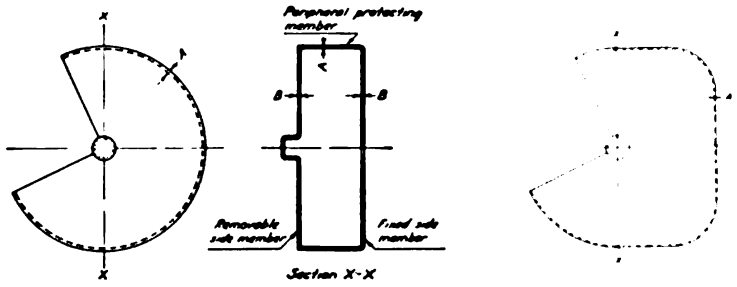
History: 1954 ACS 74, p. 95, Eff. Jan. 18, 1973; 1954 ACS 99, p. 106, Eff. Apr. 18, 1979.

R 408.10125 Exposure adjustments.

Rule 125. A guard for an abrasive wheel on a bench, floor, or cylindrical grinder shall be constructed so that the peripheral protecting member can be adjusted to the decreasing diameter of the abrasive wheel. The distance between the abrasive wheel and the end of the peripheral member at the top shall not exceed 1/4 inch. An adjustable tongue may be used to achieve this dimension.



History: 1954 ACS 74, p. 95, Eff. Jan. 18, 1973.

R 408.10126 Material requirements and minimum dimensions.

Rule 126. (1) Figures 7 and 8 and table 6 shall be followed for material requirements and minimum dimensions of peripheral and side members for guards. A cutting-off wheel 16 inches or less in diameter and operating at not more than 16,000 surface feet per minute may use cast or malleable iron as prescribed in table 6.

(2) A cutting-off wheel larger than 16 inches and operating at not more than 14,200 surface feet per minute shall have guards as prescribed in table 6 or 7.

History: 1954 ACS 74, p. 99, Eff. Jan. 18, 1973.

R 408.10127 Construction of fabricated guards.

Rule 127. (1) A fabricated guard made of structural steel shall be as prescribed in table 8.

(2) Column A of table 8 shall also apply to cast guards.

(3) Column B of table 8 shall apply where an adjustable tongue is held by bolts.

(4) Any means of fastening shall be considered satisfactory if, when assembled, it has strength at least equal to the members being joined.

TABLE 8

Dimensional Requirements for Construction of Fabricated Guards
Maximum Wheel Speed 10,000 SFPM

R 408.10128 Construction of drawn steel guards.

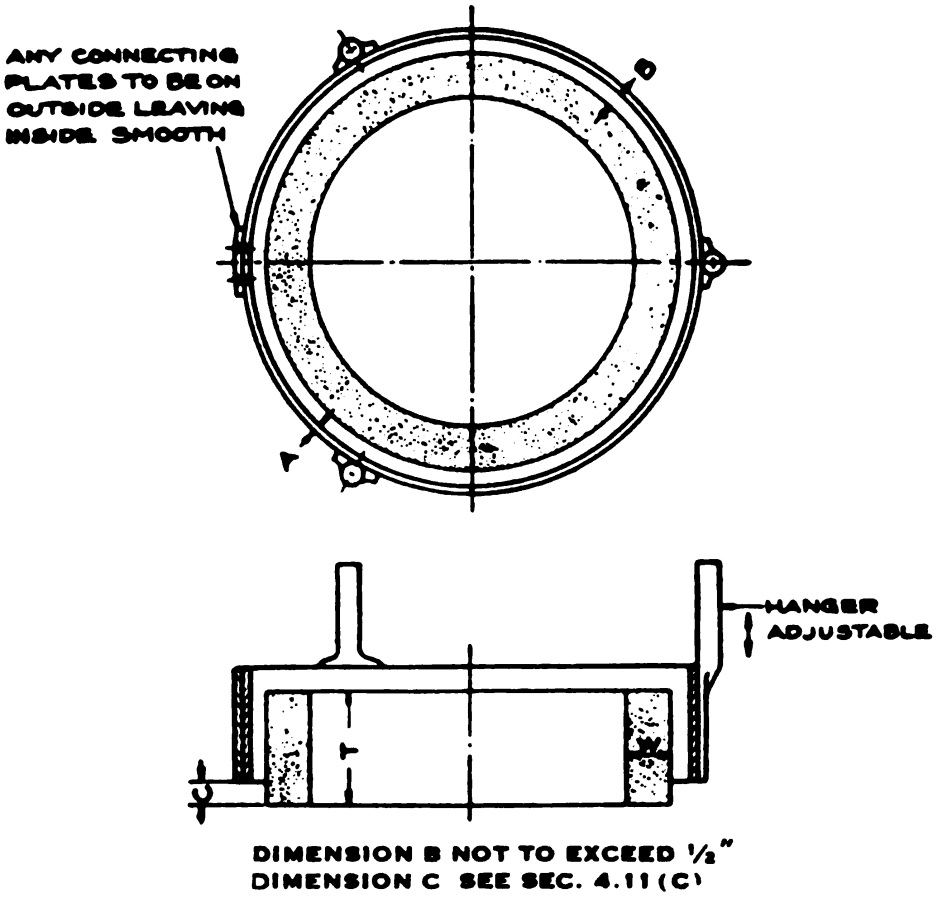
Rule 128. (1) A drawn steel guard for an abrasive wheel 8 inches and smaller on a portable grinder shall be as prescribed in figure 3 and table 2.

(2) A drawn steel guard for a depressed center wheel shall be as prescribed in figure 4 and table 3. The lip, shown as dimension B in figure 4, shall curl inward to deflect pieces if an abrasive wheel breaks.

History: 1954 ACS 74, p. 101, Eff. Jan. 18, 1973.

R 408.10129 Construction of band type guards.

Rule 129. A band type guard for a segment, ring or nut inserted disc wheel shall be constructed as follows:



(a) The band shall be steel plate or material of equal strength and as prescribed in figure 9 and table 9. The band shall be continuous with the ends being welded, riveted or bolted in such a manner as to leave the inside free of projections.

(b) The inside diameter of the band shall not be more than 1 inch larger than the outside diameter of the abrasive wheel and shall be concentric with the abrasive wheel.

(c) The width and adjustment of the band shall be such that the wheel will not protrude beyond the edge of the band a distance greater than that prescribed in table 10.

FLANGE PROVISIONS

R 408.10141 General requirements.

Rule 141. (1) An abrasive wheel shall be mounted between flanges, except as noted below, which shall not be less than 1/3 the diameter of the abrasive wheel. Exceptions:

(a) Mounted wheel.
(b) Portable cup, plug and cone wheels with threaded inserts or studs.
(c) Abrasive disc of the inserted nut, inserted washer and projecting stud type.
(d) Plate mounted wheel.
(e) Cylinder, cup or segmented wheel mounted in a chuck.
(f) Depressed center wheel.
(g) Internal wheel less than 2 inches in diameter.
(h) Straight and flaring cup wheel for terrazzo use.
(i) Cutting-off wheel (see subrule (2)).
(j) Masonry and concrete saws.

(2) A straight cutting-off wheel shall be mounted between relieved flanges which are not less than 1/4 the wheel diameter. A depressed center cutting-off wheel more than 16 inches in diameter shall be mounted between flat unrelieved flanges not less than 1/4 the wheel diameter.

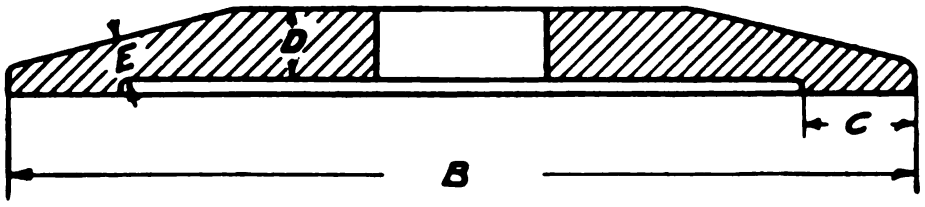
(3) A masonry saw using a reinforced resinoid and steel-centered wheel may use 4-inch diameter flanges for wheels through 20-inch diameter.

(4) Concrete saws using a steel-centered wheel 20-inch and larger may use flanges ⅛ the wheel diameter.

History: 1954 ACS 74, p. 103, Eff. Jan. 18, 1973.

R 408.10142 Flange construction.

Rule 142. (1) Whenever a wheel is mounted between flanges, the flange shall be designed to transmit the driving torque from the spindle to the abrasive wheel. They shall be dimensionally accurate and balanced with no rough surfaces or sharp edges.



(2) A flange shall be made of steel, cast iron or materials of equal strength and rigidity so that when tightened, the radial width of the bearing surface of contact on the abrasive wheel is maintained (See figure 10).

(3) Two flanges between which an abrasive wheel is mounted, except when a special adaptor is used on a depressed center wheel, shall have the same dimensions and bearing surface.

(4) The minimum dimensions for the following types of flanges shall be maintained according to the listed figures and tables:

(a) Straight relieved flange—figure 10 and table 11.
(b) Straight unrelieved flange—figure 11 and table 12.
(c) Straight adaptor flange—figure 12 and table 13.
(d) Straight flange—figures 13 and 14 and table 14.
(e) Straight adaptor flange—figure 15 and table 15.
(f) Straight adaptor flange—heavy duty—figures 16 and 17 and table 16.
(g) Arborless wheel flange—figures 18 and 19 and table 17.
(h) Straight flange for wheel sleeves—figure 20 and table 18.

Note: These flanges may be clamped together by means of a central nut, or by a series of bolts or some other equivalent means of fastening. For hole sizes smaller than shown in this table, use table 9.

History: 1954 ACS 74, p. 103, Eff. Jan. 18, 1973.

R 408.10143 Maintenance for flanges.

Rule 143. A flange with a worn, warped, sprung, or damaged bearing surface shall be repaired or replaced.

(2) When resurfacing a straight relieved flange, a recess of not less than 1/16 inch shall be maintained on the side next to the wheel for a distance prescribed in table 11.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(3) When resurfacing a straight flange of the adaptor or sleeve type, the undercut shown in figures 13 and 14 shall be maintained to insure that there will be no bearing on the sides of the abrasive wheel within ⅛ inch of the arbor hole.

History: 1954 ACS 74, p. 108, Eff. Jan. 18, 1973.

MOUNTING PROVISIONS

R 408.10151 Bushings.

Rule 151. A bushing used in mounting an abrasive wheel shall not be greater than the width of the wheel or make contact with the flange.

History: 1954 ACS 74, p. 109, Eff. Jan. 18, 1973.

R 408.10152 Blotters.

Rule 152. A blotter shall be used between a flange and the abrasive wheel. The blotter shall cover the entire contact area of the flange. Exceptions:

(a) Mounted, cone and plug wheels.
(b) Abrasive discs—inserted nut, inserted washer and projecting stud type.
(c) Plate mounted wheels.
(d) Cylinders, cups or segmented wheels that are chuck mounted.
(e) Type 27 and 28 depressed center wheels.
(f) Cutting-off wheels.
(g) Internal wheels not more than 2 inches in diameter.
(h) Type 4 tapered wheels.
(i) Diamond and Borzon type wheels.
(j) Terrazzo wheels.
(k) Type 27A cutting-off wheels.

History: 1954 ACS 74, p. 109, Eff. Jan. 18, 1973.

R 408.10153 Multiple wheel mounting.

Rule 153. When mounting more than 1 abrasive wheel between a pair of flanges, the wheels shall be cemented together, separated by spacers having low compressibility such as soft copper or brass or especially manufactured for mounting without cementing or use of the prescribed spacers. The spacers shall be equal in diameter to the flanges and have equal bearing surfaces.

History: 1954 ACS 74, p. 109, Eff. Jan. 18, 1973.

R 408.10154 Mounting nuts.

Rule 154. (1) A single spindle nut shall be tightened only enough to drive the abrasive wheel and prevent slippage.

(2) A multiple screw flange shall be tightened uniformly to distribute pressure over the flange surface and prevent springing of the flange.

History: 1954 ACS 74, p. 109, Eff. Jan. 18, 1973.

R 408.10155 Mounting of abrasive disc wheels.

Rule 155. (1) An inserted nut wheel shall be mounted with a steel machine face plate of the same diameter as the wheel. The thickness of the machine face plate shall be as prescribed in table 19.

(2) A screw hole in the machine face plate shall be located to match the threaded hole in the inserted nut and large enough so the screw will not bind. Each screw hole in the plate shall be countersunk to a uniform depth to accommodate the screw head. A screw shall engage the threads of the inserted nuts, but not touch the bottom of the hole.

(3) A machine face plate shall be flat, concentric and mounted at a 90 degree angle to the machine spindle.

(4) A plate mounted wheel having a mounting plate thinner than prescribed in table 19 shall have an additional machine face plate installed to provide the additional strength needed. The added machine face plate shall have the same diameter as the wheel (see figure 21 and table 20).

R 408.10156 Mounting depressed center wheels.

Rule 156. (1) A depressed center wheel, except as prescribed in rule 157, shall be mounted with specially designed adaptors.

(2) The back flange shall extend beyond the central hub or raised portion and contact the wheel to counteract the side pressure on the wheel in use.

(3) The adaptor nut which is less than the minimum ⅓ diameter of the wheel shall fit into the depressed side to prevent interference in side grinding and drive the wheel by its clamping force against the depressed portion of the back flange.

(4) Adaptors affixed by the depressed center wheel manufacturer shall not be reused.

History: 1954 ACS 74, p. 110, Eff. Jan. 18, 1973.

R 408.10157 Mounting depressed center cutting-off wheels.

Rule 157. A depressed center cutting-off wheel more than 16 inches in diameter shall be mounted with flat unrelieved flanges having matching bearing surfaces not less than ¼ the wheel diameter.

History: 1954 ACS 74, p. 110, Eff. Jan. 18, 1973.

R 408.10158 Mounting cylinder wheels.

Rule 158. (1) A cylinder wheel shall be cemented or chucked onto a machine face plate which shall be flat, concentric and mounted at 90 degrees to the machine spindle.

(2) A cylinder wheel shall be used only on a machine equipped with a band-type guard as prescribed in R 408.10129.

History: 1954 ACS 74, p. 110, Eff. Jan. 18, 1973.

R 408.10159 Mounting segments.

Rule 159. (1) Segments shall be chucked in a holding mechanism as prescribed by the manufacturer of the chucking device.

(2) The segments shall be used only on a machine equipped with a band-type guard as prescribed in R 408.10129.

History: 1954 ACS 74, p. 110, Eff. Jan. 18, 1973.

SPEED PROVISIONS

R 408.10171 Wheel speed.

Rule 171. (1) An abrasive wheel shall be run at a speed not more than that prescribed in table 21 nor more than the rated speed on the wheel. The revolutions per minute may be increased as the wheel diameter decreases provided the original surface feet per minute is not exceeded. Wheel speed shall be computed from the free running speed of the machine spindle.

(2) An abrasive wheel or its package shall show the maximum operating speed as revolutions per minute. The use of a package for this marking shall be limited to those shapes which make marking unfeasible.

(3) An employer shall purchase and use only an abrasive wheel, except as noted below, which has been speed tested as prescribed in table 22 by the manufacturer. Exceptions:

(a) A wheel less than 6 inches in diameter.
(b) A diamond wheel, metal and organic bond.
(c) Ball grinding wheel.
(d) Segmental disc wheel and disc wheel.
(e) Regulating wheel for centerless grinders.
(f) Mounted wheel.

(g) Segment.

(4) The operating speed and overhang of a mounted wheel shall not be more than that prescribed in tables 23 to 31 (See figure 22).

History: 1954 ACS 74, p. 111, Eff. Jan. 18, 1973.

R 408.10172 Deviations.

Rule 172. An employer desiring to use an abrasive wheel in excess of the maximum speeds listed in table 21 may petition the department of labor for a deviation.

TABLE 21

History: 1954 ACS 74, p. 111, Eff. Jan. 18, 1973.

OPERATING PROVISIONS

R 408.10181 Machine speeds.

Rule 181. (1) The wheel spindle speed on a grinding machine shall be checked with a tachometer whenever a pulley or motor is changed. The speed shall not exceed the rating of the machine or the abrasive wheel. The spindle speed shall be permanently marked on the machine and maintained.

(2) A grinding machine with a vari-speed control shall have the speed adjustment supervised by an authorized and trained employee.

History: 1954 ACS 74, p. 121, Eff. Jan. 18, 1973.

R 408.10182 Training.

Rule 182. An employee shall be instructed in the care, use, and protection of an abrasive wheel and equipment before assignment.

History: 1954 ACS 74, p. 121, Eff. Jan. 18, 1973.

R 408.10183 Wheel breakage.

Rule 183. (1) A cracked or broken wheel shall not be used.

(2) Wheel breakage shall be investigated by the employer to determine and correct the cause.

History: 1954 ACS 74, p. 121, Eff. Jan. 18, 1973.

R 408.10184 Starting new wheels.

Rule 184. After mounting an abrasive wheel, it shall be run with the guard in place or in an enclosure at operating speed for not less than 1 minute before applying work. During this time an employee shall not stand in front of or in line with the wheel.

History: 1954 ACS 74, p. 121, Eff. Jan. 18, 1973.

R 408.10185 Truing and dressing wheels.

Rule 185. An out-of-truth abrasive wheel shall be trued by a trained employee. A wheel which cannot be trued shall not be used.

History: 1954 ACS 74, p. 121, Eff. Jan. 18, 1973.

R 408.10186 Side grinding.

Rule 186. Side grinding shall be performed on an abrasive wheel designed for that purpose. A wheel designed for grinding on the periphery shall not be used for side grinding. Form grinding is not considered the standard practice of side grinding.

History: 1954 ACS 74, p. 121, Eff. Jan. 18, 1973.

R 408.10187 Maintenance.

Rule 187. (1) An employer shall maintain grinding equipment in a condition which will not create a hazard for the employee.

(2) An employer shall instruct the employee to report defective equipment to the employee's supervisor.

(3) A rheostat controlled direct current motor driven grinder, a vari-speed control grinder or an air grinder shall be speed checked not less than once a week.

History: 1954 ACS 74, p. 121, Eff. Jan. 18, 1973.

PART 2. FLOOR AND WALL OPENINGS, STAIRWAYS, AND SKYLIGHTS

R 408.10201 Scope.

Rule 201. This part is intended to provide safety of life and limb in all places of employment where there is danger of persons, materials, or equipment falling through or into floor and wall holes or openings, or from stairways or runways. This part applies to temporary or emergency conditions as well as to permanent conditions.

History: 1954 ACS 60, p. 62, Eff. Nov. 14, 1969; 1954 ACS 68, p. 41, Eff. Sept. 15, 1971; 1954 ACS 88, p. 89, Eff. Aug. 18, 1976.

R 408.10205 Definitions; D to F.

Rule 205. (1) "Detour guard" means a barrier or other device used to direct employees from contact with hazards.

(2) "Fixed industrial stairs" means a series of steps leading from 1 level or floor to provide limited access for maintenance or operating employees.

(3) "Floor hole" means an opening measuring less than 12 inches but more than 1 inch in its least dimension, in a floor, platform, pavement or yard, through or into which persons, materials or equipment may fall, such as a belt hole, pipe opening or slot opening.

(4) "Floor opening" means an opening measuring 12 inches or more in its least dimension, in a floor, platform, pavement or yard, through or into which persons, material or equipment may fall, including but not limited to a hatchway, stair or ladder opening, pit or large manhole. A floor opening occupied by an elevator or dumbwaiter is excluded from this part as it is covered by the elevator law, Act No. 227 of the Public Acts of 1967, being §§408.801 to 408.824 of the Michigan Compiled Laws.

History: 1954 ACS 60, p. 62, Eff. Nov. 14, 1969; 1954 ACS 68, p. 41, Eff. Sept 15, 1971; 1954 ACS 76, p. 56, Eff. Aug. 29, 1973.

R 408.10206 Definitions; H to R.

Rule 206. (1) "Handrail" means a single member supported on brackets from a wall or partition, as on a stairway or ramp, to furnish persons with a handhold.

(2) "Hazardous substance" means a substance or mixture of substances which is toxic, corrosive, an irritant, a strong sensitizer, flammable or which generates pressure through decomposition, heat or other means, if the substance or mixture of substances may cause clinical evidence of personal injury or illness during or as a direct result of a customary or reasonably anticipated handling or use.

(3) "Means of egress" means a continuous path of travel from any point in a building to the open air outside at ground level and consists of 3 separate and distinct parts: the exit access, the exit and the exit discharge. A means of egress comprises both vertical and horizontal means of travel.

(4) "Platform" means a working space for 1 or more persons, elevated above the surrounding floor or ground level, such as a balcony or platform for the operation of machinery and equipment or storage.

(5) "Runway" means a passageway for persons, elevated above the surrounding floor or ground level, including but not limited to a footwalk along shafting or a walkway between buildings.

History: 1954 ACS 68, p. 41, Eff. Sept. 15, 1971; 1954 ACS 76, p. 56, Eff. Aug. 29, 1973.

R 408.10207 Definitions; S.

Rule 207. (1) "Skylight" means an opening in a roof or floor covered by a translucent or transparent material not capable of supporting 300 pounds applied perpendicularly on any 1 area.

(2) "Stair railing" means a barrier erected in conjunction with a stairway to prevent falls of persons.

(3) "Stairway" means a flight of stairs of 4 or more risers.

(4) "Standard barrier" means a barrier erected along exposed edges of a floor opening, wall opening, ramp, platform or runway to prevent falls of persons or material.

History: 1954 ACS 60, p. 63, Eff. Nov. 14, 1969; 1954 ACS 68, p. 41, Eff. Sept. 15, 1971; 1954 ACS 76, p. 57, Eff. Aug. 29, 1973.

R 408.10208 Definitions; T to W.

Rule 208. (1) "Temporary barrier" means a portable barrier to shield and identify a floor opening.

(2) "Toeboard" means a barrier at floor level erected along exposed edges of a floor opening, wall opening, platform, runway, ramp or a wall hole to prevent falls of materials.

(3) "Wall hole" means an opening less than 30 inches but more than 1 inch in height, of unrestricted width, or more than 1 inch but less than 18 inches wide and of unrestricted height, in a wall or partition.

(4) "Wall opening" means an opening at least 30 inches high and 18 inches wide, in a wall or partition, through or into which persons may fall.

History: 1954 ACS 68, p. 42, Eff. Sept. 15, 1971.

R 408.10211 Guards for stairway openings.

Rule 211. (1) A stairway floor opening shall be guarded by a standard barrier as specified in R 408.10231 to R 408.10236. It shall be provided on all exposed sides, except at the entrance to the stairway. A standard toeboard shall be installed where activities present the probability of objects or materials falling or rolling over the edge of the opening.

(2) For a stairway where traffic across the opening prevents the use of a fixed standard barrier such as when located in an aisle space, the barrier shall consist of a hinged floor opening cover as specified in R 408.10239 and removable standard barriers on all exposed sides, except at the entrance to the stairway. The removable barriers should be hinged or mounted so as to come into use automatically with the opening of the cover.

(3) Where a door or gate opens directly on a stairway, a platform shall be provided, and the swing of the door or gate shall not reduce the floor area leading to the stairs to a width less than 20 inches.

History: 1954 ACS 60, p. 63, Eff. Nov. 14, 1969.

R 408.10213 Guards for open-sided floors, platforms, and runways.

Rule 213. (1) Regardless of height, an open-sided floor, walkway, platform or runway above or adjacent to dangerous equipment shall be guarded with a standard barrier and toeboard as specified in R 408.10231(1) and R 408.10233(2).

(2) An open-sided floor or platform 4 feet or more above adjacent floor or ground level shall be guarded by a standard barrier as specified in R 408.10231 on all open sides, except where there is entrance to a ramp, stairway or fixed ladder. The barrier shall be provided with a toeboard as specified in R 408.10233(2) where, beneath the open sides, (a) persons can pass, (b) there is moving machinery, or (c) there is equipment with which falling materials could create a hazard. The intermediate sections of the barrier and the toeboard may be eliminated when materials are regularly passed over the end of the floor, as in lumber storage. A stationary elevated platform secured to a building or structure used exclusively for the service and maintenance of overhead bridge cranes and similar mobile equipment may be equipped with standard barriers and toeboards that are removable in lieu of fixed standard barriers and toeboards on the side adjacent to the machinery, if such barriers and toeboards are secured against falling when they are not serving as protective barriers.

(3) Guards shall be provided for a platform or runway of gratings used as a working area, which will prevent tools or materials from falling on persons below.

(4) Open sides of a loading or storage platform which is used primarily for loading or unloading railroad cars or trucks, and open hearth pouring platforms are exempt from the provisions of this part.

(5) A runway shall be guarded by a standard barrier and toeboard as specified in R 408.10231 and R 408.10233 on all open sides 4 feet or more above floor or ground level. The barrier and toeboard on 1 side of a runway used exclusively for special purposes, including but not limited to oiling, servicing or filling tank cars, may be omitted if the runway is not less than 18 inches wide.

History: 1954 ACS 60, p. 63, Eff. Nov. 14, 1969; 1954 ACS 68, p. 42, Eff. Sept. 15, 1971.

R 408.10215 Guards for other floor openings or platforms.

Rule 215. (1) A ladderway floor opening or platform shall be guarded by a standard barrier with standard toeboard on all exposed sides and with the passage through the barrier either provided with a gate which swings away from the opening or so offset that a person cannot walk directly into the opening.

(2) A hatchway, floor opening, or floor hole into which persons may accidentally walk or through which material may fall shall be guarded by 1 of the following:

(a) A hinged floor opening covered as specified in R 408.10239 and equipped with standard barriers permanently attached thereto so as to leave only 1 exposed side. If the opening is not in use, the cover shall be closed or the exposed side shall be guarded at both top and intermediate positions by removable standard barriers.

(b) A removable standard barrier with toeboard on not more than 2 sides of the opening and fixed standard barriers with toeboards as specified in R 408.10231 and R 408.10233(2) on all other exposed sides. The removable standard barriers shall be kept in place when the opening is not in use and should preferably be hinged or mounted so as to be conveniently replaceable. A barrier may be omitted around the perimeter of a pit used for vehicle servicing, if a yellow caution line is installed around the perimeter of the pit. The line shall be 12 inches wide and maintained so as to be clearly visible.

(c) A floor opening cover as specified in R 408.10239.

(3) Where operating conditions necessitate the feeding of material into a hatchway or chute opening, protection shall be provided to prevent a person from falling through the opening.

(4) A manhole floor opening shall be covered by a floor hole cover as prescribed in R 408.10239, which need not be hinged in place when secured or constructed to prevent accidental displacement. When the cover is not in place, the manhole opening shall be constantly attended by an employee or by an outside service, or shall be protected by temporary barriers.

(5) A temporary floor opening shall have a temporary barrier or shall be constantly attended by a person.

(6) A floor hole or floor opening into which persons cannot accidentally walk, on account of fixed machines, equipment, or walls, but tools or materials can fall on employees or equipment, shall be protected by a cover that leaves no openings more than 1 inch wide unless this opening is connected to a chute-type device. The cover shall be securely held in place to prevent tools or materials from falling through.

(7) An area below a floor hole or floor opening, or wall hole or wall opening, where material is being lowered shall be guarded by a standard fixed or temporary barrier, or attended by a person.

(8) A skylight less than 36 inches above a roof or floor shall be guarded by a standard barrier or skylight guard, as prescribed in R 408.10231 or R 408.10240, on all exposed sides.

History: 1954 ACS 60, p. 64, Eff. Nov. 14, 1969; 1954 ACS 68, p. 42, Eff. Sept. 15, 1971; 1954 ACS 76, p. 57, Eff. Aug. 29, 1973; 1954 ACS 88, p. 89, Eff. Aug. 18, 1976; 1954 ACS 99, p. 107, Eff. Apr. 18, 1979.

R 408.10217 Guards for wall openings, holes, and pits above floor or ground level.

Rule 217. (1) A wall opening from which there is a drop of more than 4 feet or where a person may fall on or into a hazard shall be equipped with standard barrier or a wall opening screen, specified in R 408.10231 and R 408.10237. Where there is exposure below to falling materials, a toeboard shall also be provided. If the barrier has to be removable, it should be hinged or mounted so as to be conveniently replaceable. When the opening is not in use for handling materials, the barrier shall be kept in position regardless of a door on the opening. Where a removable standard barrier is used, a grab handle as specified in R 408.10237 shall

be provided on each side of the opening with its center approximately 4 feet above floor level.

(2) A chute wall opening from which there is a drop of more than 4 feet shall be guarded by a barrier as specified in R 408.10231.

(3) A window wall opening at a stairway landing, floor, platform or balcony from which there is a drop of more than 4 feet and where the bottom of the opening is less than 3 feet above the platform, floor or landing, shall be guarded by standard wall opening screens or standard barrier as specified in R 408.10231 and R 408.10237. Where the window opening is less than 4 inches above the landing, floor or platform, a standard toeboard shall be provided as specified in R 408.10233.

(4) A temporary wall opening shall have barriers and toeboards as specified in R 408.10231 and R 408.10233.

(5) Where there is a hazard of materials falling through a wall hole, and the lower edge of the near side of the hole is less than 4 inches above the floor, and the far side of the hole is more than 4 feet above the next lower level, the hole shall be protected by a standard toeboard, or an enclosing screen either of solid construction, or as specified in R 408.10233 and R 408.10237.

(6) If a wall hole has an unrestricted height of 48 inches or more and is more than 12 inches in width, and the near side is less than 42 inches above the floor level and the far side of the hole is more than 4 feet above the next lower level, the hole shall be protected to the height of a standard barrier.

(7) Where a stairway or ladder landing ends in direct proximity to hazards, detour guards shall be installed or used to protect employees against contact with such hazards.

History: 1954 ACS 60, p. 64, Eff. Nov. 14, 1969; 1954 ACS 68, p. 43, Eff. Sept. 15, 1971.

R 408.10219 Open tanks or vats.

Rule 219. When the top of an open tank or vat containing a hazardous substance is less than 36 inches from the floor, platform, or ground level, a barrier shall be erected to a height of not less than 36 inches on all exposed sides.

History: 1954 ACS 76, p. 57, Eff. Aug. 29, 1973.

R 408.10220 Access to other elevations.

Rule 220. (1) One of the following shall be used to gain access to another elevation of more than 16 inches:

(a) Flight of stairs.

(b) Fixed industrial stairs.

(c) Ramp.

(d) Fixed ladder.

(e) A portable ladder, as prescribed in the occupational safety standards commission standard, Part 4. Portable Ladders, being R 408.10401 to R 408.10456 of the Michigan Administrative Code, may be used for temporary access to another elevation.

(2) After the effective date of this part, a winding stairway shall not be installed except for limited usage or secondary access. A winding stair may be installed on a tank or other round structure with a diameter of not less than 5 feet.

History: 1954 ACS 76, p. 57, Eff. Aug. 29, 1973.

R 408.10221 Stairway railings and guards.

Rule 221. (1) A stairway having 4 or more risers shall be equipped with handrails, as specified in R 408.10235 and R 408.10236, or a stair railing, as specified in R 408.10233 to R 408.10236, as follows:

Digitized by Google

(a) On a stairway less than 44 inches wide, having both sides enclosed, at least 1 handrail, preferably on the right side when descending.

(b) On a stairway less than 44 inches wide, having 1 side open, at least 1 stair railing on the open side.

(c) On a stairway less than 44 inches wide, having both sides open, 1 stair railing on each side.

(d) On a stairway 44 or more inches wide, but less than 88 inches wide, 1 handrail on each enclosed side and 1 stair railing on each open side.

(e) On a stairway 88 or more inches wide, 1 handrail on each enclosed side, 1 stair railing on each open side, and 1 intermediate stair railing located approximately midway of the width.

(2) A winding stairway shall be equipped with a handrail offset to prevent walking on portions of the treads having a width of less than 6 inches. A winding stairway existing at the effective date of this rule is exempted from this requirement. Future alterations shall comply with this rule.

History: 1954 ACS 60, p. 65, Eff. Nov. 14, 1969; 1954 ACS 68, p. 44, Eff. Sept. 15, 1971; 1954 ACS 76, p. 57, Eff. Aug. 29, 1973; 1954 ACS 88, p. 90, Eff. Aug. 18, 1976.

R 408.10223 Stairway slopes, treads, and risers.

Rule 223. (1) A stairway or a fixed industrial stair slope shall not have a slope of more than 50 degrees nor less than 30 degrees from the horizontal. Where the slope is less than 18 degrees a ramp shall be used. Where the slope is more than 75 degrees a fixed or portable ladder shall be used.

(2) Each tread and riser shall be of uniform dimensions in each flight. The minimum tread run shall not be less than 8 inches. The sum of the tread run and riser shall be a minimum of 17 inches or a maximum of 18 inches. Tread run does not include the nosing.

(3) A stairway existing at the effective date of this rule is exempt from this rule. Future alterations shall comply with this rule.

History: 1954 ACS 60, p. 65, Eff. Nov. 14, 1969; 1954 ACS 68, p. 44, Eff. Sept. 15, 1971; 1954 ACS 76, p. 57, Eff. Aug. 29, 1973.

R 408.10227 Fixed industrial stairs and platforms.

Rule 227. (1) A fixed industrial stair shall have:

(a) Design and construction to carry a load of not less than 5 times the normal live load, but never less than 1,000 pounds.

(b) A minimum width of 22 inches.

(c) A vertical clearance of not less than 7 feet from any tread nose to an overhead object. Projections such as pipes, raceways, air ducts or fixtures between 5 and 7 feet above the tread nose are permissible if guarded and marked.

(d) The tread and riser as prescribed in subrule (2) of R 408.10223. A tread shall have a slip resistant surface.

(2) Where a stair platform is used, its width shall be not less than the width of the stair nor shall its length be less than 30 inches measured in the direction of travel.

(3) A stair railing with intermediate rail shall be installed on any open side of a fixed industrial stair and platform. A handrail shall be installed on not less than 1 side of a closed fixed industrial stair, preferably on the right descending side. The railing and handrail shall be as prescribed in R 408.10233 and R 408.10236, and shall be installed on stairs of 4 or more risers.

(4) A flight of stairs installed after the effective date of this rule shall consist of not more than a 12-foot continuous rise. An intermediate platform as prescribed in

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

subrule (2) shall be used to provide relief where more than a 12-foot rise is necessary to reach the next level.

History: 1954 ACS 76, p. 57, Eff. Aug. 29, 1973; 1954 ACS 88, p. 90, Eff. Aug. 18, 1976.

R 408.10231 Standard barrier specifications.

Rule 231. (1) A standard barrier shall consist of a vertical barrier not less than 42 inches high. Such a barrier existing at the effective date of this part may be not less than 36 inches in height, except that future alterations shall comply. Intermediate rails, screen, or solid material shall be used to prevent a fall of an employee through the area between the top of the barrier and the floor or ground level. Anchoring and framing of all members shall be of such construction that the completed structure shall be capable of withstanding a load of 300 pounds applied in any direction at any point.

(2) Where a barrier is likely to receive heavy stresses from crowds, trucking, or handling materials, it shall be constructed to withstand these loads.

(3) Where the top of the barrier is used as a handrail the surface shall be smooth throughout its length.

(4) The barrier to a height of 7 feet shall not present a hazard by protruding objects and sharp edges.

History: 1954 ACS 60, p. 65, Eff. Nov. 14, 1969; 1954 ACS 68, p. 44, Eff. Sept. 15, 1971; 1954 ACS 76, p. 58, Eff. Aug. 29, 1973.

R 408.10232 Temporary barriers.

Rule 232. (1) A temporary barrier shall consist of a free-standing frame or stanchions 42 inches high with top and midrail of 2 x 4's, pipe, rope, or chain.

(2) A temporary barrier shall be identified by a warning device including, but not limited to, a light, flags, or colors to warn persons of a hazardous area.

History: 1954 ACS 68, p. 44, Eff. Sept. 15, 1971; 1954 ACS 88, p. 91, Eff. Aug. 18, 1976.

R 408.10233 Stair railing and toeboard specifications.

Rule 233. (1) A stair railing shall be of construction similar to a standard barrier as required in R 408.10231 but the vertical height shall be not more than 34 inches nor less than 30 inches from the upper surface of the top rail to the surface of the tread in line with the face of the riser. The 34-inch requirement is modified to 38 inches for a stair railing existing at the effective date of this rule.

(2) A standard toeboard shall be not less than 4 inches in vertical height from its top edge to the level of the floor, platform, runway, or ramp. It shall be securely fastened in place and with not more than ¼ inch clearance above floor level. The toeboard shall be constructed of solid material or with openings of not over 1 inch in greatest dimension. Where material is piled to such height that a standard toeboard and construction of the standard barrier does not provide protection, the toeboard shall be extended vertically to the height of the piled material.

History: 1954 ACS 60, p. 65, Eff. Nov. 14, 1969.

R 408.10235 Handrail specifications.

Rule 235. (1) A handrail shall consist of a lengthwise member so mounted on a wall or partition as to offer no obstruction to a smooth surface along the top and both sides of the handrail. The handrail shall be of a configuration that will furnish an adequate handhold for a person grasping it to avoid falling. The ends of the handrail shall be arranged so as not to constitute a hazard.

(2) The handrail shall be not more than 34 inches nor less than 30 inches in height from the upper surface of the handrail vertically to the surface of the tread in line with the face of riser or to the surface of the ramp. The 34-inch requirement

is modified to 38 inches for a handrail existing at the effective date of this rule.

(3) A handrail shall be of such size and mounted so that the completed structure is capable of withstanding a load of at least 300 pounds applied in any direction at any point on the rail.

History: 1954 ACS 60, p. 66, Eff. Nov. 14, 1969; 1954 ACS 68, p. 44, Eff. Sept. 15, 1971.

R 408.10236 Clearance for handrails and stair railings.

Rule 236. (1) A handrail, stair railing, and the top of a standard barrier used as a railing shall be provided with a clearance of not less than 1½ inches between the handrail or railing and any other object.

(2) A handrail or stair railing in existence before the effective date of this rule may have a clearance of less than 3 inches, but not less than 1¼ inches, between the handrail or stair railing and any other object.

History: 1954 ACS 60, p. 66, Eff. Nov. 14, 1969; 1954 ACS 68, p. 44, Eff. Sept. 15, 1971; 1954 ACS 88, p. 91, Eff. Aug. 18, 1976.

R 408.10237 Wall opening grab handles and screens.

Rule 237. (1) A wall opening grab handle shall be not less than 12 inches in length and shall be mounted to give at least 3 inches clearance from the side framing of the wall opening. The size, material, and anchoring of the grab handle shall be such that the completed structure is capable of withstanding a load of at least 300 pounds applied in any direction at any point of the handle.

(2) A grab rail in existence before the effective date of this rule may have a clearance of less than 3 inches but not less than 1½ inches between the grab rail and any other object.

(3) A wall opening screen shall be of such construction and mounting that it is capable of withstanding a static load of at least 300 pounds applied horizontally at any point on the screen. It may be of solid construction, of grillwork with openings not more than 8 inches long, or of slatwork with openings not more than 4 inches wide with length unrestricted.

History: 1954 ACS 60, p. 66, Eff. Nov. 14, 1969; 1954 ACS 68, p. 45, Eff. Sept. 15, 1971.

R 408.10239 Floor opening and floor hole covers.

Rule 239. (1) A floor opening and floor hole cover shall be of any material or construction that will support at least 3 times the normal load, except that when located in a plant roadway, it shall be designed to carry a truck rear axle load of 24,000 pounds.

(2) The top of a cover shall be of materials no more slippery than the surrounding floor surface and should be flush with the surface. A cover projection not more than 1 inch above the floor level may be used if all edges are chamfered to an angle with the horizontal of not more than 30 degrees.

(3) Hinges, handles, bolts, or other parts shall be set flush with the floor or cover surface.

History: 1954 ACS 60, p. 66, Eff. Nov. 14, 1969; 1954 ACS 68, p. 45, Eff. Sept. 15, 1971.

R 408.10240 Skylight guards.

Rule 240. (1) A skylight guard shall be designed and constructed to withstand a 300-pound load applied perpendicularly at any 1 area on the screen.

(2) The guard construction shall be of grillwork with openings not more than 4 inches long or slatwork with an opening not more than 2 inches wide with length unrestricted. Ordinary loads or impacts shall not deflect the material downward to break the skylight glass.

History: 1954 ACS 76, p. 58, Eff. Aug. 29, 1973.

R 408.10241 Maintenance.

Rule 241. Floors, platforms, stair treads, and landings shall be maintained free of broken, worn, splintered, or loose pieces that would constitute a tripping or falling hazard. Material used for repair of these components shall meet the design strength of the component.

History: 1954 ACS 68, p. 45, Eff. Sept. 15, 1971.

PART 3. FIXED LADDERS

R 408.10301 Purpose and scope.

Rule 301. This part is intended to provide reasonable safety for life and limb by establishing minimum standards for the design and installation of fixed ladders and safe use by employees. A fixed ladder shall be designed to carry a designed minimum load under varying circumstances depending upon placement, length, method of fastening, and other requirements of the installation. Therefore, all parts and appurtenances necessary for a safe and efficient ladder shall necessarily be integral parts of that design. Utility poles and radio, television and transmission towers are excluded from this part.

History: 1954 ACS 69, p. 57, Eff. Nov. 15, 1971.

R 408.10305 Definitions; C to F.

Rule 305. (1) "Cage," "cage guard," or "basket guard" means an enclosure fastened to the side rails of a fixed ladder or to the structure to encircle the climbing space of the ladder for the safety of a climber.

(2) "Cleats" means ladder crosspieces of rectangular cross section placed on edge on which an employee may step.

(3) "Fastenings" means a device, including, but not limited to, a fixed, hinged, bearing or slide-type fastening, to attach a ladder to a structure, building, or equipment.

(4) "Fixed ladder" means a ladder permanently attached to a structure, building, or stationary equipment.

History: 1954 ACS 69, p. 57, Eff. Nov. 15, 1971.

R 408.10306 Definitions; G to L.

Rule 306. (1) "Grab bar" means a handhold placed adjacent to or as an extension above a ladder for the purpose of providing access beyond the limits of the ladder.

(2) "Individual rung ladder" means a fixed ladder having each rung individually attached to a structure, building, or equipment.

(3) "Ladder" means an appliance usually consisting of 2 side rails joined at regular intervals by crosspieces called steps, rungs, or cleats, on which a person may step.

(4) "Ladder height" means the distance from ground or floor level to the topmost landing or top of a ladder.

(5) "Ladder safety device" means a device, other than a cage or well, designed to eliminate or reduce the possibility of accidental falls.

History: 1954 ACS 69, p. 57, Eff. Nov. 15, 1971.

R 408.10307 Definitions; P to R.

Rule 307. (1) "Pitch" means the included angle between the horizontal and the ladder, measured on the opposite side of the ladder from the climbing side.

(2) "Railings" means any combination of railings defined in the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10201 to R 408.10239 of the Michigan Administrative Code.

(3) "Rail ladder" means a fixed ladder consisting of side rails joined at regular intervals by rungs or cleats and fastened in full length or in sections to a building, structure or equipment.

(4) "Rungs" means crosspieces of circular or oval cross section on which an employee may step.

History: 1954 ACS 69, p. 58, Eff. Nov. 15, 1971.

R 408.10308 Definitions; S to W.

Rule 308. (1) "Side-step ladder" means a ladder from which an employee getting off at the top needs to step sideways to reach the landing.

(2) "Steps" means the flat crosspieces of a ladder on which an employee may step.

(3) "Through ladder" means a ladder which an employee getting off at the top needs to step through to reach the landing.

(4) "Well" means a permanent complete enclosure around a fixed ladder to protect a climber. Proper clearance for a well will give the same protection as a cage.

History: 1954 ACS 69, p. 58, Eff. Nov. 15, 1971.

R 408.10321 Design.

Rule 321. A fixed ladder, its appurtenances and fastenings shall be designed to meet the following load requirements:

(a) The minimum design live load shall be a single concentrated load of 300 pounds. A ladder installed before the effective date of this part may have a minimum design load of 200 pounds.

(b) The number and position of additional concentrated live load units of 300 pounds each, or 200 pounds each if installed before the effective date of this part, as determined from anticipated usage of the ladder shall be considered in the design.

(c) The live loads shall be considered to be concentrated at that point or points causing the maximum stress in the structural member.

(d) The weight of the ladder and appurtenances together with the live load shall be considered in the design of rails and fastenings.

History: 1954 ACS 69, p. 58, Eff. Nov. 15, 1971.

R 408.10323 Rungs, cleats, and steps.

Rule 323. (1) The distance between rungs, cleats, and steps shall be not more than 12 inches from the top of 1 rung, cleat, or step to the top of the next rung, cleat, or step above, and shall be uniformly spaced throughout the length of the ladder.

(2) Rungs, cleats, and steps shall be free of splinters, sharp edges, burrs, or hazardous projections.

History: 1954 ACS 69, p. 58, Eff. Nov. 15, 1971.

R 408.10324 Rungs and cleats.

Rule 324. (1) The clear length of rungs and cleats shall be not less than 16 inches.

(2) The rungs of an individual rung ladder shall be so designed that an employee's foot cannot slide off the end. (See figure 1.)

(3) Metal rungs installed after November 15, 1971, shall have a diameter of not less than ¾ inch steel rod or material of equivalent strength, except as provided in subrule (1) of R 408.10341.

(4) Metal cleats shall be made of steel or material of equal strength and have a bearing surface of not less than ½ inch.

(5) Wood cleats and other wood components of a fixed ladder shall be as prescribed in the USAS standard, A14.1-1968, portable wood ladders, which is incorporated herein by reference. This standard is available for inspection at the Lansing office of the Michigan department of labor. The standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926, at a cost of $4.00 each.

R 408.10326 Fastenings.

Rule 326. Fastenings shall be as strong as the rails and shall be of sufficient length to allow a minimum distance, as required by R 408.10335, between a permanent structure and the rungs of a ladder. Fastenings shall be attached to the permanent structure either by being built into it or by through bolts, rivets, or expansion bolts grouted, leaded, or the equivalent.

History: 1954 ACS 69, p. 59, Eff. Nov. 15, 1971.

R 408.10328 Splices.

Rule 328. A splice shall meet the design requirements specified in R 408.10321. A splice or connection shall have a smooth transition with the original members and shall not have sharp or extensive projections.

History: 1954 ACS 69, p. 59, Eff. Nov. 15, 1971.

R 408.10331 Protection from deterioration.

Rule 331. (1) Dissimilar metals shall be protected from electrolytic action when they are joined.

(2) A metal ladder and appurtenances installed in a corrosive environment shall be coated or otherwise treated to resist corrosion.

(3) A wood ladder subject to deterioration shall be treated with a transparent preservative. Paint shall not be used as a preservative. The design and construction shall prevent or minimize the accumulation of water on or between wood parts.

History: 1954 ACS 69, p. 59, Eff. Nov. 15, 1971.

R 408.10333 Maintenance.

Rule 333. (1) A fixed ladder shall be inspected regularly with the intervals being determined by the use and exposure to deteriorating elements.

(2) Rungs, cleats, side rails, and other appurtenances shall be maintained to withstand the minimum loads established by this part.

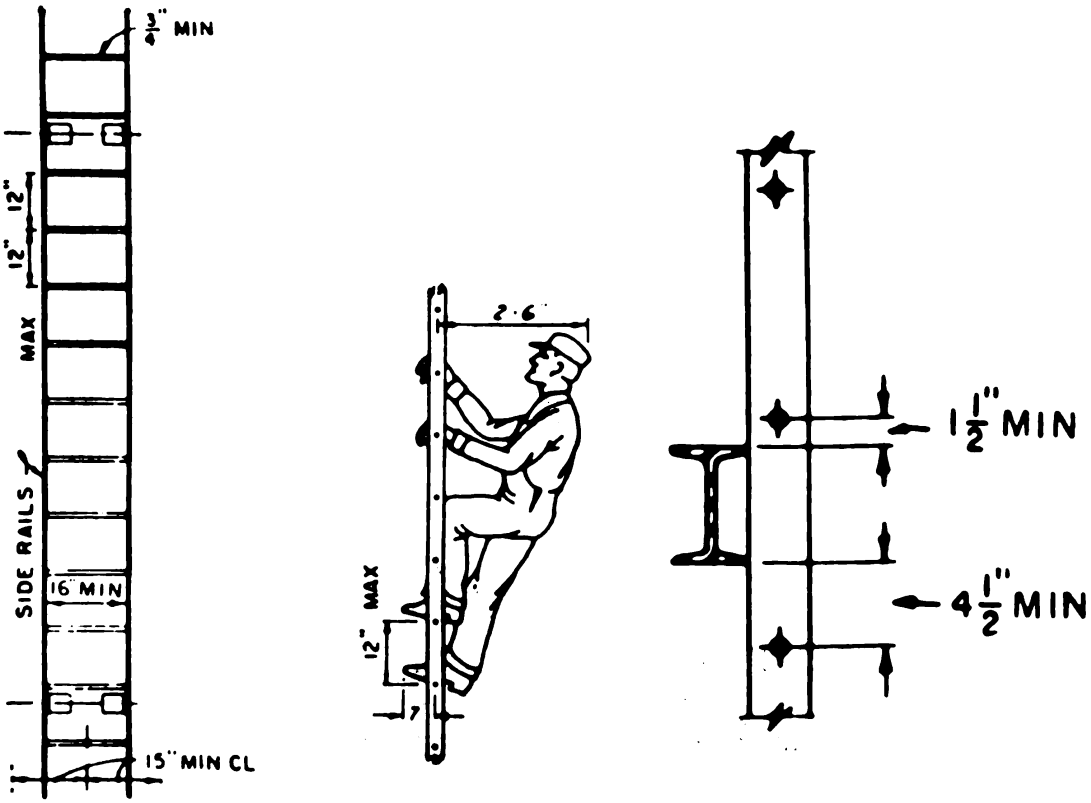
(3) A fixed ladder which does not meet the requirements of this part shall be repaired or removed from service.

History: 1954 ACS 69, p. 60, Eff. Nov. 15, 1971; 1954 ACS 79, p. 51, Eff. May 16, 1974.

R 408.10335 Clearance.

Rule 335. (1) The perpendicular distance from the center line of the rungs on the climbing side of a fixed ladder shall be not less than 36 inches for a pitch of 76 degrees, and not less than 30 inches for a pitch of 90 degrees to the nearest permanent object, except with respect to a cage or well installation. The minimum clearance for intermediate pitches between these 2 limits shall be in proportion to the slope. (See figure 2.)

(2) A clear width of not less than 15 inches shall be provided each way from the center line of the fixed ladder to the nearest permanent object, except with respect to a cage or well installation.



(3) The perpendicular distance from the center line of the rung on the back side of a fixed ladder to the nearest permanent object shall be not less than 7 inches, except that when an unavoidable object is encountered, the minimum clearances shown in figure 2 shall be followed.

(4) The distance from the center line of a grab bar to the nearest permanent object in back of the grab bar shall be not less than 4 inches. A grab bar shall not protrude on the climbing side.

(5) The step across distance from the nearest edge of a fixed ladder to equipment or a structure shall be not less than 2½ inches nor more than 12 inches. (See figure 3.)

(6) Where used, a counterweighted hatch cover shall open not less than 60 degrees from the horizontal. The distance from the center line of the rungs or cleats to the edge of the hatch opening on the climbing side shall be not less than 24 inches for offset walls or 30 inches for straight walls. Protruding potential hazards shall not be permitted within 24 inches of the center line of the rungs or cleats. Such hazards within 30 inches of the center line of the rungs or cleats shall be fitted with deflector plates placed at an angle of 60 degrees to the horizontal. (See figure 4.) The relationship of a fixed ladder to a counterweighted hatch cover shall be as prescribed in figure 5.

R 408.10341 Special rules for utility manhole fixed ladders.

Rule 341. (1) A utility manhole fixed ladder shall have:

(a) Rungs of not less than ¾ inch diameter steel rod or material capable of supporting 300 pounds with not less than 10-inch clear length. Rungs existing before the effective date of this part may be ⅝ inch diameter steel rod or material of equal strength capable of supporting 200 pounds.

(b) Rungs not less than 4 inches from the center of the rungs to the wall on the side opposite the climbing side. The rungs shall be embedded not less than 3 inches in the wall and aligned 1 above another.

(c) Rungs not less than 27 inches from the center of the rungs to the wall or projections on the climbing side.

(d) After November 15, 1971, rung configuration shall be so designed that an employee's foot cannot slide off the end. (See figure 1.)

(e) Spacing between rungs of not more than 16 inches on center and uniformly spaced throughout the entire length.

(2) A utility manhole with a conical shape shall not be provided with a fixed ladder. Access shall be by a portable ladder only.

History: 1954 ACS 69, p. 60, Eff. Nov. 15, 1971; 1954 ACS 79, p. 54, Eff. May 16, 1974.

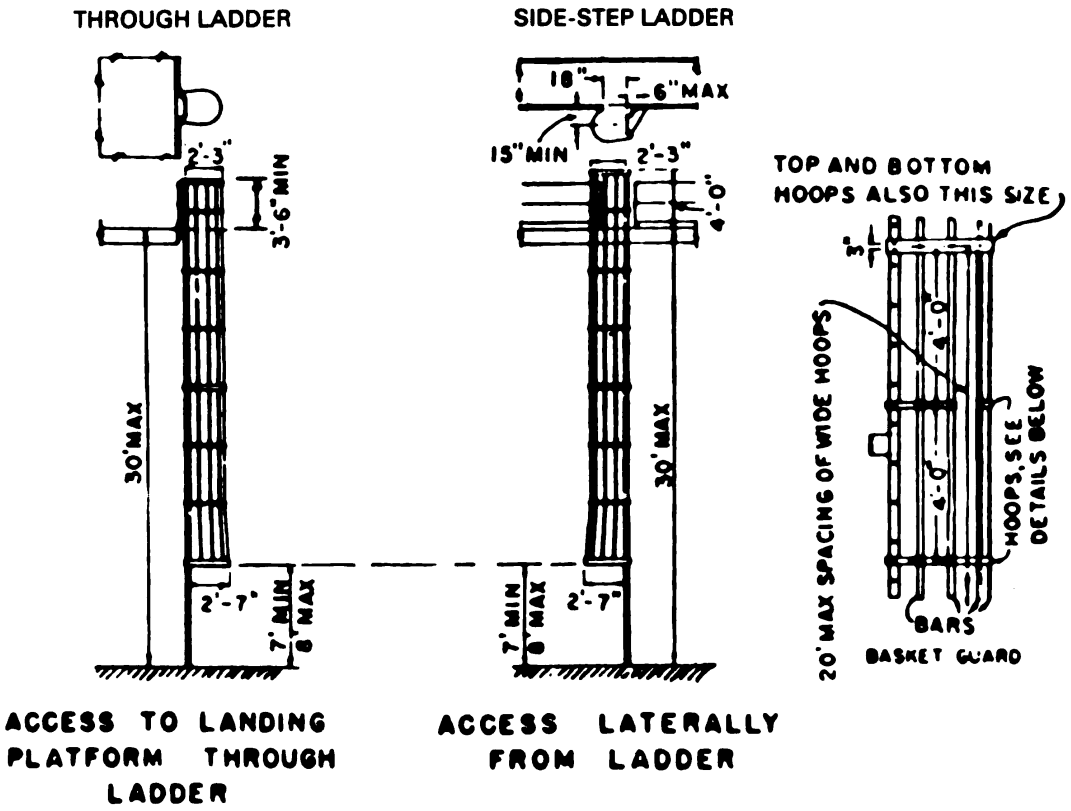
R 408.10351 Safety devices.

Rule 351. (1) A cage, well, or ladder safety device shall be provided on a ladder of more than 20 feet to an unbroken length of not more than 30 feet.

(2) A ladder safety device shall be used on a fixed ladder over 30 feet in unbroken length, or the ladder shall be removed from service by removing that portion of the ladder which is within 20 feet of the ground or floor, sealing the upper level from access to the ladder, prohibiting use of the ladder, and attaching a prominent, lettered durable sign on the bottom of the remaining ladder stating, "DANGER—Do Not Use This Ladder." The lettering shall remain legible. The ladder may be retained in service for employee emergency descent only by equipping the ladder with a cage as prescribed in R 408.10352, and having a prominent, lettered durable sign on the bottom of the ladder stating, "For Emergency Use Only." The lettering shall remain legible.

(3) A ladder safety device, such as one that incorporates a life belt, friction brake, or sliding attachment, shall meet the design requirements of the ladder it serves.

History: 1954 ACS 69, p. 60, Eff. Nov. 15, 1971; 1954 ACS 99, p. 107, Eff. Apr. 18, 1979.



R 408.10352 Cages.

Rule 352. (1) A cage shall extend not less than 42 inches above the top of a landing, unless other approved protection is provided. (See figure 6.)

(2) A cage shall extend down a ladder to a point not less than 7 feet nor more than 8 feet above the ground, floor or platform. The bottom shall be flared not less than 4 inches or the part of the cage opposite the ladder shall be carried to the base.

(3) A cage shall extend not less than 27 nor more than 28 inches from the center line of the rungs of a ladder. A cage shall be not less than 27 inches in width. The inside shall be clear of projections. Vertical bars shall be located at a spacing of not more than 40 degrees around the circumference of the cage, allowing a spacing of not more than approximately 9½ inches from center to center.

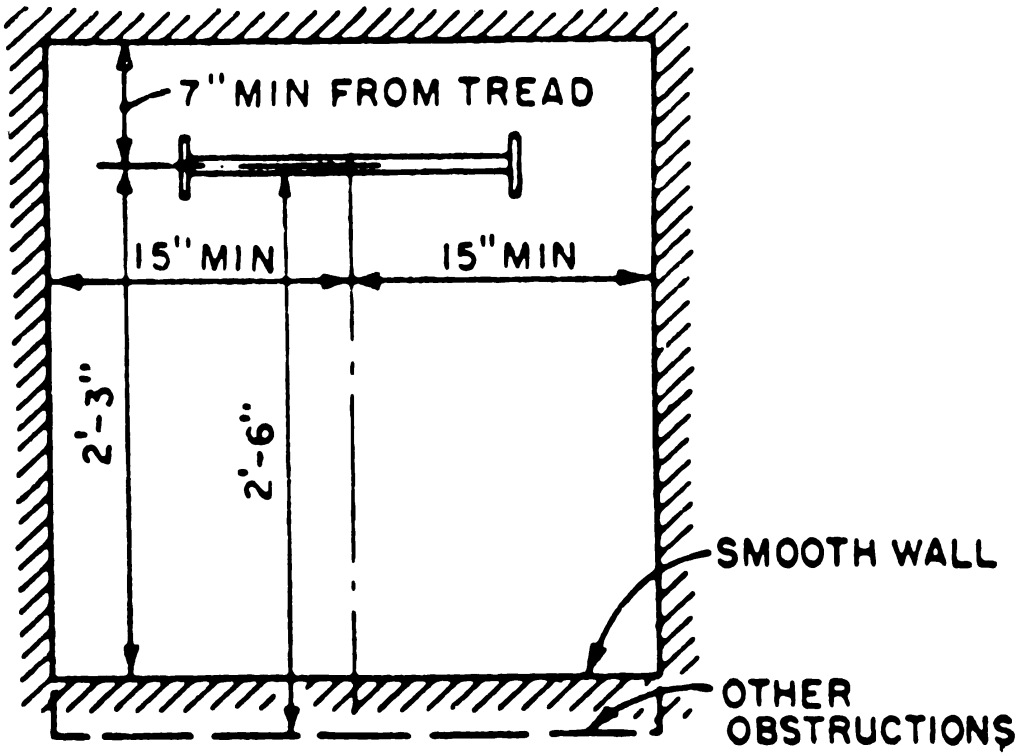
Cages—Special Applications

History: 1954 ACS 69, p. 61, Eff. Nov. 15, 1971; 1954 ACS 79, p. 54, Eff. May 16, 1974.



R 408.10353 Ladder wells.

Rule 353. A ladder well shall have a clear width of not less than 15 inches, measured each way from the center line of the ladder. On the climbing side of the ladder, not less than 30 inches of clearance shall be provided from the center line of the rungs to any obstruction, except not less than 27 inches from the center line of the rungs on the climbing side shall be provided for a smooth-walled well. (See figure 7.)

FIGURE 7

Clearance Diagram for Fixed Ladder in Well

History: 1954 ACS 69, p. 61, Eff. Nov. 15, 1971; 1954 ACS 79, p. 56, Eff. May 16, 1974; 1954 ACS 88, p. 91, Eff. Aug. 18, 1976.

R 408.10355 Landing platforms.

Rule 355. (1) A ladder used to ascend to a height of more than 20 feet, except on a chimney, without a ladder safety device shall have a landing platform for each 30 feet of height thereof; provided, however, that where a cage or well is not employed, a landing platform shall be provided for every 20 feet of height or fraction thereof. The requirements for a landing platform pursuant to this subrule and subrule (3) may be substituted by conformance with R 408.10351(2).

(2) A ladder section shall be offset from adjacent sections with a landing platform provided at each offset, except where the climbing space opening in the platform is closed with a hinged part of the platform.

(3) Where an employee has to step a distance more than 12 inches from the center line of the rung of a ladder to the nearest edge of a structure or equipment, a landing platform shall be provided. The step-across distance shall be not less than 2¼ inches.

(4) The side step from a fixed ladder to a platform shall be not less than 7 inches and not more than 12 inches measured from the side rail to the platform edge.

(5) The side rail of an adjacent ladder shall be offset not less than 5 inches from the edge of a platform.

(6) A landing platform shall be equipped with standard railings as specified in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10201 to R 408.10241 of the Michigan Administrative Code, and arranged to give safe access to the ladder. A platform shall be not less than 24 inches in width and not less than 30 inches in length.

(7) One rung of any section of a ladder shall be located at the level of the landing laterally served by the ladder. Where access to the landing is through the ladder, the same rung spacing that is used on the ladder shall be used from the landing platform to the first rung below the landing.

History: 1954 ACS 69, p. 61, Eff. Nov. 15, 1971; 1954 ACS 79, p. 57, Eff. May 16, 1974; 1954 ACS 99, p. 106, Eff. Apr. 18, 1979.

R 408.10357 Ladder extensions.

Rule 357. (1) The side rails of a through or side-step ladder extension shall extend 3½ feet above parapets and landings. On a through ladder extension, the rungs shall be omitted from the extension and shall have not less than 18 nor more than 24 inches clearance between rails. For side-step or offset fixed ladder sections, at landings, the side rails and rungs shall be carried to the next regular rung beyond or above the 3½ feet minimum. (See figure 8.)

(2) This rule does not apply to a fixed ladder at a hatch cover.

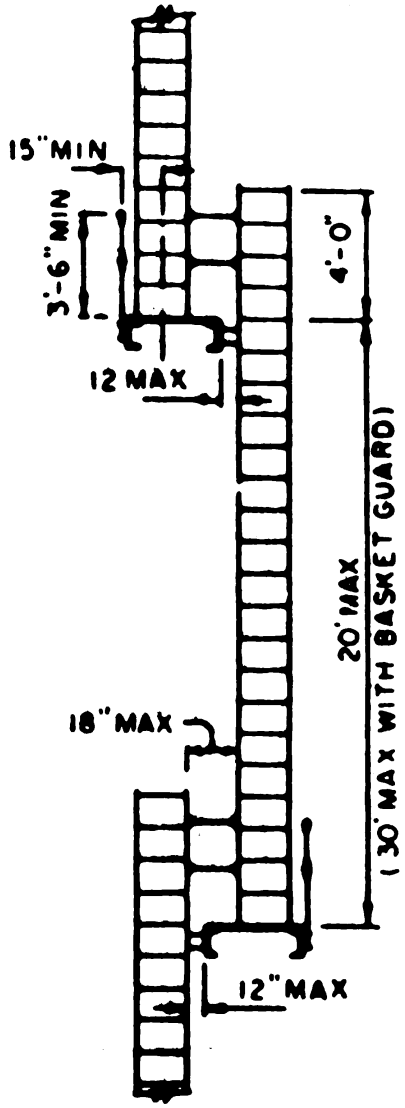

FIGURE 8

Offset Fixed Ladder Sections

History: 1954 ACS 69, p. 61, Eff. Nov. 15, 1971; 1954 ACS 79, p. 57, Eff. May 16, 1974.

R 408.10361 Grab bars.

Rule 361. Grab bars shall be spaced by a continuation of the rung spacing when they are placed horizontally. Vertical grab bars shall have the same spacing as the ladder side rails. Grab bar diameters shall be the equivalent of the round rung diameters. This rule does not apply to a fixed ladder covered with a manhole cover to allow for traffic.

History: 1954 ACS 69, p. 61, Eff. Nov. 15, 1971.

R 408.10365 Pitch.

Rule 365. (1) The preferred pitch of a fixed ladder shall be between 75 degrees and 90 degrees with the horizontal. (See figure 9.) However, a ladder with a pitch of less than 75 degrees shall have steps and raised hand rails, as specified in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10201 to R 408.10239 of the Michigan Administrative Code.

(2) A fixed ladder is substandard if it is installed within the substandard pitch range of 60 and 75 degrees with the horizontal. A substandard fixed ladder is permitted only where necessary to meet conditions of installation. (See figure 9.) This substandard pitch range shall be avoided, if possible.

(3) A ladder shall not have a pitch of more than 90 degrees with the horizontal.

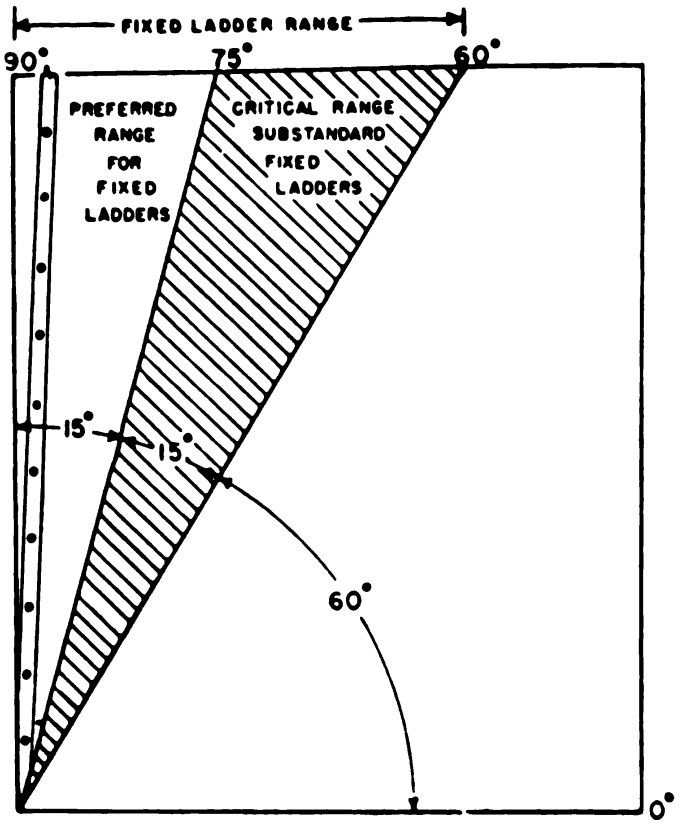

FIGURE 9

Pitch of Fixed Ladders

PART 4. PORTABLE LADDERS

GENERAL PROVISIONS

R 408.10401 Scope.

Rule 401. This part establishes minimum requirements for the construction, care and use of portable ladders used in, around or about places of employment.

History: 1954 ACS 66, p. 18, Eff. Jan. 15, 1971.

R 408.10403 Definitions; A to D.

Rule 403. (1) "Act" means Act No. 282 of the Public Acts of 1967, being §§408.851 to 408.868 of the Michigan Compiled Laws.

(2) "Brand" means marking by burning with a hot iron.

(3) "Check" means a lengthwise separation of wood less than 6 inches in length and ½ inch deep, most of which occurs across the rings of annual growth.

(4) "Cleats" means a ladder's crosspieces of rectangular cross section placed on edge on which a person may step to ascend or descend.

(5) "Crack" means a separation of wood cells across the grain line.

(6) "Decay or rot" means the disintegration of wood substance due to action of wood destroying fungi.

History: 1954 ACS 66, p. 18, Eff. Jan. 15, 1971; 1954 ACS 73, p. 33, Eff. Nov. 10, 1972.

R 408.10404 Definitions; E.

Rule 404. (1) "Extension ladder" means a non-self-supporting portable ladder adjustable in length. It consists of 2 or more sections traveling in guides or brackets so arranged as to permit adjustment of the ladder's length. Its size is designated by the sum of the lengths of the sections measured along the side rails.

(2) "Extension trestle ladder" means a self-supporting portable ladder, adjustable in length, consisting of a trestle ladder base and a vertically adjustable single ladder, with suitable means for locking the ladders together. The size is designated by the length of the rail of the trestle ladder base.

History: 1954 ACS 66, p. 18, Eff. Jan. 15, 1971; 1954 ACS 79, p. 59, Eff. Mar. 20, 1974.

R 408.10406 Definitions; L to R.

Rule 406. (1) "Ladder" means an appliance which usually consists of 2 side rails joined at regular intervals by crosspieces called steps, rungs, or cleats on which a person may step to ascend or descend.

(2) "Ladder stand" means a mobile, fixed size, self-supporting ladder consisting of flat treads in the form of stairs and may include handrails.

(3) "Pitch" means the included angle between the horizontal and the ladder, measured on the opposite side of the ladder from the climbing side.

(4) "Platform ladder" means a self-supporting type of step ladder of fixed size with a platform provided at the working level. The size is determined by the distance along the front rail from the platform to the base of the ladder.

(5) "Portable ladder" means a ladder not permanently fixed in place and which may be used at various locations.

(6) "Rungs" means a ladder's crosspieces of circular or oval cross section on which a person may step to ascend or descend.

History: 1954 ACS 66, p. 19, Eff. Jan. 15, 1971; 1954 ACS 79, p. 59, Eff. Mar. 20, 1974.

R 408.10407 Definitions; S.

Rule 407. (1) "Safety feet" means a safety device placed on the foot of the side rails of straight, sectional or extension ladders to reduce the likelihood of the base

slipping. Safety feet may be flat pads covered with a non-slip material, pointed metal projections or spur wheels.

(2) "Sectional ladder" means a non-self-supporting portable ladder, consisting of 2 or more sections so constructed that the sections, when combined by interlocking, will function as a single ladder. Its size is designated by the overall length of the assembled sections. It is not adjustable.

(3) "Single ladder" means a non-self-supporting portable ladder, non-adjustable in length, consisting of only 1 section. Its size is designated by the overall length of the side rail.

(4) "Special-purpose ladder" means a portable ladder which represents either a modification or a combination of design or construction features in 1 of the general-purpose types of ladders.

(5) "Split" means a lengthwise separation or lateral fault along the grain line; a tearing apart of the wood cells from 1 surface to the opposite or adjoining surface.

(6) "Step ladder" means a self-supporting portable ladder, non-adjustable in length, having flat steps and a hinged back. Its size is measured along the front edge of the side rails.

(7) "Steps" means the flat crosspieces of a ladder on which a person may step to ascend or descend.

History: 1954 ACS 66, p. 19, Eff. Jan. 15, 1971; 1954 ACS 79, p. 60, Eff. Mar. 20, 1974.

R 408.10408 Definitions; T to W.

Rule 408. (1) "Trestle ladder" means a self-supporting portable ladder, non-adjustable in length, consisting of 2 sections hinged at the top to form equal angles with the base. The size is designated by the length of the side rails measured along the front edge.

(2) "Worn" means the reduction of a dimension of a wood or nonwood part by more than 10% of its original size.

History: 1954 ACS 66, p. 19, Eff. Jan. 15, 1971.

R 408.10411 Rescinded.

History: 1954 ACS 66, p. 19, Eff. Jan. 15, 1971; rescinded 1954 ACS 88, p. 92, Eff. Aug. 18, 1976.

R 408.10413 Brand on wood ladder; mark or tag on nonwood ladder.

Rule 413. (1) A wood ladder purchased for use in, around, or about a place of employment shall bear a brand to show the manufacturer's name, or an appropriate abbreviation thereof, or private label, the last 2 numbers of the year manufactured, ladder grade, and certification of compliance with United States American standards, standard A14.1-1975, portable wood ladders, which is incorporated herein by reference. This standard is available for inspection at the Lansing office of the department of labor, and the standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $5.00 each. The required information may be stamped into a guide iron on an extension ladder or the metal support of a step ladder cap. Each section of an extension or trestle ladder shall bear the required information.

(2) A nonwood ladder purchased for use in, around, or about a place of employment shall bear a permanent mark or a permanently attached tag, giving the manufacturer's name or private label and the last 2 numbers of the year manufactured, ladder grade, and certification of compliance with American standard association standard, A14.2-1972, portable metal ladders, which is

incorporated herein by reference. This standard is available for inspection at the Lansing office of the department of labor and may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $4.25 each.

(3) A portable rung ladder provided and used by a life support organization, such as a fire or police department, is not subject to R 408.10413(1) and (2), R 408.10427, R 408.10441(1), R 408.10445(4), (5), and (7), and R 408.10447(3), if the ladder specifications exceed the requirements of USAS-A14.1-1968 or ASAS-A14.2-1956.

(4) A ladder purchased prior to January 15, 1972, may be used without the marking required in subrules (1) and (2), but shall conform to ANSI A14.1-1975 or A14.2-1972.

History: 1954 ACS 66, p. 20, Eff. Jan. 15, 1971; 1954 ACS 73, p. 34, Eff. Nov. 10, 1972; 1954 ACS 88, p. 92, Eff. Aug. 18, 1976.

WOOD LADDERS

R 408.10421 Portable wood ladders; metal and wood parts.

Rule 421. (1) The strength of metal parts and fittings of a portable wood ladder shall not be less than the design requirements of the ladder to which they are affixed.

(2) Wood parts shall meet United States American standards, standard A14.1-1968 when repairs are made. This standard is available as noted in R 408.10413(1).

History: 1954 ACS 66, p. 20, Eff. Jan. 15, 1971.

R 408.10422 Portable wood step ladders.

Rule 422. A step ladder shall be only of a type as follows:

(a) Type I—which shall be an industrial step ladder, 3 to 20 feet in length and manufactured for heavy duty, such as used by utilities, contractors, and industries.

(b) Type II—commercial step ladder, 3 to 10 feet for medium duty, such as used by painters, offices, and light industries.

History: 1954 ACS 66, p. 20, Eff. Jan. 15, 1971; 1954 ACS 73, p. 34, Eff. Nov. 10, 1972; 1954 ACS 79, p. 60, Eff. Mar. 20, 1974.

R 408.10423, R 408.10424 Rescinded.

History: 1954 ACS 66, p. 20, Eff. Jan. 15, 1971; rescinded 1954 ACS 73, p. 33, Eff. Nov. 10, 1972.

R 408.10426 Portable rung ladders.

Rule 426. (1) A portable rung ladder shall be of a type as follows:

(a) Single ladder.

(b) Section extension ladder.

(c) Sectional ladder.

(d) Trestle or extension trestle ladder.

(2) A portable rung ladder, except a trestle or extension trestle ladder, shall be equipped with safety feet which decrease slipping.

(3) Hooks or grips which are attached near the top of a portable rung ladder for added security shall be securely fastened to the side rails, and shall be of such dimensions as to withstand the loads imposed upon them.

History: 1954 ACS 66, p. 21, Eff. Jan. 15, 1971; 1954 ACS 73, p. 34, Eff. Nov. 10, 1972.

R 408.10427 Portable rung ladder lengths.

Rule 427. A portable rung ladder which is of greater length than given in table 3 shall not be used.

TABLE 3
Portable Rung Ladder Lengths

Type of Ladder	Maximum Length
Single ladder	22 feet
Two section extension ladder	40 feet
Three section extension ladder	60 feet
Assembled sectional ladder	21 feet
Trestle ladder or extension sections or base sections of an extension trestle ladder	18 feet

History: 1954 ACS 66, p. 21, Eff. Jan. 15, 1971.

R 408.10428 Portable rung extension ladders.

Rule 428. (1) A portable rung extension ladder shall consist of 1 section which shall fit within the side rails of another section and arranged in such a manner that the upper sections may be raised or lowered.

(2) The minimum overlap of adjacent sections of a 2 or 3 section portable rung extension ladder shall be as follows:

Size of ladder in feet for all sections	Overlap of each section in feet
Up to and including 32	3
Over 32 up to and including 48	4
Over 48 up to and including 60	5

(3) Locks and guide irons on portable rung extension ladders shall be of metal. Locks shall be positive in their action. At least 2 guides shall be used on each side rail where sections are lapped and so placed to prevent the upper section or sections from tipping or falling out while being raised, lowered or used.

(4) A portable rung extension ladder shall have positive means which insure the overlap as specified in subrule (2).

(5) A portable rung extension ladder may be equipped with a rope and pulley which shall be securely attached to the ladder in a manner which does not weaken the rungs or the side rails. The pulley shall be not less than 1¼ inches in diameter and the rope used with the pulley shall not be less than 5/16 inch in diameter, shall have a breaking strength of not less than 560 pounds and shall be of sufficient length for the purpose intended.

History: 1954 ACS 66, p. 22, Eff. Jan. 15, 1971; 1954 ACS 73, p. 34, Eff. Nov. 10, 1972.

R 408.10431 Special purpose ladders.

Rule 431. (1) A special-purpose ladder shall comply with the requirements of R 408.10422 to R 408.10428, except as modified by this rule.

(2) A platform step ladder shall be constructed in accordance with the requirements for a type I step ladder or a type II step ladder. A platform of a platform ladder shall be capable of supporting a load of 200 pounds placed at any point on the platform.

(3) A type II step ladder which is used for painting may have its top omitted.

History: 1954 ACS 66, p. 22, Eff. Jan. 15, 1971; 1954 ACS 73, p. 34, Eff. Nov. 10, 1972.

R 408.10432 Cleat ladders.

Rule 432. (1) A cleat ladder which is longer than 22 feet shall not be used.

(2) Wood in a cleat ladder shall be straight grained and knot free.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(3) Wood side rails of a cleat ladder shall not be less than 2 x 4 inches nominal. Wood cleats of a cleat ladder may not be less than 1 x 4 inches nominal.

(4) The distance between the side rails of a cleat ladder shall be at least 14½ inches, but not more than 16½ inches.

(5) Wooden cleats shall be inset into the 2 side rails of a cleat ladder not less than ½ inch or attached directly to the edge of the side rails if filler blocks the thickness of the cleats are securely attached to the edge of the rail for the entire length between the cleats. The cleats shall be fastened to each rail by at least 3 size 10-d wire nails.

History: 1954 ACS 66, p. 22, Eff. Jan. 15, 1971; 1954 ACS 79, p. 60, Eff. Mar. 20, 1974.

R 408.10433 Ladder stands.

Rule 433. (1) A ladder stand shall be capable of sustaining the specified load.

(2) The load, which shall be calculated on the basis of 1 or more 200-pound employees, together with 50 pounds of equipment each, shall be applied uniformly to a 3½ inch wide area, front to back, at the center of the width span, with a safety factor of 4.

(3) The maximum height at the working level shall be not more than 4 times the minimum base dimension. A ladder stand which does not meet this requirement shall be provided outrigger frames to achieve this least base dimension.

(4) The step width shall be not less than 16 inches and the steps shall have a slip resistant surface.

(5) Not less than 2 of the 4 casters of a ladder stand shall be the swivel type, and the caster shall be provided with positive wheel lock, swivel lock, or both, to prevent movement.

(6) Steps shall be uniformly spaced and sloped, with a rise of not less than 9 inches, nor more than 10 inches, and a depth of not less than 7 inches. The slope of the steps section shall be a minimum of 55 degrees and a maximum of 60 degrees, measured from the horizontal.

(7) Handrails shall be a minimum of 29 inches high. Measurements shall be taken vertically from the center of the step. Units having more than 5 steps, or 60 inches vertical height to the top step, shall be equipped with handrails.

History: 1954 ACS 79, p. 60, Eff. Mar. 20, 1974; 1954 ACS 88, p. 92, Eff. Aug. 18, 1976.

R 408.10441 Handling, storage, and transportation.

Rule 441. (1) A ladder shall be handled with reasonable care and not subjected to deliberate dropping or to misuse. A ladder shall not be used as a plank or skid.

(2) A ladder should be stored in such a manner as to provide ease of access and inspection. A ladder stored in a horizontal position should be supported at a sufficient number of points to avoid sagging and permanent set.

(3) A ladder shall not be stored within 6 feet of a radiator, stove, steampipe, or in a location which is subjected to excessive heat or dampness.

(4) A ladder which is carried on a vehicle:

(a) Should be adequately supported to prevent sagging.

(b) Should be securely fastened in a position to minimize chafing and the effects of road shocks.

(c) Shall be fastened to prevent it from catapulting forward in the event of a sudden stop.

History: 1954 ACS 66, p. 22, Eff. Jan. 15, 1971; 1954 ACS 88, p. 93, Eff. Aug. 18, 1976.

R 408.10442 Maintenance.

Rule 442. (1) A ladder shall not be painted with an opaque material. A ladder, particularly one used out-of-doors, should be coated with a suitable transparent protective material to retard splintering caused by weathering.

(2) The side rails and legs of a ladder shall be kept free from splinters. The joint between the side rail and step shall be kept tight and metal hardware and fittings secured.

(3) A ladder including its safety feet shall be kept free of oil, grease, mud, or any similar slippery substances.

(4) The locks, pulleys, spreader joints, or other movable metal parts of a ladder shall operate freely without undue play. Lubricants shall be applied as needed.

(5) A rope used on a ladder shall not have a long or loosely twisted lay, shall be free of burns and cuts, and shall not show evidence of weakness resulting from fraying, wear, mildew, or rot. Rope ends shall be fastened or whipped.

History: 1954 ACS 66, p. 22, Eff. Jan. 15, 1971; 1954 ACS 79, p. 60, Eff. Mar. 20, 1974.

R 408.10443 Inspection; repair or replacement.

Rule 443. (1) A ladder shall be inspected before its use and after it has fallen or been involved in an accident to determine its condition. A ladder shall be repaired or replaced if it shows:

(a) Splits in its side rails through to opposite surfaces in excess of 3 inches at the rungs or 6 inches along the rails. Splits singly or in combination along the same grain line shall not exceed 6 inches in any 1 foot. Splits through to the opposite broad faces exceeding 6 inches but not more than 1½ feet in length in single or combined lengths may be closed with a ⅜ inch diameter wagon box-head rivet centrally located in the narrow face of the rail. Where the split runs through rung holes, the rivets shall be placed approximately 2 inches from the center of each rung so affected. This subdivision does not refer to checks in a ladder.

(b) Gouges, dents or other damage that may be dressed smooth if the rail is not reduced by more than 10% of the thickness or depth. Damage to corner edges, including splits, may be dressed to a smooth bevel, if the cross section is not reduced by more than 10% of its original area.

(c) Worn, crushed, cracked, split, splintered or missing rungs, steps, tops or platforms.

(d) Longitudinal play of ¾ inch in the rails due to looseness of rungs or steps.

(e) Broken or bent guide irons, spreaders or locks.

(2) A ladder with a defect, described in subrule (1), shall be tagged "Dangerous. Do Not Use" and it shall be removed from service for repair or destruction. Improvised repairs shall not be made.

History: 1954 ACS 66, p. 22, Eff. Jan. 15, 1971; 1954 ACS 73, p. 34, Eff. Nov. 10, 1972; 1954 ACS 79, p. 60, Eff. Mar. 20, 1974.

R 408.10445 Use of ladders.

Rule 445. (1) A ladder shall not be placed in front of a door which opens toward the ladder unless the door is blocked open, locked, guarded by a person, or protected by a barricade.

(2) A ladder shall not be placed on a box, barrel, or other unstable base.

(3) A climber shall face the ladder when ascending or descending.

(4) A ladder shall not be used as a brace, skid, guy, gin pole, gang way, or for any other use than that for which it is intended.

(5) A person on a single or sectional ladder shall not overreach or do any pushing or pulling that may cause the ladder to move or topple. If both shoulders are outside the side rail, the user is overreaching.

(6) The user shall not stand astride a ladder and another object.

(7) A single or sectional ladder manufactured pursuant to these rules shall not be used by more than 1 person at a time.

History: 1954 ACS 66, p. 23, Eff. Jan. 15, 1971.

R 408.10446 Use of step ladders.

Rule 446. (1) A step ladder which is being used shall be opened fully and its spreaders locked.

(2) Each leg of a step ladder shall be in contact with solid footing. A board or plank may be used to secure footing on uneven ground.

(3) If a step ladder does not have a guard rail, the top step and cap shall not be used to work from or to climb on.

(4) A folded step ladder shall not be used as a straight ladder by leaning it against a wall or other support.

(5) When carrying objects up ladders, 1 hand should be kept free to maintain balance and security.

(6) The bracing on the back legs of a step ladder shall not be used for climbing.

History: 1954 ACS 66, p. 23, Eff. Jan. 15, 1971; 1954 ACS 73, p. 35, Eff. Nov. 10, 1972; 1954 ACS 79, p. 61, Eff. Mar. 20, 1974.

R 408.10447 Use of straight and extension ladders.

Rule 447. (1) A straight or extension ladder shall be so placed that the side rails have a secure footing. Where the surface is uneven, boards, planks, or leveling jacks may be used to create an even surface. A straight or extension ladder shall have safety feet. The ladder shall be so placed as to prevent slipping, or it shall be lashed or held in position.

(2) A portable, non-self-supporting ladder should be erected at a pitch of 75½ degrees for maximum balance and strength. This may be accomplished by placing the base out from the wall or other support ¼ of the working length of the ladder.

(3) Ladders shall not be tied or fastened together to provide longer sections other than with the hardware provided by the manufacturer.

(4) A person using a straight or extension ladder shall not stand on the top 2 rungs or within 3 feet from the top of the ladder.

(5) If the top of the ladder is secured to an object, the user may secure himself to the ladder by placing 1 leg over the second rung above the rung on which he is standing.

(6) When using a ladder to go from 1 landing to another, the ladder shall extend above the upper landing by at least 3 feet.

(7) The top rest for a straight or extension ladder shall be reasonably rigid, and shall have ample strength to support the applied load.

History: 1954 ACS 66, p. 23, Eff. Jan. 15, 1971; 1954 ACS 79, p. 61, Eff. Mar. 20, 1974; 1954 ACS 88, p. 93, Eff. Aug. 18, 1976.

NONWOOD LADDERS

R 408.10451 Construction.

Rule 451. (1) The design and construction of a portable nonwood ladder shall be such as to produce a ladder without structural defects or accident hazards such as sharp edges or burrs.

(2) Rung or step connections to the side rail of a portable nonwood ladder should be so constructed as to insure rigidity and strength.

(3) Rungs or steps of portable nonwood ladders shall be corrugated, knurled, dimpled, coated with skid-resistant material, or otherwise treated to minimize the possibility of slipping.

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(4) Hardware shall meet the strength requirements of the ladder's component parts, and shall be of a material that is protected against corrosion. Metals shall be so selected as to avoid excessive galvanic action.

History: 1954 ACS 66, p. 24, Eff. Jan. 15, 1971.

R 408.10452 Specifications.

Rule 452. (1) A nonwood straight or extension ladder shall comply with R 408.10426 to R 408.10428, except a nonwood portable extension ladder with an interlocking rail section, such as a channel, shall have not less than a single guide iron on each rail.

(2) To be classified as a standard length ladder, the measured length shall be within plus or minus ⅛ inch of the specified length. A nonwood step ladder which exceeds 16 feet in length shall not be used. The bottom of each rail of a nonwood step ladder shall have non-slip material.

(3) A nonwood trestle ladder or extension sections or base section of a nonwood extension trestle ladder shall comply with R 408.10427.

(4) The length of a nonwood platform ladder shall not exceed 16 feet.

(5) A nonwood platform ladder shall comply with R 408.10422.

History: 1954 ACS 66, p. 23, Eff. Jan. 15, 1971; 1954 ACS 73, p. 35, Eff. Nov. 10, 1972.

R 408.10454 Nonwood ladder care and maintenance.

Rule 454. (1) A nonwood ladder shall be maintained pursuant to R 408.10441 and R 408.10442(3), (4), and (5).

(2) A nonwood ladder shall be inspected before being used and after it has fallen or been involved in an accident to determine its condition.

(3) A nonwood ladder shall be repaired or replaced if it shows cracked, bent, or twisted side rails or legs; rungs where opposite surfaces are bent or deformed; loose or broken rivets and bolts, or other fasteners; broken or bent spreaders, guides, or locks.

History: 1954 ACS 66, p. 24, Eff. Jan. 15, 1971.

R 408.10456 Use of nonwood ladders.

Rule 456. (1) A metal ladder, except a ladder provided and used by a life support organization such as a fire department, shall not be furnished or used near an exposed or open electrical source.

(2) A nonwood ladder shall be used pursuant to R 408.10445 to R 408.10447.

(3) When in use, a nonwood, non-self-supporting ladder shall be placed so that the 2 side rails are supported, unless equipped with a single attachment capable of supporting the imposed load.

History: 1954 ACS 66, p. 24, Eff. Jan. 15, 1971; 1954 ACS 79, p. 61, Eff. Mar. 20, 1974.

PART 5. SCAFFOLDING

GENERAL PROVISIONS

R 408.10501 Scope.

Rule 501. This part applies to scaffolds and the use of material and equipment in conjunction with scaffolding, including a mobile elevating platform and a powered platform in, around, or about places of employment, but excluding a self-propelled vehicle mounted elevating platform.

History: 1954 ACS 81, p. 48, Eff. Nov. 19, 1974.

R 408.10502 Applicability.

Rule 502. (1) A powered platform using a power source other than electricity shall follow all the rules of the standard except for power source. Other methods of power for hoisting shall provide equivalent safety for the user.

(2) Those scaffolds not covered by this part shall furnish equivalent or greater safety for the employee as provided by these rules.

History: 1954 ACS 81, p. 48, Eff. Nov. 19, 1974.

R 408.10503 Definitions; B, C.

Rule 503. (1) "Bearer," sometimes called a "putlog," means a bearing cross member that supports the floor of a scaffold.

(2) "Boatswain's chair" means a seat supported by slings attached to a suspended rope.

(3) "Bricklayer's square scaffold" means a scaffold composed of framed wood squares which support a platform.

(4) "Carpenter's bracket scaffold" means a scaffold, triangular in shape, made of wood or metal brackets secured to a structure to hold a platform.

(5) "Coupler" means a device made of drop forged steel, malleable iron, structural grade aluminum or material of equivalent strength and used to lock or join component parts of a tubular scaffold.

(6) "Crawling board" means a plank with cleats spaced and secured at equal intervals for use on roofs, but not designed to hold or carry material.

History: 1954 ACS 81, p. 49, Eff. Nov. 19, 1974.

R 408.10504 Definitions; F to L.

Rule 504. (1) "Fall prevention device" means a mechanism attached to a lifeline which will stop uncontrolled descent if an employee falls from an elevated position.

(2) "Heavy duty scaffold" means a scaffold designed and constructed to carry a uniformly distributed load of 75 pounds per square foot.

(3) "Horse scaffold" means a scaffold in which the platform or floor is supported by saw horses.

(4) "Independent pole scaffold" means a scaffold having a platform supported by ledgers attached at both ends to solid uprights independent of other support.

(5) "Interior hung scaffold" means a scaffold suspended inside a building from the ceiling or roof structure.

(6) "Ladder jack scaffold" means a platform supported by metal brackets attached to the rungs or rails of a ladder.

(7) "Ledger" means a horizontal support extending from post to post at right angles to the bearer and supports the bearer.

(8) "Light duty scaffold" means a scaffold designed and constructed to carry a uniformly distributed load of 25 pounds per square foot.

History: 1954 ACS 81, p. 49, Eff. Nov. 19, 1974.

R 408.10505 Definitions; M to O.

Rule 505. (1) "Maximum intended load" means the total weight of the employees, materials, equipment, and scaffold.

(2) "Medium duty scaffold" means a scaffold designed and constructed to carry a uniformly distributed load of 50 pounds per square foot.

(3) "Mobile elevating platform" means a type of freestanding scaffolding which can be manually moved horizontally from 1 area to another and raised or lowered manually or with power to predetermined heights.

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(4) "Mobile scaffold" means a tube and coupler or welded frame type scaffold mounted on castors or wheels.

(5) "Needle beam scaffold" means a platform which rests on 2 beams which are supported at the end by ropes.

(6) "Nominal" means dressed sizes of lumber.

(7) "Outrigger scaffold" means a scaffold supported by beams extending from a building and fastened to the framework or floor inside a building.

History: 1954 ACS 81, p. 49, Eff. Nov. 19, 1974.

R 408.10506 Definitions; P to R.

Rule 506. (1) "Pick" means a scaffold platform which is manufactured, assembled and sold as a ready to use item.

(2) "Pinch point" means a point at which it is possible to be caught between the moving parts of a machine, or between moving and stationary parts of a machine.

(3) "Plank" means a piece of lumber, as prescribed in R 408.10512, which is sold by a lumber dealer and has no stringers or cross braces when purchased.

(4) "Powered hoisting machine" means a mechanical, electrical, hydraulic or pneumatically operated device used to raise or lower a swing or suspension scaffold or a mobile elevating platform.

(5) "Powered platform" means scaffolding equipment consisting of a permanently installed, power operated working platform and a roof car or other suspension means.

(6) "Roof bracket" means a bracket used on a slope roof to support a plank, having provisions for fastening to the roof or securing by ropes over the ridge to a fixed object.

(7) "Roof car" means a structure for the suspension of a working platform which provides for the platform's horizontal movement to work positions.

History: 1954 ACS 81, p. 49, Eff. Nov. 19, 1974.

R 408.10507 Definitions; S.

Rule 507. (1) "Safety factor" means a ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(2) "Scaffold" means an elevated work platform for supporting both men and materials which is temporary in nature.

(3) "Scaffold ladder" means a type of ladder attached to scaffolding for access to the platform.

(4) "Single pole scaffold" means a scaffold having a platform supported by ledgers attached to a row of solid uprights at 1 end and a wall or building at the other end.

(5) "Suspension scaffold" means a platform supported by bearers with each bearer supported at 2 or more points by wire rope from thrustouts so arranged and operated to permit raising and lowering of the platform.

(6) "Swing scaffold" means a platform supported by hangers at not more than 2 points and suspended from overhead supports to permit raising and lowering of the platform.

History: 1954 ACS 81, p. 50, Eff. Nov. 19, 1974.

R 408.10508 Definitions; T to W.

Rule 508. (1) "Thrustout," sometimes called an "outrigger," means a beam extending out from a building to support a scaffolding platform.

(2) "Tube and coupler type scaffold" means an assembly of tubing serving as posts, bearers, ledgers, braces, and special couplers which serve to connect the various parts.

(3) "Welded frame type scaffold" means a sectional or frame scaffold built up of prefabricated welded sections consisting of posts and intermediate members connected by braces.

(4) "Window jack scaffold" means a platform extending through a window opening secured to the structure and supported by braces.

(5) "Wire rope scaffold" means a scaffold consisting of 2 lengths of wire rope strung between building structural members upon which a plank with standard barrier is supported for special usage in servicing unlimited areas where use of conventional scaffold is not practical.

(6) "Working load" means total weight of employees, materials, and equipment.

(7) "Working platform" means a suspended structure used for vertical travel and either may be powered from a roof car or have its own raising and lowering powered mechanism.

History: 1954 ACS 81, p. 50, Eff. Nov. 19, 1974.

R 408.10511 General requirements.

Rule 511. (1) Except where a ladder as prescribed in Part 4. Portable Ladders, being R 408.10401 to R 408.10456 of the Michigan Administrative Code, or a self-propelled vehicle mounted elevating platform is furnished, an employee engaged in work that cannot be done safely from the ground or from solid construction shall be provided a scaffold from which to work or shall wear a safety harness and lifeline.

(2) A scaffold, part, or material used in scaffolding shall not be furnished or used if it has a defect which would create a hazard to an employee. A scaffold damaged or weakened from any cause shall be repaired before use.

(3) A scaffold shall not be loaded to more than the designed working load.

(4) Materials being hoisted to a scaffold shall have a tag line when necessary to control the load.

(5) Tools, materials, and debris shall not be permitted to accumulate in a quantity to cause a hazard.

(6) Precautions shall be taken to protect scaffold members, including suspension ropes, when using a heat producing process.

(7) A lifeline and safety belt of approved design shall be worn where an employee is required to crawl out on a thrustout or projecting beam.

(8) An employee shall not be permitted to work on a scaffold outdoors during a storm or high wind, or on a scaffold covered with ice or snow, except when performing emergency service. When performing emergency service, safeguards such as, but not limited to, lanyards and safety belts shall be provided by the employer and used by the employee.

(9) Scaffolding endangered by a truck or other moving equipment shall be protected by a warning device or barrier, or both.

(10) A scaffold shall not be altered or moved horizontally while it is in use or is being occupied, unless the scaffold is specifically designed for occupied horizontal travel.

(11) Fiber rope used for or near any work involving the use of corrosive substances or chemicals shall be treated or protected against deterioration.

History: 1954 ACS 81, p. 50, Eff. Nov. 19, 1974; 1954 ACS 89, p. 24, Eff. Nov. 13, 1976.

R 408.10512 Planking.

Rule 512. (1) Planking shall be scaffold grade and capable of supporting the intended load. The maximum span for a 2 by 10 inch or wider plank shall be as prescribed in table 1.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(2) Planking shall:

(a) Extend over the end bearer not less than 6 inches but not more than 12 inches.

(b) Be cleated or otherwise fastened to prevent shifting and be uniform in thickness, except where lapped as prescribed in subrule (3).

(c) Consist of not less than two 2 by 10 inch wide boards.

(3) Where planks are lapped, each plank shall lap its bearer at least 6 inches which will provide a minimum overlap of 12 inches.

(4) Where the ends abut each other, the butt joint shall be at the center line of a pole and rest on separate bearers.

(5) A manufactured plank, or pick, shall be used as prescribed in the manufacturer's instructions.

(6) Planks shall be laid with their edges close together so as to prevent material and tools from falling.

(7) Where a scaffold turns a corner, the planks shall be laid to prevent tipping. The planks that meet the corner bearer at an angle shall be laid first, extending over the diagonally placed bearer far enough to have a good bearing, but not far enough to tip. The planks running in the different direction shall be laid so as to extend over and rest on the first layer of planks.

TABLE 1

Planking Span Table	Material				
	Full thickness undressed lumber			Nominal thickness lumber	
Working load (p.s.f.)	25	50	75	25	50
Permissible span (ft.)	10	8	7	8	7

History: 1954 ACS 81, p. 51, Eff. Nov. 19, 1974; 1954 ACS 89, p. 25, Eff. Nov. 13, 1976.

R 408.10513 Construction.

Rule 513. (1) A scaffold and its components shall have a designed safety factor of not less than 4 with the load figure including the total weight of materials, men, and scaffold. Load carrying timber members for scaffold framing shall be not less than 1,500 f. (stress grade) construction grade lumber.

(2) A scaffold, except a ladder scaffold, boatswain's chair, or needle beam scaffold, 10 feet or more above floor or ground level shall have a standard barrier and toeboard pursuant to rules 231 and 233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10231 and R 408.10233 of the Michigan Administrative Code. A life line and safety belt of approved design shall be used where a railing is required but not practical.

(3) A scaffold over a walk, aisle, or work area shall have the sides screened from toeboard to the top rail where an employee is required to work or pass under scaffold.

(4) When work is being performed above a scaffold, overhead protection consisting of 2 inch planks laid tight, or equivalent material shall be installed not more than 9 feet above the scaffold floor.

(5) Where access is not available directly from a structure, a wood scaffolding shall have a stair to the platform or a portable ladder pursuant to the occupational safety standards commission standard, Part 4. Portable Ladders, being R 408.10401 to R 408.10456 of the Michigan Administrative Code, or a fixed ladder pursuant to the occupational safety standards commission standard, Part 3. Fixed

Ladders, being R 408.10301 to R 408.10365 of the Michigan Administrative Code, except that a cage is not mandatory for the fixed ladder. Use of a stair or fixed ladder shall not have a tendency to tip the scaffold.

(6) Manufactured scaffolding shall be equipped with a stair or a fixed ladder, or mounted by a portable ladder, except that a cage is not mandatory for a fixed ladder. On manufactured scaffolding purchased 1 year after the effective date of this part and equipped with a built-in fixed ladder or an attached scaffold ladder, the ladder shall be constructed of rungs not less than 12 inches long, uniformly spaced not less than 12 inches nor more than 16¼ inches from the center of 1 rung to another and the rung and component parts shall support a minimum of 300 pounds.

(7) Footing for a scaffold shall be sound, rigid, and capable of supporting the maximum intended load without settling or displacement. Objects such as barrels, boxes, loose brick, or concrete blocks shall not be used.

(8) Poles, legs, or uprights of a scaffold shall be plumb and secured or braced to prevent swaying or displacement.

(9) Load carrying timber members of a scaffold shall be a minimum of 1,500 f. (stress grade) construction grade lumber.

(10) Construction and attachment of a scaffold shall be such that there is no direct pull on the fasteners.

History: 1954 ACS 81, p. 51, Eff. Nov. 19, 1974; 1954 ACS 89, p. 25, Eff. Nov. 13, 1976.

BUILT-UP SCAFFOLDS

R 408.10521 General rules for wood pole scaffolds.

Rule 521. (1) When a wood pole is spliced, the ends shall be square and flat. Not less than 2 wood splice plates shall be secured to adjacent sides and shall be not less than 4 feet in length by 1 inch thick by the same width as the pole and have equal overlap to the joint. More than 1 consecutive splice per general level shall not be made (See figure 1).

(2) A pole scaffold shall be guyed or tied to the building or structure. Where the height or length is more than 25 feet, the scaffold shall be secured at intervals not more than 25 feet vertically and horizontally.

(3) Ledgers shall overlap the poles at each end by not less than 4 inches, be level and nailed to the inside of the poles. A ledger shall not be nailed less than 1 inch to the top edge.

(4) Two ledgers meeting at a pole shall be nailed to each other and 2 ledgers meeting at a corner shall have 1 cut flush to the pole and the other nailed on the outside and overlap.

(5) A ledger shall not be spliced between poles. A spliced ledger shall be reinforced by a bearing block secured to the side of the pole to form a support for the ledger.

(6) A bearer shall be set with its greater dimension vertical and shall project 3 inches beyond the ledger and the inner and outer pole.

(7) Successive lengths of planking shall not abut on a single bearer and, where planks abut, 2 bearers shall be placed not more than 8 inches apart.

(8) When moving a work platform to a new level, the old platform shall remain in place until the new bearers are in place to receive the platform.

(9) A wood pole scaffold less than 60 feet in height shall use materials prescribed in tables 2 to 7. A scaffold more than 60 feet in height shall be designed by an engineer knowledgeable in scaffolds and erected as prescribed in the blueprints. A copy of the blueprint shall be on the job site. A wood pole scaffold shall not be erected beyond the reach of local fire fighting apparatus.

(10) Diagonal bracing shall be provided to prevent the poles moving in a direction parallel with the wall or from buckling. Full diagonal face bracing shall be erected across the entire face of pole scaffolds in both directions. Brace splices shall be at the poles.

(11) The free ends of a pole scaffold shall be cross braced.

(12) A wood pole scaffold shall not be erected beyond the reach of fire fighting equipment.

History: 1954 ACS 81, p. 52, Eff. Nov. 19, 1974; 1954 ACS 89, p. 28, Eff. Nov. 13, 1976.

R 408.10522 Independent pole scaffold; specific.

Rule 522. (1) An independent pole scaffold shall be set as close to the wall of the building as possible.

(2) Cross bracing shall be provided between the inner and outer set of poles of an independent pole scaffold.

History: 1954 ACS 81, p. 55, Eff. Nov. 19, 1974.

R 408.10523 Single pole scaffold; specific.

Rule 523. Single pole scaffolding shall:

(a) Have the inner end of the bearer rest in the wall of the building with at least a 4 inch bearing. Notching is prohibited.

(b) Have the inner end of the bearer, when used on frame buildings, rest on a block 12 inches long and not less than 2 by 6 inches nominal size. The block shall be notched the width of the bearer and not less than 2 inches deep. The bearer shall be nailed to both the block and the building.

(c) Have the inner end of the bearer, when it comes at a window opening, supported by a plank of equal strength resting on the window sill and fastened to the building. The bearer shall be braced against displacement.

(d) Have a bearer reinforced with a $\frac{3}{16}$ by 2 inch steel strip or its equivalent secured to its lower edge along its entire length.

History: 1954 ACS 81, p. 55, Eff. Nov. 19, 1974.

R 408.10524 Suspension scaffolding.

Rule 524. (1) A suspension scaffold, including the supporting thrustout, shall be capable of sustaining a working load of 50 pounds per square foot with a designed safety factor of not less than 4.

(2) Wire ropes, used on suspension scaffolding, shall have a designed safety factor of not less than 6. Wire ropes fastened around a rod shall be equipped with a thimble.

(3) When U-bolt clamps are installed, a minimum of 3 shall be used at each fastening with the U-bolts installed on the dead end (See table 8). The clamps shall be retightened after loading.

(4) A thrustout for a suspension scaffold shall be not less than a 7 inch—15.3 pound steel "I" beam, being not less than 15 feet long and project not more than 6½ feet beyond the bearing point. It shall be set with the web vertical and spaced no more than 7 feet apart and project 1 foot beyond the outer edge of the suspension platform.

(5) The thrustout inner end shall be fastened to the frame of the building with bolts, anchor plates, lockwashers, and jam nuts and it shall be anchored against horizontal displacement, or a thrustout may be counterbalanced if the counterweight is fastened to the thrustout. Sandbags or other loose material shall not be used. Where a counterweight is used, it shall be 3 times the supported weight and located on the inner end of the thrustout with the center of the counterweight mass not less than equi-distance to the center of the weight of the load as measured from the fulcrum.

(6) A thrustout outer end shall be equipped with a stop-bolt to prevent the shackle slipping over the edge. A thrustout rigged over a parapet wall shall be supported by a wood block a minimum of 4 by 4 by 18 inches long nominal size at that point.

(7) A suspension platform shall be secured to prevent swinging away from the building. Rollers or fenders shall be provided to prevent striking the building and to facilitate raising and lowering.

(8) A bearer for a suspension scaffold shall be made of 4 by 6 inch timber set on edge or structural steel of equivalent strength. A bearer shall have sufficient length to hold the planks between the frame where a hoisting machine is used. Plank edges shall abut.

(9) A powered hoisting machine, where used, shall conform to R 408.10548. The running ends of the suspension wire rope shall be securely attached to the hoisting drum, and at least 4 turns of rope shall remain on the drum at all times.

(10) Each scaffold shall be installed or relocated in accordance with designs and instructions of a registered professional mechanical or civil engineer, and such installation or relocation shall be supervised by a competent designated person.

R 408.10525 Swinging scaffolds.

Rule 525. (1) A platform for a swing scaffold shall have a bar, strip, or other device attached to the platform outside the hanger to prevent the platform slipping off the hanger. A platform shall be not less than 20 inches nor more than 36 inches wide.

(2) Where rope and blocks are used to support a swing scaffold, the scaffold shall have:

(a) Hangers made of 3/4-inch round steel, or its equivalent, designed to have a flat bottom to hold a platform, and with arms to hold a standard barrier pursuant to R 408.10513(2) and a loop to hold the hook on a block.

(b) Supporting ropes of 3/4-inch first quality manila, or its equivalent, and used with not less than one 6-inch single and one 6-inch double block. Where acid cleaning or sandblasting is done, not less than 5/16-inch wire rope shall be used.

(c) All blocks fit the size of rope they carry.

(d) Ropes made fast to the point of the hook on the hanger eye by a special hitch which cannot slip.

(3) The platform, rope, slings, and other supporting parts shall be inspected before each installation. Periodic inspections shall be made while the scaffold is in use.

(4) A hook with an eye or ring, used to support the swing scaffold on the building, shall be wrought iron or steel of a cross section not less than 5/8 by 2 inches, or equivalent, with the 5/8-inch measurement on the edge. Eaves or cornices shall be inspected for cracks, loose blocks, or other deterioration before setting the hooks. A hook shall have a safety line of 3/4-inch manila rope, or its equivalent, secured from an eye or ring to a structurally sound portion of the building to prevent slipping of the hook.

(5) Two or more scaffolds shall not be combined by bridging with planks or similar connecting links, unless the scaffolds are equipped with hoisting machines and the planking has the capability to pivot and remain secured to the unit.

(6) Occupancy on a swing scaffold shall be limited as follows:

(a) Maximum designed working load of 500 pounds, 2 employees.

(b) Maximum designed working load of 750 pounds, 3 employees.

(7) An employee using a swing scaffold shall wear a safety belt tied to a lifeline by a lanyard not more than 48 inches long connected by an approved fall prevention device on the lifeline. The belt, lifeline, and lanyard shall be as prescribed in rule 3133 of the occupational safety standards commission standard, Part 31. Personal Protective Equipment, being R 408.13133 of the Michigan Administrative Code. The lifeline shall extend to the ground.

(8) In lieu of providing a lifeline, an employee may attach his safety belt and lanyard to the scaffold, if a separate fall prevention device is installed at each support point, using safety lines equivalent to the support ropes, and if the device is connected to the scaffold with a line which will allow a drop of not more than 12 inches.

(9) Swing scaffolds shall be equipped with rollers or fenders as prescribed in R 408.10524(7).

(10) When not in use, a swing scaffold shall be secured to the building or ground, and all tools and materials shall be removed.

(11) When a hoisting machine is used with a swing scaffold, it shall be as prescribed in R 408.10548 and R 408.10549.

History: 1954 ACS 81, p. 57, Eff. Nov. 19, 1974; 1954 ACS 89, p. 31, Eff. Nov. 13, 1976.

R 408.10526 Outrigger's scaffolds.

Rule 526. (1) A thrustout for an outrigger scaffold shall be of timber 3 by 10 inches nominal, set on edge, or of structural steel of equal strength set with the web vertical. A thrustout shall extend outside the building not more than 6 feet, shall be spaced no more than on 6-foot centers, and shall be fastened to prevent twisting or other movement. A thrustout shall be braced diagonally from the outside end to the building. The brace shall be not less than 25% longer than the extended length of the thrustout. The inboard end of outrigger beams, measured from the fulcrum point to the extreme point of support, shall be not less than 1½ times the outboard end in length.

(2) A suspended platform shall be formed by use of 2 by 6 inch nominal vertical hangers and 2 by 6 inch nominal bearers. A vertical hanger shall be braced to prevent side sway and be not more than 10 feet long. Additional support blocks shall be nailed to the vertical hangers above the thrustouts and below the bearers. The inboard ends of outrigger beams shall be securely supported, either by means of struts bearing against sills in contact with the overhead beams or ceiling, or by means of tension members secured to the floor joist underfoot, or by both if necessary. The inboard ends of outrigger beams shall be secured against tipping, and the entire supporting structure shall be securely braced in both directions to prevent any horizontal movement.

(3) Planking for the platform shall abut edges tightly from end of thrustout to building or from vertical hanger to vertical hanger, and shall be as prescribed in R 408.10512.

(4) A standard barrier and toeboard shall be installed as prescribed in R 408.10231 and R 408.10233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights.

(5) A horse scaffold shall not be used with an outrigger's scaffold.

(6) Outrigger scaffolds designed by a registered professional mechanical or civil engineer shall be constructed and erected in accordance with such design. A copy of the detailed drawings and specifications, showing the sizes and spacing of

members, shall be kept on the job. Where additional working levels are required to be supported by the outrigger method, the plans and specifications of the outrigger and scaffolding structure shall be designed by a registered professional mechanical or civil engineer.

History: 1954 ACS 81, p. 58, Eff. Nov. 19, 1974; 1954 ACS 89, p. 32, Eff. Nov. 13, 1976.

R 408.10527 Horse scaffolds.

Rule 527. (1) A horse scaffold shall be built pursuant to table 9 of straight-grained lumber and braced to resist side thrusts.

(2) A horse higher or longer than 4 feet shall have the cross section of each member increased to the next nominal size in width.

(3) Nailing of extension pieces to the legs is prohibited.

(4) Legs shall be set on concrete or other hard surface, or base plates as prescribed in R 408.10513(7).

(5) Horses shall be spaced not more than 6 feet apart on bearer centers.

(6) When tiering, a horse scaffold shall be placed above the one below and the legs held in place by cleats nailed to the planking. A horse scaffold shall not be tiered more than 2 high or 10 feet high.

TABLE 9

Nominal Size Material for a 4 Foot Long x 4 Foot High Horse

Bearers	2 x 6 inches
Legs	2 x 4 inches
Brace between legs	1 x 6 inches
Gusset brace at top of legs	1 x 8 inches
Half diagonal brace	1 x 6 inches

History: 1954 ACS 81, p. 58, Eff. Nov. 19, 1974.

R 408.10528 Ladder jack scaffolds.

Rule 528. (1) A ladder jack scaffold shall be used on a type 1, sometimes called heavy duty, manufactured ladder only, and at heights not more than 20 feet from the ground or floor level.

(2) The span of a wood plank shall be not more than 8 feet between ladder jacks, and the planking shall be as prescribed in R 408.10512.

(3) The span of a pick shall not exceed 24 feet.

(4) A ladder jack scaffold shall be limited to 2 employees at any 1 time, except if 3 ladders support the plank 3 employees may occupy the plank. Not more than 2 employees shall occupy any given 8 feet of plank at any 1 time.

(5) A ladder used with a ladder jack shall be equipped with nonslip feet pursuant to R 408.10426 of the occupational safety standards commission standard, Part 4. Portable Ladders.

(6) A ladder jack shall be made of metal with a designed strength to sustain the load as prescribed in R 408.10513(1). A ladder jack shall be designed to bear on the side rails in addition to the rungs, or if bearing on the rungs only, the bearing surface shall be not less than 10 lineal inches on each rung.

History: 1954 ACS 81, p. 59, Eff. Nov. 19, 1974.

R 408.10529 Boatswain's chair.

Rule 529. (1) The wood seat of a boatswain's chair shall be not less than nominal 12 by 24 inches by 1 inch thick with the underside reinforced by cleats fastened to prevent splitting.

(2) Two ⅝-inch fiber or equivalent rope slings shall be reeved through 4 seat holes so as to cross each other on the underside. Where an employee is using a heat

or spark producing process such as gas or arc welding or cutting, ⅝ inch wire rope shall be used in place of the fiber rope.

(3) The employee shall wear a safety belt and lifeline prescribed in R 408.10525(6). The lifeline shall be securely attached to substantial members of the structure, not scaffold, or to securely rigged lines, which will safely suspend the worker in case of a fall.

(4) The tackle shall consist of bearing or bushed blocks and ⅝ inch manila rope or its equivalent. A roof iron, hook, or other object to which the tackle is anchored shall be secured to prevent dislodgement. Tie backs shall be installed at right angles to the face of the building and secured to the roof hooks and the building.

History: 1954 ACS 81, p. 59, Eff. Nov. 19, 1974; 1954 ACS 89, p. 32, Eff. Nov. 13, 1976.

R 408.10530 Bricklayer's square scaffold.

Rule 530. (1) The squares of a bricklayer's square scaffold shall be not more than 5 feet wide by 5 feet high and set not more than 5 feet apart for medium duty and not more than 8 feet apart for light duty. The bearers and legs shall be made of 2 by 6 inch material, the corner braces of 1 by 6 inch material and the diagonal braces of 1 by 8 inch material.

(2) Additional 1 by 8 inch bracing shall extend from the bottom of each square to the top of the next square on the front and rear of the scaffold.

(3) Platform planks shall be not less than 2 by 10 inches with the ends overlapping the bearers of the squares. Each plank shall be supported by not less than 3 squares.

(4) If tiered, the tiers shall not exceed 3 in height with 1 square resting directly above another square. The upper tiers shall rest on continuous rows of planking with the square secured to the planks.

History: 1954 ACS 81, p. 59, Eff. Nov. 19, 1974.

R 408.10531 Carpenter's bracket scaffold.

Rule 531. (1) The supporting brackets of a carpenter's bracket scaffold shall be a triangular frame of not less than 2 by 3 inch material fitted and secured together or of metal of equivalent strength, and of such size to support not less than two 2 by 10 inch planks.

(2) The supporting brackets shall be fastened to the structure by 1 of the following:

(a) If made of wood, the corners shall be gusseted in a manner to prevent the joints pulling apart.

(b) Through bolts not less than ⅝ inch in diameter and long enough to project ¾ inch beyond the nut when in place.

(c) A metal stud attachment device.

(d) Welding to a metal tank.

(e) Hooking over a secured supporting member capable of sustaining the imposed load.

(3) The supporting brackets shall be not more than 10 feet apart to support 1 employee and not more than 75 pounds of material, or 6 feet apart to support 2 employees and not more than 75 pounds of material.

History: 1954 ACS 81, p. 59, Eff. Nov. 19, 1974.

R 408.10532 Working surfaces; steep slopes.

Rule 532. (1) An employee working on a roof where the working area is more than 20 feet above the ground, the pitch is more than 3 inches in 12 inches and there is no roof parapet, shall be provided and use a roofing bracket scaffold or crawling board.

(2) An employee using a roofing bracket scaffold or crawling board shall wear a safety belt and lifeline prescribed in R 408.10525(6) or a catch platform shall be provided. The catch platform shall extend 2 feet beyond the projection of the eaves or structure, whichever is further away, and shall be equipped with a standard barrier and toeboard as prescribed in R 408.10231 and R 408.10233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights.

History: 1954 ACS 81, p. 60, Eff. Nov. 19, 1974.

R 408.10533 Roofing brackets and crawling boards.

Rule 533. (1) A roofing bracket shall fit the pitch of the roof so as to maintain the working plank level.

(2) A roofing bracket shall be secured by nails in addition to the bracket's pointed metal projection, except where a ¾ inch first grade manila rope, or equivalent, is used as a support.

(3) A crawling board not less than 1 by 10 inches shall extend from the roof eave to the ridge. Cleats shall be 1 by 1½ inches and equal in length to the width of the crawling board. The cleats shall be secured to the crawling board by nails driven through and clinched on the underside. Space between cleats shall not exceed 24 inches.

(4) A crawling board shall be secured to a roof by ridge hooks or other equivalent means.

History: 1954 ACS 81, p. 60, Eff. Nov. 19, 1974; 1954 ACS 89, p. 33, Eff. Nov. 13, 1976.

R 408.10534 Needle beam scaffold.

Rule 534. (1) Wood needle beams shall be not less than 4 by 6 inches with the greater dimension set vertically or equivalent structural steel may be used.

(2) The span between needle beams shall be not more than 8 feet when using 2 inch scaffolding planks.

(3) Rope supports shall be 1 inch diameter first grade manila rope, or equivalent material, and spaced not more than 10 feet apart. The rope shall be attached to the needle beams by a scaffold hitch or an eye splice. The loose end of the rope shall be tied by a bowline knot or a round turn and half hitch. The scaffold hitch shall be arranged in a manner so as to prevent the needle beam from rolling or otherwise becoming displaced.

(4) Scaffold planks shall be secured against displacement.

(5) Tools, bolts, and nuts on a needle beam scaffold shall be secured in containers.

(6) A needle beam scaffold shall be suspended from thrustouts prescribed in R 408.10524 or from permanent structural members if they have a safety factor of not less than 4 times the maximum intended load.

History: 1954 ACS 81, p. 60, Eff. Nov. 19, 1974; 1954 ACS 89, p. 33, Eff. Nov. 13, 1976.

R 408.10535 Window jack scaffold.

Rule 535. (1) A window jack scaffold shall be used as a work platform for not more than 1 employee and only for the purpose of working at the window opening through which the jack is placed.

(2) A window jack scaffold shall consist of a plank secured to the structure with braces running from a point not more than 4 inches from the end of the plank to the structure at an angle of not less than 45 degrees to the horizontal.

(3) A window jack shall not be used to support a plank running from 1 window jack to another.

(4) Where the prescribed standard barrier cannot be used, the employee shall be protected by an approved safety harness and a lifeline secured to the structure.

History: 1954 ACS 81, p. 60, Eff. Nov. 19, 1974.

MANUFACTURED SCAFFOLDING

R 408.10541 General.

Rule 541. (1) Manufactured scaffolding shall be erected and used as specified by the manufacturer's instructions.

(2) Manufactured scaffolding shall be constructed, installed, and maintained as prescribed in R 408.10511, R 408.10512, and R 408.10513.

(3) Manufactured scaffolding shall be erected by a competent and experienced employee.

(4) Stationary manufactured scaffolding shall be tied to and braced against a building at intervals not to exceed 30 feet horizontally and 26 feet vertically or otherwise guyed.

(5) Adjusting screws on stationary manufactured scaffolding shall have an adjustment of not more than 18 inches from baseplate to bottom of frame with a minimum of 6 inches retained within the frame.

(6) Before a metal scaffold is erected near an exposed power line, the utility or property owner shall be consulted. A power line or electrical apparatus shall be considered energized unless the property owner or utility indicates it is de-energized and the line or apparatus is visibly grounded. Where deenergizing is impracticable, the following minimum clearances shall be maintained:

Voltage	Clearance
To 50 kv	10 feet
Over 50 kv	10 feet + .4 inch per kv

History: 1954 ACS 81, p. 61, Eff. Nov. 19, 1974.

R 408.10542 Tube and coupler type scaffolding.

Rule 542. (1) A light duty tube and coupler scaffold shall have all posts, bearers, ledgers and braces of not less than 2 inch nominal O.D. steel tubing or equivalent with the posts spaced no more than 6 feet apart by 10 feet along the length of the scaffold. Other structural members shall be capable of carrying the intended load. The scaffold shall be limited to those heights and working levels prescribed in table 10.

(2) A medium duty tube and coupler scaffold shall have all posts, ledgers and braces of not less than nominal 2 inch O.D. steel tubing or equivalent with the posts spaced no more than 6 feet apart by 8 feet along the length of the scaffold. Bearers shall be nominal 2½ inch O.D. steel tubing or equivalent except that 2 inch O.D. tubing may be used if the posts are spaced not more than 5 feet apart by 8 feet along the length of the scaffold. Other structural members shall be capable of carrying the intended load. The scaffold shall be limited to those heights and working levels prescribed in table 11.

(3) A heavy duty tube and coupler scaffold shall have posts, ledgers and braces of not less than nominal 2 inch O.D. steel tubing or equivalent with the posts spaced not more than 6 feet apart by 6½ feet along the length of the scaffold. Bearers shall be of not less than nominal 2½ inch O.D. steel tubing or equivalent. Other structural members shall be capable of carrying the intended load. The scaffold shall be limited to those heights and working levels prescribed in table 12.

(4) A scaffold to be erected at a height greater than those prescribed in tables 10, 11, or 12 shall be designed by an engineer knowledgeable in scaffolding and a copy of the blueprint shall be maintained at the job site.

(5) Tube and coupler type scaffolding shall:

(a) Have ledgers erected along the length of the scaffold, located on both inside and outside posts at each bearer level. Ledgers shall be interlocked to form continuous lengths and coupled to each post. The bottom ledgers shall be located as close to the base as possible. Ledgers shall be placed not more than 6 feet 6 inches on centers, vertically.

(b) Have bearers installed transversely between posts, coupled to the posts and bearing on the ledger coupler. A bearer shall be not less than 4 inches nor more than 12 inches longer than the post spacing or ledger spacing. A bearer may be cantilevered for use with brackets to carry not more than 2 planks.

(c) Be cross braced across the width of the scaffold from the inner to outer ledgers at not less than every third set of posts horizontally and every fourth runner vertically. The bracing shall extend diagonally from the inner and outer ledgers upward to the next outer and inner ledgers.

(d) Have longitudinal bracing installed at approximately a 45 degree angle from the base of the first outer post toward the top of the scaffold. Where possible, bracing shall be repeated every fifth post. In a similar manner, longitudinal diagonal bracing shall also be installed from the last post extending back and upward toward the first post. Where conditions preclude the attachment of this bracing to the posts, it may be attached to the ledgers.

TABLE 10

Tube and Coupler Scaffolds Light Duty

Working levels	Additional planked levels	Maximum height
1	8	125 ft.
2	4	125 ft.
3	0	91 ft. 0 in.

Uniformly distributed load ..... Not to exceed 25 p.s.f.
Post spacing (longitudinal) ..... 10 ft. 0 in.
Post spacing (transverse) ..... 6 ft. 0 in.

TABLE 11

Tube and Coupler Scaffolds Medium Duty

Working levels	Additional planked levels	Maximum height
1	6	125 ft.
2	0	78 ft. 0 in.

Uniformly distributed load ..... Not to exceed 50 p.s.f.
Post spacing (longitudinal) ..... 8 ft. 0 in.
Post spacing (transverse) ..... 6 ft. 0 in.

R 408.10543 Welded frame type scaffolds.

Rule 543. (1) Welded frame type scaffolds shall:

(a) Be cross braced to secure vertical frames together laterally and have such length as to automatically insure the erected scaffold will be square, plumb, and rigid.

(b) Have the frames and panels secured by coupling pins to provide vertical alignment and prevent uplift.

(c) Have the panels or frames spaced in a manner to support the intended load.

(d) Be secured to the building or structure at intervals of not more than 30 feet horizontally and 26 feet vertically.

(e) Have the planking span limited to table 1 of R 408.10512.

(2) Where a welded frame type scaffold is erected at a height of more than 125 feet, it shall be designed by an engineer knowledgeable in scaffolding and a copy of the blueprint shall be maintained at the job site.

(3) The frame and accessories of a welded frame type scaffold shall be inspected for defects before each job use and after misuse. Defective parts shall be repaired or replaced. Repairs and replacements shall have the capability of supporting the intended load.

History: 1954 ACS 81, p. 62, Eff. Nov. 19, 1974; 1954 ACS 89, p. 33, Eff. Nov. 13, 1976.

R 408.10544 Mobile scaffolds.

Rule 544. (1) A mobile scaffold shall be constructed as prescribed in R 408.10542 or R 408.10543 and shall be limited to a height of 50 feet unless designed and erected by an engineer knowledgeable in scaffolding.

(2) A mobile scaffold shall:

(a) Not exceed a height of 4 times the minimum base dimension, or shall be guyed every 20 feet of height to prevent movement. Outriggers, when used, may be considered as part of the base dimension.

(b) Have a landing platform at intervals of not more than 30 feet.

(c) Have the wheels locked when in use and attached by pins or bolts, or other equivalent means, to the frame or adjusting screw.

(d) Have a limit adjustment of screw jack to not more than 12 inches from top of castor bearing plate to bottom of frame. The castor stem shall fit the socket in the frame and extend inside not less than 6 inches.

(e) Have all scaffold castors provided with a positive wheel, a swivel lock, or both, to prevent movement.

(f) Have adequate rigid diagonal bracing to vertical members provided.

(g) Have exposed surfaces free from sharp edges, burrs, and other hazards.

(h) Have the width of a working platform at any level not less than 20 inches and secured in place.

(i) Have the designed load of all mobile scaffolds calculated on the basis of:

Light—Designed and constructed to carry a working load of 25 pounds per square foot.

Medium—Designed and constructed to carry a working load of 50 pounds per square foot.

Heavy—Designed and constructed to carry a working load of 75 pounds per square foot.

(j) Have the work level platform of scaffolds, sometimes called towers, of wood, aluminum, or plywood planking, steel, or expanded metal for the full width of the scaffold, except for necessary openings. Work platforms shall be secured in place.

(3) A sectional folding stairway scaffold shall:

(a) Be designed as medium duty, except for high clearance. A sectional folding stairway scaffold with a high clearance base shall be designated as a light duty scaffold.

(b) Have an integral stairway and work platform incorporated into the structure.

(c) Have the end frames designed so that the horizontal bearers provide supports for multiple planking levels.

(d) Be not more than 4½ feet wide by 6 feet in length.

(4) A sectional folding ladder scaffold shall:

(a) Be designed as a light duty scaffold, including special base open end sections which are designed for high clearance. For certain special applications, the 6 foot in length folding ladder scaffolds, except for special high clearance base sections, shall be designed for use as medium duty scaffolds.

(b) Have a width of not more than 4½ feet.

(c) Have a length of not more than 6 feet 6 inches for a 6-foot long unit, 8 feet 6 inches for an 8-foot unit, or 10 feet 6 inches for a 10-foot long unit.

(d) Have the end frames designed so that the horizontal bearers provide supports for multiple planking levels.

(e) Have an integral set of pivoting and hinged folding diagonal and horizontal braces and a detachable work platform incorporated into the structure.

History: 1954 ACS 81, p. 62, Eff. Nov. 19, 1974; 1954 ACS 89, p. 34, Eff. Nov. 13, 1978.

R 408.10545 Wire rope scaffolding.

Rule 545. (1) Wire rope used as a supporting means for a plank shall have a designed safety factor of not less than 6 with the load figure including the total weight of men, materials, and scaffold.

(2) A plank used on a wire rope scaffold shall be as prescribed in R 408.10512. A lifeline prescribed in R 408.10525(6) shall be used.

(3) A plank used on a wire rope scaffold shall be attached to the wire rope in a manner which will not allow the plank to disengage such rope and shall facilitate moving the plank along the wire rope.

(4) Wire rope shall be used and maintained as prescribed in R 408.10571.

History: 1954 ACS 81, p. 63, Eff. Nov. 19, 1974.

R 408.10546 Powered mobile elevating platforms.

Rule 546. A powered mobile elevating platform, excluding a powered industrial truck, shall:

(a) Be used according to the manufacturer's written instructions which shall be kept on the premises.

(b) Provide standard barrier and toeboard pursuant to R 408.10231 and R 408.10233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights.

(c) Have a designed safety factor of not less than 4 for the lifting device and platform.

(d) Have a designed safety factor of not less than 6 for all cables.

(e) Have a positive safety device to prevent the platform from uncontrolled descent in case of power failure or failure of the elevating system.

(f) Be visually inspected by the operator before each use for defects that are hazardous and not be used until the defective part is repaired or replaced.

(g) Not be ridden when moving horizontally, except where specifically designed for that purpose.

(h) Not exceed a height of 4 times the minimum base dimension where the stability of the scaffold is dependent on the base dimension, or shall be guyed every 20 feet of height to prevent movement. Outriggers, when used, may be considered as a part of the base dimension.

(i) Have the wheels locked when in use.

(j) Have the hoisting motor pursuant to R 408.10548 or R 408.10549.

(k) Have the base enclosed where the cables or a pinch point constitutes a hazard to an employee.

History: 1954 ACS 81, p. 63, Eff. Nov. 19, 1974.

R 408.10547 Manual mobile elevating platforms.

Rule 547. (1) A manually powered mobile elevating platform shall be equipped with a positive locking device to prevent horizontal movement.

(2) A manually powered mobile elevating platform shall comply with all items in R 408.10546 except subdivision (j).

History: 1954 ACS 81, p. 63, Eff. Nov. 19, 1974.

R 408.10548 Powered hoisting machine.

Rule 548. (1) A powered hoisting machine shall be inspected not less than once a month when in service and not put into service unless free of hazards.

(2) A powered hoisting machine manufactured after the effective date of this part shall carry a label of an approved nationally recognized testing laboratory such as underwriters laboratories or factory mutual engineering corporation that the machine is approved for the use on a suspension scaffold, swinging scaffold, or powered mobile elevating platform.

History: 1954 ACS 81, p. 64, Eff. Nov. 19, 1974.

R 408.10549 Manual powered hoisting devices.

Rule 549. A manually powered hoisting device shall be equipped with a positive locking device.

History: 1954 ACS 81, p. 64, Eff. Nov. 19, 1974.

R 408.10550 Hydraulic and pneumatic systems.

Rule 550. (1) Rigid or flexible piping and the component parts of a hydraulic or pneumatic hoisting machine system shall have a safety factor of not less than 4.

(2) When a hydraulic or pneumatic system is bled, the platform supported by this system shall be in the lowered position or blocked in such a manner that the safety of the employee is assured.

(3) A leak in a hydraulic or pneumatic system shall be repaired before the unit is used.

(4) A reverse check valve or equivalent means shall be installed in the hydraulic cylinder to prevent uncontrolled fall of the work platform in case of system failure.

History: 1954 ACS 81, p. 64, Eff. Nov. 19, 1974.

POWERED PLATFORMS

R 408.10561 Construction and modification.

Rule 561. (1) A powered platform installed, or that part of a powered platform modified, after August 27, 1971, shall be as prescribed in ANSI A120.1-1970, safety requirements for powered platforms for exterior building maintenance, which is incorporated herein by reference, and as further prescribed in the rules of this part. The standard is available for inspection at the Lansing office of the department of labor. This standard may be purchased from the American National Standards Institute, 1430 Broadway Avenue, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $3.25 each.

(2) A powered platform shall be suspended by 2 or more cables. Where 2 cables are used, each employee on the work platform shall wear a safety belt and lanyard, as prescribed in R 408.10525(6), attached to an individual lifeline not less than ¾ inch in diameter manila rope or the equivalent, or to the work platform. The lifeline shall be secured to the building structure.

(3) A powered platform shall be equipped with a 2-way voice communication system, when normal voice communication cannot be understood, for emergency use between the working platform and a supervised location.

(4) Where thrustouts are used in place of a roof car, they shall be anchored to the building structure with fasteners capable of sustaining the imposed load.

History: 1954 ACS 81, p. 64, Eff. Nov. 19, 1974; 1954 ACS 89, p. 34, Eff. Nov. 13, 1976.

R 408.10562 Roof cars.

Rule 562. (1) A roof car shall be used whenever it is necessary to move a working platform horizontally to a work or storage position.

(2) Movements of a roof car shall be restricted to a designated path of travel. Mechanical stops shall be provided to prevent the roof car traversing beyond the path of travel. The stops shall be capable of withstanding a force equal to 100% of the inertial effect of the roof car under power.

History: 1954 ACS 81, p. 64, Eff. Nov. 19, 1974.

R 408.10563 Controls and interlocks.

Rule 563. (1) Control devices for a powered platform shall be the constant pressure type and designed to prevent accidental actuation.

(2) Control devices shall be permanently labeled as to their function.

(3) Where a roof car is used, safety interlocks shall be provided to insure:

(a) That the working platform will not leave the stored position until the required positive position anchor is engaged.

(b) That the roof car cannot move when the working platform is away from the stored position.

History: 1954 ACS 81, p. 64, Eff. Nov. 19, 1974.

R 408.10564 Safety factors.

Rule 564. All parts of a powered platform subject to stress, except the wire rope, shall have a designed safety factor of not less than 5. Wire rope shall have a designed safety factor of not less than 10.

History: 1954 ACS 81, p. 65, Eff. Nov. 19, 1974.

R 408.10565 Working platforms.

Rule 565. A working platform used on the exterior of a building shall be equipped with rollers which will be in contact with the building face. Where the vertical working travel of a working platform is more than 130 feet, the platform shall be equipped with guide rollers or guide shoes which shall positively engage guides, such as "T" rails or indented mullions. The guide rollers or guide shoes shall enter the guides at the lowest possible speed and not require any manual assistance from an employee while the work platform is in motion. A working platform installed before the effective date of this part with a rise of more than 130 feet, may use an equivalent means to tie the platform to the building in lieu of guide rollers or guide shoes.

History: 1954 ACS 81, p. 65, Eff. Nov. 19, 1974.

R 408.10566 Inspections and tests.

Rule 566. (1) An employer having a powered platform under his control shall:

(a) Provide operating instructions and a check list for a visual inspection which shall be used before each daily use by the operator. The visual inspection shall include a check of the controls and safety interlocks.

(b) Provide a physical inspection and service and repair when required, by a trained and authorized employee or an outside service every 30 days or before each use cycle if the equipment is used less often than every 30 days. The inspection, service or repair shall be logged to show the date and signature of the authorized employee or outside service and the work done.

(c) Provide for inspections and operating tests not less than annually or after major alterations to determine that all components including safety and operating equipment conform to the provisions of this standard. Such inspections and operating tests shall be made by a trained and authorized employee or outside service and shall be logged to show date and signature of employee or outside service.

(2) A special inspection of governors and secondary brakes shall be made not less than annually by an authorized and trained employee or outside service to verify that the initiating device for the secondary brake operates at the proper overspeed. If a test cannot be made in the field, the initiating device or hoisting machine, or both, shall be removed from the building and sent to a shop equipped to make such a test. When the tested parts are reinstalled, the powered platform shall be reinspected before returning it to service.

History: 1954 ACS 81, p. 65, Eff. Nov. 19, 1974.

R 408.10567 Maintenance.

Rule 567. (1) The following maintenance shall be performed, when required, during the 30 day inspection:

(a) Replacement of any worn or defective parts noted during inspections prescribed in R 408.10566.

(b) Electrical connections kept tight and controller contactors and relays clean.

(c) Gears, shafts, bearings, brakes, and hoisting drums aligned.

(2) Hoisting ropes shall be reshackled at the nondrum ends at intervals not to exceed 2 years. In reshackling a rope, enough shall be cut from the end to remove damaged or fatigued portions. The rope shall be retagged and the limit switches reset, if necessary.

(3) Hoisting rope shall be replaced whenever there are 6 or more broken wires in any 1 lay or when the wire rope becomes damaged or in a deteriorated condition.

History: 1954 ACS 81, p. 65, Eff. Nov. 19, 1974.

WIRE, FIBER AND SYNTHETIC ROPE

R 408.10571 Wire rope maintenance; general.

Rule 571. (1) Wire rope for a scaffold shall be replaced if:

(a) In any length of 8 diameters, the total number of visible broken wires exceeds 10% of the total number of wires.

(b) The wire rope has been kinked, crushed, bird caged or sustained any other damage which distorts the wire rope structure.

(c) The wire rope shows heat or corrosive damage.

(2) Wire rope bent to form an eye over a bolt or rod having a diameter less than 4 times the rope diameter shall be equipped with a metal thimble.

(3) End fittings should be swaged or zinc-poured sockets.

(4) Where wire clips are used, table 8 shall be followed and the "U" bolts installed on the dead or short end of the wire rope.

(5) Wire rope shall be stored in a manner to prevent damage or deterioration.

(6) Before cutting wire rope, a seizing shall be placed on each side of the cut on preformed wire rope; 2 seizings on each side of ⅞ inch size or smaller non-preformed wire rope and 3 seizings on each side of 1 inch or larger size nonpreformed wire rope.

(7) Wire rope shall be maintained in a lubricated condition over its entire length with the same type lubricant used by the manufacturer.

History: 1954 ACS 81, p. 66, Eff. Nov. 19, 1974.

R 408.10572 Fiber rope.

Rule 572. (1) A fiber rope shall be inspected visually before the start of each daily use for the following conditions:

(a) Externally for abrasions, cut or broken fibers, decay, burns, lack of strength, softness, variation in size, or roundness of the strands.

(b) Internally, by separating the strands at 3-foot intervals, for broken fibers, presence of grit, mildew, or mold, color change of the fibers, or powdering and short loose fibers. A rope having any of these conditions shall be replaced or returned to the manufacturer for repair.

(2) A fiber rope shall be stored in a dry room in coils or on a reel.

(3) A wet fiber rope shall be dried by placing it in the sunshine or a warm room by hanging loosely over a rounded peg or hook.

(4) A fiber rope shall not be:

(a) Kinked or run over sharp corners.

(b) Used when frozen or left in freezing temperatures when wet.

(5) A fiber rope subjected to an impact load equal to or more than its rated capacity shall be replaced.

(6) A thimble shall be used with fiber rope pursuant to R 408.10571(2).

History: 1954 ACS 81, p. 66, Eff. Nov. 19, 1974.

R 408.10573 Synthetic rope.

Rule 573. (1) A synthetic rope shall be inspected visually before the start of each job for abrasions, cut or broken fibers, burns, melted fibers, variation in size or roundness of the strands. A rope having any of these conditions shall be replaced or returned to the manufacturer for repair.

(2) Because of the variance in manufacturing methods, the manufacturer's recommendations shall be followed.

(3) A synthetic rope shall not be kinked, run over sharp corners, used when frozen, or left in freezing temperatures when wet.

(4) A synthetic rope subjected to an impact load equal to or more than its rated capacity shall be replaced.

(5) A thimble shall be used with synthetic rope pursuant to R 408.10571(2).

History: 1954 ACS 81, p. 66, Eff. Nov. 19, 1974.

PART 6. FIRE EXITS
GENERAL PROVISIONS

R 408.10601 Scope.

Rule 601. This part specifies measures consistent with nationally recognized good practice in places of employment which will provide that degree of employee safety that can reasonably be required from the hazards of fire and explosion arising from the storage, handling and use of hazardous substances, materials and devices, and from conditions hazardous to employees' lives in the use or occupancy of employers' buildings or premises.

History: 1954 ACS 62, p. 32, Eff. May 18, 1970.

R 408.10602 Applicability.

Rule 602. (1) This part covers new and existing construction. In various sections of this part there are special provisions for existing buildings differing from those for new construction. Where there are no specific provisions in this part for existing buildings, the requirements for new construction shall apply.

(2) If a political subdivision of the state has fire safety standards in conflict with this part, the more restrictive provisions of either the political subdivision or this standard shall apply.

History: 1954 ACS 62, p. 33, Eff. May 18, 1970.

R 408.10603 Definitions; B to F.

Rule 603. (1) "Breakaway door" means a door which is designed to slide in normal operation and will swing open in any position when pressure is applied to the door in an emergency.

(2) "Fire area of a building" means that space contained within component structural parts having a fire resistance sufficient to prevent further spread of fire originating therein.

(3) "Fire door" means a fire resistive door assembly, including frame and hardware.

(4) "Fire resistance" means the property of a material or assembly to withstand fire or give protection from it.

(5) "Flammable" means subject to easy ignition and rapid flaming combustion.

(6) "Floor area or gross area" means the floor area within the perimeter of the outside walls of a building, with no deductions for hallways, stairs, closets, thickness of walls, columns, or other features.

History: 1954 ACS 62, p. 33, Eff. May 18, 1970; 1954 ACS 79, p. 61, Eff. May 16, 1974.

R 408.10604 Definitions; H to M.

Rule 604. (1) "Hazardous area" means an area of a building, or portion thereof, used for purposes that involve highly combustible, highly flammable, or explosive products or materials which are likely to burn with extreme rapidity or which may produce poisonous fumes or gases, including highly toxic or noxious acids, alkalies, or irritant hazards; or that cause division of material into fine particles or dust subject to explosion or spontaneous combustion; or that constitute a high fire hazard because of the form, character or volume or the material used.

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(2) "Hazard of contents" means the relative danger of the start and spread of fire, the danger of smoke or gases generated, and the danger of explosion or other occurrence potentially endangering the lives and safety of employees in a building. Where certain features of a building are such as to involve a hazard greater than the hazard of the contents, the greater degree of hazard shall govern.

(3) "High hazard contents" means combustibles of a character or quantity which burn with extreme rapidity, or from which extremely poisonous fumes or explosions are to be expected in the case of fire.

(4) "Horizontal exit" means a way of passage from a building to an area of refuge in another building on approximately the same level, or a way of passage through or around a fire-resistant wall or fire-resistant partition to an area of refuge on approximately the same level in the same building, which affords safety from fire or smoke from the area of escape and areas communicating therewith.

(5) "Low hazard contents" means those of such low combustibility that no self-propagating fire therein can occur and that consequently the only probable danger will be from panic, fumes, smoke or fire from some external source.

(6) "Means of egress" means a continuous path of travel from any point in a building to the open air outside at ground level and consists of 3 separate and distinct parts: the exit access, the exit, and the exit discharge. A means of egress comprises both vertical and horizontal means of travel. The parts are defined as follows:

(a) "Exit access" means that portion of a means of egress which leads to an entrance to an exit.

(b) "Exit" means that portion of a means of egress which is separated from the area of a building from which escape is to be made by a wall, floor, door or other means which provides the protected path necessary to proceed with reasonable safety to the exterior of the building.

(c) "Exit discharge" means that portion of a means of egress between termination of the exit and the exterior of the building at ground level.

History: 1954 ACS 79, p. 62, Eff. May 16, 1974.

R 408.10605 Definitions; N to S.

Rule 605. (1) "Noncombustible building" means a building constructed of materials which do not support fire.

(2) "Ordinary hazard contents" means those which are liable to burn with moderate rapidity and to give off considerable volume of smoke, but from which neither extremely poisonous fumes nor explosions are to be expected in case of fire.

(3) "Self-closing" means equipped with an approved device which will insure closing without manual assistance after having been opened.

(4) "Sprinklered" means equipped with an approved automatic sprinkler system, properly maintained.

(5) "Street" means a public thoroughfare, 30 or more feet in width, which has been dedicated or deeded to the public for public use and is accessible for use by a fire department in fighting fires. An enclosed space or tunnel, even though used for vehicular and pedestrian traffic, is not considered as a street.

History: 1954 ACS 62, p. 33, Eff. May 18, 1970; 1954 ACS 79, p. 62, Eff. May 16, 1974.

R 408.10611 Design of buildings and structures.

Rule 611. (1) A building or structure designed for human occupancy shall be provided with exits prescribed in this part which shall permit prompt escape in case of fire or other emergency. The design of the exits and other safeguards shall be such that reliance for safety of life in case of fire or other emergency will not depend solely on a single safeguard. Additional safeguards shall be provided for life safety in case any single safeguard is ineffective due to human or mechanical failure.

(2) A building or structure shall be so constructed, arranged, equipped, maintained and operated as to avoid undue danger to the lives and safety of the employees from fire, smoke, fumes or panic during the period of time necessary for escape from the building or structure.

(3) A building or structure of such size, arrangement or occupancy that a fire may not itself provide a warning, shall be equipped with a fire alarm system to facilitate a fire drill or to warn of a fire so the employees may escape.

History: 1954 ACS 79, p. 62, Eff. May 16, 1974.

R 408.10612 Occupancy of new buildings.

Rule 612. A building under construction shall not be occupied, in whole or in part, until all facilities required by this part, in the portion to be occupied, are installed and functioning.

History: 1954 ACS 62, p. 33, Eff. May 18, 1970; 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10613 Occupancy and use during repairs and alterations.

Rule 613. (1) An existing building shall not be occupied during repairs or alterations unless exits and fire protection are continuously maintained.

(2) A hazardous substance or equipment for repairs or alterations shall not be introduced in a building while the building is occupied, unless the condition of use and safeguards provided are such as not to create any additional danger to employees' lives.

History: 1954 ACS 62, p. 33, Eff. May 18, 1970; 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10614 Operating condition of protective equipment.

Rule 614. A required exit, exit lighting, automatic sprinkler system, fire detection and alarm system, fire door, and other required items of fire protection shall be maintained in proper operating condition.

History: 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10615 Rescinded.

History: 1954 ACS 62, p. 34, Eff. May 18, 1970; rescinded 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10616 Rescinded.

History: 1954 ACS 69, p. 63, Eff. Nov. 15, 1971; rescinded 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10617 Rescinded.

History: 1954 ACS 62, p. 34, Eff. May 18, 1970; rescinded 1954 ACS 79, p. 63, Eff. May 16, 1974.

CLASSES OF OCCUPANCY AND HAZARD OF CONTENTS

R 408.10621 Classes of occupancy.

Rule 621. A building or part thereof shall be classified as follows:

(a) A hotel which includes a building, portion of a building or group of buildings under the same management in which there are more than 15 sleeping

Digitized by Google

accommodations for hire, primarily used by transients, whether designated as a hotel, apartment hotel, inn, club, motel, or by any other name.

(b) Mercantile occupancy which includes a store, market and other room or building for the display and sale of merchandise. Not limited to but included in this group are supermarkets, department stores, shopping centers, drugstores, and auction rooms.

(c) An office occupancy which means one used for the transaction of business, other than covered under mercantile occupancy, for the keeping of accounts and records and similar purposes. Not limited to but included in this group are doctors' and dentists' offices, city and township halls, court houses, and libraries.

(d) An industrial occupancy which includes a factory making products of all kinds and a property devoted to operations such as processing, assembling, mixing, packaging, finishing or decorating, repairing, and similar operations. Not limited to but included in this group are laboratories, dry cleaning plants, power plants, pumping stations, smoke houses, laundries, creameries, gas plants, refineries, and saw mills.

(e) A storage occupancy which includes a building used primarily for the storage or sheltering of goods, merchandise, products, vehicles, or animals. Not limited to but included in this group are warehouses, cold storage operations, freight terminals, truck and marine terminals, bulk oil storage, parking garages, hangars, grain elevators, barns, and stables.

(f) Miscellaneous occupancies which means those buildings covered in R 408.10691 to R 408.10697.

History: 1954 ACS 62, p. 34, Eff. May 18, 1970.

R 408.10622 Multiple and partial occupancies.

Rule 622. (1) If 2 or more classes of occupancy occur in the same building so intermingled that separate safeguards are impracticable, the safeguard facilities shall be sufficient to meet the requirements for each individual area or section, as well as for the entire building.

(2) If a minor portion of a building is used for any purpose incidental to the major occupancy and the minor occupancy does not incur any hazard to the remainder of the building, it shall be classified as part of the major occupancy.

History: 1954 ACS 62, p. 34, Eff. May 18, 1970.

R 408.10625, R 408.10626 Rescinded.

History: 1954 ACS 62, p. 35, Eff. May 18, 1970; rescinded 1954 ACS 79, p. 63, Eff. May 16, 1974.

MEANS OF EGRESS

R 408.10631 Construction, maintenance, and changes.

Rule 631. (1) The components of a means of egress including doors, stairs, ramps, passages, and signs shall be of substantial construction and shall be maintained in an operable condition.

(2) An exit shall be not less than 28 inches wide, except where specifically permitted elsewhere in this part. Ceiling height of a means of egress shall be not less than 7½ feet and a projection from the ceiling not less than 6⅝ feet from the floor.

(3) A space formed with movable or folding partitions and occupied by more than 20 persons shall have an approved means of egress.

(4) An alteration, addition, or change of occupancy that would reduce means of egress below the requirements for a new building is prohibited.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(5) Furnishings and decorations of an explosive or highly flammable character shall not be used in any occupancy.

(6) Where fire retardant paints or solutions are used, they shall be renewed, as necessary to maintain their fire retardant properties.

History: 1954 ACS 62, p. 35, Eff. May 18, 1970; 1954 ACS 69, p. 63, Eff. Nov. 15, 1971; 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10632 Obstructions.

Rule 632. (1) A means of egress shall be continuously maintained free of all obstructions or impediments to full instant use in case of fire or other emergency. A mirror shall not be placed on an exit door or be placed in or adjacent to an exit in a manner to confuse the direction of exit.

(2) A lock, fastening device, or barrier shall not be installed or used on a means of egress in a manner that will prevent or hinder free escape from the inside of a building.

(3) A device or alarm to restrict the improper use of an exit shall be so designed and installed that it cannot, even in case of failure, impede or prevent emergency use of an exit.

(4) Devices such as turnstiles and gates shall not be placed so as to obstruct a means of egress.

(5) No combustible or flammable debris, waste, or other material, the burning of which would render hazardous egress from the building shall be placed, stored, or kept on, under, at the bottom of, or adjacent to a means of egress or elevator. Where a means of egress is being obstructed by the placement of movable objects, aisles shall be marked and railings or permanent barriers provided to protect the means of egress against encroachment. (Railing or standard barrier as per general industry safety standards commission standards, Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10201 to R 408.10239 of the Michigan Administrative Code.)

History: 1954 ACS 62, p. 35, Eff. May 18, 1970; 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10633 Permissible exits and exit components.

Rule 633. (1) Approved exits for all occupancies regulated by this part shall be restricted to the following permissible types: doors, inside or outside stairs, horizontal exits, ramps, escalators, and fire escapes for existing occupancies.

(2) An exit shall consist only of approved components. An exit shall be constructed as an integral part of the building or permanently affixed thereto.

(3) Stairs, landings, and other exit components shall be guarded against falls over open edges, and guards and handrails shall continue the full length of the guarded exit component.

(4) An exit protected by separation from other parts of the building shall have the separating construction meet the following:

(a) The separation shall have not less than a 1-hour fire-resistance rating when the exit connects 3 stories or less. This applies whether the stories connected are above or below the story at which the exit discharge is located.

(b) The separation shall have not less than a 2-hour fire-resistance rating when the exit connects 4 or more stories, whether above or below the floor of discharge.

(c) Any opening therein shall be protected by an approved self-closing fire door.

(d) An opening in an exit enclosure shall be confined to that which is necessary for access to the enclosure from a normally occupied space and for egress from the enclosure.

History: 1954 ACS 62, p. 35, Eff. May 18, 1970; 1954 ACS 79, p. 63, Eff. May 16, 1974.

R 408.10634 Number of exits.

Rule 634. (1) Not less than 2 exits, remotely located from each other, shall be provided for every building, floor, or fire area, including a basement, except that a single exit may be permitted, when approved, in an existing low or ordinary hazard occupancy for a building, floor or fire area with a population less than 50 persons, and in a new occupancy with a population less than 25 persons.

(2) Where the contents are classified as high hazard, there shall be at least 2 exits, accessible in different directions. All doors shall swing in the direction of exit travel. Where floor areas are divided into rooms, there shall be at least 2 ways of escape from every room, however small, except toilet rooms so located that they are out of areas of high hazard.

(3) A single story noncombustible building for industrial or storage occupancy with an approved fully equipped automatic sprinkler system and normally not subject to traffic by other than employees shall have exit doors which will provide safe egress spaced not more than every 300 feet apart on the perimeter wall.

History: 1954 ACS 62, p. 36, Eff. May 18, 1970; 1954 ACS 69, p. 63, Eff. Nov. 15, 1971.

R 408.10635 Travel distance to exits.

Rule 635. (1) The total number of exits in a building shall be sufficient so that the maximum travel distance from any occupied space to at least 1 exit shall not exceed the limits specified in R 408.10636.

(2) The distance to an exit shall be measured along the center line of the natural and unobstructed path of travel.

(3) In case of an open area, the distance to an exit shall be measured from the most remote point subject to occupancy. In case of an individual room subject to occupancy by not more than 6 persons, distance to an exit shall be measured from the doors of such room if the path of travel from any point in the room to the door does not exceed 50 feet.

(4) Where an open stairway is part of a path of travel to a required exit, the distance shall include the travel on the stairway, and the travel from the end of the stairway to reach an outside door or other exit, in addition to the distance to reach the stairway.

(5) Where any part of an outside stair or other outside exit is within 15 feet horizontal distance of an unprotected building opening, the distance to an exit shall include the length of travel, to ground level, on the exit itself.

(6) Exits and exit access shall be so arranged that there are no dead-end pockets or hallways whose depths exceed the limits specified for the individual occupancies in table 1.

History: 1954 ACS 62, p. 36, Eff. May 18, 1970; 1954 ACS 69, p. 63, Eff. Nov. 15, 1971.

R 408.10636 Exit distances.

Rule 636.

TABLE 1

Type of Occupancy	Maximum Travel Distance to Exits (in feet) Unsprinklered	Sprinklered	Dead-End Limits (in feet)
Mercantile, ordinary hazard	100	150	50
Mercantile, high hazard	75	75	0
Office	200	300	50
Industrial	100	150	50
Industrial, high hazard	75	75	0
Storage, low and ordinary hazard	100	150	50
Storage, high hazard	75	100	0
Hotels	100	150	35

Note: For miscellaneous structures, see R 408.10691 to R 408.10697.

(1) An industrial or storage occupancy with an ordinary hazard classification may extend the maximum distance of travel to an exit to 400 feet if the occupancy is in a single story noncombustible building with an approved fully automatic sprinkler system.

(2) An industrial or storage occupancy with an ordinary hazard classification may extend the maximum distance of travel to an exit in excess of 400 feet if the occupancy is in a single story noncombustible building, has an approved fully automatic sprinkler system and the height of the ceiling, smoke curtain and roof ventilation is designed to minimize the possibility that an employee may be overtaken by the spread of fire or smoke within 6 feet of the floor level before he can reach an exit.

(3) A building described in subrule (2) having a travel distance of more than 400 feet shall have:

(a) A standard approved fire alarm system which includes a coded system to a centrally located station which shall be supervised during occupancy.

(b) A manually operated fire alarm sending station at each main exit and in the natural path of escape at an accessible and visible location.

(c) A fire alarm sending station located so that not more than 200 feet will have to be traversed to reach the station.

(4) A mercantile occupancy with an ordinary hazard classification may extend the maximum distance of travel to an exit to 300 feet if the occupancy is in a single story noncombustible building with an approved fully automatic sprinkler system. A checkout area or lane not in use shall be equipped with a breakaway device to provide a means of egress in event of emergency.

History: 1954 ACS 62, p. 36, Eff. May 18, 1970; 1954 ACS 69, p. 63, Eff. Nov. 15, 1971.

R 408.10637 Means of egress capacity.

Rule 637. (1) Where a building is equipped with exits so located as to satisfy travel distance requirements for the occupancy and hazard of contents classifications but has an exit deficiency due to its population density, additional exit capacity shall be provided to satisfy the requirements of these rules.

(2) The capacity of a means of egress shall be measured in units of width of 22 inches. Fractions of a unit shall not be counted, except that 12 inches added to 1 or more full units shall be counted as ½ a unit of exit width. A 40-inch door may be rated as 2 units for existing construction only.

(3) The capacity of a means of egress shall be limited to the capacity of its lowest rated component. Units of exit width shall be measured in the clear at the narrowest point of the means of egress.

History: 1954 ACS 62, p. 36, Eff. May 18, 1970.

R 408.10638 Capacity of components.

Rule 638. (1) Means of egress components shall have the following rated exiting capacities per unit of width:

(a) Doors leading outside the building at grade or not more than 21 inches above or below grade ..... 100 persons per unit

(b) Horizontal exits ..... 100 persons per unit

(c) Stairs and ramps ..... 60 persons per unit

(d) Fire escapes with access by doors ..... 45 persons per unit

(e) Fire escapes with access by windows ..... 20 persons per unit

(2) The exiting capacities prescribed in subrule (1)(a) and (b) may be increased to 150 persons per unit, if the occupancy is equipped with an approved fully automatic sprinkler system.

History: 1954 ACS 62, p. 37, Eff. May 18, 1970; 1954 ACS 99, p. 108, Eff. Apr. 18, 1979.

R 408.10639 Capacity as affected by population.

Rule 639. (1) The capacity of a means of egress from a building, floor, balcony, tier, or other occupied space shall be sufficient for the population thereof. The population for industrial and storage occupancies shall be based on the maximum number of persons that may be in the space at any time as determined by actual count. All other types of occupancies shall not be less than the number computed in accordance with table 2.

TABLE 2

Type of Occupancy	Square Feet per Person
Mercantile, street floor or sales basement	30
Mercantile, other floors	60
Office	100
Hotel	200

Note: The computed population of an occupancy is obtained by dividing the gross floor area of a building, floor or fire area by the indicated square feet per person.

(2) Mercantile occupancy in a single story noncombustible building with an approved fully equipped automatic sprinkler system may increase the square footage requirement in table 2 by 100%.

(3) Where an exit serves more than 1 floor, only the population of each floor considered individually need be used in computing the capacity of the exit at that level, if the exit capacity is not decreased in the direction of exit travel. Where a means of egress from floors above and below converge at an intermediate level, the capacity of the exit from the point of convergence shall be not less than the combined capacity of the converging exits.

History: 1954 ACS 62, p. 37, Eff. May 18, 1970; 1954 ACS 69, p. 64, Eff. Nov. 15, 1971.

R 408.10641 Exit access and discharge.

Rule 641. (1) An exit access shall not be through a room subject to locking.

(2) An exit access shall be so arranged that it will not be necessary to travel through any area of high hazard occupancy in order to reach the nearest exit.

(3) The minimum width of an exit access shall be at least equal to the required width of the exit to which it leads, but not less than 34 inches. The headroom clearance shall be not less than 6 feet 8 inches from the floor.

(4) An exit discharge shall discharge directly to a street, or to a yard, court or other open space of such size as to accommodate all employees leaving the building by that exit discharge to safe access to a street.

(5) Stairs and other exits shall be arranged to make clear the direction of egress to the street. Where an exit stairs continues beyond the floor of discharge, it shall be interrupted at the floor of discharge by a partition, door or other effective means.

(6) Exit access by the way of an exterior balcony, porch, gallery, or roof shall:

(a) Be kept free from accumulations of snow and ice.

(b) Be permanent direct route without obstructions, such as railings, gates, barriers, or other objects, that might divide the space into sections or rooms. Where furniture or other movable objects might block the path of travel, they shall be secured in place or a standard barrier as prescribed in R 408.10231 of Part 2. Floor and Wall Openings, Stairways and Skylights, shall protect the path of travel.

(c) Have no dead ends in excess of 20 feet.

(d) Comply with this part as to requirements for width and arrangement.

History: 1954 ACS 62, p. 37, Eff. May 18, 1970; 1954 ACS 79, p. 64, Eff. May 16, 1974.

DOORS AND STAIRS

R 408.10643 Doors; general provisions.

Rule 643. (1) A door assembly, including the doorway, frame, door, and necessary hardware, may be used as a component in a means of egress when it conforms to the requirements of this part. As such, the assembly is designated as an exit door.

(2) A single leaf of an exit door shall be not less than 28 inches nor more than 48 inches in width.

(3) Where a door or gate opens directly on a stairway, a platform shall be provided, and the swing of the door or gate shall not reduce the floor area leading to the stairs to a width less than 20 inches.

(4) A sliding door shall not be used as part of the exit capacity of a building unless it is designed and equipped with a break-away type door.

History: 1954 ACS 62, p. 37, Eff. May 18, 1970; 1954 ACS 69, p. 64, Eff. Nov. 15, 1971.

R 408.10644 Swing.

Rule 644. (1) An exit door shall be of the side-hinged swinging type. It shall swing with exit travel when serving an area of high hazard occupancy or a building, floor or area with a population of more than 50 persons in an existing building, or more than 25 persons in a new building, the construction of which started after the effective date of these rules.

(2) If 1 or more approved exits are provided and the travel distance requires additional exits, a mechanically aided sliding door may be used to exit to the outside of a building constructed before May 15, 1970, under the following conditions:

(a) The occupancy shall be classified as a low or ordinary storage hazard or as an ordinary mercantile hazard.

(b) The mechanical aid to the door shall allow the door to be opened quickly and easily by 1 person.

(c) The mechanical aid of the door shall not be rendered inoperative by fire or lack of maintenance.

(3) An exit door providing access to a stairway shall swing in the direction of exit travel. During its swing, the door shall not block stairs or landings, and, when open, shall not interfere with the full use of the stairway.

(4) An exit door at the foot of stairs from upper floors or at the head of stairs from basements shall swing with exit travel.

(5) A screen door or storm door in connection with a required exit shall not swing against the direction of exit travel in any case where doors are required to swing with exit travel.

History: 1954 ACS 62, p. 38, Eff. May 18, 1970; 1954 ACS 79, p. 64, Eff. May 16, 1974; 1954 ACS 99, p. 108, Eff. Apr. 18, 1979.

R 408.10645 Locks, fastening devices, and closing mechanisms.

Rule 645. (1) An exit door shall be so arranged as to be readily opened, without the use of a key, from the side from which egress is to be made at all times when the building served thereby is occupied.

(2) A latch or other fastening device on an exit door shall be provided with a knob, handle, panic bar, or other simple type of releasing device. Slide bolts, hasps, hooks and eyes and similar types of locking devices difficult to open against door pressure shall not be installed or used.

(3) A fire door to a stair enclosure or horizontal exit shall be provided with a reliable self-closing mechanism, and shall not at any time be secured in the open position.

History: 1954 ACS 62, p. 38, Eff. May 18, 1970.

R 408.10646 Power operated doors.

Rule 646. An exit door, wholly or partly power operated, shall be so designed that in case of power failure it can be manually operated. A power operated door shall not be counted as a required exit unless it swings with the exit travel.

History: 1954 ACS 62, p. 38, Eff. May 18, 1970.

R 408.10647 Revolving doors.

Rule 647. (1) A revolving door shall constitute an exit door only under the following conditions:

(a) The door shall be installed before the prohibition listed in subrule (2).

(b) The number of revolving doors used as exit doors shall not exceed the number of swinging doors used as exit doors within 20 feet thereof.

(c) A revolving door may serve as an exit, without an adjacent swinging door, for a street floor elevator lobby if no stairway or door from other parts of the building discharges through the lobby and the lobby has no occupancy other than as a means of travel between elevators and street.

(d) A revolving door shall be equipped with means to prevent its rotation at more than 12½ revolutions per minute.

(e) A revolving door shall not be used at the foot of stairs from upper floors, or at the head of stairs from the basement or other lower floors.

(f) A revolving door credited as an exit door shall have a rated capacity of ½ unit of exit width.

(2) A revolving door installed 180 days after the effective date of this part shall not constitute an exit door.

History: 1954 ACS 62, p. 38, Eff. May 18, 1970; 1954 ACS 79, p. 64, Eff. May 16, 1974.

R 408.10651 Stairs.

Rule 651. (1) Stairs serving as a required exit shall comply with the requirements of this part as to construction specifications and details, and of table 3.

TABLE 3

Minimum width clear of all obstructions except handrails which may project not more than 3½ inches each side.	44 inches. 36 inches where total occupancy of all floors served by stairway is less than 50 persons
Maximum height of risers:	
Existing construction	9 inches
New construction	8 inches
Minimum width of tread exclusive of nosing or projection:	
Existing construction	8 inches
New construction	10 inches
Winders:	
Existing construction	Permitted when complying with all other requirements of this part
New construction	Not permitted
Maximum height between landings	12 feet
Minimum dimension of landing in direction of travel	44 inches

(2) A variation in the width of tread or height of risers in any flight shall not exceed 3/16 inch.

(3) A stair and a platform or landing used in connection therewith, in a building 4 stories or more in height, shall be of noncombustible construction throughout, except for handrails.

(4) A stair, platform, landing, balcony, and stair hallway floor shall be designed to carry a load of 100 pounds per square foot, or a concentrated load of 300 pounds so located as to produce maximum stress conditions.

(5) Where the material of stair treads and landings is such as to involve danger of slipping, nonslip material shall be provided on the tread surface.

(6) Stairways and intermediate landings shall continue with no decrease in width along the direction of exit travel.

(7) Monumental stairs, either inside or outside, may be accepted as required exits if all requirements for exit stairs are complied with, except that curved stairs may be accepted with a radius of 25 feet or more at the inner edges.

History: 1954 ACS 62, p. 38, Eff. May 18, 1970; 1954 ACS 69, p. 64, Eff. Nov. 15, 1971.

HORIZONTAL EXITS, RAMPS, AND ESCALATORS

R 408.10661 Horizontal exits.

Rule 661. (1) A fire area or area of refuge with a horizontal exit shall have, in addition to the horizontal exit or exits, at least 1 means of egress leading to the outside, or have access to an adjacent fire area containing an outside means of egress.

(2) A fire area or area of refuge for which credit is allowed in connection with a horizontal exit shall have, in addition to the horizontal exit or exits, at least 1 means of egress leading to the outside.

(3) Where either side of a horizontal exit is occupied, the doors used in connection with the horizontal exit shall be unlocked.

(4) The floor area on either side of a horizontal exit shall be sufficient to hold the occupants of both floor areas allowing not less than 3 square feet clear floor area per person.

(5) Where a horizontal exit serves areas on both sides of a wall, there shall be adjacent openings with swinging doors at each, opening in opposite directions, with signs on each side of the wall or partition indicating as the exit door the door which swings with the travel from that side; or other approved arrangements providing doors always swinging with any possible exit travel.

History: 1954 ACS 62, p. 39, Eff. May 18, 1970; 1954 ACS 69, p. 65, Eff. Nov. 15, 1971.

R 408.10664 Ramps.

Rule 664. (1) A ramp may be a component in a means of egress when it conforms to the requirements of this part, and to the special requirements of table 4 with the designation of a class A or class B ramp.

TABLE 4
Ramps

	Class A	Class B
Width	44 inches and greater	30 to 44 inches
Slope	1 to 1 3/16 in 12	1 3/16 to 2 in 12
Maximum height between landings	No limit	12 feet

(2) The ramp and the platforms and landings associated therewith shall be designed for not less than 100 pounds per square foot live load.

(3) The slope of the ramp shall not vary between landings. A landing shall be level and changes in direction of travel if any shall be made only at landings.

(4) The ramp in a building more than 3 stories in height shall be of noncombustible construction. The ramp floor and landings shall be solid and without perforations.

(5) The ramp shall have a nonslip surface.

History: 1954 ACS 62, p. 39, Eff. May 18, 1970.

R 408.10667 Escalators.

Rule 667. An escalator, to be considered a component of means of egress, shall be fully enclosed above the ground floor and equipped with fire doors containing fusible links to protect the escalator area against the passage of flame, smoke, and gases in the event of fire. An escalator being operated in the direction contrary to normal exit travel shall not be considered a means of egress.

History: 1954 ACS 62, p. 40, Eff. May 18, 1970; 1954 ACS 69, p. 65, Eff. Nov. 15, 1971.

FIRE ESCAPES

R 408.10671 Fire escape stairs.

Rule 671. (1) Fire escape stairs may be used as a required exit only in existing buildings. Fire escape stairs shall not constitute more than 50% of the required exit capacity. Fire escape stairs shall not constitute any part of the required exits for a new building.

(2) Fire escape stair dimensions shall be in accordance with table 5:

TABLE 5

Minimum width	22 inches clear between rails
Minimum horizontal dimension of a landing or platform	22 inches
Maximum rise	9 inches
Minimum tread, exclusive of nosing	9 inches
Spiral winders	Not permitted
Maximum height betwen landings	12 feet

(3) Fire escape stairs shall have walls or approved guards, and handrails on both sides.

History: 1954 ACS 62, p. 40, Eff. May 18, 1970.

R 408.10672 Stair construction and load.

Rule 672. (1) Iron, steel, concrete, or other approved noncombustible material shall be used for the construction of fire escape stairs, balconies, railings, and other features appurtenant thereto.

(2) Balconies and stairs shall be designed to carry a load of 100 pounds per square foot, or a concentrated load of 300 pounds so located as to produce maximum stress conditions.

History: 1954 ACS 62, p. 40, Eff. May 18, 1970.

R 408.10673 Exposure to fire escape stairs.

Rule 673. Fire escape stairs shall be so arranged that they will be subject to exposure by the smallest possible number of window and door openings. Every

opening, any portion of which is within the following limits, shall be completely protected by approved fire doors or metal frame wired glass windows, as follows:

(a) A horizontal opening if within 15 feet of a balcony, platform or stairway constituting a part of the escape proper. This does not apply to a platform or walkway leading from the same floor to the escape proper. Protection need not extend around a right angle corner (outside angle 270 degrees) of the building.

(b) An opening below if within 3 stories or 35 feet of a balcony, platform, walkway or stairway constituting a part of the escape proper, or within 2 stories or 20 feet of a platform or walkway leading from any story to the escape proper.

(c) An opening above if within 10 feet of a balcony, platform or walkway, as measured vertically, or from any stair treads, as measured vertically from the face of the outside riser.

(d) An opening on a top story. Protection for wall openings is not required where stairs do not lead to the roof.

History: 1954 ACS 62, p. 40, Eff. May 18, 1970.

R 408.10674 Access to fire escape stairs.

Rule 674. (1) Access to fire escape stairs shall be by doors or casement windows whose minimum dimensions are 24 inches by 6 feet 6 inches, or by double hung windows 30 by 36 inches clear opening. Double hung windows shall be so counterbalanced and maintained that they can be readily opened.

(2) Insert screens, if any, on any type of opening giving access to fire escape stairs shall be of types that may be readily opened or pushed out. Storm sash shall not be used on a window providing access to fire escape stairs.

(3) Access to fire escape stairs through windows with sills more than 12 inches above the inside floor level shall be provided with permanent access steps leading to the access window. The outside balcony shall not be more than 18 inches below the sill.

History: 1954 ACS 62, p. 40, Eff. May 18, 1970.

R 408.10675 Swinging stairs.

Rule 675. (1) A swinging stair section shall not be used for a fire escape stairs, except where termination is over a sidewalk, alley, or driveway.

(2) A swinging stair section shall not be located over doors, over the path of travel from another exit, nor be in any location where there are obstructions.

(3) The width of a swinging stair section shall be at least equal to that of the stairs above and the pitch shall not be steeper than that of the stairs above.

(4) A counterweight shall be provided for a swinging stair section and this shall be of the type balancing about a pivot, no cables being used. Counter-balancing shall be such that a weight of 150 pounds 1 step from pivot will not start swinging action, and a weight of 150 pounds, ¼ of the length of the swinging stairs from the pivot, will positively cause the stairs to swing down.

(5) A latch or other device shall not be installed or used to lock a swinging stair section in the up position.

History: 1954 ACS 62, p. 41, Eff. May 18, 1970.

R 408.10677 Ladders.

Rule 677. No form of ladder shall be used as a fire escape except that a ladder conforming to occupational safety commission standards, Part 3. Fixed Ladders, being R 408.10301 to R 408.10365 of the Michigan Administrative Code, may be used to provide a means of escape from a boiler room, storage elevator, or tower, as permitted for special miscellaneous occupancies, elevated platforms around

machinery, or similar spaces subject to routine simultaneous occupancy by not more than 3 persons.

History: 1954 ACS 62, p. 41, Eff. May 18, 1970; 1954 ACS 69, p. 65, Eff. Nov. 15, 1971.

R 408.10679 Slide escapes.

Rule 679. (1) A slide escape may be used as a required exit only for industrial occupancies with high hazard contents, and shall be counted as an exit only when regularly used in fire drills or for a normal exit.

(2) A slide escape shall be of such type and shall be constructed and installed to conform to the "Regulations Governing Installation and Construction of Tubular and Spiral Fire Escapes in the State of Michigan," being R 28.51 to R 28.73 of the Michigan Administrative Code.

History: 1954 ACS 62, p. 41, Eff. May 18, 1970.

ILLUMINATION AND MARKING

R 408.10681 Artificial lighting.

Rule 681. (1) A means of egress shall be illuminated by artificial lighting at places and for periods of time required to maintain the illumination to values not less than 1.0 footcandles measured at the floor. Illumination shall be so arranged that the failure of any single lighting unit, such as the burning out of an electric bulb, will not leave the area in darkness.

(2) Artificial lighting shall be from a source of reasonable reliability, such as a public utility service. A battery operated electric light or any type of portable lamp or lantern shall not be used for primary exit illumination. Luminescent, fluorescent, or reflective material shall not be used as a substitute for required illumination.

History: 1954 ACS 62, p. 41, Eff. May 18, 1970.

R 408.10682 Emergency illumination.

Rule 682. In a building with natural lighting subject to occupancy by more than 300 persons, and in a building for which no natural lighting is provided and subject to occupancy by more than 100 persons, approved emergency lighting facilities shall be provided for a means of egress so arranged that required exit illumination will be maintained for a period of at least ½ hour in the event of failure of normal lighting of the building. Emergency lighting facilities shall be automatic, and there shall be no appreciable period of interruption during the change-over from the normal lighting of the building.

History: 1954 ACS 62, p. 41, Eff. May 18, 1970; 1954 ACS 69, p. 65, Eff. Nov. 15, 1971.

R 408.10685 Signs.

Rule 685. (1) A means of egress to an exit not immediately apparent from any point in an occupancy shall be marked by directional signs.

(2) A door, passage, or stairway, which is neither an exit nor an exit access, and which is so located or arranged as to be likely mistaken for an exit, shall be identified by a sign reading "NOT AN EXIT" or similar designation, or be identified by a sign indicating its actual use or character.

(3) A sign shall designate an exit and shall be located and be of such size and color and design as to be readily visible and identifiable from the distance of travel for that particular occupancy.

History: 1954 ACS 62, p. 42, Eff. May 18, 1970; 1954 ACS 69, p. 65, Eff. Nov. 15, 1971; 1954 ACS 79, p. 64, Eff. May 16, 1974.

R 408.10686 Sign illumination and letter size.

Rule 686. (1) An exit sign shall be illuminated by a light source giving a value of not less than 5.0 footcandles on the illuminated surface.

(2) An exit sign shall have the word "EXIT" in plainly legible letters not less than 6 inches high, with the principal strokes of the letters not less than ¾-inch wide.

(3) An internally illuminated exit sign shall be provided where the reduction of normal illumination is permitted and less than 5 footcandles would appear on the exit sign.

History: 1954 ACS 62, p. 42, Eff. May 18, 1970; 1954 ACS 79, p. 64, Eff. May 16, 1974.

MISCELLANEOUS OCCUPANCIES

R 408.10691 Vehicles.

Rule 691. A house trailer or similar vehicle, railroad car, street car, truck, or bus from which the wheels have been removed and a permanent-type foundation provided, or otherwise fixed so that it is no longer mobile, is considered a building and is subject to the requirements of this part.

History: 1954 ACS 62, p. 42, Eff. May 18, 1970.

R 408.10692 Vessels.

Rule 692. A ship, barge, or other vessel permanently moored or aground and occupied for purposes other than navigation is subject to the requirements of this part.

History: 1954 ACS 62, p. 42, Eff. May 18, 1970.

R 408.10693 Open buildings.

Rule 693. An open building includes all operations conducted in the open air where equipment is in the open with platforms used for necessary access, sometimes with roofs or canopies to provide shelter, but without walls as distinguished from an enclosed building. An open building shall have exit facilities providing at least 1 means of escape from any point subject to employee occupancy, such means of escape affording safety from fire or smoke therefrom, explosion or release of fumes.

History: 1954 ACS 62, p. 42, Eff. May 18, 1970.

R 408.10694 Aircraft hangars.

Rule 694. (1) An exit from an aircraft storage or servicing area shall be provided at intervals of not more than 150 feet on all exterior walls of the aircraft hangar. A minimum of 2 exits shall serve each aircraft storage or servicing area. Horizontal exits through interior walls shall be provided at intervals of not more than 100 feet. Dwarf or "smash" doors in doors accommodating aircraft may be used to comply with these requirements.

(2) An exit from a mezzanine floor in an aircraft storage or servicing area shall be so arranged that the maximum travel to reach the nearest exit from any point on the mezzanine shall not exceed 75 feet.

History: 1954 ACS 62, p. 42, Eff. May 18, 1970.

R 408.10695 Storage elevators for combustible commodities.

Rule 695. (1) In a storage elevator there shall be at least 1 stairway from basement to first floor and from the first floor to the top floor of the working house enclosed in a dust-tight, noncombustible shaft.

Digitized by Google

(2) A noncombustible door of the self-closing type shall be provided at each floor landing.

(3) An exterior stair or basket ladder type fire escape (see occupational safety standards commission standards, Part 3. Fixed Ladders, being R 408.10301 et seq. of the Michigan Administrative Code) shall be provided from the roof of the working house to ground level or to the roof of an adjoining annex with access from all floors above the first.

(4) An exterior stair or basket ladder type fire escape (see occupational safety standards commission standards, Part 3. Fixed Ladders, being R 408.10301 et seq. of the Michigan Administrative Code) shall be provided from the roof of each storage annex to ground level.

(5) A fire escape ladder shall be provided adjacent to a manlift for the up and down sides.

(6) A storage elevator shall have an opening leading to a fire escape ladder from each floor or work level.

(7) Storage elevators for combustible commodities existing at the effective date of this part do not need to comply with subrules (1) and (2).

(8) Storage elevators for combustible commodities erected after the effective date of this part shall comply with all items of this rule.

History: 1954 ACS 62, p. 42, Eff. May 18, 1970; 1954 ACS 69, p. 65, Eff. Nov. 15, 1971.

R 408.10696 Towers.

Rule 696. (1) A tower occupied for purposes such as observation or signaling, either an independent structure or on top of a building, shall be permitted with a single stairway or ramp exit if all of the following conditions are met:

(a) The tower is of such size as not to be subject to occupancy by more than 25 persons on any 1 floor level.

(b) The tower is subject only to occupancy by persons capable of descending the stairway and is not used for living or sleeping purposes.

(c) The construction is fire-resistive, noncombustible, or heavy timber, with no quick-burning interior finish. There shall be no combustible materials in, under, or in the immediate vicinity of the tower, except as necessary to perform the requirements of occupancy.

(2) Stairs shall conform to the requirements of this part, except that for existing towers fire escape type stairs may be used. (See occupational safety standards commission standards, Part 3. Fixed Ladders, being R 408.10301 et seq. of the Michigan Administrative Code.)

(3) A tower, such as a forest fire observation tower and a railroad signal tower designed for occupancy by not more than 3 persons employed therein, need not be constructed of fire-resistive, noncombustible material and may be served by ladders instead of stairs. (See occupational safety standards commission standards, Part 3. Fixed Ladders, being R 408.10301 et seq. of the Michigan Administrative Code.)

History: 1954 ACS 62, p. 43, Eff. May 18, 1970.

R 408.10697 Piers and water-surrounded buildings.

Rule 697. (1) A pier used for any purpose other than for mooring of vessels and handling of cargo shall be provided with a means of egress from any building thereon to the pier and from the pier to the mainland appropriate to the character of the occupancy of the pier.

(2) A building, such as a lighthouse, surrounded by water shall have a sufficient area of ground, as on an island or fire-resistive platform, to provide an adequate area of refuge from a fire in the building.

History: 1954 ACS 62, p. 43, Eff. May 18, 1970.

PART 7. GUARDS FOR POWER TRANSMISSION
GENERAL PROVISIONS

R 408.10701 Scope.

Rule 701. This part applies to all equipment used in the transmission of power, excluding the point of operation.

History: 1954 ACS 60, p. 66, Eff. Nov. 14, 1969.

R 408.10703 Definitions; A to G.

Rule 703. (1) "Belt" includes any power transmission belt, including, but not limited to, a flat belt, round belt and V-belt, overhead chain and link belt. It does not include a conveyor belt.

(2) "Belt pole" means a device used in shifting belts on and off fixed pulleys on a line or countershaft if there are no loose pulleys.

(3) "Belt shifter" means a device for mechanically shifting belts from tight to loose idler pulleys or vice versa, or for shifting belts on cones of speed pulleys.

(4) "Exposed to contact" means that the location of an object is such that a person might come into contact with it and be injured.

(5) "Flywheel" includes a balance wheel and a flywheel pully mounted and revolving on the crankshaft of an engine or other shafting.

(6) "Gears" means a set or train of wheels or parts that engages another part as by meshing teeth.

(7) "Guarded" or "enclosed" means that an object is covered, fenced or surrounded so that it is not exposed to contact.

History: 1954 ACS 60, p. 66, Eff. Nov. 14, 1969; 1954 ACS 69, p. 66, Eff. Oct. 15, 1971.

R 408.10704 Definitions; H to V.

Rule 704. (1) "Horizontal belt" means a belt running within a 60 degree angle from horizontal.

(2) "Maintenance runway" means a permanent runway or platform used for oiling, maintenance, running adjustment, or repair work, but not for a passageway.

(3) "Nip-point belt and pulley guard" means a device which encloses a pulley and is provided with rounded or rolled edge slots through which the belt passes.

(4) "Point of operation" means that point at which cutting, shaping, or forming by a machine is accomplished upon stock and other points that may offer a hazard to the operator in inserting or manipulating stock in the operation of the machine.

(5) "Securely fastened" means that the safety device or object referred to shall be so secured in place that it cannot be moved under normal or reasonably foreseen conditions or circumstances.

(6) "Vertical belt" means a belt running within a 30 degree angle from vertical.

History: 1954 ACS 60, p. 66, Eff. Nov. 14, 1969; 1954 ACS 69, p. 66, Eff. Oct. 15, 1971.

POWER TRANSMISSION EQUIPMENT

R 408.10711 Flywheels.

Rule 711. Any part of a flywheel 7 feet or less above the floor or platform shall be guarded in 1 of the following ways:

(a) Enclosed by a construction pursuant to R 408.10751 to R 408.10754 and R 408.10757.

(b) With standard barriers and toeboards placed not less than 15 inches nor more than 20 inches from the rim of the flywheel pursuant to rule 231 and subrule

(2) of rule 233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10231 and R 408.10233(2) of the Michigan Administrative Code.

(c) The upper rim of a flywheel protruding through a working floor, shall be enclosed or surrounded by a standard barrier and toeboard pursuant to R 408.10231 and R 408.10233(2) of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

(d) A flywheel with a smooth rim 5 feet or less in diameter may be guarded pursuant to R 408.10756.

History: 1954 ACS 60, p. 67, Eff. Nov. 14, 1969; 1954 ACS 69, p. 66, Eff. Oct. 15, 1971.

R 408.10712 Cranks and connecting rods.

Rule 712. A crank and a connecting rod, if exposed to contact, shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757 or by a standard barrier pursuant to R 408.10231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

History: 1954 ACS 60, p. 67, Eff. Nov. 14, 1969; 1954 ACS 69, p. 66, Eff. Oct. 15, 1971.

R 408.10713 Tail rods and extension piston rods.

Rule 713. Tail rods and extension piston rods exposed to contact shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757 or by a standard barrier pursuant to R 408.10231 which allows a clearance of not less than 15 inches nor more than 20 inches from the fully extended tail rod or extension piston rod.

History: 1954 ACS 60, p. 67, Eff. Nov. 14, 1969.

R 408.10714 Governor balls.

Rule 714. Governor balls located 7 feet or less from the floor or platform shall be enclosed by a construction pursuant to R 408.10751 to R 408.10754 and R 408.10757.

History: 1954 ACS 60, p. 67, Eff. Nov. 14, 1969.

R 408.10715 Discharge or exhaust pipes.

Rule 715. The discharge of an exhaust pipe or boiler blowoff, if exposed to contact, shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757.

History: 1954 ACS 60, p. 67, Eff. Nov. 14, 1969.

R 408.10716 Revolving and reciprocating parts.

Rule 716. A revolving or reciprocating part where exposed to contact shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757.

History: 1954 ACS 60, p. 68, Eff. Nov. 14, 1969; 1954 ACS 69, p. 66, Eff. Oct. 15, 1971.

R 408.10721 Shafts.

Rule 721. (1) A continuous line of shafting shall be secured in position against endwise movement.

(2) An inclined or vertical shaft shall be held in position against endwise thrust.

(3) A projecting shaft end where exposed to contact shall be made flush or guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757.

History: 1954 ACS 60, p. 68, Eff. Nov. 14, 1969; 1954 ACS 69, p. 67, Eff. Oct. 15, 1971.

R 408.10722 Shafting.

Rule 722. (1) Shafting exposed to contact 7 feet or less above a floor or platform level shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757.

(2) Horizontal shafting extending over a driveway shall be guarded with a trough guard, unless it is located 15 feet or more above the driveway or is a part of an overhead traveling crane.

(3) Horizontal transmission shafting exposed to contact under benches shall be guarded in 1 of the following ways:

(a) Completely enclosed.

(b) Guarded by a trough guard. The sides of the trough shall come to the underside of the table or, if the shafting is located near a floor, to the floor.

(c) Guarded on exposed sides with a rigid shield guard extending from the underside of the bench top to 2 inches below the line of shafting.

History: 1954 ACS 60, p. 68, Eff. Nov. 14, 1969; 1954 ACS 69, p. 67, Eff. Oct. 15, 1971.

R 408.10723 Rescinded.

History: 1954 ACS 60, p. 70, Eff. Nov. 14, 1969; rescinded 1954 ACS 69, p. 67, Eff. Oct. 15, 1971.

R 408.10725 Pulley guards and guides.

Rule 725. (1) A pulley and a pulley part exposed to contact 7 feet or less from the floor or platform shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757.

(2) If the distance from a pulley to the nearest fixed pulley, clutch, or hanger is less than the width of the belt used, a guide shall be provided to prevent the belt from leaving the pulley.

(3) If there is an overhanging pulley on a line, jack, or countershaft with no bearing between the pulley and the outer end of the shaft, a guide to prevent the belt from running off the pulley shall be provided.

History: 1954 ACS 60, p. 70, Eff. Nov. 14, 1969.

R 408.10726 Pulley condition and operation.

Rule 726. (1) A pulley with a defect, including, but not limited to, a crack or a piece broken out, shall not be used.

(2) A pulley subject to active corrosive conditions shall be of corrosive resisting material.

(3) A pulley permanently out of service shall not be allowed to remain on shafting which is in use, or it shall be enclosed with a guard pursuant to R 408.10751 to R 408.10754 and R 408.10757.

(4) A pulley shall not be operated at more than its designed rim speed.

(5) Composition or laminated wood pulleys shall not be installed where they are subjected to influences detrimental to their structural composition.

History: 1954 ACS 60, p. 70, Eff. Nov. 14, 1969; 1954 ACS 69, p. 67, Eff. Oct. 15, 1971; 1954 ACS 88, p. 93, Eff. Aug. 18, 1976.

R 408.10727 Belts.

Rule 727. (1) A belt and pulley 7 feet or less above the floor or platform and exposed to contact shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757. In a power plant or power-development room, a standard barrier and toeboard may be used pursuant to R 408.10231 and R 408.10233(2) of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

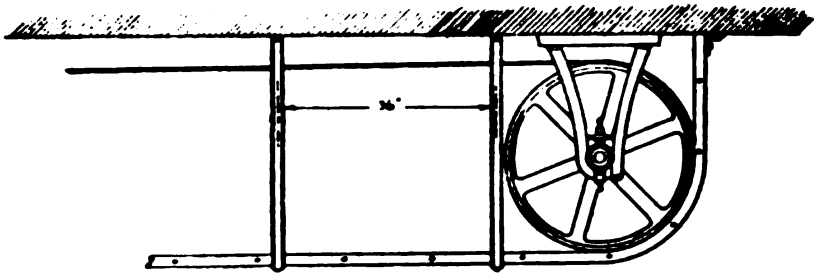
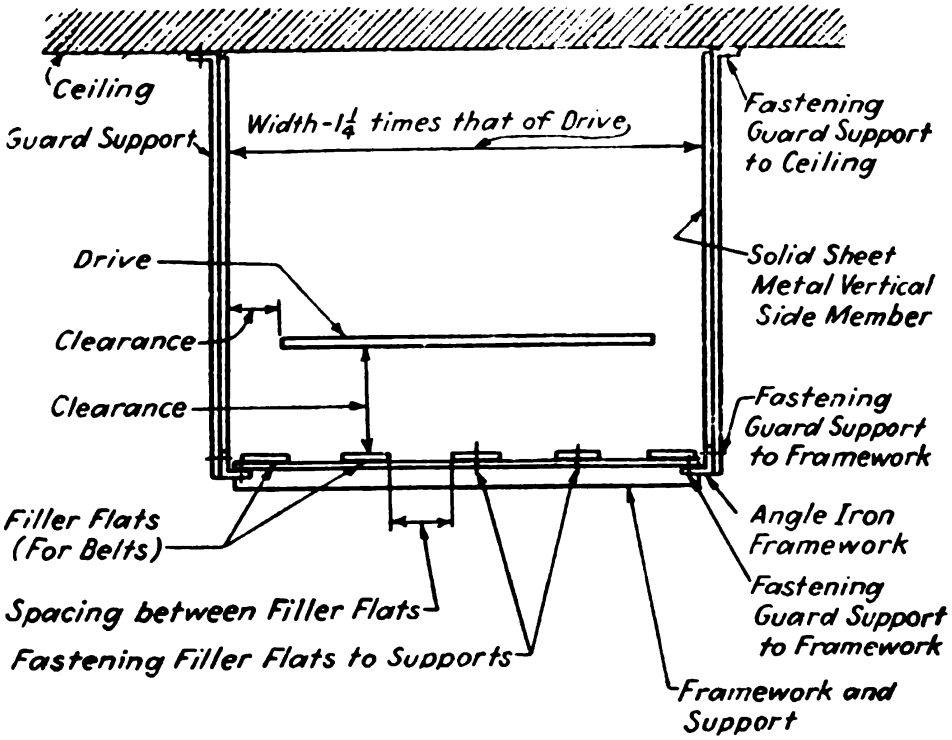
(2) A horizontal belt more than 7 feet above the floor or platform shall be guarded for its entire length if located over a passageway or work place pursuant to table B of R 408.10753 and figure 2.

(3) A passageway between horizontal belts shall have:



(a) A lower run guarded by a platform which is provided with a standard barrier and toeboard pursuant to R 408.10231 and R 408.10233(2) of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

(b) The upper run guarded pursuant to R 408.10727(2).



(4) A vertical or inclined belt running over a lower pulley more than 7 feet above the floor or platform and located over a passageway or work place shall be guarded pursuant to R 408.10727(2).

R 408.10728 Rescinded.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969; rescinded 1954 ACS 69, p. 67, Eff. Oct. 15, 1971.

R 408.10729 Cone pulley belts.

Rule 729. (1) A cone belt and pulley shall be equipped with a belt shifter so constructed as to adequately guard the nip-point of the belt and pulley. If the frame of the belt shifter does not adequately guard the nip-point of the belt and pulley, the nip-point shall be further protected by means of a guard which extends at least to the top of the largest step of the cone.

(2) If the belt is of the endless type or laced with rawhide laces, and a belt shifter is not desired, the belt will be considered guarded if the nip-point of the belt and pulley is protected by a nip-point guard which extends at least to the top of the largest step of the cone, and formed to show the contour of the cone in order to give the nip-point of the belt and pulley the maximum protection.

(3) If the cone is located less than 3 feet from the floor or working platform, the cone pulley and belt shall be guarded to a height of 3 feet regardless of whether the belt is endless or laced with rawhide.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969; 1954 ACS 88, p. 93, Eff. Aug. 18, 1976.

R 408.10730 Belt tighteners and counterweights.

Rule 730. (1) A suspended counterbalanced belt tightener and its parts shall be provided with a safety cable or device to prevent the tightener from being exposed to contact if the belt breaks or guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757.

(2) A suspended counterweight exposed to contact, or a part of a counterweight which could subject an employee to injury, shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757, or provided with a safety cable or device to prevent fall.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969; 1954 ACS 69, p. 67, Eff. Oct. 15, 1971.

R 408.10731 Gears, sprockets, and chain drives.

Rule 731. (1) Gears, sprockets, and chain drives exposed to contact shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757. This does not apply to hand operated gear sprockets and chain drives used to adjust machine parts which do not move after hand power is removed.

(2) Protection against falling chain or metal belts shall be provided pursuant to R 408.10751 to R 408.10754 and R 408.10757 where drives extend over a work area or passageway.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969; 1954 ACS 69, p. 67, Eff. Oct. 15, 1971.

R 408.10732 Openings for oiling.

Rule 732. If frequent oiling is necessary, openings with hinged or sliding self-closing covers shall be provided. Points not readily accessible shall have remote lubricating means if the lubricant is to be added while machinery is in motion and the oiler would be exposed to contact.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969.

R 408.10734 Friction drives.

Rule 734. The driving points and moving parts of friction drives, if exposed to contact, shall be guarded pursuant to R 408.10751 to R 408.10754 and R 408.10757.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969.

R 408.10736 Projections.

Rule 736. Projecting keys, set screws, and other projections in revolving parts exposed to contact shall be removed, made flush, or guarded. This does not apply to keys or set screws within gear or sprocket casings or other enclosures, nor to keys, set screws, or oil cups in hubs of pulleys less than 20 inches in diameter if they are within the plane of the rim of the pulley.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969; 1954 ACS 69, p. 68, Eff. Oct. 15, 1971.

R 408.10738 Rescinded.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969; rescinded 1954 ACS 69, p. 68, Eff. Oct. 15, 1971.

STARTING AND STOPPING DEVICES

R 408.10741 Clutches.

Rule 741. (1) A clutch, cut-off coupling, or clutch pulley having any projecting parts exposed to contact shall be enclosed by a stationary guard constructed pursuant to R 408.10751 to R 408.10754 and R 408.10757.

(2) On a line shaft, the shifting part of a jaw clutch and the shifting or mechanism part of a friction clutch coupling shall be attached to the driven shaft.

History: 1954 ACS 60, p. 72, Eff. Nov. 14, 1969.

R 408.10743 Belt shifters.

Rule 743. (1) A tight pulley and a loose pulley shall be equipped with a permanent belt shifter provided with mechanical means to prevent the belt from creeping from the loose to the tight pulley.

(2) A belt shifter and clutch handle shall be rounded and be located to prevent being exposed to contact, but within easy reach of the operator. If an overhead belt shifter is not directly located over a machine or bench, the handles shall be cut off 7 feet above floor level.

History: 1954 ACS 60, p. 73, Eff. Nov. 14, 1969.

R 408.10744 Belt poles, perches, and fasteners.

Rule 744. (1) Belt poles shall be of sufficient size to enable workmen to grasp them securely. They shall be smooth and of straight grain hardwood.

(2) If loose pulleys or idlers are not practicable, belt perches in form of brackets and rollers shall be used to keep idle belts away from the shafts.

(3) Belts shifted by hand shall be glued or fastened with leather lacing.

History: 1954 ACS 60, p. 73, Eff. Nov. 14, 1969.

GUARD DESIGN AND CONSTRUCTION

R 408.10751 Design.

Rule 751. (1) The design of a guard shall take into consideration:

(a) The nature of protection required of the guard.

(b) The possibility of guard failure.

(c) The amount of maintenance required on the guard.

(2) In a place where it is necessary to change belts, make adjustments, or apply oil or grease, a guard may have hinged sections or be of a removable design. A guard shall be closed or replaced after servicing.

History: 1954 ACS 60, p. 73, Eff. Nov. 14, 1969; 1954 ACS 69, p. 68, Eff. Oct. 15, 1971.

R 408.10752 Construction.

Rule 752. A guard shall be practicable, durable, and effective, and it shall not introduce a new hazard, including, but not limited to, burrs and sharp edges.

History: 1954 ACS 60, p. 73, Eff. Nov. 14, 1969; 1954 ACS 69, p. 68, Eff. Oct. 15, 1971.

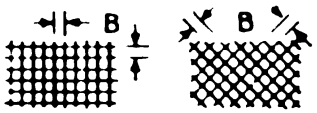
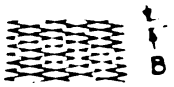
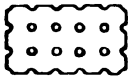
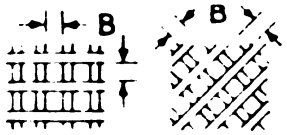
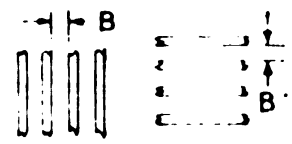
R 408.10753 Materials.











Rule 753. (1) The wires in a wire mesh shall be fastened at every cross point either by welding, soldering, or galvanizing, except in case of diamond or square wire mesh made of no. 14 gage wire, ¾-inch mesh or heavier.

(2) Wood guards may be used if the presence of fumes or if manufacturing conditions cause rapid deterioration of metal guards or in construction work and in locations outdoors if extreme cold or extreme heat make metal guards and railings undesirable.

(3) Material sizes and clearances shall be pursuant to table A. See figures 2, 3, and 4.

TABLE A

Standard Materials and Dimensions for Machinery Guards
Size and Clearance of Filler Materials

Material	Clearance from Moving Part at All Points (inches)	Largest Mesh or Opening Allowable B (inches)	Minimum Gauge (U.S. Standard) or Thickness
 Woven Wire	Under 2 2-4 4-15	⅜ ½ 2	No. 16 - ⅜ in. No. 16 - ½ No. 12 - 2
 Expanded Metal	Under 4 4-15	½ 2	No. 18 - ½ in. No. 13 - 2
 Perforated Metal	Under 4 4-15	½ 2	No. 20 - ½ in. No. 14 - 2
 Sheet Metal	Under 4 4-15	... ...	No. 22 No. 22
 Wood or Metal Strips Crossed	Under 4 4-15	⅜ 2	¾ in. wood or No. 16 metal
 Wood or Metal Strips Not Crossed	Under 4 4-15	½ the width One width	¾ in. wood or No. 16 metal
 Plywood, Plastic or Equivalent	Under 4 4-15	... ...	¼ in. ¼ in.

R 408.10754 Frames.

Rule 754. (1) If a guard has a frame, the material shall be securely fastened to it.

(2) If the design of a guard requires filler material of greater area than 12 square feet, additional framework shall be provided to maintain panel area within this limit.

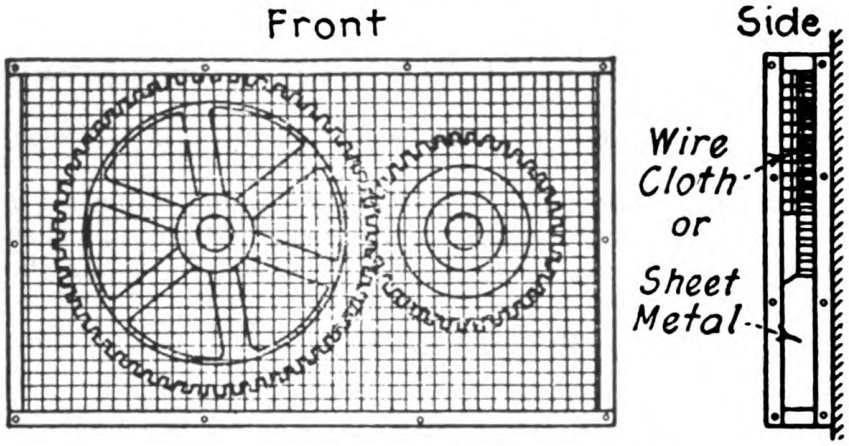
(3) The joints of a framework shall be made equivalent in strength to the material of the frame.

(4) The minimum dimensions of materials in the frame of a guard shall be of sufficient strength and rigidity to hold the filler material fastened to it and to give the guard sufficient strength and rigidity in order to provide the desired protection.

History: 1954 ACS 60, p. 76, Eff. Nov. 14, 1969; 1954 ACS 69, p. 70, Eff. Oct. 15, 1971.

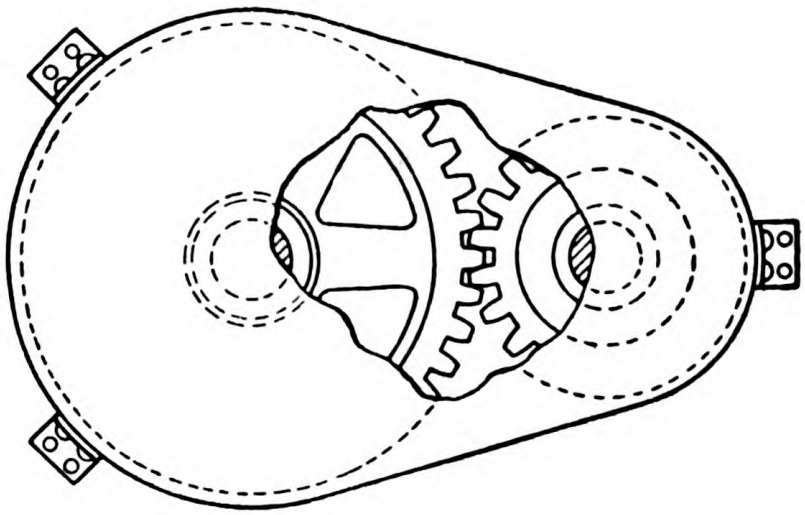
R 408.10756 Disk guards.

Rule 756. A disk guard shall be made of materials specified in table A of R 408.10753 and fastened securely to spokes of pulleys, flywheels, or gears. If a possibility of contact with sharp edges of the disk exists, the edge shall be rolled. Lock nuts or washers shall be placed on the unexposed side of the wheel.



History: 1954 ACS 60, p. 76, Eff. Nov. 14, 1969; 1954 ACS 69, p. 70, Eff. Oct. 15, 1971.

R 408.10757 Shield guards.



Rule 757. A shield guard shall be made of approved material pursuant to table A of R 408.10753.

POWER DISCONNECTS AND LOCK-OUTS

R 408.10761 Stopping devices.

Rule 761. (1) A machine shall be equipped with a stopping device which can be safely actuated from the operator's working position. Such a device may stop the entire machine operation or only that part of the machine at point of operation. The machine shall be restarted only after an assurance that all employees are in the clear.

(2) Each machine simultaneously attended or operated by more than 1 employee shall be equipped with a machine power control for each employee exposed to point of operation hazards. These controls shall be interlocked in a manner to prevent operation of the machine, until each employee actuates his control.

(3) A machine power control shall be designed and installed to prevent operation by accidental contact with objects or parts of the body and maintained in good operating condition.

History: 1954 ACS 60, p. 78, Eff. Nov. 14, 1969; 1954 ACS 69, p. 70, Eff. Oct. 15, 1971.

R 408.10763 Machine power disconnects.

Rule 763. (1) A machine shall be equipped with means to permit the disconnecting of its source of power while persons are performing maintenance or making adjustments or repairs.

(2) An employer shall provide procedures to assure that a power disconnect is in an "off" position. An employee shall use a power disconnect pursuant to the procedures provided by his employer.

History: 1954 ACS 60, p. 79, Eff. Nov. 14, 1969.

R 408.10765 Inspection and care of equipment; clothing for oilers.

Rule 765. (1) All power-transmission equipment shall be inspected at intervals not exceeding 60 days and be kept in good working condition at all times.

(2) Shafting shall be kept in alignment, free from rust and excess oil or grease.

(3) Where explosives, explosive dusts, flammable vapors, or flammable liquids exist, the hazard of static sparks from shafting shall be carefully considered.

(4) Bearings shall be kept in alignment and properly adjusted.

(5) Hangers shall be inspected to make certain that all supporting bolts and screws are tight and that supports of hanger boxes are adjusted properly.

(6) Pulleys shall be kept in proper alignment to prevent belts from running off.

(7) Inspection shall be made of belts, lacings, and fasteners, and such equipment shall be kept in good repair.

(8) The oilers shall wear clothing appropriate to the hazard.

History: 1954 ACS 88, p. 94, Eff. Aug. 18, 1976.

PART 8. PORTABLE FIRE EXTINGUISHERS GENERAL PROVISIONS

R 408.10801 Scope.

Rule 801. The rules of this part apply to the installation, use, inspection, maintenance, and testing of portable fire extinguishers in, around, and about places of employment, except permanently installed extinguishing systems and portions of such systems which may be portable, such as a hose and nozzle attached to a fixed supply of extinguishing agent.

History: 1954 ACS 69, p. 70, Eff. Oct. 15, 1971; 1954 ACS 80, p. 46, Eff. July 23, 1974.

R 408.10803 Definitions; A to C.

Rule 803. (1) "Approved label" means a label or other identifying mark of a nationally recognized testing laboratory such as underwriters' laboratories, incorporated, factory mutual research corporation, or underwriters' laboratories of Canada that maintains a periodic inspection of production of labeled fire equipment or materials and by whose labeling is indicated compliance with nationally recognized standards or tests to determine suitable usage in a specified manner.

(2) "Class 'A' fire" means a fire that has as its fuel ordinary combustible material, such as wood, cloth, paper, rubber, and many plastics.

(3) "Class 'B' fire" means a fire that has as its fuel flammable liquids, gases, or greases.

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(4) "Class 'C' fire" means a fire that involves energized electrical equipment where the nonconductivity of the extinguishing agent is necessary to prevent shock. The fuel consumed by a class "C" fire shall be classed as A, B, or D.

(5) "Class 'D' fire" means a fire that involves the oxidation reaction of combustible metals, such as magnesium, titanium, zirconium, sodium, or potassium.

History: 1954 ACS 69, p. 70, Eff. Oct. 15, 1971.

R 408.10804 Definitions; E to I.

Rule 804. (1) "Extinguisher" means a portable fire extinguisher.

(2) "High hazard" means a condition where the amount of combustibles or flammable liquids present is such that a fire of severe magnitude may be expected. These may include woodworking, auto repair, aircraft servicing, warehouses with high piled (over 15 feet in solid piles, over 12 feet in piles that contain horizontal channels) combustibles and processes such as flammable liquid handling, painting, and dipping.

(3) "Inspection" means a check to see if an extinguisher is in its designated place with no obvious damage or defects that would prevent operation.

History: 1954 ACS 69, p. 71, Eff. Oct. 15, 1971; 1954 ACS 80, p. 46, Eff. July 23, 1974.

R 408.10805 Definitions; L to O.

Rule 805. (1) "Low hazard" means a condition where combustible or flammable liquids would create a beginning fire of minimal intensity in occupancies such as, but not limited to, offices, schools exclusive of trade schools and shops, and public buildings.

(2) "Ordinary hazard" means a condition where combustibles would create a beginning fire of average or medium intensity in occupancies such as, but not limited to, department stores, warehouses, and manufacturing buildings of average hazard.

History: 1954 ACS 69, p. 71, Eff. Oct. 15, 1971.

R 408.10808 Employers' responsibilities.

Rule 808. (1) An employer in control of a property where extinguishers are required shall be responsible for compliance with this part.

(2) A portable extinguisher shall be maintained in a fully charged and operable condition and kept at its designated place ready for use, except as prescribed in R 408.10839.

History: 1954 ACS 69, p. 71, Eff. Oct. 15, 1971; 1954 ACS 80, p. 46, Eff. July 23, 1974.

IDENTIFICATION

R 408.10811 Classification.

Rule 811. (1) An extinguisher shall be classified by suitability for a class of fire as defined in R 408.10803 and rated for extinguishing capability.

(2) The classification shall consist of a letter which indicates the class of fire on which the extinguisher has been found effective, preceded by a rating numeral, for Class "A" and "B" only, which rates the extinguishing potential of the extinguisher. See tables 3 and 4.

History: 1954 ACS 69, p. 71, Eff. Oct. 15, 1971.

R 408.10812 Labels.

Rule 812. (1) A new extinguisher shall bear an approved label indicating its class and rating.

(2) An extinguisher effective on more than 1 class of fire shall have multiple letter and numeral-letter classifications and ratings.

History: 1954 ACS 69, p. 71, Eff. Oct. 15, 1971.

R 408.10813 Classes of fire; type and contents of extinguisher.

Rule 813. An extinguisher shall be selected and provided for protection against a specific class or classes of fire in accordance with table 1.

TABLE 1

Hazard	Extinguisher type and contents
Class "A" fire	Soda and acid, foam, loaded stream, multi-purpose dry chemical, pressure-operated water, water pump tanks.
Class "B" fire	Carbon dioxide, dry chemical, foam, loaded stream, multi-purpose dry chemical, bromo-trifluoromethane.
Class "C" fire	Carbon dioxide with plastic horn only, dry chemical, multi-purpose dry chemical, bromo-trifluoromethane.
Class "D" fire	Extinguishing agent listed for use on a specific combustible metal hazard.

History: 1954 ACS 69, p. 71, Eff. Oct. 15, 1971; 1954 ACS 89, p. 35, Eff. Nov. 13, 1976.

R 408.10814 Vapor toxicity.

Rule 814. An extinguisher or extinguishing device containing an active agent or propellant, whose thermal decomposition product or products have a level of vapor toxicity equal to or greater than any of the materials listed in table 2, shall not be used, installed for use, or allowed to remain installed for use.

TABLE 2

1. Carbon tetrachloride, CCl_4
2. Chlorobromomethane, CH_2BrCl
3. Azeotropic chlormethane, CM_7
4. Dibromodifluoromethane, CBr_2F_2
5. 1, 2-dibromo-2-chloro-1, 1, 2-trifluorothane, $CBrF_2CBrClF$
6. 1, 2-dibromo-2, 2-difluorothane, $CH_2BrCBrF_2$
7. Methyl bromide, CH_3Br
8. Ethylene dibromide, CH_2BrCH_2Br
9. Hydrogen bromide, HBr
10. Methylene bromide, CH_2Br_2
11. Bromodifluoromethane, $CHBrF_2$

History: 1954 ACS 69, p. 71, Eff. Oct. 15, 1971.

DISTRIBUTION

R 408.10821 Number and classes.

Rule 821. The number and classes of extinguishers needed shall be based on the area of the building or occupancy, the severity of the hazard and the anticipated classes of fire.

History: 1954 ACS 69, p. 72, Eff. Oct. 15, 1971.

R 408.10822 Class A extinguishers.

Rule 822. (1) The number of class A fire extinguishers required shall be in accordance with table 3.

(2) Travel distance to the nearest extinguisher shall not be more than 75 feet.

(3) A class A extinguisher shall be provided for a combustible building, interior finish and contents having class A fire potential in accordance with table 3.

(4) A combustible building having an occupancy hazard subject to class B or C fires shall have the required class A extinguisher in addition to class B or C extinguishers except where the fire extinguisher has more than 1 letter classification, it may be considered to satisfy requirements of both.

(5) A class A extinguisher shall be located on the same floor as the hazard.

(6) A floor area of a building less than that specified in table 3 shall have at least 1 class A extinguisher of the minimum size.

(7) The requirements of table 3 may be fulfilled by extinguishers of lower ratings whose numerical ratings equal or exceed the minimum rating for the area specified, except that an extinguisher with a rating of less than 2A shall not be acceptable.

(8) Protection requirements shall be considered fulfilled if extinguishers of a higher rating are provided and the travel distance does not exceed 75 feet.

(9) Within a location where an approved automatic sprinkler system is provided, the square feet area limitation prescribed in table 3 shall not apply for the protection requirements of class A extinguishers. The 75 feet travel distance to an extinguisher shall not be exceeded.

TABLE 3

Minimum Extinguisher Rating for Area Specified	Low Hazard Contents	Ordinary Hazard Contents	High Hazard Contents
2A	6,000 sq. ft.	3,000 sq. ft.	Not permitted
3A	9,000 sq. ft.	4,500 sq. ft.	3,000 sq. ft.
4A	11,250 sq. ft.	6,000 sq. ft.	4,000 sq. ft.
6A	11,250 sq. ft.	9,000 sq. ft.	6,000 sq. ft.

History: 1954 ACS 69, p. 72, Eff. Oct. 15, 1971; 1954 ACS 80, p. 46, Eff. July 23, 1974.

R 408.10823 Class B extinguishers.

Rule 823. (1) A class B extinguisher shall be provided according to the severity of the hazard listed in table 4, except as required by subrule (3).

(2) A foam extinguisher only of a lower rating, not to exceed 3, may be used to fulfill this rule.

(3) An open tank in a building having flammable liquids in depth exceeding ¼ inch shall be provided with an extinguisher on a basis of 1 numerical unit of class B extinguishing agent per square foot of the surface area of the largest tank hazard within the area. An open tank in a building having an area of more than 100 square feet shall be provided with a fixed extinguishing system in addition to the required portable units. An open tank in a building having an area of more than 100 square feet and protected by a fixed system shall be provided with portable units to protect an area to a maximum of 100 square feet.

(4) Travel distance to the nearest class B extinguisher in a building shall be not more than 50 feet. A class B extinguisher of a higher rating may be used but the travel distance shall be not more than 50 feet.

(5) Widely separated hazards, such as, but not limited to, kitchens, boiler rooms, and paint storage rooms, shall be protected with an extinguisher for the type of hazard present if the travel distance exceeds 25 feet.

(6) A class B extinguisher shall be located on the same floor as the hazard and shall be located so as not to expose an employee to undue danger in order to reach the extinguisher.

TABLE 4

(For extinguishers labeled prior to June 1, 1969)

Type of Hazard	Basic Minimum Extinguisher Rating
Light	4B
Ordinary	8B
High	12B

(For extinguishers labeled after June 1, 1969)

Type of Hazard	Basic Minimum Extinguisher Rating
Light	5B
	10B
Ordinary	10B

High	20B
	40B

History: 1954 ACS 69, p. 72, Eff. Oct. 15, 1971; 1954 ACS 80, p. 46, Eff. July 23, 1974.

R 408.10824 Class C extinguishers.

Rule 824. At least one 15 pound CO_2 or equivalent class C extinguisher, as listed in table 1, shall be provided within 25 feet of a high hazard area containing an electrical distribution source including, but not limited to, a generator, transformer bank, or main switch gear immediately downstream from a service entrance. Since fire itself is a class A or B hazard, the extinguisher shall be sized and located according to the anticipated class A or B fire.

History: 1954 ACS 69, p. 73, Eff. Oct. 15, 1971; 1954 ACS 80, p. 47, Eff. July 23, 1974.

R 408.10825 Class D extinguishers.

Rule 825. (1) A class D extinguisher shall be used on the specific combustible metal fire for which it has been approved. The extinguisher shall be used according to instructions on the name plate.

(2) A class D extinguishing agent in a quantity sufficient to provide a smothering blanket over the burning material shall be maintained within 25 feet of a combustible metal being machined or processed.

(3) The extinguishing agent may be applied directly from a bulk container.

History: 1954 ACS 69, p. 73, Eff. Oct. 15, 1971.

INSTALLATION, INSPECTION, TESTING, AND MAINTENANCE

R 408.10831 Location.

Rule 831. (1) An extinguisher shall be located where it will be readily seen and accessible along normal paths of travel.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j

(2) In a location where a visual obstruction cannot be avoided, a sign, color symbol, or other means shall be used to indicate the location.

(3) Extinguishers of different classes grouped together shall be marked in a manner to facilitate proper choice in case of a fire. An extinguisher with an extinguishing agent which conducts electricity shall bear a label "not for electrical fires" with the letters legible from a distance of 3 feet or more.

History: 1954 ACS 69, p. 73, Eff. Oct. 15, 1971; 1954 ACS 80, p. 47, Eff. July 23, 1974.

R 408.10833 Installation.

Rule 833. (1) An extinguisher shall be installed securely on a hanger, in a bracket, or mounted in a cabinet, unless it is wheeled type or cart mounted. A means shall be used to indicate the location of an extinguisher mounted in a cabinet or on a shelf. The extinguisher shall be placed so that the operating instructions face outward.

(2) An extinguisher having a gross weight of not more than 40 pounds shall be installed so that the top is not more than 5 feet above the floor. An extinguisher having a gross weight of more than 40 pounds, except a wheeled type or cart mounted, shall be installed so that the top is not more than 3½ feet above the floor. An extinguisher, except a wheeled type or cart mounted, shall be installed so that the bottom is not less than 6 inches from the floor.

(3) An extinguisher installed under conditions where it is subject to severe vibration shall be installed on brackets specifically designed to cope with the vibration.

(4) An extinguisher shall be suitable for use within a temperature range of at least plus 40 degrees to plus 120 degrees Fahrenheit. An extinguisher installed at a location subjected to temperature extremes shall be of a type listed for the temperature to which it will be exposed, or placed in an enclosure capable of maintaining the temperature.

History: 1954 ACS 69, p. 73, Eff. Oct. 15, 1971; 1954 ACS 80, p. 47, Eff. July 23, 1974.

R 408.10835 Inspection; maintenance or recharge date tag; replacement.

Rule 835. (1) An extinguisher shall be inspected monthly, or at more frequent intervals when circumstances require, to insure the extinguisher:

(a) Is at its designated place.

(b) Has not been actuated or tampered with.

(c) Does not have obvious damage, such as, but not limited to, physical damage, external corrosion, or other impairment.

(2) An extinguisher showing defects which would possibly affect its operation shall be removed from service and given a complete check. An extinguisher shall have a tag attached to it showing the maintenance or recharge date and the initials or signature of the person who performed the service.

(3) An extinguisher shall receive a thorough inspection not less than once a year to insure operability. An extinguisher requiring recharging or weighing shall be maintained at least annually.

(4) An extinguisher showing evidence of corrosion or mechanical injury shall be subjected to an approved hydrostatic test as specified in R 408.10836(2) or replaced. A pump-type water or anti-freeze extinguisher or a nonrefillable container showing evidence of corrosion or mechanical injury shall be replaced.

History: 1954 ACS 69, p. 73, Eff. Oct. 15, 1971; 1954 ACS 80, p. 47, Eff. July 23, 1974; 1954 ACS 89, p. 35, Eff. Nov. 13, 1976.

R 408.10836 Testing.

Rule 836. (1) An extinguisher shall receive an approved hydrostatic test every 5 years, except dry chemical with brazed-brass, aluminum, or mild steel shells,

bromotrifluoromethane, and dry powder for metal fires, which shall be tested every 12 years. The hydrostatic test date shall be recorded on a suitable metallized decal or equally durable material which has been affixed by a heatless process to the shell of the extinguisher, showing date of test, test pressure, and the name of the person or agency making the test. An extinguisher tested after the effective date of this part shall have a label which will not retain its original condition when removal from an extinguisher is attempted. An extinguisher manufactured under the department of transportation specifications incorporated in subrule (2) of this rule may have the inspection date and the serviceman's or firm's name, initials, or symbol stamped into the cylinder.

(2) An extinguisher, cylinder, or cartridge used for storage of a compressed gas, manufactured as prescribed in department of transportation specifications, shall be hydrostatically tested in accordance with department of transportation, Code of Federal Regulations on Transportation #49-1972, Parts 171-190, which are incorporated herein by reference, and are available for inspection at the Lansing office of the department of labor. A copy of these regulations, 49 C.F.R. Parts 171-190, may be purchased from the Superintendent of Documents, U. S. Government Printing Office, Washington, D.C. 20402, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $4.25.

(3) A nitrogen cylinder or other cylinder for inert gas, such as found on a wheeled extinguisher, shall be tested at not less than 5-year intervals.

(4) The hose and couplings on an extinguisher equipped with a shut off nozzle at the outlet end of the hose shall have a hydrostatic test without the nozzle at the test interval prescribed for the unit on which the hose is installed.

(5) A dry chemical and dry powder hose assembly requiring a hydrostatic test shall be at a test pressure of 300 pounds per square inch for 1 minute. A carbon dioxide hose assembly requiring a hydrostatic test shall be at a test pressure of 1250 pounds per square inch for 1 minute.

(6) An extinguisher subjected to an original factory test pressure of 350 pounds per square inch or more shall be tested at 75% of the factory test pressure, but not less than 300 pounds per square inch (see table 5).

TABLE 5

Hydrostatic Test Pressure Requirements—Non-ICC Shells
Shells Not Specified in U. S. Department of Transportation Regulations (Formerly Interstate Commerce Commission)

Extinguisher Type	Original Factory Test Pressure	Requires Hydrostatic Test Pressure
All Dry Chemical and Dry Powder	400 psi or greater 350-399 psi below 350 psi	75% of factory test pressure 300 psi 75% of factory test pressure
Foam—500 psi factory test	500	375
Foam—350 psi factory test	350	300
Soda-Acid—500 psi factory test	500	375
Soda-Acid—350 psi factory test	350	300

TABLE 5 (Cont.)

Extinguisher Type	Original Factory Test Pressure	Requires Hydrostatic Test Pressure
Stored-Pressure or Cartridge-Operated Water-Type (including Anti-Freeze and Loaded-Stream)	400 psi or greater	75% of factory test pressure
	350-399 psi	300 psi
	below 350	75% of factory test pressure

History: 1954 ACS 69, p. 74, Eff. Oct. 15, 1971; 1954 ACS 80, p. 47, Eff. July 23, 1974; 1954 ACS 89, p. 35, Eff. Nov. 13, 1976.

R 408.10837 Recharging.

Rule 837. An employer maintaining his own extinguisher shall use recharging materials of the class specified on the extinguisher nameplate or recommended by the manufacturer for recharging.

History: 1954 ACS 69, p. 74, Eff. Oct. 15, 1971.

R 408.10839 Removal and return of extinguisher.

Rule 839. (1) An extinguisher removed from the premises shall be replaced by a spare extinguisher of the same classification during the period the extinguisher is gone.

(2) An extinguisher temporarily removed from its location shall be returned to its designated location in a fully charged and operable condition, or replaced by an extinguisher of the same classification.

History: 1954 ACS 69, p. 74, Eff. Oct. 15, 1971; 1954 ACS 80, p. 48, Eff. July 23, 1974; 1954 ACS 89, p. 37, Eff. Nov. 13, 1976.

PART 9. FIXED FIRE EQUIPMENT
GENERAL PROVISIONS

R 408.10901 Scope.

Rule 901. This part pertains to the installation and maintenance of fixed fire equipment in, around, or about a place of employment, and sets forth requirements for its use in areas where an employee would be injured by rapidly burning material and possible subsequent explosion.

History: 1954 ACS 80, p. 49, Eff. Aug. 20, 1974.

R 408.10902 Definitions; A to C.

Rule 902. (1) "Automatic sprinkler system" means a network of specially sized piping to which sprinklers are connected and systematically spaced. The system is activated by heat to discharge water over a fire starting at any point. This system is connected to a water supply through a controlling valve and a device for activating an alarm when the system is operating.

(2) "Carbon dioxide extinguishing system" means a system of pipes or hoses, nozzles, a triggering device and a pressurized container of carbon dioxide. The gas dilutes the oxygen or gaseous fuel, thus stopping the combustion chain reaction.

(3) "Class A fire" means a fire that has, as its fuel, ordinary combustible material, such as wood, cloth, paper, rubber, and many plastics.

(4) "Class B fire" means a fire that has, as its fuel, flammable liquids, gases, or greases.

(5) "Class C fire" means a fire that involves energized electrical equipment where the nonconductivity of the extinguishing agent is necessary to prevent shock. The fuel consumed by a class C fire will be classed as A, B, or D.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(6) "Class D fire" means a fire that involves the oxidation reaction of combustible metals, such as magnesium, titanium, zirconium, sodium, or potassium.

History: 1954 ACS 80, p. 49, Eff. Aug. 20, 1974.

R 408.10903 Definitions; D to F.

Rule 903. (1) "Dry chemical extinguishing system" means a system of pipes or hoses, nozzles, an actuating device, an expellant gas, and a container holding a dry chemical. When activated, the expellant gas carries the dry chemical in suspension to stop the combustion chain reaction.

(2) "Dry chemical" means an agent, capable of extinguishing a fire, composed of very small particles, such as sodium bicarbonate, potassium bicarbonate, or monoammonium phosphate, with added particulate material supplemented by special treatment to prevent caking and providing flowability.

(3) "Dry pipe system" means an automatic sprinkler system employing compressed air or other nonflammable gases in the system instead of water. When a sprinkler opens, relieving the air pressure, water pressure opens a dry pipe valve filling the system with water. This system is normally used where piping is exposed to freezing temperatures.

(4) "Fire pump" or "booster pump" means a water pump used to supply water from a suction supply at a specific pressure and volume to a sprinkler or standpipe system.

(5) "Fixed fire equipment" means a fire extinguishing system which is permanently mounted and portions of those systems which may be portable, such as a hose and nozzle attached to a fixed supply of extinguishing agent.

(6) "Flammable liquid" means any liquid having a flashpoint below 100 degrees Fahrenheit.

(7) "Flammable material" means that material which ignites easily, burns intensely or has a rapid rate of flame spread.

History: 1954 ACS 80, p. 49, Eff. Aug. 20, 1974.

R 408.10905 Definitions; H to P.

Rule 905. (1) "Halogenated extinguishing system" means a fixed system of pipes or hoses, nozzles, an actuating device and a container containing a halogenated agent under pressure. The agent inhibits the chemical reaction of fuel and oxygen, thus stopping the combustion chain reaction.

(2) "High expansion foam system" means a system of flooding an area with an aggregation of bubbles mechanically generated by the passage of air or gas through a net or screen which is wetted by a solution of foaming agents and generated as a foam in a ratio of 100 to 1000 to 1.

(3) "Local fire alarm system" means a system of boxes or devices which will manually or automatically activate a visual or audible alarm, or both, to alert an employee.

(4) "Predischarge or discharge alarm" means an audible or visual device interconnected with an extinguishing system and a detecting actuating device.

History: 1954 ACS 80, p. 49, Eff. Aug. 20, 1974.

R 408.10907 Definitions; S to W.

Rule 907. (1) "Sprinkler" or "sprinkler head" means a device which is installed in a sprinkler system and controls the direction and area of coverage of an extinguishing agent.

(2) "Standpipe and hose system" means a water pipe and a hose used where the building height or character requires an immediate means of obtaining a fire stream.

(3) "Water flow alarm" means a device so constructed and installed that any flow of water from a sprinkler system, equal to or greater than that from a single sprinkler, will result in an audible alarm signal on the premises.

History: 1954 ACS 80, p. 50, Eff. Aug. 20, 1974.

R 408.10911 Employer's responsibility.

Rule 911. (1) An employer shall be responsible for the maintenance of the fixed fire equipment system in the area occupied or controlled by him.

(2) An employer shall furnish training to an employee before assignment to perform maintenance on a fixed fire equipment system.

(3) An employer shall have the design of the fixed fire equipment system reevaluated whenever the occupancy changes or fire hazards increase.

(4) An employer shall keep a record of the 3 most recent tests and inspections, but in no case shall it cover less than a 12-month period.

History: 1954 ACS 80, p. 50, Eff. Aug. 20, 1974.

R 408.10912 Employee's responsibility.

Rule 912. An employee shall not perform maintenance or make inspections on fixed fire equipment unless he has been trained for the type of equipment to be maintained or inspected and has been authorized to do so.

History: 1954 ACS 80, p. 50, Eff. Aug. 20, 1974.

R 408.10913 Notification.

Rule 913. Whenever fixed fire equipment is closed or removed from service, the following shall be accomplished:

(a) The plant manager or his designated representative shall be notified.

(b) The balance of the system shall be kept operable.

(c) After alterations or repairs, the system shall be tested and resealed in operable condition where required, and those persons in subdivision (a) advised.

History: 1954 ACS 80, p. 50, Eff. Aug. 20, 1974.

R 408.10914 Requirements.

Rule 914. (1) A fixed fire equipment system, as listed in R 408.10921 and R 408.10941 to R 408.10976, shall be installed for:

(a) All areas inside a building where flammable liquids are mixed, dispensed, or applied, or used for washing or quenching, except:

(i) A dip tank holding less than 150 gallons, having less than 4 square feet of liquid surface or both.

(ii) As dispensed from an approved safety container of 5 gallons or less.

(b) Other areas where the quantities of flammables are likely to burn rapidly and injure a nearby employee. Such a system shall be classed according to table 1. Other equivalent systems may be used, if such systems meet standards or tests of the department of labor and are installed and maintained in accordance with nationally recognized requirements.

(2) Where a fixed fire equipment system is required or is installed and in use, it shall be installed and maintained as prescribed in R 408.10916 to R 408.10984.

(3) Except as prescribed in R 408.10971, a fixed fire equipment system containing an active agent or propellant whose thermal decomposition product or products have a level of vapor toxicity equal to or greater than any of the materials listed in table 2 shall not be used, installed for use, or allowed to remain installed for use where an employee would be exposed to the agent or propellant.

R 408.10916 Gravity, suction, and pressure tanks.

Rule 916. (1) A gravity or suction water tank shall be maintained at the full water level designed for fire protection purposes.

(2) The water and air in a pressure water tank shall be maintained at the designed levels and pressures.

(3) The water in a gravity, suction, or pressure tank and risers shall be maintained above freezing temperature. Where a heater is used, the water temperature shall be not more than 60 degrees Fahrenheit.

(4) A steel water tank shall be inspected not less than every 3 years for deterioration and, when necessary, repairs made.

(5) A wooden water tank shall be inspected not less than every 2 years for deterioration and, when necessary, repairs made.

History: 1954 ACS 80, p. 51, Eff. Aug. 20, 1974.

R 408.10917 Fire pumps.

Rule 917. (1) A fire pump shall be operated not less than once a month as follows:

(a) A steam fire pump operated until water is discharged freely from the relief valve.

(b) A centrifugal pump operated at rated speed.

(c) If power is provided by an internal combustion engine, the engine shall be run for not less than 30 minutes to bring it up to normal operating temperature.

(d) An automatically controlled pump tested manually shall have not less than 1 start each month accomplished by reducing the pressure in the water pressure sensing line or with a larger flow from the entire system.

(2) A fire pump shall be maintained in a room above freezing temperature.

(3) A fire pump shall be used for fire protection only.

(4) A fire pump shall be tested to rated capacity not less than once a year.

History: 1954 ACS 80, p. 51, Eff. Aug. 20, 1974.

AUTO SPRINKLER SYSTEMS

R 408.10921 Installation.

Rule 921. An automatic sprinkler system installed, or that portion of a system modified after the effective date of this part, shall be installed as prescribed by the N.F.P.A. standard, #13-1973, installation of sprinkler systems, which is incorporated herein by reference and which is available for inspection at the Lansing office of the department of labor. This standard may be purchased, at a cost of $2.50 each, from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 80, p. 51, Eff. Aug. 20, 1974.

R 408.10923 Inspection and maintenance of dry systems.

Rule 923. A dry pipe system shall:

(a) Have the system pressure checked not less than once a week and replenished, when necessary.

(b) Have a means of maintaining the temperature of the dry pipe valve above freezing.

(c) Have all low drain points drained and free of water during freezing temperatures.

(d) Maintain the priming water at the designed level.

(e) Give the dry pipe valve a working test, cleaning, and resetting not less than once a year.

History: 1954 ACS 80, p. 52, Eff. Aug. 20, 1974.

R 408.10924 Clearance to sprinkler deflectors.

Rule 924. The clearances between a ceiling type sprinkler deflector and the top of a stock pile shall be:

(a) Thirty-six inches where the top of solid piled stock is more than 15 feet high or is more than 12 feet in rack or palletized storage.

(b) Eighteen inches for all other piling.

History: 1954 ACS 80, p. 52, Eff. Aug. 20, 1974.

R 408.10925 Inspection and maintenance.

Rule 925. (1) A sprinkler shall not be painted or coated except by the sprinkler manufacturer. Excepted are petroleum jelly or paper bag coverings, which shall not interfere with the normal functioning of the sprinkler.

(2) An automatic sprinkler shall be replaced with a new sprinkler after it is installed 50 years or shows evidence of corrosion, leakage, or damage.

(3) A sprinkler in a spray area shall be kept free of deposits which would interfere with its operation.

(4) A sprinkler wrench shall be used for installing and removing a sprinkler.

(5) A broken or loose pipe hanger shall be replaced or refastened.

History: 1954 ACS 80, p. 52, Eff. Aug. 20, 1974.

R 408.10926 Supplies.

Rule 926. A stock of extra sprinklers shall be maintained or readily available for each temperature rating and type so that the system can be returned to readiness as soon as possible.

History: 1954 ACS 80, p. 52, Eff. Aug. 20, 1974.

R 408.10927 Outside open sprinkler equipment.

Rule 927. Outside open sprinkler equipment shall be tested during warm weather not less than once a year.

History: 1954 ACS 80, p. 52, Eff. Aug. 20, 1974.

STANDPIPE AND HOSE SYSTEMS

R 408.10931 Installation.

Rule 931. A standpipe and hose system installed, or that portion of a system modified after the effective date of this part, shall be installed as prescribed by the N.F.P.A. standard, #14-1973, standpipe and hose systems, which is incorporated herein by reference and which is available for inspection at the Lansing office of the department of labor. This standard may be purchased, at a cost of $1.00 each, from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 80, p. 52, Eff. Aug. 20, 1974.

R 408.10933 Location.

Rule 933. A standpipe shall be located so as to be unobstructed, readily accessible, and so guarded that it is protected against mechanical damage.

History: 1954 ACS 80, p. 52, Eff. Aug. 20, 1974.

R 408.10934 Hose.

Rule 934. Where a hose outlet is required for use of building occupants, the hose length shall not exceed 75 feet of 1½-inch, unlined, or 100 feet of rubber lined, hose attached to the outlet. An employer having an organized and trained fire brigade may increase the 75 feet limitation to 100 feet of unlined hose.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974.

R 408.10935 Hose rack or reel.

Rule 935. A hose rack or reel shall be provided for fire hose at each hose station and the hose and nozzle shall be maintained in the rack or reel when not in use.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974.

R 408.10936 Hydrants.

Rule 936. (1) A yard hydrant shall be inspected not less than once a month for obstructions around the opening and accessibility to employees.

(2) A yard hydrant shall be flushed not less than once a year.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974.

R 408.10937 Inspection of standpipe and hose system; water level; valve.

Rule 937. (1) An inspection of all portions of a standpipe and hose system shall be made not less than once a year by a trained and authorized employee or an outside service.

(2) A water tank shall be maintained at the water level designed for fire protection purposes and where a pressure tank is used, the air pressure shall be maintained at the designed pressure level, but not less than 75 psi.

(3) The valve to the main connection of the source of water to a standpipe shall be kept open at all times.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974; 1954 ACS 89, p. 37, Eff. Nov. 13, 1976.

CARBON DIOXIDE SYSTEMS

R 408.10941 Installation.

Rule 941. A carbon dioxide extinguishing system installed, or that portion of the system modified after the effective date of this part, shall be installed as prescribed in the N.F.P.A. standard, #12-1973, carbon dioxide extinguishing systems, which is incorporated herein by reference and which is available for inspection at the Lansing office of the department of labor. This standard may be purchased, at a cost of $2.25 each, from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974.

R 408.10944 Installations prohibited.

Rule 944. A carbon dioxide extinguishing system shall not be installed to control a fire involving:

(a) Chemicals containing their own oxygen supply, such as cellulose nitrate.

(b) Combustible metals or special hazardous materials, such as sodium, potassium, magnesium, titanium, and zirconium.

(c) Metal hydrides.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974.

R 408.10945 Safeguards.

Rule 945. (1) Where there is a possibility that an employee may be trapped in, or enter into, an atmosphere made hazardous by a carbon dioxide discharge, the following safeguards shall be provided:

(a) Predischarge and discharge alarm.

(b) Warning signs.

(c) Employee training.

(d) Self-contained breathing apparatus.

(2) Where an alarm, audible or visual, is provided to indicate system failure, it shall be distinctive from an alarm indicating operation or hazardous conditions and shall operate continuously until manually shut off.

(3) Before an employee enters an area where carbon dioxide has been discharged and may be trapped, the area shall be purged or the employee shall wear approved respiratory equipment.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974.

R 408.10946 Inspection.

Rule 946. (1) A carbon dioxide extinguishing system shall be inspected by a trained and authorized employee or outside service:

(a) Not less than annually to insure operability.

(b) Not less than semiannually to insure that all high pressure cylinders are at the designed weight. A cylinder showing a net loss in weight of more than 10% shall be refilled or replaced.

(c) Not less than annually to check the accuracy of low pressure system liquid level gauges.

(d) If a container shows a loss of more than 10%, it shall be refilled, unless the minimum gas requirements are still provided.

(2) A tag shall be affixed indicating the date of inspection.

History: 1954 ACS 80, p. 53, Eff. Aug. 20, 1974.

DRY CHEMICAL SYSTEMS

R 408.10951 Installation.

Rule 951. A dry chemical extinguishing system installed, or that portion of the system modified after the effective date of this part, shall be installed as prescribed by the N.F.P.A. standard, #17-1973, dry chemical extinguishing systems, which is incorporated herein by reference and which is available for inspection at the Lansing office of the department of labor. This standard may be purchased, at a cost of $1.25 each, from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 80, p. 54, Eff. Aug. 20, 1974.

R 408.10953 Installations prohibited.

Rule 953. A dry chemical extinguishing system shall not be installed to control a deep seated or burrowing fire in ordinary combustibles, or for the items prescribed in subdivisions (a) and (b) of R 408.10944.

History: 1954 ACS 80, p. 54, Eff. Aug. 20, 1974.

R 408.10954 Safeguards.

Rule 954. Safeguards, as prescribed in R 408.10945, except subdivision (d), shall be provided where the possibility exists that an employee might be within the hazardous area during discharge of the extinguishing agent.

History: 1954 ACS 80, p. 54, Eff. Aug. 20, 1974.

R 408.10955 Inspection.

Rule 955. (1) A dry chemical extinguishing system shall be inspected by a trained and authorized employee or outside service:

(a) Not less than annually to insure operability.

(b) Not less than semiannually to insure the installed expellant gas containers are at the designed pressure or weight.

(c) Not less than semiannually to insure the stored pressure dry chemical container is at the designed pressure.

(2) A tag shall be affixed indicating the date of inspection.

History: 1954 ACS 80, p. 54, Eff. Aug. 20, 1974.

HIGH EXPANSION FOAM SYSTEMS

R 408.10961 Installation.

Rule 961. A high expansion foam system installed, or that portion of the system modified after the effective date of this part, shall be installed as prescribed by the N.F.P.A. standard, #11a-1970, high expansion foam systems, which is incorporated herein by reference and which is available for inspection at the Lansing office of the department of labor. This standard may be purchased, at a cost of 75 cents each, from the National Fire Protection Association, 470 Atlantic Avenue,

Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 80, p. 54, Eff. Aug. 20, 1974.

R 408.10963 Installations prohibited.

Rule 963. A high expansion foam system shall not be installed to control a fire involving:

(a) Chemicals containing their own oxygen supply, such as cellulose nitrate.

(b) Energized unenclosed electrical equipment.

(c) Water reactive metals, such as sodium and potassium.

(d) Water reactive materials, such as triethyl-aluminum and phosphorous pentoxide.

History: 1954 ACS 80, p. 54, Eff. Aug. 20, 1974.

R 408.10964 Safeguards.

Rule 964. (1) Safeguards for a high expansion foam system shall be provided as prescribed in R 408.10954.

(2) Entry into foam shall be made only in an emergency. If emergency entry is necessary, self-contained breathing apparatus shall be worn in conjunction with a life line attended by another employee outside the hazardous area.

History: 1954 ACS 80, p. 55, Eff. Aug. 20, 1974.

R 408.10965 Inspection and maintenance.

Rule 965. (1) A high expansion foam system shall be inspected by a trained and authorized employee or by an outside service no less than once a year to insure operability, when needed.

(2) Strainers shall be inspected and cleaned after each use.

History: 1954 ACS 80, p. 55, Eff. Aug. 20, 1974.

HALOGENATED EXTINGUISHING SYSTEMS

R 408.10971 Installation.

Rule 971. (1) A halogenated fire extinguishing system installed or modified after the effective date of this part shall be installed as prescribed by the N.F.P.A. standard, #12A-1973, halogenated fire extinguishing agent systems—halon 1301, which is incorporated herein by reference and which is available for inspection at the Lansing office of the department of labor. This standard may be purchased, at a cost of $2.00 each, from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

(2) The plan and installation of a halogenated fire extinguishing system shall be approved by the state fire marshal.

History: 1954 ACS 80, p. 55, Eff. Aug. 20, 1974.

R 408.10973 Exceptions to use.

Rule 973. A halogenated fire extinguishing system shall not be used to extinguish fires as listed in R 408.10944.

History: 1954 ACS 80, p. 55, Eff. Aug. 20, 1974.

R 408.10975 Safeguards.

Rule 975. (1) Where there is a possibility that an employee may be trapped in, or may enter into, an atmosphere made hazardous by the discharge of a halon 1301 extinguishing agent, the following safeguards shall be provided:

(a) A predischarge and a discharge alarm in a normally occupied area, except an explosion suppressant system, does not require a predischarge alarm if the concentration of the discharge agent does not exceed 7%. If evacuation of the area by personnel can be accomplished within 1 minute, the concentration may be increased to 10%.

(b) Warning signs.

(c) Employee training.

(2) Where an alarm, audible or visual, is provided to indicate system failure, it shall be distinctive from an alarm indicating operation or hazardous conditions, and shall operate continuously until manually shut off.

(3) Before an employee enters an area where Halon 1301 has been discharged, the area shall be purged of that substance. In an emergency and before purging has been accomplished, an employee may enter the area while wearing approved respiratory equipment.

History: 1954 ACS 80, p. 55, Eff. Aug. 20, 1974; 1954 ACS 89, p. 37, Eff. Nov. 13, 1976.

R 408.10976 Inspection and maintenance.

Rule 976. (1) A halogenated extinguishing system shall be inspected by a trained and authorized employee or by an outside service not less than once a year to insure operability.

(2) Not less than semiannually the following shall be accomplished:

(a) The weight and pressure of a refillable container of a halogenated extinguishing agent shall be checked. A container shall be repaired or replaced if the loss in net weight is more than 5% or the loss in pressure is more than 10%.

(b) The weight of a nonrefillable container shall be checked. A container shall be replaced if the net weight loss is more than 5%.

(c) The weight, pressure, and date shall be entered on a tag attached to the extinguisher.

History: 1954 ACS 80, p. 55, Eff. Aug. 20, 1974.

LOCAL FIRE ALARM SYSTEMS

R 408.10981 Installation.

Rule 981. A local fire alarm system installed or that portion of the system modified after the effective date of this part shall be installed as prescribed by the N.F.P.A. standard, #72A-1972, standard for the installation, maintenance and use of local protective signaling systems for watchmen, fire alarm and supervisory service, which is incorporated herein by reference and which is available for inspection at the Lansing office of the department of labor. This standard may be purchased, at a cost of $1.25 each, from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 80, p. 55, Eff. Aug. 20, 1974.

R 408.10983 Installation.

Rule 983. (1) A local fire alarm system shall be mounted in a location where the system will not be activated by vibration or jarring.

(2) A manual fire alarm box shall be mounted permanently to a wall or post and protected against physical damage.

(3) A manual fire alarm box shall be located so that the maximum distance on each floor to a box will be not more than 200 feet. The box shall be unobstructed, readily accessible and in the regular path of travel to an exit. The location of the

box shall be identified by a sign or light visible from a distance of not less than 200 feet.

(4) Where the protected premises has an emergency power supply, the local fire alarm system shall have a secondary source of power.

History: 1954 ACS 80, p. 56, Eff. Aug. 20, 1974.

R 408.10984 Maintenance and inspection.

Rule 984. A local fire alarm system shall be tested by a trained and authorized employee or an outside service not less than once a week to insure operability by the activation of not less than 1 box.

History: 1954 ACS 80, p. 56, Eff. Aug. 20, 1974.

PART 11. POLISHING, BUFFING, AND ABRADING

R 408.11101 Scope.

Rule 1101. This part sets forth rules in places of employment for safety in the use of buffing and polishing wheels and coated abrasives, including specifications for flanges, guards, fixtures, application of compounds, automatic buffing, polishing, storage, direction of operation, and speed.

History: 1954 ACS 65, p. 23, Eff. Sept. 15, 1970.

R 408.11103 Definitions; A, B.

Rule 1103. (1) "Abrading" means the process of removing materials by use of abrasives or wire wheels.

(2) "Acorn nut" means a hexagon nut with a rounded enclosed end; see figure 1.

FIGURE 1

(3) "Buffing wheel" means a wheel which, when used in conjunction with a compound and a centrifugal motion, will impart a luster to metal, plastics, or other materials. Buffing wheels are of 2 types, as follows:

(a) Type 1—"full disc buff" means a full circular disc of woven material plied and laminated, and generally sewn together.

(b) Type 2—"bias buff" means a radius of woven material drawn into a clinch ring, which then creates a circular wheel of laminated plies, radiating from the clinch ring.

History: 1954 ACS 65, p. 23, Eff. Sept. 15, 1970.

R 408.11104 Definitions; C to F.

Rule 1104. (1) "Clinch ring" means a series of hog rings pressed into a circular form integrally meshed through the buffing material.

(2) "Coated abrasive" means abrasive grains bonded to paper, fibre, or cloth, usually fabricated in various forms, such as a disc, endless belt, and sheet.

Digitized by Google

(3) "Compound" means the abrasive in a bond mixture applied to the buffing wheel or part in a cake or liquid form.

(4) "Flange or end" means disc or plates between which a buff with a metal or fibre center is mounted.

(5) "Fixture" means the support used to hold or guide a part being buffed or polished.

History: 1954 ACS 65, p. 24, Eff. Sept. 15, 1970.

R 408.11105 Definitions; O to W.

Rule 1105. (1) "Off side" means a place above or below the center line of a wheel, depending on rotation of the wheel, where a part or compound will be thrust away from the operator.

(2) "Open spindle lathe—hand jack" means a machine on which buffing or polishing wheels are mounted and run.

(3) "Polishing wheel" means a full circular disc of a material, generally a product of the loom, compressed felt or sheepskin, that is plied and laminated. Abrasive grain is glued or cemented to the periphery and when cured is used to remove fine scratches and imperfections.

(4) "Safety guard" means an enclosure for protection from emission or accidental contact.

(5) "Wire brush wheel" means a full circular disc of wires held in place by a hub or ring.

History: 1954 ACS 65, p. 24, Eff. Sept. 15, 1970.

R 408.11111 Operator personal protection.

Rule 1111. (1) An operator shall:

(a) Wear eye protection, such as goggles or a face shield when polishing, buffing, or abrading.

(b) Wear a belly pad or apron when hand buffing.

(c) Not wear loose clothing.

(2) An operator should:

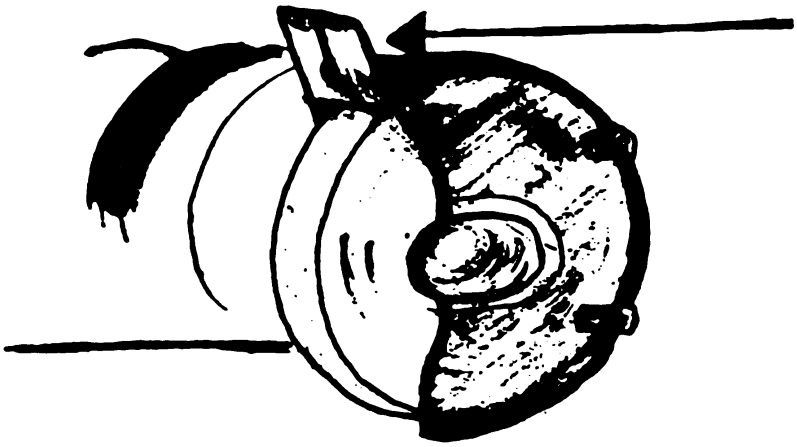
(a) Wear gloves or hand pads.

(b) Wear safety shoes or toe guards.

History: 1954 ACS 65, p. 24, Eff. Sept. 15, 1970.

R 408.11115 Guards.

Rule 1115. (1) A polishing, buffing, or wire brush wheel on a hand jack, automatic machine, or coated abrasive machine shall have guards made of a minimum of 16 gauge metal or equivalent and of a size and design to cover at least half of the sides of the working wheel, and extend at least 1 inch beyond the spindles. See figure 2.



(2) An adjustable deflector of at least 16 gauge metal or equal material shall be installed and maintained within ¼ inch of the face of the wheel on all open spindle lathes. See figure 2.

(3) The face opening shall not be any greater in area than actually required for performance of the operation.

(4) In-running nip points of drive and idler rolls, such as found in belt sanding, shall be guarded with an enclosure which will include the rolls.

FIGURE 2

History: 1954 ACS 65, p. 24, Eff. Sept. 15, 1970.

R 408.11116 Arbor ends.

Rule 1116. (1) An arbor end which is not equipped with an acorn nut or equivalent shall be guarded.

(2) A nut shall be fully installed on the spindle, and the nut shall be self-locking with the arbor rotation.

History: 1954 ACS 65, p. 25, Eff. Sept. 15, 1970.

R 408.11118 Flanges.

Rule 1118. (1) A flange shall be used with a metal or fibre center bias buff, except where the flange is an integral part of the buff.

(2) A flange shall:

(a) Be 3/16 inch thick for buff face up to 6 inches wide and 3/8 inch thick for a wider buff face.

(b) Be of a diameter to bear firmly on the clinch ring.

(c) Be of the same diameter and design of both sides.

(d) Be made of steel or material of equal strength.

(3) A flange should be tapered or bell shape instead of flat. See figure 3.

R 408.11121 Fixtures.

Rule 1121. Auxiliary equipment designed as a standing fixture shall be secured to the floor or machine.

History: 1954 ACS 65, p. 25, Eff. Sept. 15, 1970.

R 408.11123 Illumination.

Rule 1123. (1) Automatic polishing and buffing machinery and equipment shall be located with respect to sources of natural light so that light of 25 footcandles intensity will fall on the loading and unloading area. When natural light is insufficient to meet this requirement, artificial light shall be provided.

(2) Hand polishing and buffing machinery and equipment shall be located with respect to sources of natural light so that light of 30 footcandles intensity will fall on the work. When natural light is insufficient to meet this requirement, artificial light shall be provided.

History: 1954 ACS 65, p. 25, Eff. Sept. 15, 1970.

R 408.11131 Operations.

Rule 1131. (1) Buffing or polishing shall be performed on the off side.

(2) Buffing compound, when applied to a revolving wheel, shall be applied to the off side.

(3) The wheel speed shall not exceed the manufacturer's recommended revolutions per minute.

(4) Coated abrasives shall be run according to the direction (→) indicated by the manufacturer.

History: 1954 ACS 65, p. 25, Eff. Sept. 15, 1970.

R 408.11135 Storage of abrasives.

Rule 1135. Coated abrasives shall be stored under conditions of temperature and humidity to prevent breakage or warpage.

PART 12. WELDING AND CUTTING

GENERAL PROVISIONS

R 408.11201 Scope.

Rule 1201. This part is intended to provide, in, about, or around places of employment, reasonable safety to persons involved in welding, cutting, brazing, soldering, and acetylene generating and to those exposed to these processes and the equipment and compressed gases used.

History: 1954 ACS 71, p. 43, Eff. May 1, 1972; 1954 ACS 81, p. 67, Eff. Sept. 26, 1974.

R 408.11203 Definitions; A to C.

Rule 1203. (1) "AC" means alternating current.

(2) "Arc welding" means a process for joining metals by heating with an electric arc with or without the use of pressure and with or without a filler material.

Digitized by Google

(3) "Brazing" means a process of joining metals without melting them with a filler metal melting above 800 degrees Fahrenheit.

(4) "Confined space" means a small or restricted space without proper life supporting atmosphere or in which mobility is restricted.

(5) "Cutting" means a process in which the severing or removing of metal is effected by the use of an arc or flame.

(6) "Cylinders" means containers for storing compressed gases manufactured, labeled and periodically tested in accordance with specifications of the department of transportation regulations or manufactured in accordance with specifications of the national fire protection association, which are hereby incorporated by reference and are available for inspection at the Lansing office of the Michigan department of labor. These regulations, department of transportation regulations on transporting dangerous articles—tariff no. 14, 1970, may be purchased from the American Trucking Association, H. J. Sonnenberg, Issuing Officer, 1616 P Street N.W., Washington, D.C. 20036, at a cost of $11.00 each, and the national fire code, volume 2, gases, 1970-71, may be purchased from the National Fire Protection Association, 60 Batterymarch Street, Boston, Massachusetts 02110, at a cost of $5.00 each, or from the Michigan State Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 71, p. 43, Eff. May 1, 1972; 1954 ACS 81, p. 67, Eff. Sept. 26, 1974.

R 408.11204 Definitions; D to N.

Rule 1204. (1) "DC" means direct current.

(2) "Fire resistance" means the property of a material or assembly to withstand fire or give protection from it.

(3) "Gas welding" means a process for joining metals by heating with a gas flame with or without the use of pressure and with or without the use of a filler material.

(4) "Inert gas" means argon, carbon dioxide, helium, or nitrogen gas.

(5) "Manifold" means an assembly of pipe and fittings to interconnect either single or multiple sources to single or multiple outlets.

(6) "Noncombustible" means having properties which do not support combustion.

History: 1954 ACS 71, p. 43, Eff. May 1, 1972.

R 408.11205 Definitions; P to W.

Rule 1205. (1) "Press welding machine" means a machine that utilizes 2 platens, 1 of which moves toward the other during the initial part of the machine cycle. It does not provide welding pressure. After 1 of the platens has moved to a stop position, the welding pressure required for the welding operation is applied by 1 or more air or hydraulic cylinders.

(2) "Psig" means pounds per square inch as measured by a gauge.

(3) "Resistance welding" means the joining of metals by the use of heat generated at the joint by the resistance to the flow of electric current and by the application of pressure.

(4) "Soldering" means a process of joining metals without melting them using a filler metal melting at 800 degrees Fahrenheit, 427 degrees Centigrade, or below.

(5) "Spot welding" means a form of resistance welding in which the current and pressure are restricted to the spot of metal surfaces directly in contact between the electrodes.

(6) "Storage" means the storage of filled or empty cylinders not in use.

(7) "Water capacity" means the weight of water, as related to liquefied gas, of a volume equivalent to that of the cylinder.

(8) "Welder" means a person capable of performing a manual or semi-automatic welding operation.

(9) "Welding operator" means a person who operates a machine or automatic welding equipment.

History: 1954 ACS 71, p. 43, Eff. May 1, 1972; 1954 ACS 81, p. 67, Eff. Sept. 26, 1974.

R 408.11211 Responsibility.

Rule 1211. (1) An employer shall:

(a) Give each employee training or a test before allowing him to use equipment for arc and gas welding and cutting.

(b) Provide face and eye protection as prescribed in Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(c) Insure that other personal protective clothing or equipment is used when necessary.

(d) Provide protective devices, such as, but not limited to, curtains, safety glasses, or face shields to reduce the risk of flash burn, sparks, and foreign bodies to all employees in the area.

(e) Provide ventilation where necessary to protect an employee against toxic materials as prescribed by the state department of public health.

(2) An employee shall:

(a) Use welding and cutting equipment as trained and authorized.

(b) Use the protective equipment required by the employer or the hazard.

(c) Not tamper with safety devices.

(3) An employee in charge of the operation of oxygen or fuel-gas supply equipment, of oxygen or fuel-gas systems, including generators, shall be instructed and judged competent by the employer for this work before being left in charge. Rules and instructions covering the operation and maintenance of oxygen or fuel-gas supply equipment, including generators, and oxygen or fuel-gas distribution piping systems shall be readily available.

History: 1954 ACS 71, p. 44, Eff. May 1, 1972; 1954 ACS 81, p. 68, Eff. Sept. 26, 1974; 1954 ACS 89, p. 38, Eff. Nov. 13, 1976.

R 408.11212 General.

Rule 1212. (1) A mixture of fuel gas with air or oxygen shall not be permitted except when consumed at a burner or torch.

(2) Only apparatus, such as a torch, regulator, pressure reducing valve, acetylene generator, and manifold, designed for use with fuel gas or oxygen, shall be used for welding or cutting.

(3) The total volume of acetylene used per hour shall not exceed ½ of the total volume of the acetylene supply in the system.

(4) Liquid acetylene shall not be used.

(5) A cylinder to which a regulator is attached shall not be moved unless secured to a hand or powered truck designed or equipped for this purpose.

(6) A cylinder valve shall be closed when:

(a) Moving the cylinder.

(b) The work is finished or is left unattended during lunch, overnight or any other prolonged period.

(c) The cylinder is empty.

(7) Fuel gas shall not flow from a cylinder or manifold through a torch or other device equipped with a shut off valve unless the pressure is reduced by a regulator attached to the cylinder or manifold.

(8) An oxygen cylinder, cylinder valve, coupling regulator, hose, and apparatus shall be kept free from oily or greasy substances and shall not be handled with oily hands or gloves. A jet of oxygen shall not be permitted to strike an oily surface, greasy clothes or enter a fuel, oil, or other storage tank.

(9) Oxygen shall not be used as a substitute for compressed air nor any other use except for welding or cutting or life support procedures.

(10) Welders shall place welding cable and other equipment so that it is clear of passageways, ladders, and stairways, or it shall be protected against damage or hazards to an employee.

History: 1954 ACS 81, p. 68, Eff. Sept. 26, 1974; 1954 ACS 89, p. 38, Eff. Nov. 13, 1976.

R 408.11213 Working in confined spaces.

Rule 1213. (1) When working in a confined space, the torch valves and the gas supply valve and oxygen valve outside the confined space shall be shut off during lunch, overnight, or any other prolonged period. Where practicable, the torch and hose shall be removed from the confined space.

(2) When stick electrodes are used in a confined space and welding is suspended during lunch, overnight or any other prolonged period, the electrode shall be removed from the holder and the machine shut off.

(3) The air in a confined space shall be tested with an approved device and purged, if necessary, prior to any entry. Ventilation shall be provided in the confined space when an employee is present.

(4) A cylinder or welding power source used in a confined space shall be placed and secured on the outside of the space where work is being performed.

(5) Where an employee must enter a confined space through a small opening, another employee trained in rescue procedures and equipment with such means as are necessary to effect a rescue, if needed, shall be stationed outside the confined space in position to watch the welder. When safety belts and lifelines are used, they shall be so attached to the welder's body that his body cannot be jammed in a small exit opening.

(6) After welding operations are completed in a confined space, a sign or other warning shall be used to mark the hot metal.

History: 1954 ACS 81, p. 68, Eff. Sept. 26, 1974; 1954 ACS 89, p. 39, Eff. Nov. 13, 1976.

R 408.11214 Warning tags and labels.

Rule 1214. (1) A storage container of welding materials with filler metals or fusible granular materials shall carry a special label:

CAUTION

Welding may produce fumes and gases hazardous to health. Use adequate ventilation. See American national standards institute standard Z49.1-1973, safety in welding and cutting.

(2) A storage container of brazing filler metals containing cadmium in significant amounts shall carry a special label:

WARNING

Contains cadmium—poisonous fumes may be formed on heating. Do not breathe fumes. Use only with adequate ventilation such as fume collectors, exhaust ventilators or air supplied respirators. See American national standards institute standard Z49.1-1973, safety in welding and cutting. If chest pain, cough, or fever develops after use, contact physician immediately.

(3) A storage container of brazing or gas welding fluxes containing fluorides shall have a special label:

CAUTION

Contains fluorides. This flux, when heated, gives off fumes that may irritate eye, nose, and throat. Avoid fumes—use only in well ventilated spaces. Avoid contact of flux with eyes or skin. Do not take internally.

History: 1954 ACS 81, p. 69, Eff. Sept. 26, 1974.

CYLINDERS

R 408.11221 Cylinder marking.

Rule 1221. (1) Cylinders shall be legibly marked with either the chemical or trade name. Marking shall be by stenciling, stamping, or labeling and shall not be tampered with or be readily removable. Whenever practical, the marking shall be located on the shoulder of the cylinder.

(2) Unlabeled cylinders shall not be used.

(3) Empty cylinders shall be so marked at time of depletion.

History: 1954 ACS 71, p. 44, Eff. May 1, 1972; 1954 ACS 81, p. 69, Eff. Sept. 26, 1974; 1954 ACS 89, p. 39, Eff. Nov. 13, 1976.

R 408.11222 Storage.

Rule 1222. (1) An oxygen cylinder shall be stored at least 20 feet from fuel gas cylinders or a highly combustible material such as, but not limited to, oil, grease, excelsior, flammable gas, or a source of ignition, or be separated from the material by a noncombustible wall, not less than 5 feet (1.6 m) high, having a fire resistance rating of 1 hour. An oxygen cylinder shall not be stored in an acetylene generator compartment.

(2) A cylinder shall be stored away from heat in excess of 125 degrees Fahrenheit.

(3) A cylinder, whether full or empty, in storage or during shipment, shall have the valve closed and cap connected in place, if a cap is provided in the design, or otherwise protected.

(4) Storage shall be set up to insure "first in," "first out" usage.

(5) A cylinder storage area shall be posted with the names of the individual gases stocked, and a warning posted against tampering by an unauthorized employee. An assigned storage area shall be located where a cylinder will not be knocked over or struck by a passing or falling object.

(6) Where different gases are stored, they shall be grouped by types. Groupings shall separate the flammable gases from the oxidizing gases as in subrule (1).

(7) A storage area for cylinders shall be well ventilated. A cylinder shall not be stored in basements or pits except where ventilation as specified by the department of public health is furnished to keep the area purged of any accumulation of gases.

(8) Storage of fuel gas in a building in one area within 100 feet (30 m) of another fuel gas storage area and not protected by an automatic sprinkler system shall be limited to a total gas capacity of 2,000 cubic feet (56 m^3, approx.) or 11.8 cubic feet (.33 m^3) of liquefied gas which is 735 pounds (333 kg.) water capacity. Storage in excess of this amount shall be in a separate room or compartment with an exterior wall and on the top floor of the building, outside or in a special building. All walls, floors and ceilings shall be constructed of noncombustible material having a fire resistance rating of 1 hour. The walls shall be continuous from the floor to the ceiling and securely anchored. The separate room,

compartment or special building shall have no open flame for heat or light and shall be well ventilated. Openings from the separate storage room to other parts of the building shall be protected by a self-closing fire door for a class B opening and shall have a rating of at least 1 hour. Windows in partitions shall be wired glass and approved metal frames with a fixed sash. Installation shall be in accordance with the standard for the installation of fire doors and windows, N.F.P.A. 80-1974, which is incorporated herein by reference and is available for inspection at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.75 from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

(9) Where a liquid or gaseous oxygen system is used to supply gaseous oxygen for welding and cutting and the system has a storage capacity of more than 20,000 cubic feet (560 m^3), measured at 14.7 psia (101.34 kPa) and 70 degrees Fahrenheit (21.1 degrees Celsius), including unconnected reserves at the site, the system shall be as prescribed in N.F.P.A. standard 50-1971, bulk oxygen systems, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $1.00 each.

(10) A cylinder used for methylacetylene-propadiene, stabilized, shall be constructed of materials suitable for this fuel gas in the gaseous or liquid phases.

History: 1954 ACS 71, p. 44, Eff. May 1, 1972; 1954 ACS 81, p. 69, Eff. Sept. 26, 1974; 1954 ACS 89, p. 39, Eff. Nov. 13, 1976.

R 408.11223 General rules for cylinders—I.

Rule 1223. (1) A chain, bracket, or other restraining device shall be used at all times to prevent cylinders from falling.

(2) Acetylene or liquefied gas cylinders shall not be placed on their sides, but shall be stood valve end up.

(3) A cylinder shall not be dropped, dragged, rolled on its side, or struck violently.

(4) A cylinder shall be lifted only by cradles or enclosed platforms when using a crane or hoisting device. Electromagnets, hooks, ropes, or slings shall not be used.

(5) A frozen or ice clogged valve shall be thawed either by warm air or use of warm water and dried before using. Boiling water or a flame shall not be used. Force shall not be applied to a valve or cap to loosen a cylinder frozen in place.

History: 1954 ACS 71, p. 44, Eff. May 1, 1972; 1954 ACS 81, p. 70, Eff. Sept. 26, 1974.

R 408.11224 General rules for cylinders—II.

Rule 1224. (1) Gases shall not be mixed within a cylinder except by the supplier.

(2) A cylinder shall not be placed where it will become a part of the electrical circuit by accidental grounding or where it may be burned by electric welding arc. A cylinder shall not be placed so that hot slag or flame will reach it or it shall be protected by a fire resistant shield. An electrode shall not be tapped against a cylinder to strike an arc.

(3) A regulator, gauge or hose shall not be interchangeable between fuel gas, oxidizing gas or inert gas. Connections for compressed gas cylinders shall be as prescribed in ASA B57.1-1965, compressed gas cylinder valve outlet and inlet connections, which is incorporated herein by reference and may be inspected at

the Lansing office of the department of labor. This standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $4.00 each.

(4) A cylinder valve shall be opened slightly for an instant and then closed before connecting to a regulator or manifold to clear the valve of dust and dirt. This shall not be done near a source of ignition. Pressure to a regulator shall be introduced by slowly opening the cylinder valve. An acetylene cylinder valve shall not be opened more than 1½ turns of the spindle.

(5) Acetylene shall not be utilized or piped, except in cylinder manifolds, at a pressure in excess of 15 psig.

(6) Only the owner of the cylinder, if the owner is qualified, or a person trained, qualified, and authorized by the owner, shall refill a cylinder.

History: 1954 ACS 71, p. 45, Eff. May 1, 1972; 1954 ACS 81, p. 70, Eff. Sept. 26, 1974; 1954 ACS 89, p. 40, Eff. Nov. 13, 1976.

R 408.11225 General rules for cylinders—III.

Rule 1225. (1) A cylinder without fixed hand wheels shall have keys, handles or nonadjustable wrenches on valve stems while in service. A multiple cylinder installation shall require only 1 key or handle for each manifold. A hammer shall not be used to open a cylinder valve or loosen a cap.

(2) A cylinder, whether full or empty, shall not be used as a roller or support.

(3) A leaking cylinder, or a cylinder with a valve stuck open or a valve in need of repair, shall be taken outdoors away from sources of ignition, slowly emptied, tagged with a warning sign, and the manufacturer or distributor notified. Complete removal of the stem from the cylinder valve shall be avoided.

(4) Oxygen cylinders, cylinder valves, couplings, regulators, hose and apparatus shall be kept free from oily or greasy substances. Oxygen cylinders or apparatus shall not be handled with oily hands or gloves. A jet of oxygen shall not be permitted to strike an oily surface, greasy clothes or enter a fuel oil or other storage tank.

(5) Nothing shall be placed on top of a cylinder which would damage a safety device or interfere with the quick closing of the valve.

History: 1954 ACS 71, p. 45, Eff. May 1, 1972; 1954 ACS 81, p. 70, Eff. Sept. 26, 1974; 1954 ACS 89, p. 40, Eff. Nov. 13, 1976.

MANIFOLDING

R 408.11231 Oxygen manifolding.

Rule 1231. (1) An oxygen manifolding unit shall be located not less than 20 feet from combustible materials or separated by a noncombustible barrier, not less than 5 feet high, having a fire resistance rating of at least ½ hour.

(2) An oxygen manifold shall not be located in acetylene generating rooms.

(3) Each container and manifold unit shall be labeled to show the name of the gas contained.

(4) Each manifold shall be provided with approved pressure regulation devices.

History: 1954 ACS 71, p. 45, Eff. May 1, 1972; 1954 ACS 89, p. 41, Eff. Nov. 13, 1976.

R 408.11232 High pressure oxygen manifolds.

Rule 1232. (1) An oxygen high pressure manifold shall be not more than 6,000 cubic feet, except as permitted in subrule (3).

(2) More than 1 unit may be located in a room, but they shall be at least 50 feet (16 m) apart or separated by a noncombustible barrier not less than 5 feet (1.6 m) high having a fire resistance of ½ hour.

(3) An oxygen high pressure manifold with an aggregate of more than 6,000 cubic feet (170 m^3 approx.) shall be located outdoors, in a separate noncombustible building or, if located in a building that is otherwise occupied, the manifold shall be located in a separate room of noncombustible construction having a fire resistance of ½ hour, or in an area with no combustible material within 20 feet (6.1 m) of the manifold.

(4) An oxygen manifold or oxygen bulk supply system with a storage capacity of more than 20,000 cubic feet (560 m^3) including unconnected reserves shall be as prescribed in R 408.11222(9).

History: 1954 ACS 71, p. 45, Eff. May 1, 1972; 1954 ACS 81, p. 70, Eff. Sept. 28, 1974.

R 408.11233 Low pressure oxygen manifolds.

Rule 1233. (1) The operating pressure of a low pressure oxygen manifold shall be not more than 250 psig. The following sign shall be posted at each low pressure oxygen manifold:

Low Pressure Manifold:
Do not connect high pressure cylinders
Maximum pressure—250 psig

(2) A low pressure oxygen manifold shall have a minimum bursting pressure of 1,000 psig and shall be protected by a safety relief valve which will relieve at a maximum pressure of 500 psig. The safety relief vent shall discharge outside of the plant at a point away from a source of ignition and where reentry could not occur.

(3) A hose or hose connection subject to manifold pressure shall have a minimum bursting pressure of 1,000 psig.

(4) An assembled manifold including leads shall be tested and proved gas tight at a pressure of 300 psig (2070 kPa gage). The material used for testing oxygen manifolds shall be oil-free and not combustible.

History: 1954 ACS 71, p. 45, Eff. May 1, 1972; 1954 ACS 81, p. 71, Eff. Sept. 28, 1974.

R 408.11234 Fuel gas manifolding.

Rule 1234. (1) Fuel gas connected to 1 manifold inside a building shall have a total gas capacity of not more than 3,000 cubic feet (85 m^3 approx.), or 11.8 cubic feet (.33 m^3) of liquefied gas which is 735 pounds (333 kg.) water capacity. More than 1 manifold unit may be located in a room, but the manifolds shall be not less than 50 feet (16 m) apart or separated by a noncombustible barrier not less than 5 feet (1.6 m) high having a fire resistance rating of ½ hour.

(2) Fuel gas capacity on 1 manifold of more than 3,000 cubic feet (85 m^3 approx.), or 11.8 cubic feet (.33 m^3) of liquefied gas which is 735 pounds (333 kg.) water capacity, is permissible in a separate room or compartment as specified in R 408.11222(8) or located outside the building.

(3) The pressure in the gas cylinders connected to, and discharged simultaneously through, a common manifold shall be approximately equal.

(4) Manifolds shall be approved either separately for each component part or as an assembled unit.

History: 1954 ACS 71, p. 46, Eff. May 1, 1972; 1954 ACS 81, p. 71, Eff. Sept. 28, 1974; 1954 ACS 89, p. 41, Eff. Nov. 13, 1976.

MANIFOLDING—SERVICE PIPING

R 408.11241 Piping material.

Rule 1241. (1) Piping for acetylene shall be limited to steel and ductile iron.

(2) Piping for other gases shall be compatible with the gas.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(3) Oxygen at pressures of more than 700 psig shall be run in stainless steel or copper alloy piping.

(4) Gray or white cast iron fittings shall not be used.

(5) Pipe and fittings shall be as prescribed in section 2 of the ANSI B31.1-1967 standard, industrial gas and air piping systems, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor, except that:

(a) Pipe shall be not less than schedule 40 and fittings not less than standard weight in sizes up to and including 6 inch nominal.

(b) Copper tubing shall be type K or L.

(6) This standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, 7150 Harris Drive, Lansing, Michigan 48926 at a cost of $8.00.

(7) A hose connection and hose complying with R 408.11233 may be used to connect the outlet of a manifold pressure regulator to piping if the working pressure of the piping is 250 psig or less, and the length of the hose does not exceed 5 feet.

History: 1954 ACS 71, p. 46, Eff. May 1, 1972; 1954 ACS 81, p. 71, Eff. Sept. 26, 1974; 1954 ACS 89, p. 41, Eff. Nov. 13, 1978.

R 408.11242 Piping assembly.

Rule 1242. (1) All piping shall be run as directly as practicable, protected against physical damage, proper allowance being made for expansion and contraction, jarring, and vibration. Piping in a tunnel, trench, or duct shall be welded or brazed. Shutoff valves shall be located outside the conduits. Oxygen piping may be placed in the same tunnel, trench, or duct with fuel gas pipe lines, with natural or forced ventilation provided.

(2) Low points in piping carrying moist gas shall be drained into drip pots constructed so as to permit pumping or draining out the condensate at necessary intervals. A drain valve shall be installed for this purpose, having an outlet normally closed with screw caps or plugs. Open end valves or petcocks shall not be used, except that, in drips located out of doors, underground, and not readily accessible, a valve may be used at such points if it is equipped with means to secure it in the closed position. A pipe leading to the surface of the ground shall be cased or jacketed where necessary to prevent loosening or breaking.

(3) A gas shutoff valve shall be provided at the pipe entrance to a building. There shall also be provided a shutoff valve in the discharge line from the generator, gas holder, manifold, or other source of supply. A shutoff valve shall not be installed in a manner that renders a safety relief device ineffective.

(4) Before assembly, piping and fittings shall be freed of scale and dirt. An oxygen line shall be washed out with a solution such as caustic soda or trisodium phosphate. After assembly, piping shall be blown out with oil-free air or oil-free inert gas.

(5) Loose dirt that may have been trapped in the pipe shall be blown out with oil-free air or oil-free inert gas.

(6) Pressure testing of a pipeline shall be done in a manner to protect an employee from injury due to blowing out of closures and other pressure restraining devices.

(7) A piping system shall be tested and proved gas-tight at 1½ times the maximum operating pressure and shall be purged of air before being placed in service. The material used for testing oxygen lines shall be oil free and non-combustible. A flame shall not be used to detect leaks.

(8) Repairs on ferrous piping for other than inert gas lines shall be preceded by purging the lines, unless only nonsparking tools are used. When gas lines and other parts of a manifold system are being purged, a source of ignition shall not be permitted near the uncapped opening.

(9) Outdoor ferrous and all underground piping and fittings shall be covered or painted to protect against corrosion.

(10) A steel or wrought iron pipe joint shall be welded, threaded, or flanged.

(11) A brass or copper pipe joint shall be welded, brazed, threaded, or flanged. A seamless copper, brass, or stainless steel tubing joint shall be brazed or gas tubing fittings used. Where a socket type joint is used, it shall be brazed with silver brazing alloy or similar filler metal having a melting point not less than 800 degrees Fahrenheit.

History: 1954 ACS 71, p. 46, Eff. May 1, 1972; 1954 ACS 81, p. 71, Eff. Sept. 26, 1974; 1954 ACS 89, p. 41, Eff. Nov. 13, 1976.

R 408.11243 Installation and identification of piping.

Rule 1243. (1) Above ground piping, station outlet, and section valves shall be identified as to contents by color or name, or both, as prescribed in ASA standard A13.1-1956, identification of piping systems, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $2.00.

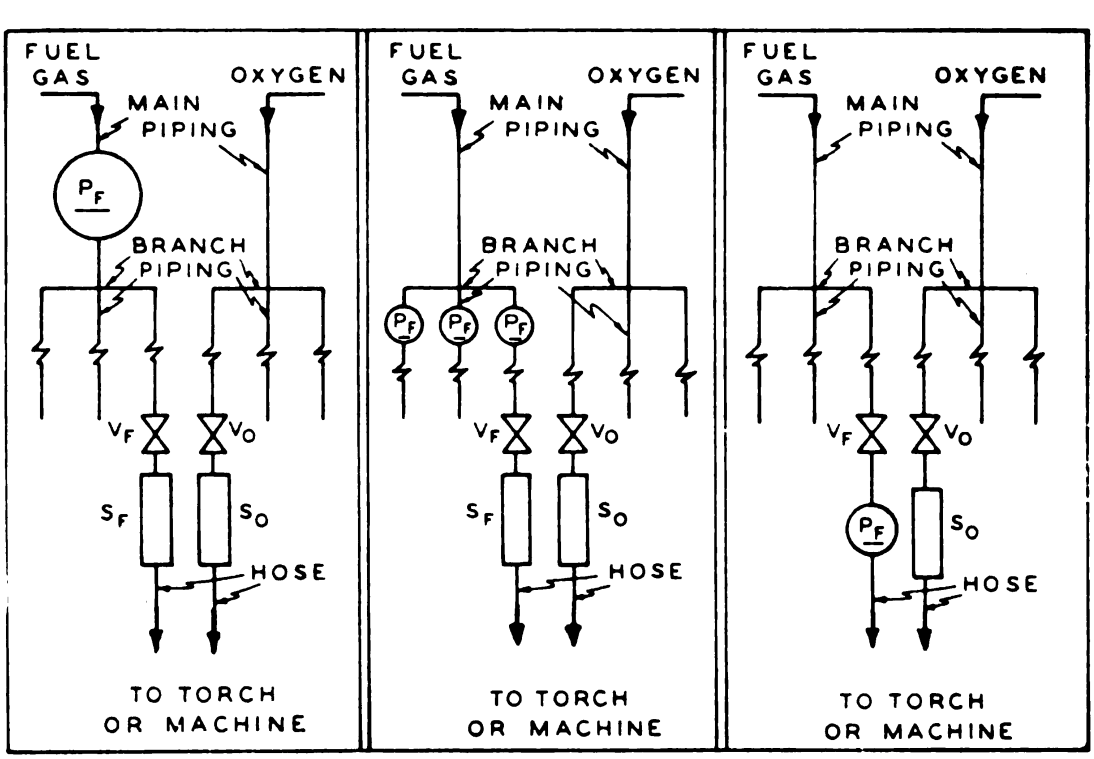
(2) A cylinder manifold shall be installed under the supervision of someone experienced in the proper practices with reference to their installation and use.

History: 1954 ACS 71, p. 46, Eff. May 1, 1972; 1954 ACS 81, p. 72, Eff. Sept. 26, 1974; 1954 ACS 89, p. 42, Eff. Nov. 13, 1976.

R 408.11244 Station outlets.

Rule 1244. (1) A station outlet shall be equipped with a shutoff valve for each torch supplied from it, designated Vf and Vo in figure 1, located upstream of other station outlet equipment.

(2) A station outlet shall be provided backflow prevention devices, designated as Sf and So in figure 1, at each station outlet, including those on a portable header, to prevent backflow, except where pipeline protection equipment, designated as Pf in figure 1, C is located at the station outlet.



(3) A station outlet shall terminate with an approved union connection for a regulator or a hose, except that the outlet may terminate with pipe threads where a permanent connection is made, such as to a machine.

(4) Each station outlet shall be equipped with a detachable seal outlet cap, secured in place, which shall seal the outlet except when a hose, regulator, or piping is attached.

(5) The total volume of acetylene used per hour shall not exceed ½ of the total volume of the acetylene supply in the system.

P_F—Protective equipment in fuel gas piping
V_F—Fuel gas station outlet valve
V_O—Oxygen station outlet valve
S_F—Backflow prevention device (s) at fuel gas station outlet
S_O—Backflow prevention device (s) at oxygen station outlet

History: 1954 ACS 71, p. 46, Eff. May 1, 1972; 1954 ACS 81, p. 72, Eff. Sept. 26, 1974; 1954 ACS 89, p. 42, Eff. Nov. 13, 1976.

R 408.11245 Portable outlet headers.

Rule 1245. (1) A portable outlet header shall not be used indoors, except where conditions preclude a direct supply from an outlet located on the service piping system.

(2) A master shutoff valve shall be provided for oxygen and fuel gas at the entrance of the portable outlet header.

(3) A portable outlet header shall be provided the protective devices prescribed in R 408.11252.

(4) Each service outlet of a portable outlet header shall be provided with a valve assembly which includes a detachable outlet seal cap, chained or otherwise secured to the valve body.

(5) A portable outlet header shall be provided a frame which will support the equipment in position and protect it from damage during handling and operation.

(6) Each outlet on the service piping from which oxygen or fuel gas is withdrawn to supply a portable outlet header shall be equipped with a readily accessible shutoff valve.

History: 1954 ACS 81, p. 73, Eff. Sept. 26, 1974; 1954 ACS 89, p. 43, Eff. Nov. 13, 1976.

MANIFOLDING—PROTECTIVE DEVICES

R 408.11251 Pressure devices.

Rule 1251. Pressure regulating and relief devices shall be provided and set to function at not more than the designed pressure and to discharge away from a source of ignition.

History: 1954 ACS 71, p. 46, Eff. May 1, 1972.

R 408.11252 Protective devices.

Rule 1252. (1) Protective equipment shall be installed in fuel gas piping to prevent backflow of oxygen into the fuel gas supply system, passage of a flashback into the fuel gas supply system and excessive back pressure of oxygen in the fuel gas supply system. See Pf in figure 1.

(2) The 3 functions may be combined in 1 device or provided by separate devices.

(3) The protective equipment shall be located in the main supply line as shown in figure 1, A. In addition, an employer may use protective equipment shown in figure 1, B and C. Where a branch is sized 2 inches or more, the protective equipment Pf shall be provided as prescribed in figure 1, B or C.

(4) Backflow protection shall be provided by a device that will prevent fuel gas from flowing into the oxygen system or oxygen from flowing into the fuel-gas system. See figure 1, A and B and Pf in figure 1, A, B, and C.

(5) A pressure relief device shall be set at a pressure not more than the pressure rating of the backflow or flash-back protection devices, whichever is lower, and shall be located on the downstream side of both of these devices. Its vent shall be as large as the inlet and terminate in a hood or bend away from a source of ignition. The vent shall be installed without low points that may collect moisture. If low points are unavoidable, drip pots with drains closed with screw plugs or caps shall be installed at the low points. A shutoff valve shall not be installed in the vent line.

(6) Fuel gas for use with equipment not requiring oxygen shall be withdrawn upstream of the piping protective devices.

(7) Piping protective equipment incorporating a liquid shall have the level maintained. Antifreeze may be used to prevent freezing.

History: 1954 ACS 71, p. 47, Eff. May 1, 1972; 1954 ACS 81, p. 73, Eff. Sept. 26, 1974; 1954 ACS 89, p. 43, Eff. Nov. 13, 1976.

HOSES AND REGULATORS

R 408.11253 Hoses and connections.

Rule 1253. (1) Only approved hose and connections shall be used. A hose connection shall be fastened to withstand twice the working pressure without leaking, but not less than 300 psig (2070 kPa). Oil-free air or an oil-free inert gas shall be used for the test.

(2) Parallel lengths of hose taped together shall have not more than 4 inches out of each 12 covered by tape.

(3) Parallel hoses shall be color coded as follows:

(a) Red—fuel gases.

(b) Green—oxygen.

(c) Black—inert gas or air.

(4) A hose shall be repaired or replaced when it shows burns, leaks, worn places or other defects which could affect the safety of employees.

History: 1954 ACS 71, p. 47, Eff. May 1, 1972; 1954 ACS 81, p. 74, Eff. Sept. 26, 1974; 1954 ACS 89, p. 44, Eff. Nov. 13, 1976.

R 408.11254 Regulators.

Rule 1254. Regulators shall:

(a) Be used as specified in R 408.11224(3).

(b) Be inspected for faulty seats and repaired when found defective.

(c) Be repaired by authorized and trained personnel, or be returned to the supplier for calibration or repairs.

(d) Not be removed until the cylinder valve is closed and the regulator drained.

(e) Have gauges marked "Use No Oil" when used for oxygen.

History: 1954 ACS 71, p. 47, Eff. May 1, 1972; 1954 ACS 81, p. 74, Eff. Sept. 28, 1974; 1954 ACS 89, p. 44, Eff. Nov. 13, 1976.

GENERAL FIRE RULES

R 408.11261 Fire precautions.

Rule 1261. (1) Cutting and welding shall be done in designated areas free of flammables or conditions favorable to fire or explosion. If it is not practical to perform the work in a designated area, a person shall be assigned responsibility for fire safety of the job and shall take the following action after inspecting the job site and designating precautions to be taken:

(a) Move flammables a minimum of 35 feet (10.7 m) from the area, cover the flammables with a fire resistant covering, or schedule the work for a time when the flammables have been removed.

(b) Cover cracks in the floor or walls that are within 35 feet (10.7 m) of the welding or cutting process if they could pass sparks to other areas.

(c) Wet down wooden floors, except when laid over concrete, and provide a bucket or pan containing water or sand or cover with a fire resistant shield. Where the floor has been wet down, arc welding operators shall be protected from shock.

(d) Have appropriate portable fire extinguishers on hand for use by trained employees.

(e) If there is a possibility that a smoldering fire may have started, keep an observer at the scene of the work for at least 30 minutes after the welding or cutting has stopped.

(2) An observer shall be assigned whenever welding or cutting is done in an area where a fire could start or 1 of the following conditions exists:

(a) Appreciable combustible materials in the building construction or contents less than 35 feet (10.7 m) from the point of operation.

(b) Appreciable combustible material more than 35 feet (10.7 m) away but easily ignited by spark.

(c) Wall or floor opening less than a 35 feet (10.7 m) radius from exposed combustible materials in adjacent areas including concealed spaces in walls and floors.

(d) Combustible material adjacent to the opposite side of a metal partition, wall, ceiling, or roof which is likely to ignite by conduction or radiation.

(3) Welding and cutting by gas utility firms on live mains is exempt from this rule when the main is filled under positive pressure with natural or manufactured gas and air movers are used to ventilate areas where fumes might accumulate.

(4) Welding or cutting shall not be permitted in the following situations:

(a) In an area not authorized by management.

(b) In a sprinklered building while such protection is impaired unless a fire watch is provided.

(c) In the presence of an explosive atmosphere such as mixtures of flammable gases, vapors, liquids, or dusts with air.

(d) In an area nearer than 35 feet of storage of large quantities of exposed, readily ignitible materials such as bulk sulfur, baled paper, or cotton.

(5) Conveyor and exhaust systems that might carry sparks to a distant combustible shall be protected or shut down.

History: 1954 ACS 71, p. 47, Eff. May 1, 1972; 1954 ACS 81, p. 74, Eff. Sept. 26, 1974.

R 408.11262 Welding drums, barrels, tanks, or other containers.

Rule 1262. (1) Welding or cutting shall not be performed on drums, barrels, tanks, or other containers until they have been cleaned of all flammable, combustible, or toxic materials or fumes.

(2) All pipelines or other connections to drums, barrels, or tanks shall be disconnected or blanked.

(3) Hollow spaces or cavities shall be vented and either filled with water or purged with an inert gas before preheating, cutting, or welding.

(4) An opening shall be maintained during welding and cutting to vent gases or vapors.

(5) The welded construction of a transmission pipeline shall be conducted in accordance with the standard for welding pipelines and related facilities, API standard 1104-1973, which is incorporated herein by reference and is available for inspection at the Lansing office of the department of labor. This standard may be purchased at a cost of $1.00 from the American Petroleum Institute, 1801 K Street, N.W., Washington, D.C. 20006, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

(6) The connection, by welding, of branches to a pipeline carrying a flammable substance shall be performed in accordance with the publication entitled "Welding or Hot Tapping on Equipment Containing Flammables," API standard PSD no. 2201-1963, which is incorporated herein by reference, and is available for inspection at the Lansing office of the department of labor. This standard may be obtained at no charge from the American Petroleum Institute, 1801 K Street, N.W., Washington, D.C. 20006, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

History: 1954 ACS 71, p. 48, Eff. May 1, 1972; 1954 ACS 89, p. 44, Eff. Nov. 13, 1976.

ARC WELDING AND CUTTING

R 408.11271 Arc welding machines.

Rule 1271. (1) An arc welding machine shall be capable of operating safely in the environment in which it is located. The design and construction shall enable the machine to carry its rated load with rated temperature rise where the temperature of the cooling air is not more than 104 degrees Fahrenheit and where the altitude is not more than 3,300 feet (1,000 m approx.).

(2) Where unusual service conditions, such as corrosive fumes, steam, oil vapor, flammable gases, vibration, shock, dust, or weather exist, a specially designed machine shall be used.

History: 1954 ACS 71, p. 48, Eff. May 1, 1972; 1954 ACS 81, p. 75, Eff. Sept. 26, 1974.

R 408.11272 Open circuit and no load voltages of arc welding machines.

Rule 1272. (1) When an arc welding machine is operated without being connected to a load, the open circuit voltage shall not exceed the values shown in table 1 when rated voltage is applied to the primary winding or when a generator type arc welding machine is operating at maximum rated no-load speed.

TABLE 1
Maximum Open Circuit Voltages of Welding Machines

Welding Current	Maximum Open Circuit (no-load) Voltage	
	Manual & Semiautomatic Machines	Automatic Machines
ac	80 rms	100 rms
dc > 10% Ripple voltage	80 rms	100 average
dc < 10% Ripple voltage	100 average	100 average

(2) When welding and cutting processes require values of open circuit voltages higher than 100, insulation or other means shall be provided to prevent the operator from making accidental contact with the high voltage.

(3) Equipment working through resistors from DC trolley voltages of 250 to 600 volts shall have a protective device for automatically disconnecting the power during arc off periods.

(4) Automatic control devices for reducing no-load voltage below 50 volts shall be provided where AC welding is to be done under wet conditions that could provide a shock hazard.

History: 1954 ACS 71, p. 48, Eff. May 1, 1972; 1954 ACS 81, p. 75, Eff. Sept. 26, 1974.

R 408.11273 Design of arc welding machines.

Rule 1273. (1) A controller integrally mounted in an electric motor driven welder shall have the capacity for carrying rated motor current and shall be capable of making and interrupting stalled rotor current of the motor.

(2) Control apparatus shall be enclosed except for the operating wheels, levers, or handles. The handles and wheels shall be large enough to be grasped by a gloved hand.

(3) Input power terminals, tap change devices, and live metal parts connected to input circuits shall be completely enclosed and accessible only by use of tools.

(4) Welding lead terminals shall be protected from accidental electrical contact by personnel or metal objects. If a welding lead terminal normally used for connection to the work is connected to a grounded enclosure, it shall be done by a conductor at least 2 sizes smaller than the grounding conductor and it shall be so marked.

(5) Portable control devices, such as push buttons, shall not be connected to an AC circuit of more than 120 volts. Exposed metal parts of a portable control device operating above 50 volts shall be grounded.

(6) Auto transformers or AC reactors shall not be used to draw welding current directly from any AC power source having a voltage of more than 80 volts.

History: 1954 ACS 71, p. 48, Eff. May 1, 1972; 1954 ACS 84, p. 53, Eff. Sept. 26, 1974.

R 408.11274 Installation.

Rule 1274. (1) The frame or case of a welding machine shall be grounded unless the manufacturer does not recommend it.

(2) The work on which the operator welds shall be grounded by a grounded metal floor, platen, connection to a grounded building frame, or by a direct ground to the machine. A wire used for grounding a work piece shall be capable of carrying the full welding current.

(3) A conduit containing an electrical conductor shall not be used for completing a work-lead circuit.

(4) A pipeline in service shall not be used as a permanent part of a work-lead circuit, but may be used during construction, extension, or repair if current is not carried through threaded joints, flanged bolted joints, or caulked joints and if special precautions are used to avoid sparking at connection of the work-lead cable.

(5) Chains, wire ropes, cranes, hoists, and elevators used for carrying loads shall not be used to carry a welding current.

(6) A welding cable shall be protected against damage, entanglement, or contact with power supply or high tension wires.

(7) A welding machine not provided with a controller or disconnect switch as an integral part shall have a controller or disconnect switch with overload protection provided. A disconnect switch with overload protection or overload disconnect protection or equivalent shall be provided for each outlet used by a portable welding machine.

(8) The rated current carrying capacity of the supply conductors for individual machines shall be not less than the rated primary current for the welding machine. The rated current carrying capacity of conductors for a group of welding machines may be less than the sum of the rated primary currents of the welding machines supplied. The conductor rating shall be determined in each case according to the machine loading based on the use to be made of each welding machine and the allowance permissible if all the machines supplied by the conductor will not be in use at the same time.

(9) Where a welding machine is working sufficiently close to another machine so that a welding operator is likely to touch the exposed parts of more than 1 electrode holder simultaneously, the machine shall be connected so as to minimize shock hazard as follows:

(a) DC machines shall be connected with the same polarity.

(b) AC machines shall be connected to the same phase of the supply circuit and with the same instantaneous polarity.

History: 1954 ACS 71, p. 49, Eff. May 1, 1972; 1954 ACS 81, p. 75, Eff. Sept. 26, 1974; 1954 ACS 89, p. 45, Eff. Nov. 13, 1976.

R 408.11275 Operation.

Rule 1275. (1) Engine fuel, cooling water, or shielding gas shall not be allowed to leak.

(2) A welding machine shall be disconnected when being moved and turned off when not in use.

(3) Electrodes shall be retracted or removed when not in use. Electrode holders not in use shall be placed so that they cannot make electrical contact with an employee, fuel or gas tanks, or conducting objects.

(4) A welder shall not let live electrodes or holders touch his bare skin or damp clothing. When arc welding is performed in wet conditions or under a condition of high humidity, the welder shall be protected against electric shock.

(5) Electrode holders shall not be cooled by immersion in water.

(6) Welding shall not be permitted where fumes or chlorinated hydrocarbons are present unless specific ventilation and personal protective equipment is provided as specified by the department of public health.

(7) Before starting an arc welding operation, the welder shall:

(a) Make sure the work lead is secured to the work.

(b) Make sure the magnetic work clamps are free of spatter on the contact surfaces.

(c) Spread out the welding cable, if necessary, to prevent overheating and damage.

(d) Make sure grounding connections are secured to a good ground.

(e) Make sure the required switching equipment for shutting down the machine has been provided.

(8) A welder shall not curl or loop welding cable around his body.

History: 1954 ACS 71, p. 49, Eff. May 1, 1972; 1954 ACS 81, p. 76, Eff. Sept. 28, 1974; 1954 ACS 89, p. 45, Eff. Nov. 13, 1976.

R 408.11276 Maintenance of arc welding machines.

Rule 1276. (1) Spliced welding cable shall not be used within 10 feet (3.05 m) of an arc welding machine.

(2) Equipment in need of repair that constitutes a safety hazard shall not be used or put in use until repairs are made by a knowledgeable employee or outside service.

(3) Cut insulation on work and lead cable or exposed bare conductors of an arc welding machine shall be protected by electrical tape and made watertight or the conductor shall be replaced. Splices shall be made by insulated welded joints or pressure connectors.

(4) An arc welding machine which has become wet shall be thoroughly dried and tested before use.

History: 1954 ACS 81, p. 76, Eff. Sept. 28, 1974.

RESISTANCE WELDING

R 408.11281 Resistance welding; generally.

Rule 1281. (1) An inspection shall be made of a resistance welding machine not less than yearly and records maintained of the findings and action taken. In addition, the operator shall report any defects to his supervisor. A defect which could cause injury shall be repaired before the machine is placed in operation.

(2) Each resistance welding operation shall be analyzed and safeguards and personal protective equipment shall be used where a hazard is found.

(3) The operator of a resistance welding machine and nearby employees shall be protected from flying sparks by shields, curtains, goggles or a combination of a face shield and safety glasses as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(4) A resistance welding machine shall be installed by a qualified employee under the direction of a licensed electrician or supervised by a welding engineer.

(5) A disconnect switch, circuit breaker or circuit interrupter shall be installed on or near the machine so that power can be shut off and locked out whenever the machine needs servicing.

(6) A pair of ignitron tubes used in resistance welding equipment shall be equipped with a thermal protection switch. When used in a series connected water line, a single switch shall be sufficient if related to the downstream tube.

(7) Controls for automatic, air, or hydraulic clamps and resistance machines shall be located or guarded to prevent accidental activation.

(8) A foot control for a resistance welder shall be guarded as prescribed in rule 2351 of the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12351 of the Michigan Administrative Code.

History: 1954 ACS 81, p. 76, Eff. Sept. 28, 1974.

R 408.11282 Nonportable spot and seam welding machines.

Rule 1282. (1) An external weld initiating control circuit for a nonportable spot or seam welding machine shall operate at not more than 120 volts for stationary equipment and not more than 36 volts for portable equipment.

(2) Stored energy or capacitor discharge type of resistance welding equipment and control panels involving more than 500 volts (550 rms volts) shall be insulated and completely enclosed. Doors of this equipment and control panels shall be interlocked in a manner to interrupt the power and short circuit all capacitors when the door is opened. In addition to the mechanical interlock, a manually operated switch or equivalent device shall be installed to insure absolute discharge of the capacitors.

(3) The door and access panel of the resistance welding machine and its control panel accessible at production floor levels shall be kept locked or interlocked to prevent entry by unauthorized employees to energized portions of the equipment. A door or access panel shall be considered locked if a key or wrench is required to open it.

(4) Where an operator's fingers are inserted between the electrodes during operation of a press welding machine, a device or guard, such as but not limited to an electric eye, 2-hand control, barriers or pull backs shall be provided and used.

(5) One or more safety emergency stop devices shall be provided on all multispot welding machines with a minimum of 1 stop device at each operator position.

(6) A large welding press shall be equipped with one or more safety pins, latches, or blocks capable of sustaining the full static load. The blocks, pins, and latches shall be electrically interlocked with the power source so that when the blocks are removed from their storage area on the machine and inserted under the ram or platen, the machine becomes inoperative.

(7) The welding transformer secondary shall be grounded by one of the following:

(a) Permanently grounding 1 side of the welding secondary circuit.

(b) Connecting a grounding reactor across the secondary winding with a reactor tap to ground.

(c) As an alternate, on nonportable machines, arranging for an isolation contactor to open 1 side of the line, while the welding or electronic contactor shall open the other side.

History: 1954 ACS 81, p. 77, Eff. Sept. 26, 1974; 1954 ACS 89, p. 46, Eff. Nov. 13, 1976.

R 408.11283 Portable welding guns.

Rule 1283. (1) Unless the design makes it unnecessary, a portable welding gun shall be counterbalanced including the cables.

(2) All suspended portable welding gun equipment, except the gun assembly, shall be equipped with a safety chain or cable capable of supporting the total shock load in event of failure of any component of the supporting system.

(3) When a trolley is used to support a portable welding machine with a clevis for attachment to a safety chain, the clevis shall be wrought or forged steel and capable of supporting the shock load in event of failure of the trolley.

(4) The movable holder shall have such clearance where it enters the welding gun frame that a shear action cannot take place if the operator's fingers are placed on the operating movable holder or guarding shall be provided.

(5) The secondary and case of a portable welding transformer shall be grounded by a center tapped secondary or by a center tapped grounding reactor connected across the secondary.

History: 1954 ACS 81, p. 77, Eff. Sept. 26, 1974.

R 408.11284 Flash welding.

Rule 1284. (1) A flash welding machine shall be equipped with a hood to control flying flash.

(2) For the protection of an operator of nearby equipment, fire-resistant curtains or suitable shields shall be set up around the machine and in such a manner that the operator's movements are not hampered.

History: 1954 ACS 89, p. 46, Eff. Nov. 13, 1976.

ACETYLENE GENERATORS

R 408.11291 Acetylene generators; marking; pressure limits.

Rule 1291. (1) An acetylene generator shall be of approved construction and permanently marked with the following information:

(a) Manufacturer's name and address.

(b) Name or model number of the generator.

(c) Capacity in cubic feet per hour.

(d) Weight and size of carbide of a single charge.

(2) The carbide used shall be not more than that marked on the acetylene generator and the rated capacity shall not be exceeded. Unless the generator is especially rated higher, a carbide feed generator shall not be rated at more than 1 cubic foot per hour per single charge.

(3) A relief valve for a generating chamber shall be set to open at a pressure of not more than 15 psig, (103 kPa gage). A relief valve for a hydraulic back pressure valve shall be set to open at a pressure of not more than 20 psig, (137.4 kPa gage).

(4) A nonautomatic generator used for generating acetylene shall be set to operate at a pressure of not more than 1 psig, (.687 kPa gage) and all water overflows shall be visible.

(5) An acetylene generator shall be so located that there will be unobstructed space around it to operate the machine without interference to or from other machines or employees and to permit adjustment and charging.

History: 1954 ACS 81, p. 77, Eff. Sept. 26, 1974; 1954 ACS 89, p. 46, Eff. Nov. 13, 1976.

R 408.11292 Acetylene generators; stationary.

Rule 1292. (1) An acetylene generator shall be installed level and in a manner not to place a strain on the generator or its connections. A generator shall be electrically grounded.

(2) A generator shall be located where water will not freeze. Heating shall be by steam, hot water, or other indirect means. Open flames, fire, or other sources of ignition shall not be permitted inside a generator house, room, or in any enclosure communicating with them. Sodium chloride or other corrosive chemicals shall not be used for protection against freezing.

(3) A water supply line to an acetylene generator with a noncontinuous connection shall terminate not less than 2 inches (5.04 cm) above the fill opening so that the water can be observed as it enters the generator. A supply line with a continuous connection shall be used only when the generator is provided an open overflow or an automatic water shutoff which will prevent overfilling the generator.

(4) An acetylene generator shall discharge only through an open connection into a vented outdoor receptacle or residue pit.

(5) An acetylene generator shall be vented by use of schedule 40 galvanized pipe, except that a vent pipe 4 inches (10.2 cm) or more in diameter of not less than 14 gage sheet metal may be used outside of a building. The pipe shall be secured to the building without a trap and installed so that condensation will drain back to the generator. The pipe shall carry to outside the building and terminate in a hood or bend not less than 12 feet from the ground and 3 feet (.91 m) from combustible construction, away from a window or other opening in a building

and any source of ignition, and shall be constructed so that rain, snow, insects, or birds cannot obstruct the opening. The vent pipes from several generators shall not be interconnected, but shall lead outside separately.

History: 1954 ACS 81, p. 78, Eff. Sept. 26, 1974; 1954 ACS 89, p. 47, Eff. Nov. 13, 1976.

R 408.11293 Gas holders.

Rule 1293. (1) A gas holder shall be constructed on the gasometer principle, the bell being suitably guided. The gas bell shall move without a tendency to bind and shall have a clearance of not less than 2 inches (5.08 cm) from the shell.

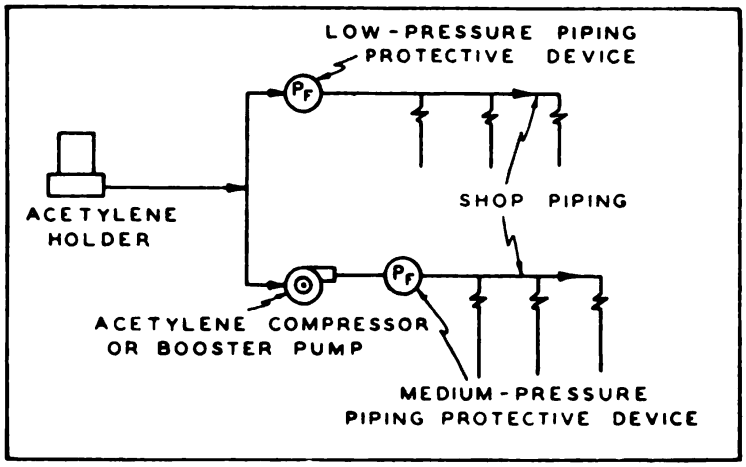
(2) The compressor or booster cutoff of a gas holder shall be located 12 inches above the landing point of the gas bell to prevent collapse of the bell.

(3) A gas holder shall be located in a heated and ventilated room as prescribed in R 408.11292(2) and the department of public health. When heat is not supplied, the gas holder seals shall be protected from freezing.

(4) A means shall be provided to stop the generator feeding mechanism before the gas holder reaches the upper limit of its travel. A gas holder connected to only 1 generator shall have a capacity of not less than ⅓ of the hourly rating of the generator.

(5) Protective devices shall be installed in each supply line when acetylene is used from a gas holder without an increase in pressure at some points but with increased pressure by a compressor or booster pump at other points. A low pressure protective device shall be installed between the gas holder and the shop piping, and a medium pressure protective device shall be installed between the compressor or booster pump and the shop piping (See figure 2). Approved protective equipment is used to prevent:

(a) Backflow of oxygen into a fuel gas supply system.



(b) Passage of a flashback into a fuel gas supply system.

(c) Excessive back pressure of oxygen in the fuel gas supply system. The 3 functions may be combined in 1 device or may be provided by separate devices.

(6) A compressor or booster pump shall be located in a ventilated area away from sources of ignition.

(7) A compressor or booster pump shall be provided with a pressure relief valve which will relieve at not more than 15 psig (103.5 kPa gage) as prescribed in R 408.11292(5). The discharge outlets of a compressor or booster pump shall be provided protective equipment as prescribed in R 408.11252.

R 408.11294 Stationary acetylene generators; outside houses and inside rooms.

Rule 1294. (1) An opening in an outside acetylene generator house shall not be located within 5 feet (1.6 m) of an opening in another building. The walls, floor, and roof shall be of noncombustible construction with a 1-hour fire-resistance rating.

(2) Where part of a generator house is used for storage or manifolding of oxygen cylinders, the space to be occupied shall be separated from the generator or carbide storage section by construction partition walls continuous from floor to ceiling, gas tight, constructed as prescribed in subrule (1), securely anchored and with not less than 1 exterior wall. Separation walls shall be without openings. Exit doors shall be located so as to be accessible in an emergency.

(3) Explosion venting for generator houses and rooms shall be provided in the exterior wall or roof. The venting area shall be equal to not less than 1 square foot (.092 m2) per 50 cubic feet (1.42 m3) of room volume and may consist of 1 or any combination of the following:

(a) Walls of light, noncombustible material, preferably single thickness, single strength glass.

(b) Lightly fastened hatch covers.

(c) Lightly fastened swinging doors on exterior walls swing outward.

(d) Lightly fastened walls or roof designed to relieve at a pressure of not more than 25 pounds (11.35 kg) per square foot.

(4) The installation of an acetylene generator within a building shall be restricted to a 1-story building or the roof or top floor of a multistory building. A generator installed inside a building shall be enclosed in a separate room and constructed as prescribed in subrule (2).

(5) An opening from an inside generator room to another part of the building shall be protected by a swinging type self-closing class "B" fire door having a 1-hour fire resistance rating. A window in the partition shall be wired glass in metal frames as prescribed in NFPA-80-1973 standard, installation of fire doors and windows, which is incorporated herein by reference and is available for inspection at the Lansing office of the department of labor. This standard may be purchased from the National Fire Protection Association, 60 Batterymarch Street, Boston, Massachusetts 02110, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926, at a cost of $2.25.

(6) A generator room or house shall be equipped with vents located at ceiling and floor levels.

(7) Illumination during daylight hours shall be by natural light. Where artificial lighting is necessary, it shall be from explosion-proof fixtures and controls. Wiring shall run through rigid conduit with threaded connectors. Telephone and other electrically powered apparatus either shall be designed for an explosive atmosphere or located outside the generator room or house.

History: 1954 ACS 81, p. 79. Eff. Sept. 28, 1974.

R 408.11295 Portable acetylene generators.

Rule 1295. (1) A portable acetylene generator shall not be used less than 10 feet (3.2 m) of combustible material other than the floor. Ceiling height shall be not less than 10 feet (3.2 m).

(2) A portable generator shall be located in a room with a total volume of not less than 35 times the total gas generating capacity per charge of all generators in the room. The gas generating capacity in cubic feet per charge is figured by multiplying the pounds of carbide per charge by 4½.

(3) A portable acetylene generator shall:

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(a) Be protected from freezing. Salt or other corrosive chemicals shall not be used.

(b) Be cleaned, recharged and the air mixture blown off outside the building.

(c) Not be moved by a crane or derrick when charged. When transported and operated on a vehicle, it shall be secured to the vehicle. The generator shall not be operated, charged or cleaned while vehicle motor is running.

(d) Not be stored in a room in which an open flame is used unless the generator contains no carbide and has been purged of acetylene. The storage room shall be ventilated.

(e) Be protected from any source of spark or flame.

(4) A portable generator shall be of a type approved for portable use.

History: 1954 ACS 81, p. 80, Eff. Sept. 28, 1974; 1954 ACS 89, p. 47, Eff. Nov. 13, 1976.

R 408.11296 Maintenance and operation.

Rule 1296. (1) An unauthorized employee shall not enter an acetylene generator room or house.

(2) Operating instructions shall be posted near the acetylene generator for ready reference.

(3) A batch type acetylene generator shall be flushed with water and the water supply replenished after a charge of carbide is exhausted, before additional carbide is added.

(4) The water carbide residue mixture shall be piped into a settling pit not a sewer pipe. Only the clear water from the settling pit may be discharged into a sewer pipe.

(5) Carbide added to an acetylene generator shall refill the space provided without ramming the charge. Steel or other ferrous tools shall not be used.

(6) The water chamber of an acetylene generator shall be maintained at the indicated level except when draining during a recharging operation.

(7) Prior to making a repair involving a source of ignition, such as welding, soldering, or other hot work, the carbide charge and feed mechanism shall be removed. All acetylene shall be expelled by completely flooding the generator with water and disconnecting the generator from the piping system. Water shall be maintained in the generator until repairs are completed. Hot repairs shall not be made in a room or house with other acetylene generators unless all generators and piping have been purged.

(8) Whenever repairs are to be made, or the generator is to be charged, or the carbide is to be removed, the water chamber shall be filled to the proper level.

History: 1954 ACS 81, p. 80, Eff. Sept. 28, 1974; 1954 ACS 89, p. 47, Eff. Nov. 13, 1976.

R 408.11297 Carbide storage; general.

Rule 1297. (1) Carbide shall be contained in metal packages capable of containing the material without rupture. The package shall be water and air tight without the use of a solder which would melt during a fire. The package shall have a screw top or equivalent.

(2) The package shall be labeled as prescribed in the occupational safety standards commission standard, Part 16. Labeling of Hazardous Substances, being R 408.11601 to R 408.11613 of the Michigan Administrative Code. Packages containing calcium carbide shall be conspicuously marked "Calcium Carbide—Dangerous If Not Kept Dry" or with an equivalent warning.

History: 1954 ACS 81, p. 80, Eff. Sept. 28, 1974; 1954 ACS 89, p. 48, Eff. Nov. 13, 1976.

R 408.11298 Carbide storage; indoors.

Rule 1298. (1) Inside storage areas for carbide shall not be protected by a sprinkler system.

(2) Carbide stored indoors shall not exceed 600 pounds (272.2 kg). The area shall be dry, waterproof, and ventilated. Carbide storage with cylinders of fuel gas shall not exceed 600 pounds (272.2 kg).

(3) Packages of carbide, except for 1 of each size, shall be kept sealed. A seal shall not be broken when there is more than 1 pound (.454 kg) of any other unsealed package of the same size of carbide in the room.

(4) Carbide in excess of 600 pounds (272.2 kg), but not more than 5,000 pounds (2,267.96 kg), shall be stored:

(a) In an inside acetylene generator room or outside generator house.

(b) In a separate room of a 1-story building which may contain other occupancies, without a cellar or basement beneath the carbide storage area. This room shall be constructed as prescribed in R 408.11294 and shall not be used for any other purpose.

(c) In a 1-story building without a cellar or basement and used for no other purpose. The building shall be located away from a congested mercantile or manufacturing district. If the building is of noncombustible construction, it may adjoin another 1-story building but the buildings shall be separated by an unpierced firewall. If the building is separated by less than 10 feet (3.2 m) from another building, there shall be no openings in the mutually exposed sides within 10 feet (3.2 m). If the carbide storage building is of combustible construction, it shall be not less than 20 feet (6.4 m) from any other 1- or 2-story building and not less than 30 feet (9.6 m) from any other building more than 2 stories.

History: 1954 ACS 81, p. 81, Eff. Sept. 26, 1974.

R 408.11299 Carbide storage; outside.

Rule 1299. (1) Only unopened metal containers of carbide shall be stored outside.

(2) The container of carbide stored outside shall be inspected monthly for water and air tightness and rusting.

(3) The bottom tier of each row of carbide containers shall be placed on wooden planking or equivalent so that the container will not make contact with the ground or groundwater.

(4) The storage area shall be not less than 10 feet (3.2 m) from the adjoining property which may be occupied.

(5) Containers of carbide shall be used on a first-in, first-out basis.

History: 1954 ACS 81, p. 81, Eff. Sept. 26, 1974.

PART 14. CONVEYORS
GENERAL PROVISIONS

R 408.11401 Scope.

Rule 1401. This part applies to the construction, maintenance, and operation of conveyors and conveying machinery in, about, or around employment. This part does not apply to industrial trucks, underground mining conveyors, passenger conveyors, stacker cranes, driverless electronic tugs, or construction equipment.

History: 1954 ACS 73, p. 35, Eff. Nov. 10, 1972.

R 408.11403 Definitions; A to C.

Rule 1403. (1) "Aisle" means a path of travel for vehicles and employees.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j

(2) "Auger or screw conveyor" means a revolving pipe or shaft on which is mounted helically shaped flighting which serves to convey bulk materials along a trough or a defined path. See figure 1.

(3) "Belt conveyor" means an endless belt operating between a drive and a tailend, with or without bend terminals, and over idler rolls or slider beds which handles bulk materials, packages or objects placed directly on the belt. See figure 2.

(4) "Belt tripper" means a device incorporating a system of pulleys which cause a conveyor belt to load or unload material at 1 or more points along the length of a belt conveyor. See figure 3.

(5) "Bucket, gravity discharge or pivoted bucket conveyor" means a series of buckets mounted between 2 endless chains or on a belt which may operate in horizontal, inclined or vertical paths. See figure 4.

(6) "Conveyor" means a horizontal, inclined or vertical device for moving or transporting bulk materials, packages or objects in a predetermined path by design and having points of loading or discharge fixed or selective.

(7) "Cross over" means a stile-like device used to cross over a conveyor or machine.

History: 1954 ACS 73, p. 35, Eff. Nov. 10, 1972.

R 408.11404 Definitions; D to I.

Rule 1404. (1) "Declined conveyor" means a conveyor transporting down a slope.

(2) "Extendable conveyor" means a conveyor which may be lengthened or shortened by power to suit operating needs.

(3) "Hanger" means a bearing, housing or frame which supports a shaft below a point at which the hanger is attached to the conveyor frame, trough or other structure.

(4) "Hinged section" means a section of conveyor equipped with a hinge mechanism for movable service.

(5) "Horizontal reciprocating or walking beam conveyor" means a reciprocating beam or beams that through hinged flights, special fixtures or other means advances material in a horizontal plane. See figure 7.

(6) "Inclined conveyor" means a conveyor transporting up a slope.

(7) "Indexing" means the controlled starting or stopping of a conveyor by distance or time.

History: 1954 ACS 73, p. 35, Eff. Nov. 10, 1972.

R 408.11405 Definitions; L to N.

Rule 1405. (1) "Live roller conveyor" means a series of rollers over which objects are moved by application of power to some or all of the rollers.

(2) "Means of egress" means a continuous path of travel from any point in a building to the open air outside at ground level.

(3) "Monorail or trolley conveyor" means a series of trolleys supported from or within an overhead track and connected by an endless propelling medium, such as a chain, cable or other linkage, with loads usually suspended from the trolley.

(4) "Nip point" means that point where a moving object creates a pinch or shearing action with a fixed or another moving object.

History: 1954 ACS 73, p. 36, Eff. Nov. 10, 1972.

R 408.11406 Definitions; P.

Rule 1406. (1) "Passageway" means a path of travel for foot traffic only.

Digitized by Google

(2) "Pinch point" means a point at which it is possible to be caught between moving parts of a machine or between moving and stationary parts of a machine, or between the material and any part of a machine.

(3) "Pneumatic conveyor" means a system of tubes or ducts through which objects or bulk materials are conveyed by a pressure or vacuum system. See figure 5.

(4) "Portable conveyor" means a transportable conveyor, usually having supports which provide mobility. See figure 6.

(5) "Pulley" means a wheel, usually cylindrical but sometimes polygonal in cross section, with the wheel's center board for mounting on a shaft and used to transmit power or change direction.

History: 1954 ACS 73, p. 36, Eff. Nov. 10, 1972.

R 408.11407 Definitions; R to V.

Rule 1407. (1) "Rollback" means an uncontrolled run of a conveyor down an inclined slope opposite to the direction of intended travel.

(2) "Roller conveyor" means a series of rollers supported in a frame over which packages or objects are moved manually, by gravity or by power. See figure 8.

(3) "Runaway" means an uncontrolled run of a conveyor on a declined slope in the direction of intended travel.

(4) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(5) "Safety limit switch" means a final device used to disconnect power to a conveyor in case of control or operator failure.

(6) "Slat conveyor" means 1 or more endless chains to which nonoverlapping, noninterlocking, spaced slats are attached to form a moving support for packages or objects being conveyed. See figure 9.

(7) "Suspended tray conveyor" means pendant trays or carriers attached to 1 or more endless chains which receive and deliver packages or objects at 1 or more locations. See figure 10.

(8) "Vertical reciprocating conveyor" means a conveyor with power or counterbalanced gravity actuated carriers which receive and discharge material to other elevations.

History: 1954 ACS 73, p. 36, Eff. Nov. 10, 1972.

R 408.11411 Employers' and employees' general responsibilities.

Rule 1411. (1) An employer shall provide training to an employee working on or by a conveyor regarding the hazards and safeguards of such work.

(2) An employer shall establish an inspection program to maintain conveyor components in a condition which does not constitute a hazard to the employee.

(3) An employee shall not ride, cross or walk on a conveyor unless it is designed for riding or crossovers are provided as specified in R 408.11425, except a floor-level slat type conveyor moving at not more than 60 feet per minute. A chain or cable conveyor used to tow objects does not require a crossover if the conveyor is not more than 8 inches above the floor, 12 inches in width and painted yellow in color.

History: 1954 ACS 73, p. 36, Eff. Nov. 10, 1972.

R 408.11412 Maintenance.

Rule 1412. (1) Lubrication shall be accomplished by 1 of the following methods:

(a) Scheduling when a conveyor can be shut off and locked out.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j

(b) Automatic pressure or gravity feed system.

(c) Extension pipe leading to an area outside of guards or away from any hazard.

(2) In any case, rule 732, which concerns lubrication, of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10732 of the Michigan Administrative Code, shall be complied with.

(3) Repairs or clean up, where unexpected motion would cause injury, shall be done when power is off and locked out.

(4) A walkway or catwalk along a conveyor shall be maintained clear of spills or other obstructions which may be a slipping or tripping hazard.

(5) A flammable cleaning fluid used in splicing of belts shall be kept in a safety container. Welding, cutting, or smoking shall not be permitted in the area where flammable cleaning fluids are being used.

History: 1954 ACS 73, p. 37, Eff. Nov. 10, 1972.

DESIGN

R 408.11421 Guarding.

Rule 1421. (1) Where a hazard exists, guards shall be provided to protect an employee from contact with moving parts where adjustments are required when a conveyor is in operation.

(2) A lift or transfer point shall have any nip point guarded and shall have a means of complying with power lockout rules prescribed in R 408.11431(1).

(3) A conveyor which indexes shall be guarded so that an employee will not be caught or trapped by the sudden movement of the conveyor.

(4) A conveyor shall be guarded so that an employee will not be caught or trapped between the conveyor and a stationary or moving part.

(5) A trolley conveyor installed overhead and dipping to a work station shall have a tray-type guard or standard barrier pursuant to rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10231 of the Michigan Administrative Code, or the area shall be designated as nonpedestrian and telltales shall be hung along the portion of the conveyor that dips to protect an employee from accidental injury.

(6) An opening for a conveyor through a floor or wall shall be guarded pursuant to rule 213 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10213 of the Michigan Administrative Code.

(7) A conveyor passing over a walkway, passageway or work area shall be provided with a pan or screen-type guard containing sides sufficient to contain any falling material which would cause injury. The designed strength of the guard shall be capable of and shall continue to withstand the maximum impact load.

History: 1954 ACS 73, p. 37, Eff. Nov. 10, 1972.

R 408.11422 Counterweights.

Rule 1422. (1) A counterweight and its pulleys shall be enclosed pursuant to rule 730(2) of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10730(2) of the Michigan Administrative Code.

(2) A counterweight and its pulleys suspended more than 7 feet above the floor or ground, in an area where an employee could walk, shall have an enclosure around the area of impact or a catch pan under the counterweight of such strength and design to hold the counterweight and pulley from dropping to the ground, floor, or platform.

(3) A counterweight attached to an arm shall have a bolt fastened near the end of the arm or a cable or chain attached to the counterweight to prevent its dropping off the arm.

History: 1954 ACS 73, p. 37, Eff. Nov. 10, 1972.

R 408.11423 Take-up.

Rule 1423. Where a spring take-up is used to maintain tension on a conveyor, the spring and fastening assembly shall be constructed to retain the spring assembly in case of breakage.

History: 1954 ACS 73, p. 37, Eff. Nov. 10, 1972.

R 408.11424 Hinged sections.

Rule 1424. (1) A manually operated hinged section for employee passage through a gravity roller conveyor, chute, belt, or other type of conveyor that requires more than a 40-pound lifting effort to operate shall be counterbalanced.

(2) A power operated section for employee passage shall be provided with a mechanical safety device which shall prevent the section from falling in case of power failure.

(3) A power conveyor having a hinged section used for the purpose of clearing a passageway shall be designed so that the section cannot be raised while the conveyor is in operation or the material being conveyed shall be stopped when the section is raised.

History: 1954 ACS 73, p. 38, Eff. Nov. 10, 1972.

R 408.11425 Crossovers.

Rule 1425. (1) A clearance of 80 inches above a floor or platform shall be maintained as a means of egress. Where a conveyor reduces this clearance, a crossover, passageway, or different means of egress shall be provided.

(2) A crossover shall be equipped with slip resistant treads, a railing and toeboard as specified in the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10201 to R 408.10241 of the Michigan Administrative Code.

(3) A crossover which cannot clear packages or objects on the conveyor shall be hinged to swing out of the way or a sensing device shall be provided to stop the conveyor if the crossover has not been moved.

History: 1954 ACS 73, p. 38, Eff. Nov. 10, 1972.

R 408.11426 Passageways and walkways.

Rule 1426. (1) A passageway under a conveyor shall have not less than 5 feet of headroom except a main aisle shall have not less than 80 inches of headroom. Where the headroom is less than 80 inches, telltales and illumination of not less than 10 foot candles shall be provided to indicate low headroom.

(2) A maintenance walkway shall be not less than 18 inches wide where it runs along a conveyor.

(3) A walkway along a conveyor in a pit or tunnel shall have illumination of at least 10 foot candles when an employee is required to work in the area.

History: 1954 ACS 73, p. 38, Eff. Nov. 10, 1972.

R 408.11427 Safety factors.

Rule 1427. (1) Structural supports of a conveyor shall be designed and constructed with a minimum design safety factor of at least 3 which shall include static and dynamic loads.

(2) A hook or carrier used on a monorail and a trolley conveyor to carry objects shall be designed with a minimum safety factor of 5 and maintained to hold the object or carriers without creating a hazard.

History: 1954 ACS 73, p. 38, Eff. Nov. 10, 1972.

R 408.11428 Adjustment.

Rule 1428. A conveyor capable of adjustment to variable fixed elevations shall be equipped with a locking device to hold the conveyor at any altitude where failure to hold would create a hazard to an employee.

History: 1954 ACS 73, p. 38, Eff. Nov. 10, 1972.

R 408.11429 Rollbacks and runaways.

Rule 1429. Rollbacks and runaways on a conveyor shall be controlled by 1 or more of the following:

(a) Track design.
(b) Back stops.
(c) Ratchets or one-way clutch on drive pulleys.
(d) Anti-runaway devices.
(e) Automatically applied brakes.

History: 1954 ACS 73, p. 38, Eff. Nov. 10, 1972.

ELECTRICAL

R 408.11431 Lockout.

Rule 1431. (1) An employer shall establish and maintain a lockout procedure which shall safeguard an employee.

(2) An electrically powered conveyor shall be equipped with a disconnect switch at the power source which shall be shut off and locked out during any type of repair, service or set up work if a hazard exists.

History: 1954 ACS 73, p. 38, Eff. Nov. 10, 1972.

R 408.11432 Starting.

Rule 1432. (1) A starting button, except a control button in a console for a manually programed multi-conveyor system, shall be equipped with a device to prevent accidental actuation.

(2) A powered conveyor, which would cause injury when started, shall not be started until employees in the area are alerted by a signal or by a person in authority that the conveyor is about to start.

(3) Power to a conveyor shall be wired so that after an interruption of electrical service, the conveyor shall not automatically restart upon resumption of electrical service.

History: 1954 ACS 73, p. 39, Eff. Nov. 10, 1972.

R 408.11433 Stop devices.

Rule 1433. (1) An emergency stop device shall be available at each point of operation where a hazard exists and within reach of an employee at that point.

(2) An emergency stop device of the momentary-contact type shall have a means of being maintained by a device in the "off" position.

(3) If more than 1 stop device is located along a conveyor, the devices shall be wired so that the conveyor can be made restartable only at the location where stopped.

(4) A stop device, except a pull cord, shall be distinguished by its red color.

(5) Conveyors in a series shall be electrically interlocked so that when any conveyor in the series is stopped for any reason, the initial stopping shall cause the upstream conveyors to stop if continued operation creates a hazard.

History: 1954 ACS 73, p. 39, Eff. Nov. 10, 1972.

R 408.11434 Switches.

Rule 1434. (1) An electrical outlet for 220 volts or more to which a portable conveyor is connected shall be equipped with a disconnect switch which shall be opened before connecting or disconnecting the plug. A load breaking plug may be used in place of a disconnect switch.

(2) A safety limit switch shall not be used as an operating control device.

History: 1954 ACS 73, p. 39, Eff. Nov. 10, 1972.

R 408.11435 Grounding.

Rule 1435. (1) An electrically powered portable or permanently installed conveyor shall be grounded.

(2) Where an explosion hazard exists, such as but not limited to dust or fumes, a means of draining the potential static electricity build up shall be provided and used.

History: 1954 ACS 73, p. 39, Eff. Nov. 10, 1972.

R 408.11436 Portable conveyors used out-of-doors.

Rule 1436. A portable conveyor used out-of-doors shall be equipped with weatherproof electrical equipment.

History: 1954 ACS 73, p. 39, Eff. Nov. 10, 1972.

SPECIFIC CONVEYORS

R 408.11441 Auger and screw conveyors.

Rule 1441. An auger or screw conveyor, with an opening not screened or covered and secured by bolts or clamps, shall be equipped with an interlocked cover which shall cut the power when raised and not start until the cover is replaced and the starter actuated.

History: 1954 ACS 73, p. 39, Eff. Nov. 10, 1972.

R 408.11442 Belt conveyors.

Rule 1442. (1) A belt conveyor using a belt tripper or other moving deflector which requires an operator to travel on the belt tripper shall have the operator's platform designed to safeguard the operator from falling or coming in contact with moving or stationary parts.

(2) A nip point at a pulley shall be guarded by an enclosure or barrier constructed to prevent access by an employee's body members or loose clothing.

(3) A belt conveyor for bulk material shall have built up sides where material spilling over the sides is a hazard.

(4) A pulley with rotating shaft shall have projecting shaft ends covered or cut flush with the hanger.

(5) A shuttle or movable hopper mounted on wheels shall have sweeps fastened ahead of the wheels with an opening of not less than ⅜ inch between the sweep and the rail.

History: 1954 ACS 73, p. 39, Eff. Nov. 10, 1972.

R 408.11443 Belt trippers.

Rule 1443. A belt tripper, with or without an operator, shall be equipped with a safety limit switch and a fixed stop to prevent over-run at each end of the runway which shall shut off the power if the tripper moves too close to the end of the runway.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11444 Bucket, pivoted bucket and gravity-discharge conveyors.

Rule 1444. A bucket, pivoted bucket, or gravity-discharge conveyor shall be enclosed with a guard or barrier to protect operating personnel.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11445 Carrier and trolley conveyors.

Rule 1445. A manually powered carrier or trolley conveyor shall have a protective device on the carrier or rail to prevent the carrier from dropping off the rail or off the end of the rail.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11446 Extendable conveyors.

Rule 1446. An extendable conveyor shall be equipped with a device located on the outermost end which shall stop movement of the conveyor when contact is made by the device.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11447 Pneumatic conveyors.

Rule 1447. (1) A pneumatic conveyor shall be designed so that doors to pressure vessels cannot be opened when there is a positive internal pressure.

(2) A gasket holding line pressures shall be shielded to prevent a gasket leak from projecting the conveyed material into a work area if the material would cause a hazard.

(3) A receiver or storage bin shall be equipped with full bin indicators or controls to prevent overfilling, if overfilling will create a hazard.

(4) A pneumatic conveyor carrying oxidizable materials shall be designed for hazards, such as but not limited to explosion, fire or corrosion.

(5) A pneumatic conveyor serving an area containing contaminated air shall be designed so that the contaminated air cannot be transported to another area.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11448 Portable conveyors.

Rule 1448. The stability of a portable conveyor shall be provided by 1 or more of the following:

(a) Securing to a fixed object.

(b) Use of outriggers.

(c) A base width of not less than ⅓ the height.

(d) A base as wide as the distance from the floor to the center of gravity.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11449 Reciprocating conveyors.

Rule 1449. (1) A reciprocating conveyor shall have inside and outside nip points guarded.

(2) If the reciprocating member of a horizontal reciprocating conveyor moves within 18 inches of a wall or other object, a barrier shall be installed at the end to prevent access by an employee.

Digitized by Google

(3) A vertical reciprocating conveyor which is manually loaded or unloaded shall be guarded with an interlock door or gate to prevent an employee being caught within a nip point.

(4) The carriage and controls of a vertical reciprocating conveyor shall be designed and installed to prevent use of the conveyor as a man lift.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11450 Roller conveyors.

Rule 1450. (1) A roller conveyor with a hinged section or with an open discharge end shall be equipped with a stop device projecting above the rollers which shall prevent a package or object from being discharged off the conveyor unless it is so designed to discharge.

(2) Nip points between power and idler rolls or delivery conveyors and idler rolls shall be eliminated by 1 of the following:

(a) The idler roller set in a 45 degree inclined slot in the direction of travel.

(b) Steel plates welded between the rolls with a maximum of ⅛ inch between plate and rolls.

(c) The idler roller set in a horizontal slot and connected with an interlock switch which will stop the conveyor.

(d) A device which offers equal or better protection may be substituted for subdivisions (a), (b), or (c).

(3) The nip point between a belt and a carrier roller on a belt drive live roller conveyor shall be protected by pop-out type carrier rollers or steel plates as prescribed in subrule (2)(b). The belt conveyor shall be guarded as specified in R 408.11442.

History: 1954 ACS 73, p. 40, Eff. Nov. 10, 1972.

R 408.11451 Slat conveyors.

Rule 1451. (1) A slat conveyor with the slat spaced 1 inch or more apart and moving at floor level or in work areas shall have a solid smooth bed under the slats to prevent a shear hazard.

(2) A slat conveyor with slats more than ¼ inch, but less than 1 inch apart, and moving at floor level or in a work area shall not have any nip point less than 4 inches below the slats.

History: 1954 ACS 73, p. 41, Eff. Nov. 10, 1972.

R 408.11452 Suspended tray or vertical opposed shelf chain conveyors.

Rule 1452. A suspended tray or vertical opposed shelf chain conveyor which is manually loaded or unloaded shall have safety devices, such as but not limited to lintel and sill switches or deflectors, to safeguard an employee.

History: 1954 ACS 73, p. 41, Eff. Nov. 10, 1972.

R 408.11461 Clothing, jewelry and fire precautions.

Rule 1461. (1) Loose clothing and jewelry, including, but not limited to, long or floppy sleeves or pants with large pantlegs or cuffs, rings, wrist watches, bracelets, ties, and scarves shall not be worn around conveyors where they constitute a hazard to an employee.

(2) Where combustibles, such as, but not limited to, coal or grain, are conveyed or stored, and where a fire caused by slippage between a drive pulley and a belt would create a hazard, the conveyor shall be equipped with a device so adjusted that a 5% loss of full load rated speed of the belt shall shut down the belt drive.

History: 1954 ACS 73, p. 41, Eff. Nov. 10, 1972.

PART 16. LABELING OF HAZARDOUS SUBSTANCES

R 408.11601 Scope.

Rule 1601. This part provides for warning label requirements for containers holding hazardous substances when such containers are used, handled, or stored by employees covered by the act.

History: 1954 ACS 71, p. 49, Eff. May 1, 1972.

R 408.11604 Definitions; C to E.

Rule 1604. (1) "Combustible liquid" means a liquid which gives off flammable vapors above 80 degrees Fahrenheit to and including 150 degrees Fahrenheit as determined by an approved flash point test.

(2) "Container" means a portable individual package, such as, but not limited to, a bag, box, bottle, barrel, can, carboy, or drum that is used to store or dispense a hazardous substance. A process tank, reactor, tank truck, and tank car are excepted.

(3) "Corrosive" (physiological) means a substance which in contact with living tissue causes destruction of the tissue by chemical action.

(4) "Dust" means solid particles generated by handling, crushing, grinding, rapid impact, detonation, or decrepitation of organic or inorganic material.

(5) "Extremely flammable liquid" means a liquid which gives off flammable vapors, at or below 20 degrees Fahrenheit, as determined by an approved flash point test.

History: 1954 ACS 71, p. 49, Eff. May 1, 1972.

R 408.11605 Definitions; F to H.

Rule 1605. (1) "Flammable liquid" means a liquid which gives flammable vapors above 20 degrees Fahrenheit to and including 80 degrees Fahrenheit as determined by an approved flash point test.

(2) "Fume" means solid particles generated by condensation from a gaseous state, generally after volatilization from molten metals, and often accompanied by a chemical reaction such as oxidation.

(3) "Gas" means a normally formless fluid which occupies a space or enclosure and which can be changed to the liquid or solid state by the effect of increased pressure or decreased temperature or both.

(4) "Hazardous substance" means a substance or mixture of substances which is toxic, corrosive, an irritant, a strong sensitizer, flammable, or which generates pressure through decomposition, heat, or other means, if the substance or mixture of substances may cause substantial personal injury or substantial illness during or as a direct result of a customary or reasonable anticipated handling or use.

(5) "Highly toxic" means a substance which falls within any of the following categories:

(a) Produces death within 14 days in ½ or more than ½ of a group of 10 or more laboratory white rats each weighing between 200 and 300 grams, at a single dose of 50 milligrams or less per kilogram of body weight, when orally administered.

(b) Produces death within 14 days in ½ or more than ½ of a group of 10 or more laboratory white rats each weighing between 200 and 300 grams, when inhaled continuously for a period of 1 hour or less at an atmosphere concentration of 200 parts per million by volume or less of gas or vapor or 2 milligrams per liter by volume or less of mist or dust, provided such concentration is likely to be encountered by man when the substance is used in any reasonably foreseeable manner.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(c) Produces death within 14 days in ½ or more than ½ of a group of 10 or more rabbits tested in a dosage of 200 milligrams or less per kilogram of body weight, when administered by continuous contact with the bare skin for 24 hours or less. If available data on human experience with any substance in the concentrations listed in subdivisions (a), (b), or (c) indicate results different from those obtained on animals, the human data shall take precedence in any classification of a substance as highly toxic.

History: 1954 ACS 71, p. 50, Eff. May 1, 1972.

R 408.11606 Definitions; I to O.

Rule 1606. (1) "Irritant" (physiological) means a substance which on immediate, prolonged or repeated contact with normal living tissue induces a local inflammatory reaction.

(2) "Label" means a display of legibly written, printed, or graphic matter upon the immediate container of a substance covered by this part which label includes the requirements of this part.

(3) "Mist" means suspended droplets generated by condensation from the gaseous to the liquid state or by breaking up a liquid state into a dispersed state, such as by splashing, foaming, or atomizing.

(4) "Mixture" means a physical commingling of 2 or more substances which have not reacted chemically with each other.

(5) "Oxidizing material" means a substance that yields oxygen readily to stimulate the combustion of organic matter.

History: 1954 ACS 71, p. 50, Eff. May 1, 1972.

R 408.11607 Definitions; S to V.

Rule 1607. (1) "Strong sensitizer" means a substance that shows from available data on human experience to be capable of inducing an allergic reaction in approximately 1% of the persons who come in contact with it.

(2) "Toxic" means a substance which falls within any of the following categories:

(a) Produces death within 14 days in ½ or more of 10 or more laboratory white rats each weighing between 200 and 300 grams, at a single dose of more than 50 milligrams but not more than 500 milligrams per kilogram of body weight, when orally administered.

(b) Produces death within 14 days in ½ or more than ½ of a group of 10 or more laboratory white rats each weighing between 200 and 300 grams, when inhaled continuously for a period of 1 hour or less at an atmosphere concentration of more than 200 parts per million but not more than 2000 parts per million by volume of gas or vapor or 2 milligrams per liter by volume or less of mist or dust, provided such concentration is likely to be encountered by man when the substance is used in any reasonably foreseeable manner.

(c) Produces death within 14 days in ½ or more than ½ of a group of 10 or more rabbits tested in a dosage of more than 200 milligrams but not more than 1000 milligrams per kilogram of body weight, when administered by continuous contact with the bare skin for 24 hours or less. If available data on human experience with any substance in the concentrations listed in subdivisions (a), (b), or (c) indicate results different from those obtained on animals, the human data shall take precedence in any classification of a substance as toxic.

(3) "Vapor" means the gaseous form of a substance which is normally in the solid or liquid state.

History: 1954 ACS 71, p. 50, Eff. May 1, 1972.

R 408.11611 General labeling requirements.

Rule 1611. (1) A container of hazardous substances shall be labeled pursuant to this part.

(2) A container of hazardous substances shall not be accepted by an employer for use or handling by his employees unless the container is labeled pursuant to this part.

(3) An employer shall not distribute, make available, furnish, or supply a hazardous substance for use by his employees unless labeled pursuant to this part. Excepted are containers of 1 quart capacity or less holding samples of hazardous substances for in-plant use. These quart or less containers shall carry a label with an identification name and statement of the hazard.

History: 1954 ACS 71, p. 51, Eff. May 1, 1972.

R 408.11612 Specific labeling requirements.

Rule 1612. (1) A label shall be placed on a container of a hazardous substance or, in case of a mixture, the primary hazard which would be most likely to cause an adverse effect on an employee, and such label shall contain the following appropriate information pursuant to this part and table 1 (see table 2 for typical labels):

(a) A product name, trade name, chemical name or generic name. It is recommended that the chemical or generic name be included if the product or trade name is used.

(b) A signal word to draw attention and designate the degree of hazard as follows:

(i) DANGER shall mean the most serious hazard.

(ii) WARNING shall mean a lesser hazard.

(iii) CAUTION shall mean the least hazard.

(c) A statement, including but not limited to "causes burns" or "vapor hazardous," as to hazards that are present with customary use or handling of the substance.

(d) Instructions on measures to avoid injury, including but not limited to "keep away from open flame" or "avoid breathing dust."

(e) Treatment instructions where the result of contact or exposure is severe and immediate treatment is desirable.

(2) Compressed gases carrying an approved department of transportation label shall be deemed to comply with this part.

(3) A label required by this part shall be located prominently on the container. Printing shall be legible and in contrast by typography and layout to other printed matter.

(4) A hazardous substance which requires special handling or storage shall have instructions covering this point included on the warning label or a separate label.

(5) If a container is too small to permit printing the entire precautionary labeling in legible size, the labeling may be condensed as follows:

(a) Retain the signal word.

(b) Retain the word poison or the skull and cross bones, where required on the label.

(c) Retain the statement of hazard, shortened if possible to a practical equivalent. Consider omitting statements for hazards which are less serious because of size of the package or use of the product.

(d) Omit minor precautionary measures, or combine precautionary measures with statement of hazard.

(e) If necessary in order to permit printing the warning in a legible size, the precautionary labeling may be placed on a cardboard or heavy paper tag securely attached to the immediate container.

History: 1954 ACS 71, p. 51, Eff. May 1, 1972; 1954 ACS 77, p. 135, Eff. Nov. 21, 1973.

R 408.11613 Cleaning of containers.

Rule 1613. An employer shall not distribute, make available, furnish, or supply a container known to have contained a hazardous substance unless the container has been thoroughly cleaned to remove all traces of any hazardous substance, except where refilled with the same substance.

History: 1954 ACS 71, p. 52, Eff. May 1, 1972.

TABLE 1
Selection of Precautionary Statements

	Class of Hazard	Signal Word	Statements of Hazard	Precautionary Measures	Instructions in Case of Contact or Exposure
INGESTION	Highly Toxic	DANGER!	MAY BE FATAL IF SWALLOWED	Wash thoroughly after handling.	☠ POISON ☠ Call a Physician FIRST AID: If swallowed dilute by giving several glasses of water, soapy water, salty water (1 Tbs. per glass), milk, or by sticking finger down throat. If vomiting occurs repeat several times. Never induce vomiting or give anything by mouth to a victim having convulsions or unconscious.
	Toxic	WARNING!	HARMFUL IF SWALLOWED	Wash thoroughly after handling.	FIRST AID: If swallowed, induce vomiting by sticking finger down throat or by giving soapy or strong salty water to drink. Repeat until vomit is clear. Call a physician. Never induce vomiting or give anything by mouth to a victim having convulsions or unconscious.
ABSORPTION	Highly Toxic	DANGER!	MAY BE FATAL IF ABSORBED THROUGH SKIN	Do not get in eyes, on skin, on clothing. Wash thoroughly after handling.	☠ POISON ☠ Call a Physician FIRST AID: In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before re-use. (Discard contaminated shoes.)
	Toxic	WARNING!	HARMFUL IF ABSORBED THROUGH SKIN	Avoid contact with eyes, skin, and clothing. Wash thoroughly after handling.	FIRST AID: In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. Wash clothing before re-use. (Discard contaminated shoes.)

TABLE 1 (Cont.)

	Class of Hazard	Signal Word	Statements of Hazard	Precautionary Measures	Instructions in Case of Contact or Exposure
INHALATION	Highly Toxic	DANGER!	MAY BE FATAL IF INHALED	Do not breathe (dust, vapor, mist, gas). Keep container closed. Use only with adequate ventilation.	☠ POISON ☠ Call a Physician FIRST AID: If inhaled, remove to fresh air. If not breathing give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen.
	Toxic	WARNING!	HARMFUL IF INHALED	Avoid breathing (dust, vapor, mist, gas). Keep container closed. Use with adequate ventilation.	FIRST AID: If inhaled, remove to fresh air. If not breathing give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen. Call a physician.
	Strong Sensitizer, Lungs	WARNING!	MAY CAUSE ALLERGIC RESPIRATORY REACTION	Avoid breathing (dust, vapor, mist, gas). Keep container closed. Use with adequate ventilation.	
	Physiologically Inert Vapor or Gas	CAUTION!	(VAPOR) (GAS) REDUCES OXYGEN AVAILABLE FOR BREATHING	Keep container closed. Use with adequate ventilation. Do not enter storage areas unless adequately ventilated.

FLAMMABILITY	Combustible Liquid	CAUTION!	COMBUSTIBLE	Keep away from heat and open flame.	
	Pyroforic Substance	DANGER!	EXTREMELY FLAMMABLE CATCHES FIRE IF EXPOSED TO AIR	Keep away from heat, sparks, and open flame. Keep container closed.	
	Strong Oxidizer	DANGER!	STRONG OXIDIZER CONTACT WITH OTHER MATERIAL MAY CAUSE FIRE	Keep from contact with clothing and other combustible materials. Do not store near combustible materials. Store in tightly closed container.	Remove and wash contaminated clothing promptly.

FOOTNOTES

1. In addition to the use of POISON and skull and crossbones in the highly toxic classes shown in the table, certain laws may require this use in other specified instances.
2. Examples of Antidote Statements; Examples of Notes to Physicians; Instructions in Case of Fire, Spill, or Leak; and Instructions for Container Handling and Storage are illustrated separately.
3. Products may present a special or unique hazard not covered in this table. For example, some chemicals may react violently with water, may liberate extremely poisonous vapors under special conditions. These special conditions shall be covered in the precautionary label text.
4. The First Aid Instructions for Class of Hazard INGESTION are considered to be applicable in the vast majority of cases involving the ingestion of a poison. In all cases, a study of the particular product involved and the applicable laws may dictate either additional or completely different First Aid Instructions.
5. Eyes shall be protected as specified in Part 35, Face and Eye Protection of the Occupational Safety Standards Commission standard being R 408.13501 to R 408.13569 of the Michigan Administrative Code.
6. Controlled ventilation shall be provided to maintain exposure limits below maximum allowable concentration as defined in Michigan Department of Public Health, Basic Guide for Control of Occupational Air Contaminates and Physical Agents being R 325.2401 of the Michigan Administrative Code.

TABLE 2

Labels for Chemicals with Single Hazards

(Insert required name of hazardous substance as per R 408.11612)

DANGER! MAY BE FATAL IF SWALLOWED

Wash thoroughly after handling.

POISON

Call a Physician

FIRST AID: If swallowed, dilute by giving several glasses of water, soapy water, salty water (1 Tbs. per glass), milk, or by sticking finger down throat. If vomiting occurs repeat several times.

EXCEPTIONS: Never induce vomiting or give anything by mouth to a victim having convulsions or unconscious.

(Insert required name of hazardous substance as per R 408.11612)

DANGER! MAY BE FATAL IF INHALED

Do not breathe (dust, mist, vapor, gas).*
Keep container closed.
Use only with adequate ventilation.

POISON

Call a Physician

FIRST AID: If inhaled, remove to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen.

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

DANGER! MAY BE FATAL IF ABSORBED THROUGH SKIN

Do not get in eyes, on skin, on clothing.
Wash thoroughly after handling.

POISON

Call a Physician

FIRST AID: In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before re-use. (Discard contaminated shoes.)

(Insert required name of hazardous substance as per R 408.11612)

WARNING! HARMFUL IF SWALLOWED

Wash thoroughly after handling.

FIRST AID: If swallowed, dilute by giving several glasses of water, soapy water, salty water (1 Tbs. per glass), milk, or by sticking finger down throat. If vomiting occurs repeat several times.

EXCEPTIONS: Never induce vomiting or give anything by mouth to a victim having convulsions or unconscious.

(Insert required name of hazardous substance as per R 408.11612)

WARNING! HARMFUL IF INHALED

Avoid breathing (dust, mist, vapor, gas).*
Keep container closed.
Use with adequate ventilation.

FIRST AID: If inhaled, remove to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen. Call a physician.

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

WARNING! HARMFUL IF ABSORBED THROUGH SKIN

Avoid contact with eyes, skin, and clothing.
Wash thoroughly after handling.

FIRST AID: In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. Wash clothing before re-use. (Discard contaminated shoes.)

(Insert required name of hazardous substance as per R 408.11612)

DANGER! CAUSES (SEVERE) EYE BURNS

Do not get in eyes.
Avoid breathing (dust, vapor, mist, gas).*
Keep container closed.
Use with adequate ventilation.
Wash thoroughly after handling.

FIRST AID: In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Call a physician.

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

DANGER! CAUSES (SEVERE) BURNS

Do not get in eyes, on skin, on clothing.
Avoid breathing (dust, vapor, mist, gas).*
Keep container closed.
Use with adequate ventilation.
Wash thoroughly after handling.

FIRST AID: In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Call a physician. Wash clothing before re-use. (Discard contaminated shoes.)

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

WARNING! CAUSES EYE IRRITATION

Avoid contact with eyes.
Wash thoroughly after handling.

FIRST AID: In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Call a physician.

(Insert required name of hazardous substance as per R 408.11612)

WARNING! CAUSES IRRITATION

Avoid contact with eyes, skin, and clothing.
Wash thoroughly after handling.

FIRST AID: In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Call a physician. Flush skin with water. (Wash clothing before re-use.)

(Insert required name of hazardous substance as per R 408.11612)

WARNING! MAY CAUSE ALLERGIC SKIN REACTION

Avoid prolonged or repeated contact with skin.
Wash thoroughly after handling.

FIRST AID: In case of contact, immediately wash skin with soap and plenty of water.

(Insert required name of hazardous substance as per R 408.11612)

WARNING! MAY CAUSE ALLERGIC RESPIRATORY REACTION

Avoid breathing (dust, mist, vapor, gas).*
Keep container closed.
Use with adequate ventilation.

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

CAUTION! (VAPOR) (GAS) REDUCES OXYGEN AVAILABLE FOR BREATHING*

Keep container closed.
Use with adequate ventilation.
Do not enter storage areas unless adequately ventilated.

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

DANGER! EXTREMELY FLAMMABLE

Keep away from heat, sparks, and open flame.
Keep container closed.
Use with adequate ventilation.

(Insert required name of hazardous substance as per R 408.11612)

WARNING! FLAMMABLE

Keep away from heat, sparks, and open flame.
Keep container closed.
Use with adequate ventilation.

(Insert required name of hazardous substance as per R 408.11612)

WARNING! FLAMMABLE

Keep away from heat, sparks, and open flame.

(Insert required name of hazardous substance as per R 408.11612)

DANGER! EXTREMELY FLAMMABLE
(GAS) (LIQUID AND GAS) UNDER PRESSURE*

Keep away from heat, sparks, and open flame.
Use with adequate ventilation.
Never drop cylinder.
Keep cylinder out of sun and away from heat.

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

CAUTION! COMBUSTIBLE

Keep away from heat and open flame.

(Insert required name of hazardous substance as per R 408.11612)

DANGER! EXTREMELY FLAMMABLE
CATCHES FIRE IF EXPOSED TO AIR

Keep away from heat, sparks, and open flame.
Keep container closed.

(Insert required name of hazardous substance as per R 408.11612)

DANGER! STRONG OXIDIZER
CONTACT WITH OTHER MATERIAL MAY CAUSE FIRE

Keep from contact with clothing and other combustible materials.
Do not store near combustible materials.
Store in tightly closed container.
Remove and wash contaminated clothing promptly.

Labels for Chemicals with Multiple Hazards

When a chemical falls into two or more of the hazard classes enumerated in Table 1, the precautionary label text will be the sum of all of the statements in the individual classes. **Be certain to refer to all footnotes to table 1 to determine the need for additional label statements.**

Some condensation of this information along the following lines is indicated:

1. Only one Signal Word **should** be used and this **should** be the Signal Word corresponding to the class of greatest hazard.

2. In the toxicity classes, Statements of Hazard may be combined when the product is equally toxic by more than one route of exposure. Examples of such combinations are: MAY BE FATAL IF SWALLOWED OR INHALED or HARMFUL IF SWALLOWED, INHALED, OR ABSORBED THROUGH SKIN.

3. When the same Precautionary Measure is applicable to more than one class of hazard, it **should not** be repeated.

4. When more than one first-aid statement is required, the words FIRST AID and "Call a physician" need not be repeated provided the statements are grouped under a general heading of FIRST AID and the phrase "Call a physician" is positioned in such a way as to be clearly applicable to all first-aid statements. Similarly, the instruction "Never give anything by mouth to an unconscious person." may appear in more than one statement, and this need not be repeated if it is clearly applicable to all of the statements that would otherwise include it.

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

5. When a product presents hazards by both skin contact and absorption, only one first-aid statement **should** be used. In such cases, the first-aid statement used **should** be that applicable to the class of hazard in the following order of priority: Highly Toxic; Toxic; Corrosive, Eye and Skin; Irritant, Eye and Skin; Strong Sensitizer, Skin.

The labels given in this section represent most of the instances in which condensation of label language is desirable. The language for flammability class of hazard does not lend itself to condensation with the language for other classes of hazard. Therefore no example is given.

(Insert required name of hazardous substance as per R 408.11612)

DANGER! MAY BE FATAL IF SWALLOWED OR INHALED

Do not breathe (dust, vapor, mist, gas).*
Keep container closed.
Use only with adequate ventilation.
Wash thoroughly after handling.

POISON
Call a Physician

FIRST AID: If swallowed, dilute by giving several glasses of water, soapy water, salty water (1 Tbs. per glass), milk, or by sticking finger down throat. If vomiting occurs repeat several times.

EXCEPTIONS: Never induce vomiting or give anything by mouth to a victim having convulsions or unconscious.

If inhaled, remove to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen.

POISON

Call a Physician

FIRST AID: If swallowed, dilute by giving several glasses of water, soapy water, salty water (1 Tbs. per glass), milk, or by sticking finger down throat. If vomiting occurs repeat several times.

EXCEPTIONS: Never induce vomiting or give anything by mouth to a victim having convulsions or unconscious.

If inhaled, remove to fresh air. If not breathing, give artificial respiration, preferably mouth-to-mouth. If breathing is difficult, give oxygen.

In case of contact, immediately flush eyes or skin with plenty of water for at least 15 minutes while removing contaminated clothing and shoes. Wash clothing before re-use. (Discard contaminated shoes.)

**Select applicable word or words in parentheses.*

(Insert required name of hazardous substance as per R 408.11612)

DANGER! MAY BE FATAL IF INHALED OR ABSORBED THROUGH SKIN
HARMFUL IF SWALLOWED

Do not breathe (dust, vapor, mist, gas).*
Do not get in eyes, on skin, on clothing.
Keep container closed.
Use only with adequate ventilation.
Wash thoroughly after handling.

History: 1954 ACS 71, pp. 53, 57, Eff. May 1, 1972.

PART 17. REFUSE PACKER UNITS
GENERAL PROVISIONS

R 408.11701 Scope.

Rule 1701. This part applies to the safe design, use and maintenance of mobile and stationary equipment used in the collection and compaction of solid waste in, around, or about places of employment.

History: 1954 ACS 74, p. 122, Eff. Dec. 29, 1972.

R 408.11704 Definitions; C to H.

Rule 1704. (1) "Container" means a bin used for collection of refuse at a point of origin.

(2) "Hopper" means a part on a refuse packer unit for receiving refuse.

(3) "Hydraulic piping" means flexible or rigid tubing used to transfer fluids under pressure.

History: 1954 ACS 74, p. 122, Eff. Dec. 29, 1972.

R 408.11705 Definitions; L to P.

Rule 1705. (1) "Loading sill" means the ledge of a hopper over which refuse is deposited into the hopper.

(2) "Mobile refuse packer unit" means a motor powered vehicle equipped with a body which receives solid waste material and compacts it under pressure.

(3) "Packer blade or panel" means a metal plate which moves the solid waste material from a hopper into a holding unit.

(4) "Pinch point" means a point at which it is possible to be caught between moving parts of a machine or between moving and stationary parts of a machine.

History: 1954 ACS 74, p. 122, Eff. Dec. 29, 1972.

R 408.11706 Definitions; R, S.

Rule 1706. (1) "Receiving box" means a receptacle which receives refuse from a stationary refuse packer unit.

(2) "Refuse" means putrescible and nonputrescible solid wastes, except body wastes, and includes garbage, rubbish, ashes, incinerator ash, incinerator residue, street cleanings, and solid market and industrial wastes.

(3) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(4) "Stationary refuse packer unit" means a unit which remains at 1 location and receives solid waste material and compacts it under pressure.

History: 1954 ACS 74, p. 122, Eff. Dec. 29, 1972.

R 408.11711 Employer responsibilities.

Rule 1711. An employer shall:

(a) Provide instruction and training before assigning an employee to a refuse packer unit.

(b) Use a refuse packer unit within its maximum rated capacity.

(c) Maintain a refuse packer unit within its maximum rated capacity.

(d) Establish and maintain a lockout procedure as prescribed in subrules (3) and (4) of R 408.11715.

History: 1954 ACS 74, p. 122, Eff. Dec. 29, 1972.

R 408.11713 Employee responsibilities.

Rule 1713. An employee shall:

(a) Use the guards and other safety features provided on a refuse packer unit.

(b) Use personal protective devices provided by the employer.

(c) Use a refuse packer unit only after he is instructed and trained in its safe operation.

(d) Use a refuse packer unit within the maximum rated capacity of the equipment.

(e) Report damage to or failure of a refuse packer unit.

(f) Not eject or dump a loaded refuse packer unit until all employees are clear of the rear of the unit.

(g) Not ride on the rear steps of a mobile packer unit when it is backing up.

History: 1954 ACS 74, p. 122, Eff. Dec. 29, 1972.

R 408.11715 Operation of refuse packer units.

Rule 1715. (1) An employee shall not pass or work under any elevated equipment or part thereof, except when protected by a truck cab or when the elevated part is supported by a prop extending to the vehicle, which prop shall:

(a) Be of such strength as to sustain the load.

(b) Maintain support in case of movement of the vehicle or mechanical failure.

(2) An operator shall not eject or dump a loaded unit until all employees are clear of the rear of the unit.

(3) A lockout procedure for a refuse packer unit shall be established and followed whereby the power shall be shut off and the key removed before and during repairs to the packer or compaction mechanism, except during maintenance testing.

(4) A power source of a stationary refuse packer unit to be repaired, serviced or set-up shall be locked out by each employee while doing such work. Any residual pressure shall be relieved before and during the work.

History: 1954 ACS 74, p. 123, Eff. Dec. 29, 1972.

R 408.11716 Hoisting cables and chains.

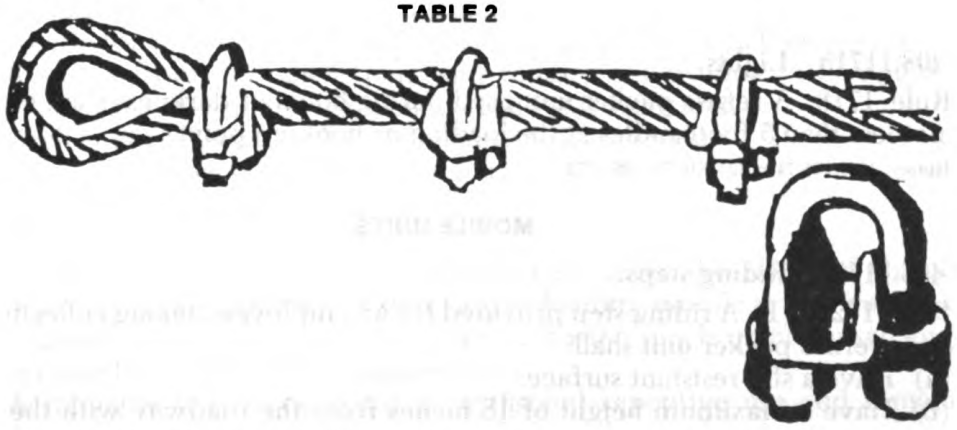
Rule 1716. (1) A chain and its component parts, other than alloy steel chain having a minimum tensile strength of 125,000 pounds per square inch, shall have a designed safety factor of not less than 5. Alloy chain shall not be used in excess of the working load in straight tension for its size as prescribed in table 1.

(2) A hoist cable and its component parts for mobile refuse packer units shall have a designed safety factor of not less than 2 based on the applied pull.

(3) A hoist cable shall be inspected on installation and monthly thereafter.

(4) A hoist cable shall not be used if, in any length equal to 8 diameters of the cable, the total number of visible broken wires exceeds 10% of the total number of wires, or if the cable shows other signs of excessive wear, corrosion, kinks or bird caging.

(5) Where a "U" type cable clamp or clip is applied, it shall comply with table 2.



(6) The hydraulic relief valve in a cable operating system shall be set at the manufacturer's rating and sealed.

(7) A hoist cable bent to form an eye shall be equipped with a metal thimble.

TABLE 1
Working Load

Nominal Size, Chain Bar, in.	Work Load, lb., min.
¼	3,250
⅜	6,600
½	11,250
⅝	16,500
¾	23,000
⅞	28,500
1	38,750
1⅛	44,500
1¼	57,500
1⅜	67,000
1½	80,000
1¾	100,000

TABLE 2

Note: There is only one correct method of installing wire rope clips. They should be attached to rope ends as shown in photograph above. The base of each clip should bear against the live, or long rope end, and the U-bolt should bear against the dead or short rope end.

R 408.11717 Hydraulic piping.

Rule 1717. (1) Hydraulic piping shall have a designed safety factor of not less than 4.

(2) A refuse packer unit with a leaking hydraulic system, in excess of normal seepage, which constitutes a hazard to an employee or potential malfunction of equipment, shall not be used until it is repaired.

(3) An employee shall be protected from contact with hydraulic piping capable of causing a burn. The hydraulic piping shall be located or guarded to prevent damage from being struck or by striking other objects.

History: 1954 ACS 74, p. 123, Eff. Dec. 29, 1972.

R 408.11718 Lights.

Rule 1718. A refuse packer unit used during hours of darkness shall have light of not less than 5 footcandles at the loading or hook-up point.

History: 1954 ACS 74, p. 123, Eff. Dec. 29, 1972.

MOBILE UNITS

R 408.11721 Riding steps.

Rule 1721. (1) A riding step provided for an employee making collections on a mobile refuse packer unit shall:

(a) Have a slip resistant surface.

(b) Have a maximum height of 18 inches from the roadway with the mobile unit empty.

(2) A grab handle shall be provided for each employee using a riding step as specified in rule 237 of the occupational safety standards commission standard,

Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10237 of the Michigan Administrative Code.

History: 1954 ACS 74, p. 124, Eff. Dec. 29, 1972; 1954 ACS 79, p. 66, Eff. Apr. 16, 1974.

R 408.11722 Warning devices.

Rule 1722. An audible or visual warning device shall be installed on a mobile packer unit to signal when the unit moves in reverse so as to warn an employee at the rear of the unit.

History: 1954 ACS 74, p. 124, Eff. Dec. 29, 1972.

R 408.11723 Loading and unloading.

Rule 1723. (1) A mechanism such as, but not limited to, a hoisting motor or lifting arm, used for loading or lifting a container, shall be constructed and maintained to handle the designed rating of a mobile refuse packer unit.

(2) On a mobile unit, except a front loader, when loading mechanically, a locking device shall be provided to prevent dislodgement of a container during the dumping operation.

History: 1954 ACS 74, p. 124, Eff. Dec. 29, 1972.

R 408.11724 Controls.

Rule 1724. (1) This rule takes effect 180 days after filing this 1974 amendment with the secretary of state.

(2) A side loading mobile refuse packer unit with a top loading hopper shall have a fixed barrier or a movable barrier interlocked with the power source if a pinch point is created by the compaction mechanism.

(3) A refuse packer unit with a side loading door shall have the door interlocked with the power source of the compaction mechanism when the bottom of the loading opening is less than 6 feet vertically from the loading surface.

(4) Loading compaction controls for a rear loading unit shall be located so that the operator using the compaction controls has a view of the loading sill.

(5) Operator controls for a mobile unit shall be designed or located so that unintentional activation will not occur.

(6) Except when guarded as required in R 408.11725(1), a mobile refuse packer unit shall be equipped with operator controls that require continuous pressure of both hands on the control devices until the packer blade has moved beyond the pinch point created where the blade or sweep panel and hopper come together, or shall provide for the blade or sweep panel to stop not less than 6 inches nor more than 16 inches from the pinch point and require reactivation to complete the cycle. When using the split cycle, a single control is sufficient.

(7) Each control device shall be labeled as to its function.

History: 1954 ACS 74, p. 124, Eff. Dec. 29, 1972; 1954 ACS 79, p. 66, Eff. Sept. 26, 1974.

R 408.11725 Guards.

Rule 1725. (1) One hundred and eighty days after the filing of this 1974 amendment with the secretary of state, a rear loading mobile refuse packer unit shall be guarded to prevent employee access to the pinch point caused by the packing cycle by 1 of the following devices:

(a) A movable barrier designed to withstand repetitive use and remain in alignment and prevent the operator from reaching the pinch point created during the packing cycle. The barrier shall be provided with a cushion along its entire length where the barrier meets the sill to prevent chance of injury. The barrier

shall be interlocked with the packing cycle so that it is in place before the packer mechanism closes to not less than 6 inches nor more than 14 inches of the pinch point.

(b) An elevating hopper which rises not less than 6 feet above the working surface before the packer blade closes to within 6 inches of the hopper sill.

(c) A fixed or movable barrier or other safety device which will prevent access to the pinch point by an employee.

(2) An operator of a mobile refuse packer may use the controls prescribed in R 408.11724(6) in lieu of fixed or movable barriers.

(3) An exposed pinch point created by mechanical controls or lifting arms on a mobile refuse packer unit shall be guarded.

History: 1954 ACS 74, p. 124, Eff. Dec. 29, 1972; 1954 ACS 79, p. 67, Eff. Apr. 16, 1974.

STATIONARY UNITS

R 408.11731 Controls.

Rule 1731. (1) Operator controls on a stationary refuse packer unit shall be designed and located to prevent accidental activation.

(2) The hopper or load opening on a manually controlled stationary refuse packer unit shall be visible to the operator from his control station.

(3) An emergency stop device distinguished by its size or color shall be provided at the control station to stop the ram of a stationary refuse packer unit.

(4) When a stationary refuse packer unit is equipped for direct manual loading and the operator is not protected from the pinch point, the control shall require continuous pressure and the compactor cycle shall stop when the control is released. Such a control shall be a minimum of 6 feet from the pinch point.

(5) Each control device shall be labeled as to its function.

History: 1954 ACS 74, p. 125, Eff. Dec. 29, 1972; 1954 ACS 79, p. 67, Eff. Apr. 16, 1974.

R 408.11732 Guards.

Rule 1732. (1) A hopper opening on a stationary refuse packer unit shall be guarded with a standard barrier as prescribed in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10231 of the Michigan Administrative Code.

(2) A pinch point exposed to contact by an employee shall be enclosed or guarded.

(3) A lifting device used to empty a container at a stationary refuse packer unit shall have a locking device as prescribed in R 408.11723(2).

(4) Maintenance access openings shall be covered and secured on the compactor. The cover shall be removable by hand tools or interlocked to the power source.

(5) A locking device used to couple a receiving box and stationary compactor unit shall be capable of withstanding the rated pressure of the compactor.

(6) A receiving box loading device shall provide a positive locking action to prevent dislodgement during the loading of the box on a vehicle.

(7) A receiving box loaded on a vehicle for transport shall have a retaining device other than the loading device.

History: 1954 ACS 74, p. 125, Eff. Dec. 29, 1972.

PART 18. OVERHEAD AND GANTRY CRANES
GENERAL PROVISIONS

R 408.11801 Scope.

Rule 1801. This part covers the equipment, installation, maintenance, and operation of top running overhead and gantry single and multiple girder cranes in, about, and around places of employment in order to safeguard employees. It does not apply to top running overhead cranes with push-type bridge and trolley, monorails, railway or truck cranes, mine hoists, conveyors, shovels, dragline excavators, equipment used on construction jobs, or to systems used to transport people.

History: 1954 ACS 76, p. 59, Eff. July 25, 1973; 1954 ACS 82, p. 89, Eff. Dec. 31, 1974.

R 408.11803 Definitions; B, C.

Rule 1803. (1) "Brake" means a device used for retarding or stopping motion by friction or power means.

(2) "Bridge" means that part of a crane consisting of girders, trucks, end ties, footwalks, and driving mechanism.

(3) "Cab" means an operator compartment located on a crane bridge or trolley.

(4) "Controller" means a device with a handle or push button that controls the motion of a crane.

(5) "Crane" means a top running overhead or a gantry crane.

History: 1954 ACS 76, p. 59, Eff. July 25, 1973; 1954 ACS 82, p. 89, Eff. Dec. 31, 1974.

R 408.11804 Definitions; F to M.

Rule 1804. (1) "Floor-operated crane" means a top running overhead crane which is controlled by an operator on a floor or independent platform.

(2) "Gantry crane" means a crane similar to an overhead crane except that the bridge for carrying the trolley or trolleys is rigidly supported by 1 or more legs running on a fixed rail or other runway.

(3) "Hooker" means an employee who attaches the load to the hook in hoisting or setting the load or both.

(4) "Hot metal crane" means a crane which transports molten metal.

(5) "Load" means the total superimposed weight on a load block or hook.

(6) "Main switch" means a switch on a crane controlling the entire power supply to the crane except that a magnet and convenience outlet circuit may bypass the main switch.

(7) "Modified" means a change in design or rating.

History: 1954 ACS 76, p. 59, Eff. July 25, 1973; 1954 ACS 82, p. 89, Eff. Dec. 31, 1974.

R 408.11805 Definitions; O to R.

Rule 1805. (1) "Overhead crane" means a top running crane with a movable bridge carrying a movable or fixed hoisting mechanism for lifting and lowering, moving horizontally and traveling on an overhead fixed runway.

(2) "Preformed" means to permanently shape wire rope before fabrication into helical form.

(3) "Pulpit" means an operator compartment for a crane located at a fixed position remote from the crane.

(4) "Rail stop" means a device attached to a rail to stop the movement of a crane beyond a fixed point.

History: 1954 ACS 76, p. 59, Eff. July 25, 1973; 1954 ACS 82, p. 90, Eff. Dec. 31, 1974.

R 408.11806 Definitions; S.

Rule 1806. (1) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the actual load or stress when in use.

(2) "Seizing" means to bind the end of a wire rope with a soft annealed iron wire.

(3) "Side pull" means to pull a load with a hoist, chain or cable other than vertically.

(4) "Storage gantry crane" means a gantry type crane of long span usually used for bulk storage of materials. The bridge girders are supported on 1 or more legs. It may have 1 or more fixed or hinged cantilever ends.

(5) "Swaged socket" means a fitting into which wire rope is inserted and attached by cold forming.

History: 1954 ACS 82, p. 90, Eff. Dec. 31, 1974.

CONSTRUCTION, INSTALLATION, AND EQUIPMENT

R 408.11821 Certification, modification, guards, and incorporation of standards.

Rule 1821. (1) A top running or gantry crane erected or modified after June 24, 1973 shall be certified, by a crane manufacturer or an engineer knowledgeable in crane construction, that the new construction or installation, or modification conforms to chapter 2-1 of the American national standard safety code for overhead and gantry cranes, USAS standard B30.2.0-1967, chapter 2-1 of which is incorporated herein by reference. This standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $3.00 each. This standard may be inspected at the Lansing office of the department of labor.

(2) Gears and other means of power transmission, except shafts, where exposed to contact, shall be guarded as prescribed in rule 731 of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10731 of the Michigan Administrative Code.

(3) A crane, except a top running crane with an underhung, single-girder hoist trolley, installed after August 31, 1971, shall be modified to conform to chapter 2-1 of ANSI B30.2.0-1967, overhead and gantry cranes, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.50 from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926

History: 1954 ACS 76, p. 59, Eff. July 25, 1973; 1954 ACS 82, p. 90, Eff. Dec. 31, 1974; 1954 ACS 89, p. 48, Eff. Nov. 13, 1976.

R 408.11822 Marking rated capacity.

Rule 1822. The rated capacity of a crane shall be legibly marked on each side of the crane, and if the crane has more than 1 hoisting unit, each unit shall have its rated capacity marked on it or its load block and this marking shall be legible from the ground or floor.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973.

R 408.11823 Safety factor for hoisting cables.

Rule 1823. The designed safety factor for the hoisting cable on:

(a) A hot metal crane shall be not less than 8.

(b) Any other crane shall be not less than 5.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973.

R 408.11824 Wire rope.

Rule 1824. (1) A wire rope used on a crane shall be repaired or replaced if:

(a) Within a segment of 8 diameters in length, the total number of broken wires exceeds 10% of the total number of wires.

(b) The wire rope has been kinked, crushed or bird caged, or has sustained any other damage which distorts the wire rope structure.

(c) The wire rope shows heat or corrosive damage.

(2) Wire rope discarded from a crane because of subrule (1) shall not be used for a sling.

(3) Wire rope for a crane bent to form an eye shall be equipped with a metal thimble.

(4) An end fitting shall be a clamp, swage or a zinc or equivalent poured socket. Before cutting wire rope, seizings shall be placed as follows: 1 seizing on each side of the cut on preformed wire rope; 2 seizings on each side of ⅞ inch size or smaller nonpreformed wire rope; and 3 seizings on each side of 1 inch or larger size nonpreformed wire rope.

(5) Wire rope, with an independent wire rope core, shall be used on all molten metal applications and in an area where the environmental atmosphere will cause deterioration of a hemp center.

(6) Wire rope shall be stored in a manner to prevent damage or deterioration.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973.

R 408.11825 Hooks.

Rule 1825. A crane hook shall be discarded if:

(a) The throat opening is more than 15% greater than the manufactured size.

(b) The hook has more than a 10% twist from a vertical center line drawn through the hook socket.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973.

R 408.11826 Testing of cranes.

Rule 1826. (1) Before a new or modified crane is put into operation or if a crane has not been used in the past 12 months, the equipment shall be tested to insure compliance with this part, including the following functions:

(a) Hoisting and lowering.

(b) Trolley travel.

(c) Bridge travel.

(d) Travel limiting devices.

(2) The trip setting of a hoist limit switch shall be determined with an empty hook traveling in increasing speeds up to the maximum speed. The actuating mechanism of the limit switch shall be located so that it will trip the switch, under all conditions, in time to prevent contact of the hook or hook block with the trolley.

(3) When a crane is given a load test, the test load shall be not more than 125% of the rated load. The test reports shall be maintained on file within the premises where the crane is located.

History: 1954 ACS 82, p. 90, Eff. Dec. 31, 1974.

R 408.11831 Rescinded.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973; rescinded 1954 ACS 82, p. 90, Eff. Dec. 31, 1974.

R 408.11832 Trolley stops.

Rule 1832. (1) Stops shall be provided at the limits of travel of the trolley.

(2) The stops shall be fastened to resist the forces applied when contacted.

(3) A stop engaging the tread of the wheel shall be of a height not less than that of the wheel radius. A stop which engages other parts of the crane is preferable.

History: 1954 ACS 82, p. 90, Eff. Dec. 31, 1974.

R 408.11833 Rescinded.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973; rescinded 1954 ACS 82, p. 91, Eff. Dec. 31, 1974.

R 408.11835 Ladders; catwalks; escape devices.

Rule 1835. (1) When a fixed ladder provides access to a crane, it shall be as prescribed in the occupational safety standards commission standard, Part 3. Fixed Ladders, being R 408.10301 to R 408.10365 of the Michigan Administrative Code.

(2) A catwalk for or on a crane shall have a standard barrier as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10201 to R 408.10241 of the Michigan Administrative Code.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973.

R 408.11837 Temporary wiring.

Rule 1837. Temporary wiring shall be subject to the requirements of the state electrical administrative board.

History: 1954 ACS 76, p. 60, Eff. July 25, 1973.

R 408.11841 Brakes and restraints.

Rule 1841. (1) An overhead or gantry crane bridge which is powered shall be equipped with an operable brake, noncoasting mechanical drive or other braking means. The brake or drive shall be capable of stopping the bridge within a distance in feet equal to 10% of the full load speed in feet per minute when traveling at full speed with full load.

(2) A trolley of a cab operated crane with the cab on the trolley shall meet the requirements of subrule (1).

(3) A gantry crane used out-of-doors shall be provided with a positive mechanical restraint, such as, but not limited to, an automatic rail clamp, to secure the crane against wind movement while parked. If clamps act on the rail heads, beads or weld flash on the rail heads shall be ground off.

History: 1954 ACS 76, p. 61, Eff. July 25, 1973; 1954 ACS 82, p. 91, Eff. Dec. 31, 1974.

R 408.11843 Controls.

Rule 1843. (1) A controller in a cab operated crane shall be permanently identified by function and direction.

(2) Rope controls for a floor operated crane shall be equipped with an arrow attached to the rope showing the direction of travel when the rope is pulled.

(3) A pendant, radio, cab, or pulpit control station shall be equipped with a positive stop device, colored red, to disconnect all motors.

(4) A crane shall be equipped with a main switch which can be locked out. An employer shall establish a lockout procedure which shall be used in connection with R 408.11875.

(5) A controller on a pendant or radio-controlled crane, when released from the "on" position, shall automatically return to the "off" position.

(6) A transmitter for a radio-controlled crane shall be stored in a locked cabinet or in a supervised storage area when not in use.

(7) All cranes shall be provided with an operable overtravel limit switch in the hoisting direction. The switch shall be located so that it is tripped under all conditions to prevent contact of the hook or block with the hoist.

(8) A crane not equipped with spring return controllers or momentary contact push buttons shall be provided with a device which will disconnect all motors from the line on failure of power and will not permit restarting until the controller handle is brought to the "off" position, or a reset switch or button is operated.

History: 1954 ACS 76, p. 61, Eff. July 25, 1973; 1954 ACS 82, p. 91, Eff. Dec. 31, 1974; 1954 ACS 89, p. 49, Eff. Nov. 13, 1976.

R 408.11845 Warning devices.

Rule 1845. (1) A crane, except a pendant controlled crane where the operator and other employees in the area of the load can see all load movement, shall be equipped with a warning device, such as a flashing light, bell, or siren. An operator shall use a warning device before starting and intermittently while traveling in an occupied area.

(2) A wind indicating device shall be provided on an outdoor storage gantry type crane which will give a visual or audible alarm to the operator at a predetermined wind velocity.

History: 1954 ACS 76, p. 61, Eff. July 25, 1973; 1954 ACS 82, p. 91, Eff. Dec. 31, 1974; 1954 ACS 89, p. 49, Eff. Nov. 13, 1976.

R 408.11847 Tool storage and fire extinguishers.

Rule 1847. (1) Tools and other necessary articles shall be stored in a secured container and not allowed to be loose in or about a crane.

(2) On a cab operated crane, a class C or multi-purpose fire extinguisher shall be provided and maintained accessible to the crane operator.

(3) The employer shall insure that the crane operator is knowledgeable in the operation of the fire extinguisher.

History: 1954 ACS 76, p. 61, Eff. July 25, 1973; 1954 ACS 82, p. 91, Eff. Dec. 31, 1974; 1954 ACS 89, p. 49, Eff. Nov. 13, 1976.

OPERATORS AND OPERATIONS

R 408.11851 Qualifications.

Rule 1851. (1) An employee selected to operate a cab or pulpit type crane shall have the following minimum qualifications and be examined for them not less than every 3 years:

(a) Vision shall measure 20/40 acuity on an approved testing device. Corrective lenses are permissible but shall be worn 100% of the time when operating a crane. Peripheral vision shall be a minimum of 140 degrees with a minimum of 65 degrees on 1 side. Depth perception shall be within the minimums as stated on an approved testing device. An operator shall be able to distinguish between red, green and yellow colors.

(b) Effective use of all 4 limbs.

(c) Height sufficient to operate the controls and to have an unobstructed view over the controls into the work area.

(d) Coordination between eyes, hands, and feet.

(e) Freedom from known convulsive disorders and episodes of unconsciousness.

(2) An employee assigned to operate a crane shall have the ability to understand signs, labels and instructions.

(3) An employee operating a crane at the effective date of this part and not meeting the requirements of subdivisions (a), (b), (c), and (d) of subrule (1) and subrule (2) may be continued as an operator if his handicap or disability does not prove detrimental to his task.

(4) An employer may apply this rule to an operator of a floor operated crane.

History: 1954 ACS 76, p. 61, Eff. July 25, 1973.

R 408.11852 Training.

Rule 1852. An employer shall train a prospective operator before his assignment as an operator of a crane. Training shall be with respect to overhead and gantry cranes and shall include:

(a) Capabilities of equipment and attachments.

(b) Purpose, use, and limitation of controls.

(c) How to make daily checks.

(d) Practice in operating assigned equipment through its functions necessary to perform the required jobs.

(e) A review of applicable state standards and company rules and regulations.

History: 1954 ACS 76, p. 61, Eff. July 25, 1973.

R 408.11853 Testing.

Rule 1853. (1) An employee, except a learner, shall pass a qualification test, including items in R 408.11852, before operating a crane.

(2) An employer shall test the knowledge and ability of an employee before authorizing him to operate a crane. The test shall determine the employee's:

(a) Operating ability.

(b) Knowledge of equipment.

(c) Knowledge of daily checks.

(d) Knowledge of applicable state standards and company rules and regulations.

History: 1954 ACS 76, p. 62, Eff. July 25, 1973.

R 408.11855 Limitations on use of cranes.

Rule 1855. (1) An employer shall limit the use of a crane to:

(a) An employee who has been trained and qualified to operate the type of crane to which he is assigned.

(b) A learner under the direct supervision of a designated operator.

(c) Maintenance personnel during performance of their duties.

(d) Its maximum rated capacity.

(2) An employer shall establish and enforce a safe procedure, applicable to authorized employees, for boarding and leaving an overhead crane.

History: 1954 ACS 76, p. 62, Eff. July 25, 1973.

R 408.11857 Reporting defects.

Rule 1857. (1) An operator shall report any defects in a crane to his supervisor.

(2) An unauthorized employee shall not enter a crane cab or pulpit.

History: 1954 ACS 76, p. 62, Eff. July 25, 1973.

R 408.11859 Personal protective equipment.

Rule 1859. (1) An operator and an employee directing a lift shall use the personal protective devices required in the area.

(2) A hooker directing a lift shall wear a hard hat as prescribed in the occupational safety standards commission standard, Part 32. Head Protection Equipment, being R 408.13201 to R 408.13241 of the Michigan Administrative Code, except a hard hat is not required if the load is never lifted to a height greater than the shoulders of the hooker when he or she is standing erect.

(3) An employee performing maintenance on an overhead or gantry crane, where a standard barrier as prescribed in R 408.11835 or platform is not provided, shall wear an approved safety belt and lanyard.

History: 1954 ACS 76, p. 62, Eff. July 25, 1973; 1954 ACS 99, p. 109, Eff. Apr. 18, 1979.

R 408.11861 General conduct of operators.

Rule 1861. (1) An operator, when starting on duty:

(a) Shall not close the main switch or emergency contactor until he checks to see if anyone is on the crane and if a warning sign is on the crane, hook, or main switch.

(b) Shall test all controls, limit switches, and brakes. When a load approaches the rated load, the operator shall test the hoisting brakes by raising the load a few inches and applying the brakes.

(2) A hoisting limit switch on a crane or hoisting means shall not be used as an operating control unless the crane is also equipped with a backup limit switch.

(3) A load shall not be lowered below a point where less than 2 full wraps of wire rope remain on the hoisting drum.

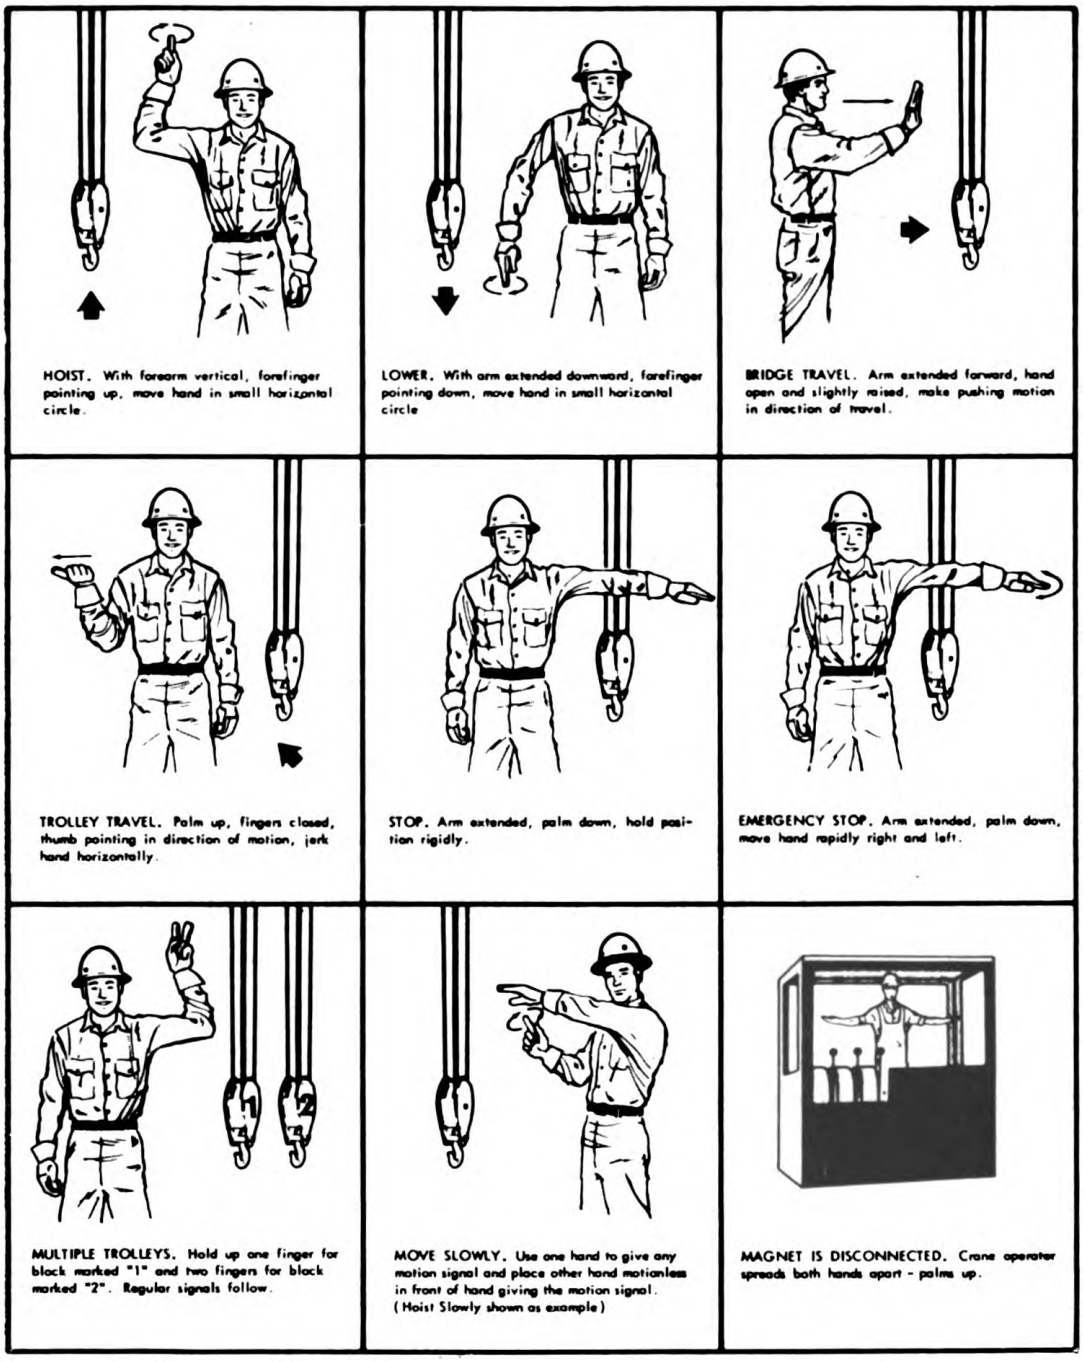
(4) When there is doubt concerning the safety of a crane or hoisting means, an operator shall stop the crane and report the condition creating this doubt to his supervisor.

(5) In case of power failure, an operator shall place all controllers in the "off" position.

(6) An operator leaving a crane unattended shall land any attached load, place the controllers in the "off" position and open the main switch. Before closing a main switch, an operator shall make sure all controllers are in the "off" position. On pendant controlled cranes, the main switch need not be opened if the crane is left unattended for short periods.

(7) An operator leaving an outdoor crane shall secure it as prescribed in subrule (2) of R 408.11841.

History: 1954 ACS 76, p. 62, Eff. July 25, 1973; 1954 ACS 82, p. 91, Eff. Dec. 31, 1974.



R 408.11863 Signals.

Rule 1863. An operator shall respond to signals only from the employee directing a lift. However, he shall obey at all times an emergency stop signal from any employee. The signals given an operator shall conform to table 1. When 2 or more cranes are used to lift a load, a designated employee shall give all signals.

TABLE 1

Overhead and Gantry Cranes

History: 1954 ACS 76, p. 62, Eff. July 25, 1973.

R 408.11865 Lifting.

Rule 1865. (1) An operator of a crane shall not carry a load over an employee.

(2) A crane shall not be used to make a side pull, except where it has been specifically established by an authorized employee that such side pull and possible consequent load swing will not endanger employees or result in equipment deterioration creating a potential hazard.

(3) Compressed gases shall be lifted only by a cradle or enclosed platform.

(4) An employee shall not ride a hoisting device, such as a magnet, hook, ball, or load, except on a work platform; which shall:

(a) Be suspended from the top 4 corners and fastened to the structural floor member.

(b) Have the point of suspension at the hook fixed so that it cannot be accidentally disengaged.

(c) Have a standard barrier and toeboard on all sides, as prescribed in rules 231 and 233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10231 and R 408.10233 of the Michigan Administrative Code. The intermediate rail may be omitted from 1 side.

(5) When attaching or moving a load, the operator or hooker shall make sure:

(a) The hoisting rope or chain is free of kinks or twists and not wrapped around the load.

(b) The load is attached to the load block hook by means of a sling or other approved device.

(c) The sling and load will clear all obstacles or obstructions.

(d) The load is balanced and secured before lifting the load more than a few inches.

(e) That multiple lines are not twisted around each other.

(f) The hook is brought over the load in a manner to prevent swinging.

(g) There is no sudden acceleration or deceleration of the moving load.

History: 1954 ACS 76, p. 64, Eff. July 25, 1973; 1954 ACS 82, p. 92, Eff. Dec. 31, 1974.

INSPECTION AND MAINTENANCE

R 408.11871 Daily inspection.

Rule 1871. At the beginning of each shift during which a crane is used, visual inspections shall be made in accordance with table 2. A visual inspection shall be limited to that which can be made from a catwalk or other safe observation point.

TABLE 2
Minimum Inspection Schedule

Item	Daily	Monthly to Quarterly	Yearly or More Often
Operating Mechanisms	visual for function	check for wear, distortion and fractures	
Limit Switches	visual and operational for function	check for adjustment and wear	
Air Systems	visual for leaks	visual for leaks	
Hydraulic Systems	visual for leaks	visual for leaks and abrasions	
Hooks*	visual for deformation and cracks		
Chains	visual for wear, elongation and twist	measure for wear and elongation	
Wire Rope**	visual for wear, broken wire, kinks	measure for wear	
Slings	visual for wear, broken wire, kinks	measure for wear

History: 1954 ACS 76, p. 64, Eff. July 25, 1973; 1954 ACS 82, p. 92, Eff. Dec. 31, 1974.

R 408.11872 Monthly and yearly inspections.

Rule 1872. (1) Monthly to yearly inspections shall be made in accordance with table 2. Before use an outdoor crane or a crane used in a corrosive atmosphere, which has been idle for more than 1 month, shall be inspected for all items on table 2. Conditions of extreme duty cycle, heat and corrosive or climatic extremes shall indicate a need for more frequent inspections before use.

(2) Records shall be kept for not less than 2 years of all monthly-to-quarterly and yearly inspections.

History: 1954 ACS 76, p. 66, Eff. July 25, 1973; 1954 ACS 82, p. 93, Eff. Dec. 31, 1974.

R 408.11875 Maintenance.

Rule 1875. (1) An employer shall maintain a crane and its accessories in a condition that will not endanger an operator or other employee.

(2) An unsafe condition on a crane determined by an inspection, shall be corrected by a designated trained employee or an outside crane service company before the crane is put into operation.

(3) Before adjustments or repairs are commenced on a crane the following precautions shall be taken:

(a) A crane to be repaired shall be moved to a location where it will cause the least interference with other moving equipment on the track or rails and operations in the area.

(b) Controllers shall be placed in the "off" position.

(c) The main switch shall be placed in the "off" or "open" position and locked, except where power is necessary to adjust or service the crane.

(d) A warning or "out of order" sign shall be placed at the operator control station.

(e) Illumination of not less than 15 footcandles intensity shall be provided while maintenance is performed on a crane.

(4) Where any other crane uses the same runway, a protective device shall be used to prevent interference with the idle crane undergoing repairs. Where the protective device is impracticable, a signal man shall be placed at a visual vantage point to warn the operator of the active crane when it reaches the limit of safe distance from the idle crane.

(5) A crane that has been adjusted or repaired shall not be returned to normal operation until all guards have been replaced, locks removed by those who installed them, or their supervisor, safety devices reactivated and the maintenance equipment removed.

(6) Manual lubrication on a crane shall comply with subrule (3)(c).

(7) An accumulation of dirt on a crane that would create a hazardous condition shall be removed.

History: 1954 ACS 76, p. 66, Eff. July 25, 1973; 1954 ACS 82, p. 94, Eff. Dec. 31, 1974.

PART 19. CRAWLER, LOCOMOTIVE, AND TRUCK CRANES GENERAL PROVISIONS

R 408.11901 Scope.

Rule 1901. This part provides for the safe construction and maintenance of crawler, locomotive, and truck cranes, including mobile hydraulic cranes, used only as lifting cranes, by the employer and their safe use by the employee in, around, and about a place of employment. Railway cranes on public right-of-ways for clearing wrecks are excluded.

History: 1954 ACS 82, p. 94, Eff. Dec. 31, 1974.

R 408.11903 Definitions; B, C.

Rule 1903. (1) "Boom" means a structural member hinged at the lower end to a fixed location and used for supporting hoisting tackle.

(2) "Boom angle" means the acute angle between the longitudinal center line of the boom and the horizontal.

(3) "Boom stop" means a device used to limit the angle of the boom at the highest position.

(4) "Crawler crane" means a rotating superstructure with a power plant, operating machinery, and boom mounted on a base equipped with crawler treads for travel, and used for hoisting and swinging loads.

History: 1954 ACS 82, p. 94, Eff. Dec. 31, 1974.

R 408.11904 Definitions; J to R.

Rule 1904. (1) "Jib" means an extension attached to a boom point to provide added boom length for lifting a specific load. A jib may be in line with the boom or offset to various angles.

Digitized by Google

(2) "Load rating" means the rating in pounds established by the manufacturer in conjunction with R 408.11923 and is dependent on such factors as anchorage, structural competence, rope strength, and hoist capacity.

(3) "Locomotive crane" means a rotating superstructure with a power plant, operating machinery, and boom mounted on a base or car equipped for travel on a railroad track. It may be self-propelled or propelled by an outside source.

(4) "Mobile hydraulic crane" means a crane using a hydraulic means of powering some of the basic crane functions.

(5) "Reeving" means a rope system in which the rope travels around drums and sheaves.

History: 1954 ACS 82, p. 94, Eff. Dec. 31, 1974.

R 408.11905 Definitions; S.

Rule 1905. (1) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(2) "Side loading" means a load applied at an angle to the vertical plane of the boom.

(3) "Standby" means not to be in regular service, but used intermittently or occasionally as required.

(4) "Standing rope" means a supporting rope which maintains a constant distance between points of attachment to the 2 components connected by the rope.

(5) "Structural competence" means the ability of a machine and its components to withstand the stresses imposed by applied loads.

(6) "Swing" means the rotation of a mast or boom for movement of loads in a horizontal direction about the axis of rotation.

History: 1954 ACS 82, p. 95, Eff. Dec. 31, 1974.

R 408.11906 Definitions; T to W.

Rule 1906. (1) "Truck crane" means a rotating superstructure with a power plant, operating machinery, and boom mounted on an automotive truck equipped with a power plant for travel.

(2) "Whipline" means a separate or auxiliary hoist rope system of lighter load capacity and higher speed than provided by the main hoist.

(3) "Winch head" means a power driven spool for handling of a load by means of friction between fiber or wire rope and the spool.

History: 1954 ACS 82, p. 95, Eff. Dec. 31, 1974.

R 408.11911 Employer responsibilities.

Rule 1911. (1) An employer shall limit the use of a crawler, locomotive, or truck crane to:

(a) An employee who has been trained and qualified to operate the type crane to which he is assigned.

(b) A learner under the direct supervision of a designated employee.

(c) Authorized maintenance personnel during the performance of their duties.

(2) An employer shall maintain a crane and its accessories in a condition which will not endanger an operator or other employees.

(3) An employer shall limit the use of a crane to its maximum rated capacity.

History: 1954 ACS 82, p. 95, Eff. Dec. 31, 1974.

R 408.11912 Employee responsibilities.

Rule 1912. (1) An employee, except a learner, shall pass a qualification test including items in R 408.11915 before operating a crane.

(2) An operator shall report any defects of a crane to his supervisor.

(3) An unauthorized employee shall not enter a crane cab.

(4) An unauthorized employee shall not ride on any exterior part of a crane.

History: 1954 ACS 82, p. 95, Eff. Dec. 31, 1974.

R 408.11913 Operator selection.

Rule 1913. (1) An employee selected to operate a crawler, locomotive, or truck crane shall meet the following requirements:

(a) Vision shall measure 20/40 acuity on an approved testing device. Corrective lenses are permissible, but shall be worn 100% of the time when operating a crane. Peripheral vision shall be a minimum of 140 degrees with a minimum of 65 degrees on 1 side. Depth perception shall be within the minimums as stated on an approved testing device. An operator shall be able to distinguish between red, green, and yellow colors.

(b) Effective use of all 4 limbs.

(c) Height sufficient to operate the controls and to have an unobstructed view over the controls into the work area.

(d) Coordination between eyes, hands, and feet.

(e) Freedom from known convulsive disorders and episodes of unconsciousness.

(f) Ability to hear and understand conversational levels of sound in an ordinary office environment.

(g) Ability to read and understand signs, labels, and instruction manuals.

(2) An employee assigned to operate a crawler, locomotive, or truck crane shall have his ability to meet the minimum requirements in this rule verified not less than every 3 years.

(3) The requirements of this rule, except subdivision (e) of subrule (1), may be waived for an existing employee operating a crawler, locomotive, or truck crane at the effective date of this part, who has demonstrated his ability to perform the duties in a safe manner.

History: 1954 ACS 82, p. 95, Eff. Dec. 31, 1974.

R 408.11914 Operator training.

Rule 1914. An employer shall provide training to a prospective crane operator prior to assignment as an operator of a crane. Instruction shall include:

(a) Capabilities of the equipment and attachments.

(b) Purpose, use, and limitations of the controls.

(c) How to make daily inspections of the equipment.

(d) Practice in operating assigned equipment through the functions necessary to perform the job.

(e) A review of state standards, company rules, and regulations applicable to crane operation.

History: 1954 ACS 82, p. 96, Eff. Dec. 31, 1974.

R 408.11915 Operator testing.

Rule 1915. An employer shall determine the ability of an employee before authorizing the employee to operate a crane. This determination shall be based on the employee's:

(a) Operating ability.
(b) Knowledge of the equipment.
(c) Knowledge of state standards, company rules, and regulations applicable to crane operation.
(d) Knowledge of daily inspections of the equipment.

History: 1954 ACS 82, p. 96, Eff. Dec. 31, 1974.

R 408.11916 Personal protective equipment.

Rule 1916. (1) An operator and an employee directing a lift for a crane shall use the personal protective equipment required in the area.

(2) An employee directing a lift for a crane shall wear a hard hat as prescribed in the occupational safety standards commission standard, Part 32. Head Protection Equipment, being R 408.13201 to R 408.13241 of the Michigan Administrative Code.

History: 1954 ACS 82, p. 96, Eff. Dec. 31, 1974.

CONSTRUCTION

R 408.11921 Construction; standards.

Rule 1921. (1) A crawler, locomotive or truck crane, purchased or modified after the effective date of this part, shall be as prescribed in chapter 5-1 and section 5-2.2 of chapter 5-2, USAS B30.5-1968, "Crawler, Locomotive and Truck Cranes," which are incorporated herein by reference and which are available for inspection at the Lansing office of the department of labor. These standards may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $3.00 each.

(2) A mobile hydraulic crane purchased or modified after the effective date of this part shall be as prescribed in chapter 15-1 and section 15-2.2 of chapter 15-2, ANSI B30.15-1973, "Mobile Hydraulic Cranes," which are incorporated herein by reference and which are available for inspection at the Lansing office of the department of labor. These standards may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $4.50 each.

(3) A crawler, locomotive, or truck crane purchased after August 31, 1971, shall be modified to conform to chapter 5 and section 5-2.2 of chapter 5-2 of the USAS standard, B30.5-1968, "Crawler, Locomotive, and Truck Cranes," or chapter 15-1 and section 15-2.2 of chapter 15-2 of ANSI standard, B30.15-1973, "Mobile Hydraulic Cranes."

History: 1954 ACS 82, p. 96, Eff. Dec. 31, 1974; 1954 ACS 89, p. 49, Eff. Nov. 13, 1976.

R 408.11923 Rating charts.

Rule 1923. (1) A legible rating chart shall be provided at the operator station showing not less than the following information for crawler, locomotive, or truck cranes:

(a) Load capacity relating to corresponding boom angles and operating radii for all boom lengths, jib lengths, and angles. Where optional equipment, such as outriggers or extra counterweights, is provided by the manufacturer, alternate ratings shall be provided in addition.

(b) Where structural competence limits the ratings, such information shall be shown on the chart.

(2) The required parts of line for hoist reeving, including the size and construction of rope, shall be on the rating chart or in the operating manual.

History: 1954 ACS 82, p. 96, Eff. Dec. 31, 1974.

R 408.11924 Ballast and counterweights.

Rule 1924. A crane shall not be operated with more than the designed amount of ballast or counterweight. The amount of ballast or counterweight shall not be changed without authorization of the manufacturer in writing and making corresponding changes in the rating chart prescribed in R 408.11923.

History: 1954 ACS 82, p. 97, Eff. Dec. 31, 1974.

OPERATION

R 408.11931 Operating practices; general.

Rule 1931. (1) An operator shall respond to signals only from the designated signalman using appropriate signals, except where voice communications equipment is used (See figure 1). An operator shall obey a stop signal from anyone.

(2) A crane shall be equipped with an audible signaling device which shall be actuated before traveling and intermittently during travel when approaching an employee. When moving a crane, the following signals shall be used:

(a) Stop, 1 audible signal.

(b) Go ahead, 2 audible signals.

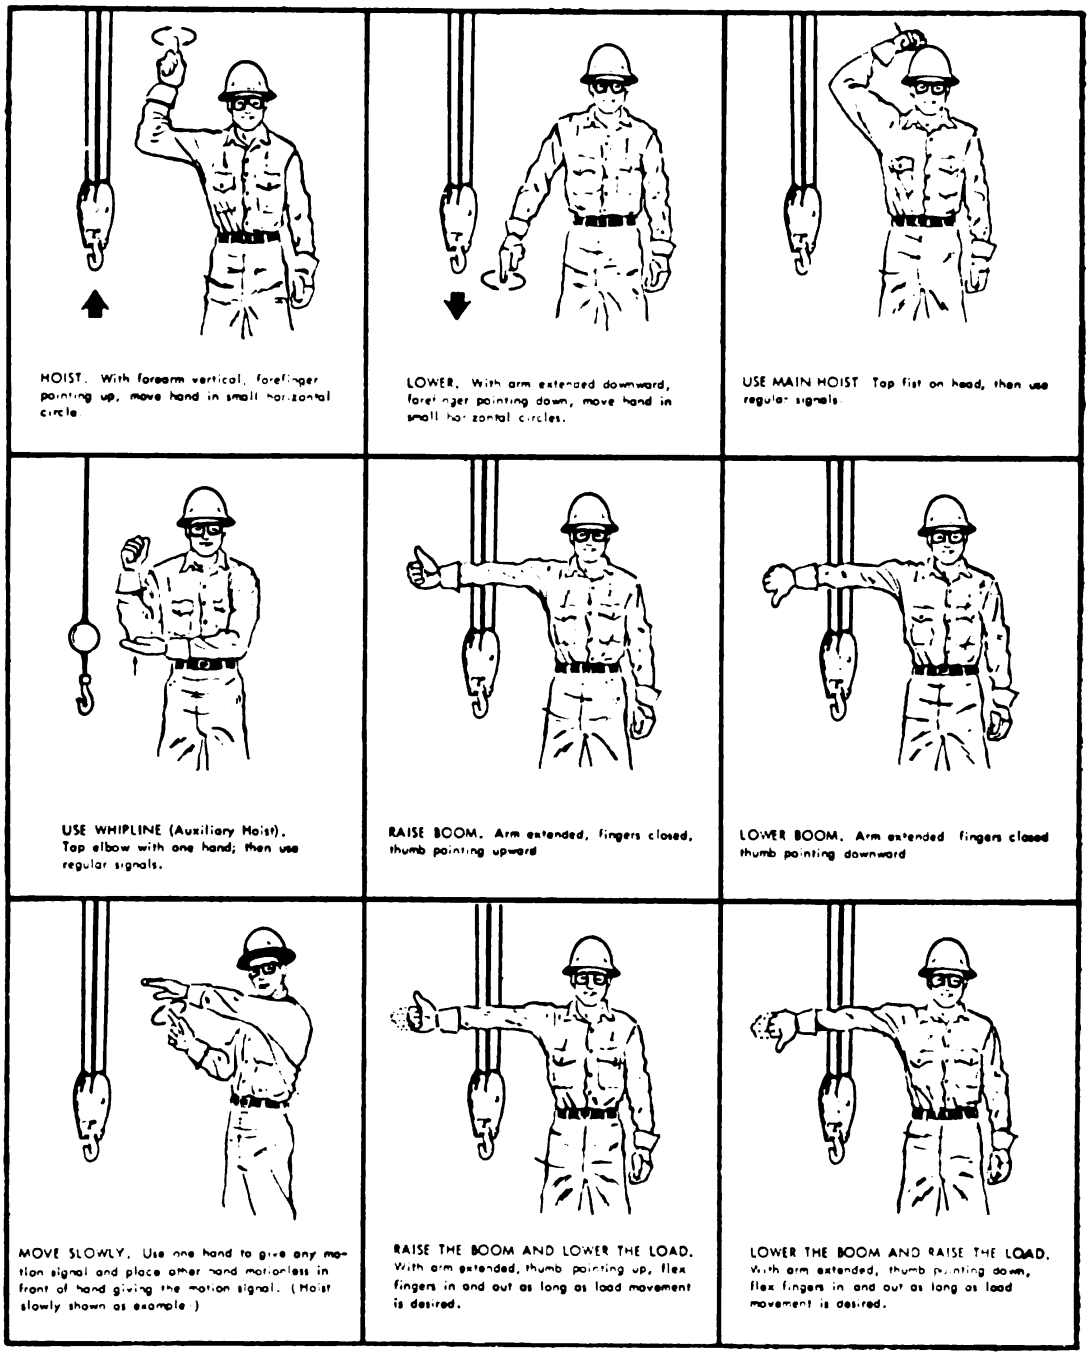
(c) Back up, 3 audible signals.

(3) An operator is responsible for those operations under his control. Whenever there is doubt as to safety, he shall stop operations until safety is assured.

(4) An operator shall not close a switch or start an engine if there is a warning sign or tag on the starting controls until the sign or tag has been removed by the employee placing it or removed by an authorized employee after making sure the hazard is removed. Before closing a switch or starting an engine, an operator shall see that all controls are in the off position and all employees are in the clear.

(5) If power fails during operation, the operator shall:

(a) Set all brakes and locking devices.



(b) Move all clutches and other power controls to the off or neutral position, unless such action would create an unsafe condition.

(c) If practicable, land any suspended load under brake control.

(6) An operator shall test all controls at the start of a shift. Needed adjustments shall be made before operations begin.

FIGURE 1 (Cont.)
Standard Hand Signals for Controlling Crane Operations

SWING. Arm extended point with finger in direction of swing of boom.

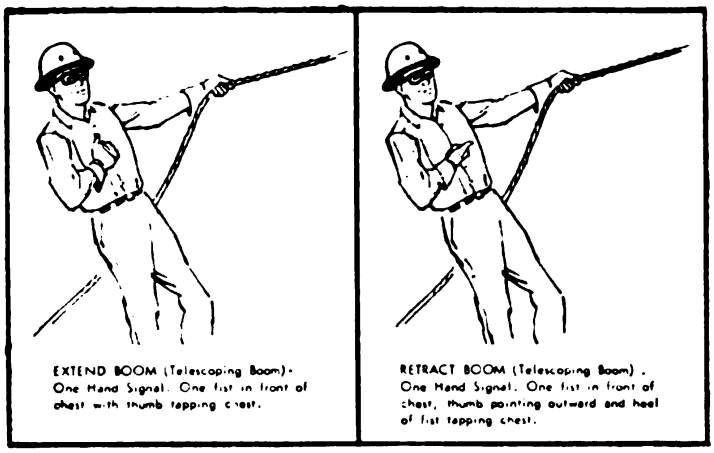
STOP. Arm extended, palm down, hold position rigidly.

EMERGENCY STOP. Arm extended, palm down, move hand rapidly right and left.

TRAVEL. Arm extended forward, hand open and slightly raised, make pushing motion in direction of travel.

DOG EVERYTHING. Clasp hands in front of body.

TRAVEL (Both Tracks) Use both fists in front of body, making a circular motion about each other, indicating direction of travel, forward or backward. (For crawler cranes only.)



TRAVEL (One Track) Lock the track on side indicated by raised fist. Travel opposite track in direction indicated by circular motion of other fist, rotated vertically in front of body. (For crawler cranes only)

EXTEND BOOM (Telescoping Booms). Both fists in front of body with thumbs pointing outward.

RETRACT BOOM (Telescoping Booms). Both fists in front of body with thumbs pointing toward each other.

FIGURE 1 (Cont.)
Standard Hand Signals for Controlling Crane Operations

History: 1954 ACS 82, p. 97, Eff. Dec. 31, 1974.

R 408.11932 Operating practices.

Rule 1932. (1) An operator shall not leave a crawler, locomotive, or truck crane unattended until:

(a) Any attached load, bucket, lifting magnet, or other device is landed.

(b) The master clutch is disengaged.

(c) The travel, swing and boom brakes and other locking devices are set.

(d) The clutch controls are in the off or neutral position unless such action would create an unsafe condition.

(e) The engine is stopped.

(f) The crane is secured against accidental travel.

(2) When assembling or disassembling a boom on the ground, it shall be blocked to prevent dropping the boom and boom sections.

(3) When a boom section is manually telescoped it shall be positioned so that through and through pinning of the cylinder eye may be accomplished and shall be checked in a horizontal position.

(4) When 2 or more cranes are used to lift a single load, 1 designated employee shall direct the rigging, lift and movement.

(5) A locomotive crane shall not be rotated into a position where other railcars on an adjacent track might strike it, except where it has been ascertained that cars are not moving on the adjacent track and flag protection has been provided.

(6) Specified tire pressures shall be maintained.

History: 1954 ACS 82, p. 100, Eff. Dec. 31, 1974.

R 408.11933 Attaching and holding a load.

Rule 1933. (1) A load shall be attached to the hook by means of a sling or other lifting device. The hoist rope shall not be wrapped around a load except when setting or removing a pole.

(2) Before starting to hoist, the operator shall make sure:

(a) The hoist rope is not kinked.

(b) The multiple part lines are not twisted around each other.

(c) The hook is not swinging when brought over the load.

(3) An employee shall not be permitted to pass or stand under a suspended load.

(4) An operator shall not load a crane beyond the rated load. A load which is limited by structural competence rather than by stability shall be checked by the operator to determine that the weight does not exceed the rated load.

History: 1954 ACS 82, p. 100, Eff. Dec. 31, 1974.

R 408.11934 Moving a load.

Rule 1934. (1) In moving a load, an operator shall avoid sudden acceleration and deceleration of a movement of the boom which would cause a swinging action by the load.

(2) An operator shall not move a load or hook if an employee is on it.

(3) A load shall be secured and balanced before it is lifted more than 6 inches.

(4) An operator shall test the hoisting brakes before moving a near rated load by raising the load a few inches and applying the hoisting brakes. This requirement applies to both single or multiple line reeving.

(5) A load or boom shall not be lowered below a point where less than 2 full wraps of rope remain on the drum.

(6) A load shall not be moved in a manner to contact obstructions.

(7) The rotational speed of a crane shall be such that the center of the load does not swing out beyond the radius of the point sheave in use. A tag line shall be used when rotation of the load would be hazardous.

History: 1954 ACS 82, p. 100, Eff. Dec. 31, 1974.

R 408.11935 Moving a load.

Rule 1935. (1) A crane shall not be used for dragging a load sideways.

(2) A load shall not be lifted over the front area of a truck crane, unless it is within the capacity of the rating chart for the front area of the truck crane.

(3) Floats or pads secured to outriggers shall be used when the load to be handled at a particular radius exceeds the rated load without outriggers (see R 408.11923). A wood block used to support an outrigger shall be:

(a) Of such size as to prevent shifting and toppling of the load.

(b) Of such strength to resist crushing.

(c) Free of defects such as knots and cracks which could affect its ability to support the load.

(4) Before lifting a load with a locomotive crane not using outriggers, a means shall be provided to prevent carrying the load on the truck springs. Rail clamps shall not be used to restrain a locomotive crane from tipping.

(5) Before moving with a load, a designated employee shall determine:

(a) Position to carry the load.

(b) Boom location.

(c) Ground conditions.

(d) Travel route.

(e) Speed of movement.

(f) Location of overhead wires.

(6) A crane, while moving from 1 location to another, shall have:

(a) The boom carried in line with the direction of movement.

(b) The superstructure secured against rotation, except when negotiating a turn with an operator in the cab or the boom on a dolly.

(c) An empty hook restrained against movement.

(7) A crane with or without a load shall not travel with the boom at a height that it may bounce back over the cab.

(8) A crane operating at a fixed radius shall have the boom-hoist pawl or other positive locking device engaged.

History: 1954 ACS 82, p. 101, Eff. Dec. 31, 1974.

R 408.11936 Operating near a power line.

Rule 1936. (1) Any overhead wire shall be considered an energized line until a representative of the owner or utility has checked and indicated otherwise.

(2) Before any crane operation is started near a power line the owner or utility representative shall be notified.

(3) Except where electrical power lines and equipment have been deenergized and visibly grounded at the point of work or where an insulating barrier, not a part of the crane, has been erected, or the employee is insulated or isolated from the crane, a crane shall maintain clearances in accordance to the following:

	Clearance	
Voltage	Boom Raised	In Transit With Boom Lowered and No Load
To 50 KV	10 feet	4 feet
Over 50 KV	10 feet + .4 inch per KV	
50 to 345 KV		10 feet
346 to 750 KV		16 feet

(4) A cage-type boom guard, insulating link, or proximity warning device may be used, but their use shall not change the requirement of subrule (3).

History: 1954 ACS 82, p. 101, Eff. Dec. 31, 1974.

R 408.11941 Cabs and operating enclosures.

Rule 1941. Clothing, personal belongings, tools, and other articles within a cab or operating enclosure shall be stored in cabinets, boxes, or other means so as not to interfere with access or operations.

History: 1954 ACS 82, p. 102, Eff. Dec. 31, 1974.

R 408.11942 Fire extinguishers.

Rule 1942. A portable dry powder fire extinguisher with not less than 5 BC rating, or equivalent, shall be kept in the cab, or in the operating enclosure, or on the unit. The operator and maintenance employees shall be trained in its use.

History: 1954 ACS 82, p. 102, Eff. Dec. 31, 1974; 1954 ACS 89, p. 50, Eff. Nov. 13, 1976.

R 408.11943 Refueling.

Rule 1943. (1) A crawler, locomotive, or truck crane fuel tank shall not be refueled while the engine is running.

(2) Where refueling is done with portable containers, the container shall be an approved safety can with an automatic closing cap and flame arrester.

(3) Smoking or other sources of sparks and flame shall be not less than 25 feet from a refueling operation.

History: 1954 ACS 82, p. 102, Eff. Dec. 31, 1974.

INSPECTION

R 408.11951 Inspection records and inspector.

Rule 1951. (1) The inspection of a crawler, locomotive, or truck crane covered by R 408.11952 to R 408.11956 shall be made by an authorized and trained employee or outside service.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j

(2) Records shall be maintained of inspection results of monthly inspections on brakes, hooks, and ropes, and semi-annual inspections of hydraulic relief pressure valves.

History: 1954 ACS 82, p. 102, Eff. Dec. 31, 1974.

R 408.11952 Initial inspections.

Rule 1952. A crawler, locomotive, or truck crane shall be inspected prior to initial use and after modification to insure compliance with this part.

History: 1954 ACS 82, p. 102, Eff. Dec. 31, 1974.

R 408.11953 Frequent inspections.

Rule 1953. (1) A crawler, locomotive, or truck crane shall be given the following daily to monthly visual inspections:

(a) Control mechanisms for wear and malfunction, each daily use.

(b) Deterioration or leakage of air or hydraulic systems, each daily use.

(c) Hydraulic system for oil level, each daily use.

(d) Hydraulic hoses and fittings for leaks and deterioration.

(e) All running ropes, each daily use.

(f) Lifting hooks for deformation or cracks. A hook having a crack, a throat opening of more than 15% of normal or more than 10 degree twist from the plane of an unbent hook shall be replaced.

(g) Rope reeving in conformance with the original installation.

(h) Electrical apparatus for malfunction, wear, dirt, and moisture accumulations.

(i) Tires for specified pressure.

(2) A crawler, locomotive, or truck crane shall be given a visual inspection not less than monthly for malfunction of safety devices.

History: 1954 ACS 82, p. 102, Eff. Dec. 31, 1974.

R 408.11954 Periodic inspections.

Rule 1954. A crawler, locomotive, or truck crane shall be given the following monthly to yearly inspections:

(a) Structural members and boom for cracks, deformation, and corrosion.

(b) Bolts and rivets for tightness.

(c) Sheaves, drums, pins, bearing, shafts, gears, rollers, locking, and clamping devices for wear, distortion, and cracks.

(d) Power sources for performance.

(e) Brake and clutch system parts, linings, pawls, and ratchets for excessive wear.

(f) Load, boom angle, and other indicators for inaccuracies over their full range.

(g) Travel, steering, braking, and locking devices for malfunction.

(h) Tires for wear or damage.

(i) Radiators and oil coolers for leakage, blockage of air passages and improper performance.

(j) Rust on piston rods and control valves.

(k) Oil strainers and filters for blockage.

History: 1954 ACS 82, p. 102, Eff. Dec. 31, 1974.

R 408.11955 Wire rope inspection.

Rule 1955. (1) Running ropes in continuous service shall have an inspection not less than once a month. The inspection shall include:

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(a) Measurement of diameter of rope.
(b) Count of broken wires in 1 lay when concentrated.
(c) End connections for broken wires.
(d) Corrosion, kinking, crushing, cutting, or other conditions affecting the capability of the rope.
(e) Cracked, bent, worn, corroded, or improperly applied end connectors.

(2) For rope in contact with equalizer sheaves or with saddles, or on sheaves where rope travel is limited, the inspection shall include moving the rope from its normal position on the sheave and examining the rope at the rope contact point.

(3) Inspection of a nonrotating type rope shall include the determination that the wires are not broken or worn within the rope.

(4) A rope which has been idle more than 1 month, shall be given a complete inspection prescribed in subrule (1) before being placed in service.

History: 1954 ACS 82, p. 103, Eff. Dec. 31, 1974.

R 408.11956 Occasional and out of service inspections.

Rule 1956. (1) A crawler, locomotive or truck crane which has been idle more than 1 month, but less than 6 months shall receive an inspection as prescribed in R 408.11953 and R 408.11955 before being placed in service.

(2) A crawler, locomotive or truck crane, which has been idle more than 6 months, shall receive an inspection as prescribed in R 408.11953 or R 408.11954 and R 408.11955 before being placed in service.

(3) A standby crawler, locomotive or truck crane shall be inspected at not less than 6 month intervals as prescribed in subrule (1).

History: 1954 ACS 82, p. 103, Eff. Dec. 31, 1974.

R 408.11957 Test for crawler, locomotive and truck cranes.

Rule 1957. (1) A crawler, locomotive, or truck crane, prior to initial use and after modification, shall be given an operational test to insure compliance with this part, including the following:
(a) Load hoisting and lowering mechanisms.
(b) Boom hoisting and lowering mechanisms.
(c) Travel mechanism.
(d) Safety devices.
(e) Boom extension mechanisms for a mobile hydraulic crane.

(2) A test load for a crawler, locomotive, or truck crane shall not exceed 110% of the rated load at any working radius.

(3) Results of operational tests and load tests shall be maintained at the job site.

(4) Where rerating is necessary, it shall be as prescribed in section 5-2.2 of chapter 5-2 of USAS B30.5-1968, "Crawler, Locomotive and Truck Crane" standard. Rerating shall not be in excess of the original load rating unless a letter of approval is obtained from the manufacturer and maintained at the job site.

History: 1954 ACS 82, p. 103, Eff. Dec. 31, 1974.

MAINTENANCE

R 408.11971 Maintenance generally.

Rule 1971. (1) An employer shall establish and maintain a preventative maintenance program under the supervision of an authorized and trained employee or outside service.

(2) Before adjustments and repairs to a crawler, locomotive, or truck crane are started, the following steps shall be taken:

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j

(a) The crawler, locomotive, or truck crane shall be placed where it does not interfere with other operations.

(b) A "warning" or "out of order" sign shall be placed at the controls, and the controls shall be in the "off" position. The sign need not be used if the energy source is locked out.

(c) The power plant shall be disconnected, locked out, or made safe by other means.

(d) The boom shall be lowered to the ground or otherwise secured against dropping.

(e) All hydraulic cylinders used for boom hoist and boom telescope on a mobile hydraulic crane shall be retracted.

(f) Hydraulic oil pressure from all hydraulic circuits shall be relieved before loosening or removing hydraulic components of a mobile hydraulic crane.

(g) The load block shall be lowered to the ground or otherwise secured against dropping, except when operation is necessary for the adjustment.

(3) After adjustments and repairs have been completed, the crawler, locomotive or truck crane shall not be returned to operations until all guards have been installed, safety devices activated, trapped air removed from the hydraulic system of a mobile hydraulic crane and maintenance equipment and warning signs or out of order signs removed.

(4) Hazardous conditions disclosed by the inspection requirements of R 408.11952 to R 408.11956 shall be corrected before operation of the crawler, locomotive, or truck crane is resumed.

(5) Adjustments shall be maintained to assure correct functioning of such components as operating mechanisms, safety devices, control systems, power plants, brakes and clutches.

(6) The original safety factor shall be maintained when repairs and replacements are made. Hooks showing defects indicated in R 408.11953 shall be replaced. Pitted or burned electrical contacts affecting their operations shall be replaced in sets.

(7) A crane or its wire rope shall not be used as a ground or to carry current. The ground shall be attached to the part being welded while welding.

History: 1954 ACS 82, p. 103, Eff. Dec. 31, 1974; 1954 ACS 89, p. 50, Eff. Nov. 13, 1976.

R 408.11972 Maintenance; wire rope.

Rule 1972. (1) Running wire ropes shall be replaced when they show 6 random broken wires in 1 rope lay or 3 broken wires in 1 strand of a rope lay; wear of 1/3 of the original diameter of outside individual wires; kinking, crushing or bird caging; heat damage; reduction in nominal diameter of 3/64 inch for ropes to 3/4 inch, 1/16 inch for ropes 7/8 inch to 1 1/8 inch, 3/32 inch for ropes 1 1/4 inch to 1 1/2 inch.

(2) A standing wire rope shall be replaced if it has more than 2 broken wires in 1 lay in a section beyond an end connection or 1 broken wire at an end connection.

(3) A wire rope having more than 1 broken wire at a socketed fitting shall be resocketed.

(4) Wire rope shall be stored in a manner to prevent damage or deterioration and handled in a manner to prevent kinking or twisting.

(5) Before cutting preformed rope, seizing shall be placed on each side of the cut to prevent unlaying of the strands. On nonpreformed rope 7/8 inch in diameter or smaller, 2 seizings shall be placed on each side of the cut, and for nonpreformed rope more than 7/8 inch in diameter, 3 seizings on each side shall be used.

(6) During installation, wire rope shall not be dragged in dirt or around sharp objects.

History: 1954 ACS 82, p. 104, Eff. Dec. 31, 1974.

PART 21. POWERED INDUSTRIAL TRUCKS

R 408.12101 Scope.

Rule 2101. The purpose of this part is to provide, in or about places of employment, minimum safety rules for the care and use of powered industrial trucks and to provide for operator safety and specifications of equipment.

History: 1954 ACS 66, p. 24, Eff. Jan. 15, 1971; 1954 ACS 73, p. 44, Eff. Nov. 10, 1972.

R 408.12103 Definitions; A, B.

Rule 2103. (1) "American Society of Mechanical Engineers type-liquid petroleum gas cylinder" means a fuel container for liquefied petroleum gas made and inspected under the ASME boiler and pressure vessel code, section 8, division 1 of 1968, which is incorporated herein by reference, including addendas through summer, 1970 and which are available for inspection at the Lansing office of the Michigan department of labor. This code may be purchased from American Society of Mechanical Engineers Order Department, United Engineering Center, 345 E-47th Street, New York 10017, at a cost of $20.50 each, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

(2) "Attachment" means a device, other than conventional forks or load backrest extension, mounted permanently or removable on the elevating mechanism of a truck for handling the load. Popular attachments are fork extensions, clamps, rotating devices, side shifters, load stabilizers, rams, and booms.

History: 1954 ACS 66, p. 25, Eff. Jan. 15, 1971; 1954 ACS 73, p. 44, Eff. Nov. 10, 1972; 1954 ACS 81, p. 81, Eff. Nov. 19, 1974.

R 408.12104 Definitions; C.

Rule 2104. (1) "Cantilever truck" means a self-loading counterbalanced or noncounterbalanced truck equipped with cantilever load engaging means. (Appendix, figure 1).

(2) "Capacity," when referring to trucks, means:

(a) The capacity of a truck equipped with a load carriage and forks, or with attachments, is the maximum weight in pounds, at a specified load center which the truck, based on the strength of its various components and applicable stability, can lift to the maximum elevation of the load engaging means. Alternate capacities may be established at the same specified load center and at less than maximum elevation of the load engaging means.

(b) The capacity of a truck equipped with a platform is the maximum weight in pounds, at a specified load center which the truck, based on the strength of its various components, can lift to the maximum elevation of the load engaging means.

(3) "Carriage" means a support structure for forks or attachment, generally roller mounted, traveling vertically within the mast of a cantilever truck.

(4) "Center-control truck" means a truck in which the operator's control position is located near the longitudinal center of the truck.

(5) "Counterbalanced truck" means a truck equipped with load engaging means wherein all the load during normal transporting is external to the polygon formed by the wheel contacts. (Appendix, figure 1).

History: 1954 ACS 66, p. 25, Eff. Jan. 15, 1971; 1954 ACS 73, p. 44, Eff. Nov. 10, 1972.

R 408.12105 Definitions; D to F.

Rule 2105. (1) "Department of transportation type LP cylinder" means a fuel container for liquefied petroleum gas made and inspected under department of transportation regulations which are herein incorporated by reference and are

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

available for inspection at the Lansing office of the Michigan department of labor. These regulations, department of transportation regulations on transporting dangerous articles—tariff #14, 1970, may be purchased from the American Trucking Association, H. J. Sonnenberg, Issuing Officer, 1616 P Street N.W., Washington, D.C. 20036, at a cost of $11.00 each, or from the Michigan Department of Labor, 300 East Michigan, Lansing, Michigan 48926.

(2) "Drift" means to move without control.

(3) "Electric truck" means a truck in which the principal energy is transmitted to motors in the form of electricity from a power source such as, but not limited to, a battery or motor generator.

(4) "End-control truck" means a truck in which the operator's position is located at the end opposite the load.

(5) "Fixed platform truck" means a truck equipped with a load platform which is nonelevating.

(6) "Forks" means horizontal tine-like projections, normally suspended from the carriage, for engaging and supporting loads.

(7) "Fork height" means the vertical distance from the floor to the load carrying surface adjacent to the heel of the forks with mast vertical, and in the case of a reach truck, with the forks extended.

(8) "Fork-lift truck" means a high-lift self-loading truck equipped with load carriage and forks for transporting and tiering loads.

(9) "Free play" means an uncontrolled movement.

History: 1954 ACS 66, p. 25, Eff. Jan. 15, 1971; 1954 ACS 73, p. 45, Eff. Nov. 10, 1972; 1954 ACS 81, p. 81, Eff. Nov. 19, 1974.

R 408.12106 Definitions; G to I.

Rule 2106. (1) "High-lift truck" means a self-loading truck equipped with an elevating mechanism designed to permit tiering. Popular types are high-lift fork trucks, high-lift ram trucks, high-lift boom trucks, high-lift clamp trucks and high-lift platform trucks. (Appendix, figure 1).

(2) "High-lift platform truck" means a self-loading truck equipped with a load platform, intended primarily for transporting and tiering loaded skid platforms. (Appendix, figure 2).

(3) "Industrial tractor" means a truck designed primarily to draw 1 or more nonpowered trucks, trailers, or other mobile loads. (Appendix, figure 5).

(4) "Internal combustion engine truck" means a truck in which the power source is a gas, LP gas, gasoline, or diesel type engine.

(5) "Issuing authority" means an employer or his designated representative who instructed and trained the operator.

History: 1954 ACS 66, p. 28, Eff. Jan. 15, 1971; 1954 ACS 73, p. 45, Eff. Nov. 10, 1972; 1954 ACS 81, p. 81, Eff. Nov. 19, 1974.

R 408.12107 Definitions; L.

Rule 2107. (1) "Liquefied petroleum gas (LP gas)" means a fuel which is composed predominantly of any of the following hydrocarbons, or mixtures of them: propane, propylene, butanes (normal butane or iso-butane) and butylenes.

(2) "Load-axle" means the truck axle nearest the load.

(3) "Load backrest extension" means a device extending vertically from the fork carriage frame.

(4) "Load center" means the horizontal longitudinal distance from the intersection of the horizontal load-carrying surfaces and vertical load-engaging faces of the forks, or equivalent load positioning structure, to the center of gravity of the load.

(5) "Load engaging means" means a load handling device attached to a powered industrial truck for the purpose of handling a load.

(6) "Low-lift truck" means a self-loading truck equipped with an elevating mechanism designed to raise the load sufficiently to permit horizontal movement. Popular types are low-lift platform trucks and pallet trucks. (Appendix, figure 3).

(7) "Low-lift platform truck" means a self-loading truck equipped with a load platform intended primarily for transporting loaded skid platforms. (Appendix, figure 3).

History: 1954 ACS 66, p. 28, Eff. Jan. 15, 1971; 1954 ACS 73, p. 45, Eff. Nov. 10, 1972.

R 408.12108 Definitions; M, N.

Rule 2108. (1) "Mast" means a support member providing the guideways permitting vertical movement of the carriage. It is usually constructed in the form of channels or similar sections providing the supporting pathway for the carriage rollers.

(2) "Motorized hand truck" means a truck designed to be controlled by a walking operator and used to lift, tow, carry, stock and tier materials. (Appendix, figure 4).

(3) "Motorized hand or rider truck" means a dual purpose truck designed to be controlled by a walking operator or by a riding operator. (Appendix, figure 6).

(4) "Narrow aisle truck" means a self-loading truck primarily intended for right angle stacking in aisles narrower than those normally required by counterbalanced trucks of the same capacity. (Appendix, figure 10).

(5) "Non-elevating truck" means a non-counterbalanced truck designed primarily for burden-carrying and not capable of self-loading.

History: 1954 ACS 66, p. 28, Eff. Jan. 15, 1971; 1954 ACS 73, p. 45, Eff. Nov. 10, 1972.

R 408.12109 Definitions; O, P.

Rule 2109. (1) "Operator" means an employee who has been trained and tested and authorized by his employer to operate a powered industrial truck.

(2) "Order picker truck, high-lift" means a high-lift truck controlled by the operator stationed on a platform movable with the load engaging means and intended for manual stock selection. The truck may be capable of self-loading or tiering, or both. (Appendix, figure 9).

(3) "Overhead guard" means a framework fitted to a truck over the head of a riding operator.

(4) "Overall lowered mast height" means the maximum vertical dimension from the ground or floor to the extreme top point of the mast with the fork carriage in the fully lowered position and unloaded.

(5) "Pallet truck" means a self-loading low-lift truck equipped with wheeled forks of dimensions to go under a single faced pallet or between the top and bottom boards of a double faced pallet and having wheels capable of lowering into spaces between the bottom boards so as to raise the pallet off the floor for transporting. (Appendix, figure 4).

(6) "Parking brake" means a device to prevent the movement of a stationary truck.

(7) "Powered industrial truck" or "truck" means a mobile, power driven vehicle used to carry, push, pull, lift, stack or tier material.

History: 1954 ACS 66, p. 28, Eff. Jan. 15, 1971; 1954 ACS 73, p. 45, Eff. Nov. 10, 1972.

R 408.12110 Definitions; R, S.

Rule 2110. (1) "Reach truck" means a self-loading truck, generally high-lift, having load engaging means mounted so the means can be extended forwardly

under control to permit a load to be picked up and deposited in the extended position and transported in the retracted position. (Appendix, figure 7).

(2) "Self-loading" means the capability of a truck to pick up, carry, set down and, in the case of high-lift types, to stack or tier its load without the aid of external means.

(3) "Service brake" means a device designed to bring a moving truck to a halt.

(4) "Side loader" means a self-loading truck, generally high-lift, having load engaging means mounted in such a manner that the means can be extended laterally under control to permit a load to be picked up and deposited in the extended position and transported in the retracted position. (Appendix, figure 8).

(5) "Straddle truck" means a general class of cantilever truck with horizontal structural wheel supported members extending forward from the main body of the truck, generally high-lift, for picking up and hauling loads between its outrigger arms. (Appendix, figure 10).

History: 1954 ACS 66, p. 27, Eff. Jan. 15, 1971; 1954 ACS 73, p. 46, Eff. Nov. 10, 1972.

R 408.12111 Definitions; T, U.

Rule 2111. (1) "Tire" means a tire which may be standard solid, cushion solid, pneumatic or solid pneumatic style.

(2) "Tiering" means a process of placing a load on or above another load.

(3) "Unattended truck" means one which is beyond the vision or more than 25 feet from the operator, whichever is less.

History: 1954 ACS 66, p. 27, Eff. Jan. 15, 1971; 1954 ACS 73, p. 46, Eff. Nov. 10, 1972.

NAMEPLATES AND MARKINGS

R 408.12121 Certification.

Rule 2121. A powered industrial truck manufactured after the effective date of this part shall be certified by the manufacturer that the truck covered by this part has been produced according to the mandatory requirements of sections 3 and 4, except subsection 421 of section 4, of the American national standards institute USAS B56.1-1969, "Safety Standard for Powered Industrial Trucks," which is incorporated herein by reference and is available for inspection at the Lansing office of the department of labor. This standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, at a cost of $6.50 each, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

History: 1954 ACS 66, p. 27, Eff. Jan. 15, 1971; 1954 ACS 73, p. 46, Eff. Nov. 10, 1972; 1954 ACS 89, p. 51, Eff. Nov. 13, 1976.

R 408.12122 Approved labels.

Rule 2122. (1) A powered industrial truck which has been accepted by an approved testing laboratory shall bear a label or marking indicating such acceptance.

(2) A nameplate, label or tag provided on such a truck shall be maintained in place and in legible condition.

History: 1954 ACS 81, p. 82, Eff. Nov. 19, 1974.
Editor's note: Former R 408.12122, deriving from 1954 ACS 66, p. 27, was rescinded by 1954 ACS 73, p. 44, Eff. Nov. 10, 1972.

R 408.12123—R 408.12129 Rescinded.

History: 1954 ACS 66, pp. 27, 28, Eff. Jan. 15, 1971; rescinded 1954 ACS 73, p. 44, Eff. Nov. 10, 1972.

R 408.12130 Effective date.

Rule 2130. A truck manufactured before the effective date of this part shall comply with R 408.12131(1) and (2), R 408.12134, R 408.12135, R 408.12136, and R 408.12143 of this part.

History: 1954 ACS 66, p. 28, Eff. Jan. 15, 1971; 1954 ACS 73, p. 46, Eff. Nov. 10, 1972.

EQUIPMENT

R 408.12131 Warning devices and lights.

Rule 2131. (1) A truck, except a motorized hand truck, shall be equipped with an audible device to warn of approach.

(2) A truck used in areas where general lighting is less than 2 footcandles shall be equipped with auxiliary lights that illuminate work in process.

History: 1954 ACS 66, p. 29, Eff. Jan. 15, 1971; 1954 ACS 73, p. 46, Eff. Nov. 10, 1972.

R 408.12132 Modifications.

Rule 2132. (1) An additional counterweight shall not be installed by the employer without written assurance from the manufacturer of the truck that the stability of the truck will not deviate from rule 406 of section 4 of the American national standards institute standard B56.1-1969.

(2) Other modifications affecting capacity or safety shall not be made without written approval of the manufacturer or an engineer knowledgeable on the subject. Capacity, operation, and maintenance instruction plates, tags, or decals shall be changed accordingly.

(3) If the truck is equipped with front end attachments, the name plate shall be marked to:

(a) Identify the attachments.

(b) Show the approximate weight of the truck and attachment.

(c) Show the load capacity of the truck and attachment combination at maximum elevation of the load engaging means with load laterally centered.

History: 1954 ACS 73, p. 46, Eff. Nov. 10, 1972; 1954 ACS 81, p. 82, Eff. Nov. 19, 1974; 1954 ACS 89, p. 51, Eff. Nov. 13, 1976.

R 408.12133 Rescinded.

History: 1954 ACS 66, p. 29, Eff. Jan. 15, 1971; rescinded 1954 ACS 73, p. 44, Eff. Nov. 10, 1972.

R 408.12134 Parking brakes.

Rule 2134. The parking brake on a sitdown rider truck shall be capable of holding the truck on the maximum grade which the truck can negotiate with rated load, or on a 15% grade, whichever is lesser. The parking brake shall be manually or automatically applied and shall remain applied until released by the operator.

History: 1954 ACS 66, p. 29, Eff. Jan. 15, 1971.

R 408.12135 Tires.

Rule 2135. Tires shall be used as recommended by the truck manufacturer.

History: 1954 ACS 66, p. 29, Eff. Jan. 15, 1971.

R 408.12136 Operator platforms.

Rule 2136. (1) An end control, reach, narrow aisle, order picker high-lift, order picking and stacking, and motorized hand rider truck shall be equipped with a platform extended beyond the operator's position, and shall withstand a compression load equal to the weight of the loaded vehicle applied along the longitudinal axis of the truck with the outermost projection of the platform against

a flat vertical surface. The back protective guard where provided shall permit rapid and unobstructed ingress or egress from the platform.

(2) On a double end control baggage type truck or a truck which may be transported on short elevators, means should be provided to prevent accidental folding of the operator's folding platform.

(3) On an order picker truck, high-lift:

(a) A removable operator platform shall be provided with a device that attaches the platform to the lifting means.

(b) The operator platform shall be equipped with side guard rails.

(c) When the platform is elevated, the horizontal travel speed of the truck shall be automatically reduced to a degree necessary to maintain stability under maximum braking load and turning.

(d) Subdivisions (a) and (c) pertain only to a truck ordered after the effective date of this part.

History: 1954 ACS 66, p. 29, Eff. Jan. 15, 1971; 1954 ACS 73, p. 47, Eff. Nov. 10, 1972.

R 408.12137 Steering control.

Rule 2137. (1) Except on a motorized hand and motorized hand or rider truck, the steering control on a powered industrial truck shall be confined within the plan view outline of the truck, or guarded to prevent injury to the operator during movement of the controls when passing an obstacle such as a wall, post, equipment, box, or another truck.

(2) On a motorized hand and motorized hand or rider truck, the steering handle shall be provided with a guard or device to protect the operator's hands from injury when passing an obstacle such as a wall, post, equipment, box, or another truck.

History: 1954 ACS 73, p. 47, Eff. Nov. 10, 1972.

R 408.12138 Load handling controls; general.

Rule 2138. A load handling control on a truck shall be:

(a) Located for right hand operation.

(b) A single lever may be used to perform more than 1 function. Push button or pre-selected controls shall be properly identified.

(c) Clearly and durably identified to indicate function and direction of motion of load or equipment.

(d) Self-centering.

History: 1954 ACS 66, p. 30, Eff. Jan. 15, 1971; 1954 ACS 89, p. 51, Eff. Nov. 13, 1976.

R 408.12139 Load handling controls; direction of motion and guards.

Rule 2139. (1) A lever or handle type control, including a toggle switch, shall be in accordance with the following table:

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

TABLE 1
Direction of Motion

Function	Of load or equipment	Of the operator's hand when actuating the control handle while facing the load
Hoist	up	rearward or up
	down	forward or down
Tilt	rearward	*rearward or up
	forward	forward or down
Reach	retract	*rearward
	extend	forward
Clamp	clamp	rearward or up
	release	forward or down
Side Shift	right	rearward or up
	left	forward or down
Rotate Laterally	clockwise	rearward or up
	counterclockwise	forward or down
Rotate Longitudinally	rearward	*rearward or up
	forward	forward or down

*The sense of rotation of the control handle is intended to be in the same direction as the desired motion of the mast or load.

(2) Moving parts that represent a hazard from the operator's position shall be protected by suitable guards.

History: 1954 ACS 66, p. 30, Eff. Jan. 15, 1971.

R 408.12141 Rescinded.

History: 1954 ACS 66, p. 30, Eff. Jan. 15, 1971; rescinded 1954 ACS 73, p. 44, Eff. Nov. 10, 1972.

R 408.12143 Overhead guard on high-lift truck.

Rule 2143. (1) Except as provided in subrule (2), a high-lift truck shall be fitted with an overhead guard. The overhead guard shall be capable of supporting a uniformly distributed static load in accordance with the following table. The overhead guard is not intended to withstand the impact of a falling capacity load.

TABLE 2
Overhead Guard Test

Truck Capacity Rating (in pounds)	Static Test Load as a % of Truck Capacity Rating
Through 5,000	200% of truck rating
Over 5,000 through 10,000	10,000 pounds plus 100% of increment rating over 5,000 pounds
Over 10,000 through 20,000	15,000 pounds plus 50% increment rating over 10,000 pounds

(2) An overhead guard may be omitted from a high-lift truck if the truck is never used to lift or raise material or objects more than 72 inches measured from the floor to the forks, and if all of the following are complied with:

(a) The load is limited to a single rack or pallet.

(b) The truck is not operated in an area where material or objects are stacked above the operator's head.

(c) A sign with lettering not less than ½-inch high is securely attached in the area of the operator's controls stating, "This truck shall not be used to lift materials above the operator's head or in an area where materials are stacked above the operator's head."

(3) A low-lift rider truck which is used to lift material stacked higher than the head of the operator, and which would likely vibrate and fall back onto the operator, shall be provided with an overhead guard.

(4) The overhead guard shall be capable of withstanding the impact of a 100-pound solid hardwood cube, or equivalent, dropped a distance of 5 feet 10 times, without failure or without permanent deflection exceeding ¾ inch.

(5) The overhead guard shall be constructed in a manner that does not interfere with visibility. Openings in the top shall not exceed 6 inches in 1 of the 2 dimensions, width or length. The guard shall be large enough to extend over the operator under all normal circumstances of truck operation, including forward tilt.

(6) A fork truck equipped with a single-tilt cylinder shall be made to avoid injury to the operator by the overhead guard resulting from failure of this cylinder or associated parts.

(7) On a truck where the operator is seated, a vertical clearance of not less than 39 inches should be maintained from the point of maximum depression of the seat under the operator to the underside of the section of the overhead guard under which the operator's head moves during normal operation.

(8) On a truck where the operator stands, a vertical clearance of not less than 74 inches should be maintained from the platform where he stands to the underside of the section of the overhead guard under which the operator's head moves during normal operation.

(9) Where head room conditions limit the overall lowered height of the truck, a normal overhead guard height may be reduced.

(10) An overhead guard is intended to offer protection from the impact of small packages, boxes, and bagged material representative of the job application, but not to withstand the impact of a falling capacity load.

History: 1954 ACS 66, p. 30, Eff. Jan. 15, 1971; 1954 ACS 81, p. 82, Eff. Nov. 19, 1974; 1954 ACS 99, p. 109, Eff. Apr. 18, 1979.

EMPLOYER RESPONSIBILITIES

R 408.12151 Operator selection.

Rule 2151. (1) An employee assigned to operate a powered industrial truck shall meet the following minimum requirements except as noted in subrule (5):

(a) Corrected vision shall measure not less than 20/40 acuity. Corrected vision between 20/40 and 20/70 is limited to daylight only, unless artificial lighting of 20 footcandles is provided. Corrective lenses where needed to qualify vision are permissible but shall be worn 100% of the time when operating powered industrial trucks.

(b) Peripheral vision shall be a minimum of 140 degrees with a minimum of 65 degrees on 1 side.

(c) Depth perception shall be within the minimums as stated on an approved testing device.

(2) Physical requirements shall include:

(a) Effective use of all 4 limbs.

(b) Height sufficient to operate the controls and to have an unobstructed view over the controls and dashboard.

(c) Coordination between eyes, hands and feet.

(d) Freedom from known convulsive disorders and episodes of unconsciousness.

(e) Hearing ability to hear and understand conversational levels of sound in an ordinary office environment.

(3) An employee assigned to operate a powered industrial truck shall have the ability to understand signs, labels and instructions.

(4) An employee assigned to operate a powered industrial truck shall meet the minimum requirements stated in this rule and be retested not less than every 3 years.

(5) Requirements listed in subdivisions (a) and (b) of subrule (2) and subrule (4) are optional for operators of a motorized hand low lift truck.

(6) An employee operating a powered industrial truck at the effective date of this part and not meeting the requirements of subrule (1), subdivisions (a), (b), (c), and (e) of subrule (2) and subrule (3) may be continued as an operator if his handicap or inability does not prove detrimental to his task. Where a deaf employee is permitted to operate a powered industrial truck all rider trucks within his area shall be equipped with a warning light as a warning device.

History: 1954 ACS 66, p. 31, Eff. Jan. 15, 1971; 1954 ACS 73, p. 47, Eff. Nov. 10, 1972; 1954 ACS 81, p. 82, Eff. Nov. 19, 1974.

R 408.12152 Training.

Rule 2152. An employer shall provide training to the employee prior to the employee's assignment as an operator of a powered industrial truck. Instruction shall include:

(a) Capabilities of the equipment and attachments.

(b) Purpose, use and limitations of controls.

(c) How to make daily checks.

(d) Practice and operating assigned vehicles through their functions necessary to perform the required job.

(e) State safety standard, R 408.12171 to R 408.12193 of Part 21. Powered Industrial Trucks, and company rules and regulations.

History: 1954 ACS 73, p. 47, Eff. Nov. 10, 1972; 1954 ACS 81, p. 83, Eff. Nov. 19, 1974.

R 408.12153 Testing.

Rule 2153. An employer shall test an employee before authorizing the employee to operate a powered industrial truck, except a motorized hand truck. The test shall check the employee's:

(a) Operating ability.

(b) Knowledge of the equipment.

(c) Knowledge of state safety standard, R 408.12171 to R 408.12193 of Part 21. Powered Industrial Trucks, and company rules covering powered industrial trucks.

(d) Knowledge of daily checks.

History: 1954 ACS 73, p. 48, Eff. Nov. 10, 1972; 1954 ACS 81, p. 83, Eff. Nov. 19, 1974.

R 408.12154 Permits.

Rule 2154. (1) An employer shall provide the employee a permit to operate a powered industrial truck only after meeting the requirements prescribed in R 408.12151, R 408.12152, and R 408.12153.

(2) Ninety days after the effective date of this part, an employee shall not be allowed to operate a truck without a permit, except a permit is optional for operators of motorized hand low lift trucks. An employee being trained is excepted from the permit requirement for a period of not more than 30 days provided the employee is under the observation of an instructor.

(3) A permit shall be carried by the operator at all times during working hours, except where for health reasons a foreign object on or in clothing is not permitted.

(4) A permit shall indicate the type of truck an operator has been trained on and is qualified to operate.

(5) A permit to operate a powered industrial truck shall be valid only with the employer who issued the permit, and the permit shall be issued for a period of not more than 3 years and shall be consistent with R 408.12151(4). Those employees excepted under R 408.12151(6) may continue to operate a powered industrial truck if their handicaps or inabilities do not prove detrimental to their tasks.

(6) A permit shall contain the following information (see sample permit):

(a) Firm name.

(b) Operator's name.

(c) Operator I.D. number, if any.

(d) Name of issuing authority.

(e) Type of truck authorized to operate.

(f) Operator restrictions, if any.

(g) Date issued.

(h) Date expiring.

History: 1954 ACS 73, p. 48, Eff. Nov. 10, 1972.

R 408.12155 Restriction of use.

Rule 2155. (1) Except as provided in subrule (2), a powered industrial truck shall not be used in an environment containing:

(a) Gases or vapors, such as, but not limited to, acetylene, hydrogen, oxygen, ether, gasoline, naphtha, or acetone, which may be present in quantities sufficient to produce an explosive or ignitable mixture.

(b) Combustible mixtures of dusts such as, but not limited to, metal dust, coal dust, coke dust, grain dust, flour dust, or organic dust.

(c) Ignitable fibers such as, but not limited to, baled waste, cocoa fiber, cotton, excelsior, kapok, or oakum.

(2) A powered industrial truck used in a hazardous environment, as noted in subrule (1), shall be equipped as prescribed in the national fire protection association standard, 505-1969, type designations, areas of use, maintenance and operation of powered industrial trucks, incorporated herein by reference. It is available for inspection at the Lansing office of the department of labor. This standard may be purchased from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210, at a cost of $2.00 each, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

History: 1954 ACS 73, p. 48, Eff. Nov. 10, 1972; 1954 ACS 89, p. 51, Eff. Nov. 15, 1976.

R 408.12161 Mechanical condition and maintenance.

Rule 2161. (1) An employer shall not permit a powered industrial truck to be used if:

(a) The service and parking brakes do not perform their intended function.

(b) The fuel system leaks.

(c) A lift cylinder of a load engaging means allows a downward drift of the load engaging means loaded or unloaded in excess of 5 inches in 5 minutes.

(d) A tilt cylinder of a mast allows a forward drift of the mast in excess of 2 degrees in 5 minutes with the mast in a vertical position and a capacity load on the fork or load engaging means.

(e) The steering mechanism allows free play of the steering wheel of more than ¼ turn on trucks capable of speeds up to 8 miles per hour and more than ⅛ turn on trucks capable of speeds over 8 miles per hour.

(f) A hydraulic system leaks and creates a hazard for an employee and equipment in the area.

(2) Repairs to a fuel and ignition system which involve a fire hazard shall be made only in a designated location. Repairs shall not be made in a location made hazardous by:

(a) Flammable gases or vapors.

(b) Combustible dusts.

(c) Ignitable fibers.

(3) Repairs to the truck electrical system shall be made only after the battery has been disconnected.

(4) A replacement part shall have not less than the equivalent safety of the original part.

(5) A water muffler shall have the water maintained at not less than 75% of capacity. A water muffler equipped with a screen shall have the screen maintained to accomplish its intended purpose. When an exhaust system of this type emits sparks or flames, the truck shall be removed from service and repaired.

(6) A truck running in excess of normal operating temperature which creates a hazardous condition shall be removed from service and repaired.

(7) A truck shall be maintained in a condition, reasonably free of lint, excess oil, and grease. Solvent with a flash point of less than 100 degrees Fahrenheit shall not be used to clean the truck. Precautions regarding ventilation, fire, and toxicity shall be observed when using a cleaning agent.

(8) Antifreeze used in a truck shall have a glycol base.

(9) A truck approved for use of 1 type of fuel may be converted to another type of fuel if the conversion qualifies the truck to its new designation, such as GS, LP, or LPS. Only approved parts shall be used. The conversion shall be as prescribed in R 408.12132(2).

(10) All repairs shall be made by authorized personnel.

History: 1954 ACS 73, p. 49, Eff. Nov. 10, 1972; 1954 ACS 81, p. 83, Eff. Nov. 19, 1974; 1954 ACS 89, p. 52, Eff. Nov. 13, 1976.

R 408.12162 Blocks and safety stands for maintenance.

Rule 2162. An employer shall provide:

(a) Chock blocks for the maintenance department use when repairing powered industrial trucks.

(b) Blocks or safety stands as a secondary support for powered industrial trucks elevated from the floor by a hoist or chain fall.

History: 1954 ACS 73, p. 49, Eff. Nov. 10, 1972.

R 408.12163 Fuel.

Rule 2163. (1) An employer shall provide safety fuel cans where trucks are refueled with gasoline at other than a gas pump area.

(2) An employer shall provide a special area for refueling that is not less than 25 feet from a source of open flame or spark and the area shall be posted to this effect.

(3) Use and storage of LP gas shall be as specified by the state fire marshal's liquefied petroleum gases regulations, being R 28.3801 to R 28.3819 of the Michigan Administrative Code.

(4) Handling and storage of fuel, such as gasoline and diesel fuel, shall be as prescribed by the state fire marshal's flammable liquids regulations, being R 28.601 to R 28.740 of the Michigan Administrative Code.

(5) Smoking while refueling shall be prohibited.

(6) Fuel level shall not be checked by use of an open flame.

History: 1954 ACS 73, p. 49, Eff. Nov. 10, 1972; 1954 ACS 81, p. 84, Eff. Nov. 19, 1974.

R 408.12164 Electric trucks.

Rule 2164. (1) Where electric trucks are used, an employer shall provide a designated area for battery changing or charging, or both, which shall be performed by a trained and authorized employee.

(2) Provisions shall be made in a battery charging area where batteries are removed from the truck for flushing and neutralization of spillage, for fire protection, and for air movement sufficient to disperse fumes from gassing batteries.

(3) Smoking and other sources of ignition shall be prohibited in these areas.

(4) A truck shall be positioned and the brake applied before changing or charging a battery. A reinstalled battery shall be positioned and secured before releasing the truck for use.

(5) Material handling equipment, such as, but not limited to, a conveyor or overhead hoist, shall be used for removing and replacing a battery. A spreader bar or an equivalent device shall be used with any overhead battery hoist so that the lifting stresses are vertical. A chain type powered battery hoist shall have a container to accumulate the excess lifting chain. When a hand hoist is used, an uncovered battery shall be covered to prevent the hand chain from shorting on cell connectors or terminals. Tools and other metallic objects shall be kept away from the terminals.

(6) When mixing electrolyte for a battery, a carboy tilter or siphon shall be provided for handling electrolyte. Acid concentrate shall be poured into water; water shall not be poured into acid concentrate.

(7) When charging a battery:

(a) The vent cap shall be kept in place and functioning.

(b) The battery or compartment covers where provided shall be kept open to dissipate heat and gases.

(8) The electrolyte level shall not be checked with an open flame.

History: 1954 ACS 73, p. 49, Eff. Nov. 10, 1972; 1954 ACS 81, p. 84, Eff. Nov. 19, 1974.

R 408.12165 Dockboards and plates.

Rule 2165. (1) An employer shall provide dockboards and plates designed to carry the load imposed on them. The carrying capacity shall be marked on a dockboard or plate purchased after the effective date of this part.

(2) The dockboard or plate shall be secured in position, either by being anchored or equipped with a device which will prevent its slipping out of position.

(3) Hand holds, or other effective means, shall be provided to permit safe handling. Where a fork truck is used, fork loops, pockets, or lugs shall be provided for safe handling.

(4) A dockboard or plate shall have a slip-resistant surface, such as but not limited to a tread plate, designed to reduce the possibility of slipping by an employee or truck.

(5) A dockboard or plate shall be designed and maintained so the end edges will have a sufficient contact with the dock or loading platform and the carrier to prevent the dockboard or plate from rocking or sliding out of position.

(6) A portable dockboard or plate used by a powered industrial truck to bridge an opening in excess of 18 inches shall have curbs. The height of the curb on a dockboard or plate used by a powered industrial truck with solid or cushion tires shall be not less than 15% of the diameter of the largest tire of the truck, however, the maximum curb height need not exceed 3 inches.

History: 1954 ACS 73, p. 50, Eff. Nov. 10, 1972.

R 408.12166 Order picker trucks; high-lift platforms.

Rule 2166. Whenever an order picker truck, high-lift is equipped with vertical only or vertical and horizontal controls traveling with the lifting carriage or forks for lifting an employee, an employer shall assure that the following is provided:

(a) A platform equipped with railing or other limiting device, including but not limited to a chain, strap or tether.

(b) A control device whereby the employee on the platform can shut off the power to the truck.

(c) Protection from falling objects as indicated necessary by the operating conditions.

History: 1954 ACS 73, p. 50, Eff. Nov. 10, 1972.

R 408.12167 Fork lift truck platforms.

Rule 2167. (1) An employee shall not be lifted or transported, except when a platform is attached to the forks by enclosed sleeves, a safety chain, or a mechanical device in such a manner that the platform cannot tip or slip.

(2) A platform shall be equipped with a railing not less than 36 inches or more than 42 inches high and a toeboard. The railing shall consist of 1 of the following materials:

(a) Wood posts of at least 2 x 4 inch nominal stock; the top rail shall be made of 2 right angle pieces of not less than 1 x 4 inch nominal stock and an intermediate rail of 1 x 4 inch nominal stock.

(b) Steel or aluminum pipe posts and rails of not less than 1 inch inside diameter and an intermediate rail of ¾ inch inside diameter pipe.

(c) Structural steel or aluminum posts, rails and intermediate rail of angle iron of not less than 1 x 1 x 3/16 inch size or other shapes of equal strength.

(3) The intermediate rail may be omitted from 1 side.

(4) A toeboard shall be made of not less than 1 x 4 inches nominal wood stock or a material of equal strength.

History: 1954 ACS 73, p. 50, Eff. Nov. 10, 1972.

R 408.12168 Load backrest extensions.

Rule 2168. A load backrest extension, manufactured in accordance with R 408.12121, shall be used whenever necessary to minimize the possibility of a load, or part of it, falling rearward.

History: 1954 ACS 73, p. 50, Eff. Nov. 10, 1972; 1954 ACS 89, p. 52, Eff. Nov. 13, 1976.

R 408.12169 Spinner knobs.

Rule 2169. A spinner knob shall not be attached to a steering handwheel of a truck unless originally equipped with such; the truck is equipped with power steering; or the truck is equipped with an anti-kickback device on the steering mechanism. The knob shall be installed within the periphery of the handwheel.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972; 1954 ACS 81, p. 84, Eff. Nov. 18, 1974.

EMPLOYEE RESPONSIBILITIES

R 408.12171 Daily check and possession of permit.

Rule 2171. (1) An employee shall not operate a powered industrial truck without a permit from his current employer in his possession.

(2) At the start of his shift, the operator of a powered industrial truck shall perform those daily checks of his equipment required by his employer.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972.

R 408.12172 General operating rules.

Rule 2172. (1) An operator shall safeguard other employees at all times.

(2) An operator shall not drive a truck up to anyone who is standing in front of a bench or other fixed object.

(3) An operator shall not allow anyone to stand or pass under the elevated portion of any powered industrial truck, whether loaded or empty.

(4) No employee, except the operator, shall ride on a powered industrial truck unless the truck is provided with a passenger seat. Passenger seats on a fork lift truck shall be under the overhead guard.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972.

R 408.12173 Position of arms and legs.

Rule 2173. An operator shall not put his arms or legs between the uprights of the mast or outside the running lines of a moving truck.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972.

R 408.12174 Parking.

Rule 2174. (1) When leaving a powered industrial truck unattended, an operator shall fully lower the forks flat to the floor, neutralize the controls, set the brakes, and shut the power off.

(2) Whenever it is necessary to leave a truck on an incline, the truck wheels shall be blocked and the steering wheels turned toward the curbing, wall or railing.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972.

R 408.12175 Towing and pushing.

Rule 2175. A truck shall not be used to tow or push railroad cars, unless it is specifically designed for that purpose. Freight car doors shall not be opened or closed by using a powered industrial truck, unless it is equipped with attachments designed for that purpose.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972.

R 408.12176 Loading trucks, trailers, and railcars.

Rule 2176. (1) When being boarded by a powered industrial truck, a highway truck and trailer shall have their brakes set and not less than 2 rear wheels blocked in a manner that will hold them from movement.

(2) Wheel stops, hand brakes, or other approved positive protection shall be provided to prevent railroad cars from moving during loading or unloading operations, and before and while dockboards or bridge plates are in position.

(3) Provisions shall be made to protect rail cars during switching operations.

(4) The landing gear of all semitrailers shall be visually inspected immediately before the trailer is uncoupled from the tractor to assure its ability to support the imposed load.

(5) A semitrailer less than 30 feet in length, when not coupled to a tractor and being loaded or unloaded with a powered industrial truck, shall be provided a support capable of sustaining the load at the front.

(6) The flooring of trucks, trailers, and railroad cars shall be checked for breaks and weakness before they are driven onto.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972; 1954 ACS 81, p. 84, Eff. Nov. 19, 1974; 1954 ACS 89, p. 52, Eff. Nov. 13, 1976.

R 408.12177 Surveying path of travel.

Rule 2177. Before moving or stacking, an operator shall survey his path of travel in order to avoid obstacles, such as, but not limited to, pipes, light fixtures, and sprinkler systems. A safe distance shall be maintained from the edge of ramps or platforms while on an elevated dock.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972; 1954 ACS 89, p. 53, Eff. Nov. 13, 1976.

R 408.12178 Operations in hazardous areas.

Rule 2178. When operating a powered industrial truck in a hazardous area, only a truck specifically equipped for such operation shall be used. See R 408.12155.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972.

R 408.12179 Reporting accidents.

Rule 2179. A powered industrial truck operator shall report all accidents involving injury to an employee, or damage to buildings and equipment, to his supervisor or other designated person.

History: 1954 ACS 73, p. 51, Eff. Nov. 10, 1972.

R 408.12180 Clear access.

Rule 2180. An operator shall maintain clear access of fire aisles, to stairways and fire equipment when depositing loads.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12181 Making repairs.

Rule 2181. Operators shall not make any repairs or adjustments unless specifically authorized to do so.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12182 Flammables.

Rule 2182. A fuel tank shall not be filled while the engine is running. Spilled fuel shall be carefully washed away or completely evaporated, and the fuel tank cap replaced before restarting the engine.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

MOVING TRUCKS

R 408.12183 Operation.

Rule 2183. (1) An operator shall operate a powered industrial truck according to the rules of this part and in accordance with local traffic rules when on a public road.

(2) When following another truck, a safe distance shall be maintained approximately 3 truck lengths from the vehicle ahead and the vehicle shall be kept under control at all times.

Digitized by Google

(3) An operator shall give the right-of-way to ambulances, fire trucks, or other emergency vehicles.

(4) An operator of a rider-type powered industrial truck shall not pass another truck traveling in the same direction at intersections, blind spots, or other dangerous locations.

(5) An operator shall cross railroad tracks diagonally wherever possible. He shall not park closer than 8½ feet from center of a railroad track.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12184 Slow down at crossings and obstructions.

Rule 2184. An operator shall slow down and sound the warning device at cross aisles and other locations where his vision is obstructed by fixed objects.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12185 Clear view.

Rule 2185. An operator shall look in the direction of and keep a clear view of the direction of travel. When moving loads blocking the forward visibility, for safe handling an operator shall drive the truck with the load trailing.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12186 Ascending and descending grades.

Rule 2186. (1) An operator shall ascend and descend grades of 10% or more at a speed of not more than 2 miles per hour.

(2) When ascending or descending a grade that exceeds the back-tilt of the mast, the load shall be facing upgrade.

(3) On all grades, unloaded trucks shall be driven with the load engaging means downgrade, tilted back, and raised only as far as necessary to clear the floor or road surface.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12187 Traveling.

Rule 2187. In level areas an operator shall travel with the load engaging means elevated only sufficiently to clear obstacles on floor or roadway.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12188 Starts, stops and turns.

Rule 2188. Starts, stops, and turns shall be made in a manner which will prevent a load from shifting or overturning the truck.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12189 Horseplay.

Rule 2189. Stunt driving and horseplay shall not be permitted.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12190 Wet floors, dockboards and bridgeplates.

Rule 2190. (1) An operator shall drive at a slow speed over wet or slippery floors.

(2) Before driving over a dockboard or bridgeplate, an operator shall assure himself that it is secured and that he will not exceed its capacity.

History: 1954 ACS 73, p. 52, Eff. Nov. 10, 1972.

R 408.12191 Entering elevators.

Rule 2191. (1) An operator shall drive onto elevators only when authorized to do so.

(2) An elevator shall be entered squarely after it is leveled to the floor. Once on the elevator an operator shall neutralize the controls, set the brakes and shut off the power.

(3) Motorized hand trucks shall enter an elevator and other confined areas with the load end forward.

(4) A truck shall not enter an elevator if the combined weight of the load and truck exceeds the capacity of the elevator.

History: 1954 ACS 73, p. 53, Eff. Nov. 10, 1972.

R 408.12192 Running over loose objects.

Rule 2192. An operator of a truck shall avoid running over loose objects.

History: 1954 ACS 73, p. 53, Eff. Nov. 10, 1972.

LOADING SAFETY

R 408.12193 Operators; loading.

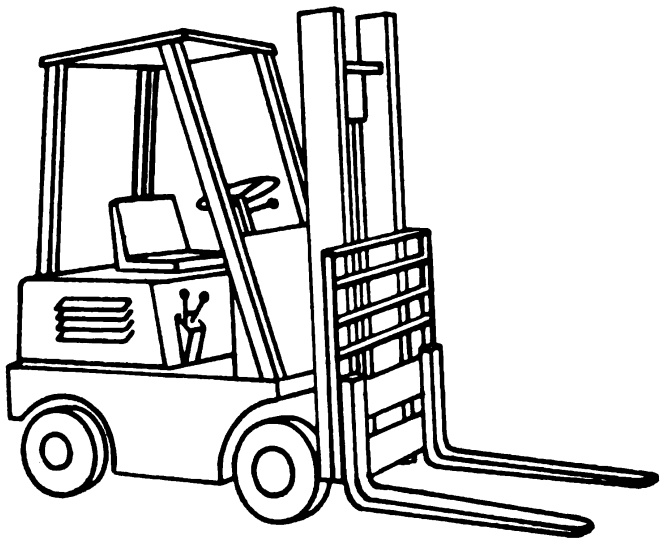
Rule 2193. An operator shall:

(a) Operate a truck equipped with attachments as a partially loaded truck when not transporting a load.

(b) When loading a fork lift truck, place the load engaging means under the load as far as possible and tilt the mast backwards to cradle the load.

(c) Exercise caution when tilting loads especially when they are segmented.

(d) Lift or transport only a load that is within the rated capacity of the truck.



(e) Lift or transport only a load that cannot fall out of a basket or container, or off the load engaging means during the normal movements of the truck.

(f) Tilt an elevated load forward only when in a deposit position over a rack or stack.

History: 1954 ACS 73, p. 53, Eff. Nov. 10, 1972.

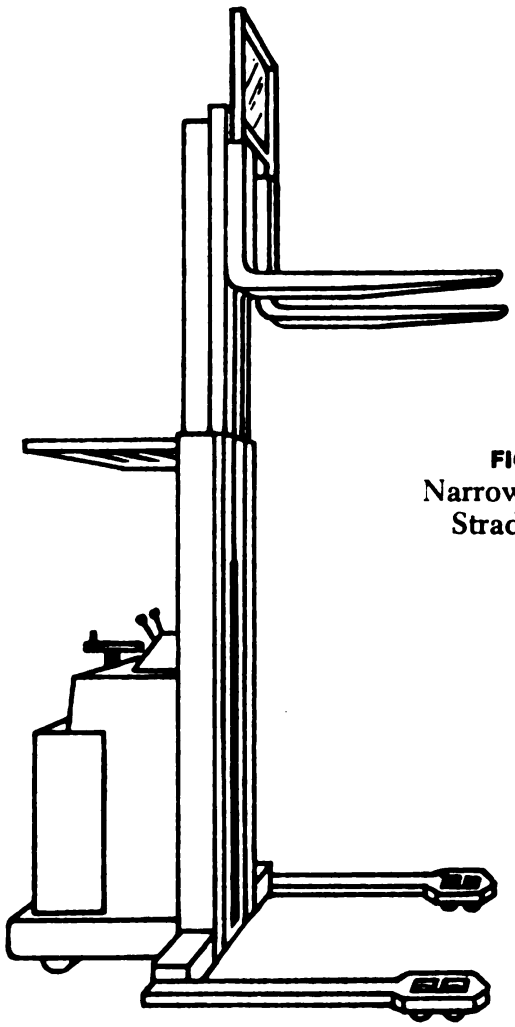

FIGURE 10
Narrow-aisle Truck
Straddle Truck

History: 1954 ACS 66, pp. 32-35, Eff. Jan. 15, 1971; 1954 ACS 73, pp. 53-58, Eff. Nov. 10, 1972.

PART 22. TRACTORS

R 408.12201 Scope.

Rule 2201. This part provides for the safe care and use of tractors as defined in this part and used in nonagricultural operations.

History: 1954 ACS 99, p. 111, Eff. June 16, 1979.

R 408.12203 Definitions; A to F.

Rule 2203. (1) "Attachment" means a removable or permanently mounted device on a tractor, such as, but not limited to, sweepers, mowers, blades, forks, front-end loaders, and post-hole diggers.

(2) "Drift" means to move without control.

(3) "Fork-lift tractor" means a high-lift, self-loading tractor equipped with load carriage and forks for transporting and tiering loads.

(4) "Free play" means an uncontrolled movement.

History: 1954 ACS 99, p. 111, Eff. June 16, 1979.

R 408.12205 Definitions; L.

Rule 2205. (1) "Load-axle" means the tractor axle nearest the load.

(2) "Load backrest extension" means a device extending vertically from the fork carriage frame.

(3) "Load-engaging means" means a load-handling device attached to a tractor for the purpose of handling a load.

(4) "Low-profile tractor" means a wheeled tractor possessing all of the following characteristics:

(a) The front wheel spacing is generally equal to the rear wheel spacing, as measured from the centerline of each right wheel to the centerline of the corresponding left wheel.

(b) The clearance from the bottom of the tractor chassis to the ground is not more than 18 inches.

(c) The highest point of the hood is not more than 60 inches.

(d) The tractor is designed so that the operator, when seated, straddles the transmission.

History: 1954 ACS 99, p. 111, Eff. June 16, 1979.

R 408.12206 Definitions; M to P.

Rule 2206. (1) "Mast" means a support member providing the guideways permitting vertical movement of the carriage. It is usually constructed in the form of channels or similar sections and provides the supporting pathway for the carriage rollers.

(2) "Nonagricultural operations" means work activity other than that designated in major groups 01 and 02, that is, agricultural production of crops and livestock of the standard industrial classification manual, United States bureau of the budget, 1972 edition, and includes any practices other than those performed by a farmer, or on a farm, as an incident to, or in conjunction with, such farming operations. Examples of nonagricultural operations are landscaping, groundskeeping, roadway maintenance, construction services, loading, and digging.

(3) "Operator" means an employee who has been trained and authorized by the employer or his designated representative to operate a tractor.

(4) "Overhead guard" means a framework fitted to a tractor over the head of a riding operator to protect the operator from falling objects.

(5) "Parking brake" means a device to prevent the movement of a parked tractor.

History: 1954 ACS 99, p. 111, Eff. June 16, 1979.

R 408.12207 Definitions; R to T.

Rule 2207. (1) "ROPS" means a rollover protective structure. ROPS may be a protective frame or a protective enclosure mounted to a tractor.

(2) "Self-loading" means the capability of a tractor to pick up, carry, set down, and, in case of high-lift types, to stack or tier its load without the aid of external means.

(3) "Service brake" means a device designed to bring a moving tractor to a halt.

(4) "Tractor" means 1 of the following:

(a) "Agricultural-type tractor" means a 2- or 4-wheel-drive vehicle of more than 20 engine horsepower and designed to furnish the power to pull, carry, propel, or drive attachments primarily intended for use in agricultural operations.

(b) "Industrial tractor" means a 2- or 4-wheel-drive vehicle of more than 20 engine horsepower designated as an industrial tractor by the manufacturer, but

having the appearance of an agricultural tractor, and designed to furnish the power to pull, carry, propel, or drive attachments primarily intended for industrial use.

(5) "Tiering" means a process of placing a load on or above another load.

(6) "Tractor weight" means the combined weight of the protective frame or enclosure, all fuels, and other components required for the normal use of the tractor.

History: 1954 ACS 99, p. 111, Eff. June 16, 1979.

R 408.12211 Labels.

Rule 2211. Painted or affixed information necessary for the safe operation of a tractor and an attachment, when in use, shall be in a legible condition.

History: 1954 ACS 99, p. 112, Eff. June 16, 1979.

R 408.12212 Modifications.

Rule 2212. (1) An additional counterweight, excluding wheelweights, or other counterweights supplied by the manufacturer and used as recommended, shall not be installed on a tractor by the employer without written assurance from the manufacturer of the tractor that the stability of the tractor is maintained.

(2) Other modifications affecting the tractor's capacity or safety shall not be made without written approval of the manufacturer, the special equipment manufacturer, or an engineer knowledgeable on the subject. Capacity, operation, and maintenance instruction plates, tags, or decals shall be changed accordingly.

History: 1954 ACS 99, p. 112, Eff. June 16, 1979.

R 408.12213 Parking brakes.

Rule 2213. A tractor shall be equipped with a parking brake or parking lock capable of holding the tractor on the maximum grade that the tractor can negotiate with rated load, or on a 15% grade, whichever is lesser. The parking brake or parking lock shall be manually or automatically applied and shall remain applied until released by the operator.

History: 1954 ACS 99, p. 112, Eff. June 16, 1979.

R 408.12214 Backhoe-equipped tractors.

Rule 2214. If a tractor is equipped with a backhoe, outriggers shall be provided and used, when necessary, to maintain stability.

History: 1954 ACS 99, p. 112, Eff. June 16, 1979.

R 408.12215 Load-handling controls; identification; single lever.

Rule 2215. (1) A load-handling control on a tractor shall be identified to indicate its function and the direction of the motion of the load or equipment.

(2) A single lever may be used to perform more than 1 function. Push-button or pre-selected controls shall be properly identified.

History: 1954 ACS 99, p. 112, Eff. June 16, 1979.

R 408.12216 Overhead guards.

Rule 2216. (1) When a load is lifted higher than the head of the operator, and the load creates a hazard to the operator, or when the operator is endangered by a hazard of falling objects other than the load, an overhead guard shall be provided. The overhead guard shall be as prescribed in SAE-J167A, overhead protection for agricultural tractors standard, which is incorporated herein by reference. This

standard may be inspected at the Lansing office of the department of labor. The standard may be purchased at a cost of 50 cents from the Society of Automotive Engineers, 400 Commonwealth Drive, Warrendale, Pennsylvania 15096, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(2) The overhead guard shall be constructed in a manner that minimizes interference with the driver's horizontal visibility. The overhead guard may be constructed of a solid material. If a grid or mesh is used, a 1.5-inch diameter circle shall be the maximum circle that can be inserted between the elements of the grid or mesh. The guard shall be large enough to extend over the operator under all normal circumstances of tractor operation, including forward or rearward tilt of the mast.

(3) On a tractor, a vertical clearance of not less than 39 inches should be maintained from the point of maximum depression of the operator's seat to the underside of the section of the overhead guard under which the operator's head moves during normal operation.

(4) Where headroom conditions limit the overall lowered height of the tractor, the normal clearance height may be reduced if the operator wears safety head protection as prescribed in Part 32. Head Protection, being R 408.13201 et seq. of the Michigan Administrative Code.

History: 1954 ACS 99, p. 112, Eff June 16, 1979.

R 408.12217 Operation of tractor on slope; ROPS requirements; remounting; labeling.

Rule 2217. (1) After January 1, 1980, an employer shall not permit a tractor to be operated on a slope that could cause the tractor to overturn, unless the tractor is equipped with a ROPS. A low-profile tractor that is used where the vertical clearance is insufficient to allow a ROPS-equipped, low-profile tractor to operate, and where it is used inside a building, is excepted from this requirement.

(2) A ROPS for a wheel-type tractor shall meet the test and performance requirements of the federal occupational safety and health administration, 29 C.F.R. 1928.52 and 1928.53 of the April 25, 1975, Federal Register; 29 C.F.R. 1926.1001 and 1926.1002 of the June 3, 1974, Federal Register, which are incorporated herein by reference, and are available for inspection at the Lansing office of the department of labor. The Federal Register for the above dates is available from the Superintendent of Documents, Washington, D.C. 20402, at a cost of 75 cents each, or the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909, at a cost of 20 cents each.

(3) If a ROPS is removed for any reason, it shall be remounted before the tractor is operated so as to meet the requirements of this rule.

(4) Each ROPS shall have permanently affixed to it a label that states:

(a) Manufacturer's or fabricator's name and address.

(b) ROPS model number, if any.

(c) Tractor make, model, or series number that the ROPS is designed to fit.

(d) That the ROPS model was tested in accordance with the requirements of 29 C.F.R. 1928.52, 29 C.F.R. 1928.53, or 29 C.F.R. 1926.1001 as incorporated herein by reference.

History: 1954 ACS 99, p. 113, Eff. June 16, 1979.

R 408.12218 Construction of seat belts.

Rule 2218. An employer shall equip each tractor having a ROPS with a seat belt which meets the requirements of the standard, SAE-J4C-1965, motor vehicle

seat belt assemblies, except as noted in R 408.12252(2) and (3). This standard is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.20 from the Society of Automotive Engineers, 400 Commonwealth Drive, Warrendale, Pennsylvania 15096, or the Michigan Department of Labor, 7150 Harris Drive, Box 40015, Lansing, Michigan 48909.

History: 1954 ACS 99, p. 113, Eff. June 16, 1979.

R 408.12219 Protection from spillage, pinch points, and power take-offs.

Rule 2219. (1) Covers, caps, and breathers for batteries, fuel tanks, oil reservoirs, and coolant systems shall be kept in place.

(2) Any pinch point or shear point created by the tractor or the attachments, or both, that creates a hazard, to which an operator in the normal operating position is exposed, shall be guarded.

(3) A tractor having a power take-off shaft shall be equipped with a master shield on the power take-off shaft, except as permitted in subrule (4). The shield shall have a strength capable of preventing permanent deformation when a 250-pound operator mounts or dismounts the tractor using the shield as a step.

(4) Power take-off-driven equipment shall be guarded to prevent employee contact with the positively driven, rotating member of the power-driven system. Where power take-off-driven equipment is of a design requiring the removal of the master shield, the attaching equipment shall include protection from that portion of the tractor power take-off shaft that protrudes from the tractor.

History: 1954 ACS 99, p. 113, Eff. June 16, 1979.

R 408.12220 Restriction of use.

Rule 2220. (1) Except as provided in subrule (2), a tractor shall not be used in an environment that is likely to contain an ignitable mixture of gases, vapors, dusts, or fibers.

(2) A tractor used in a hazardous environment, as noted in subrule (1), shall be equipped and labeled as prescribed in the national fire protection association standard, 505-1975, type designations, areas of use, maintenance, and operation of powered industrial trucks, incorporated herein by reference. This standard is available for inspection at the Lansing office of the department of labor. The standard may be purchased at a cost of $2.75 from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(3) A tractor with an internal combustion engine shall not be operated in a building or enclosed area unless ventilation is provided which reduces the concentration of toxic gases below the maximum allowable limits as set by the Michigan department of public health.

History: 1954 ACS 99, p. 113, Eff. June 16, 1979.

R 408.12231 Operator selection.

Rule 2231. (1) An employee assigned to operate a tractor shall meet the following minimum requirements:

(a) Have corrected vision that meets the requirements for a valid Michigan driver's license. Evidence of meeting this requirement shall be a Michigan driver's license or a doctor's certificate.

(b) Have effective use of all 4 limbs.

(c) Be of a height sufficient to operate the controls and to have an unobstructed view over the controls and dashboard.

(d) Have coordination between eyes, hands, and feet.

(e) Have freedom from known convulsive disorders or episodes of unconsciousness.

(f) Have the hearing ability to hear and understand conversational levels of sound in an ordinary office environment.

(g) Have the ability to understand signs, labels, and instructions.

(2) An employee who operates a tractor at the effective date of this part and who does not meet the requirements of subdivisions (a), (b), (c), (d), (f), and (g) of subrule (1) may be continued as an operator if the handicap or inability does not prove detrimental to the task.

History: 1954 ACS 99, p. 114, Eff. June 16, 1979.

R 408.12232 Training.

Rule 2232. An employer or his designated representative shall provide training to an employee prior to the employee's assignment as an operator of a tractor. Instruction shall include the following:

(a) Capabilities of the equipment and attachments.

(b) Purpose, use, and limitations of controls.

(c) How to make daily checks.

(d) Practice operating assigned tractors through the functions necessary to perform the required jobs.

(e) Use of seat belts.

History: 1954 ACS 99, p. 114, Eff. June 16, 1979.

R 408.12233 Testing.

Rule 2233. Before an employer or his designated representative authorizes an employee to operate a tractor, the employee shall demonstrate his ability to satisfactorily operate a tractor to the employer.

History: 1954 ACS 99, p. 114, Eff. June 16, 1979.

R 408.12234 Permits.

Rule 2234. An employer shall establish a procedure that assures that an employee is trained and qualified to operate a tractor prior to authorizing the employee to operate a tractor. A permit system may be used to comply with this rule.

History: 1954 ACS 99, p. 114, Eff. June 16, 1979.

R 408.12235 Mechanical condition and maintenance.

Rule 2235. (1) Repair or service work shall not be performed on tractors or attachments while the engine is running, except to make those adjustments that cannot otherwise be made.

(2) A ROPS structure shall not be welded, machined, or otherwise modified unless an engineer qualified in this field, a recognized testing laboratory, or the original manufacturer certifies that the welding, machining, or modification will not alter the original strength rating.

(3) An employer shall not permit a tractor to be used if any of the following conditions exist:

(a) The service or parking brakes do not perform their intended function.

(b) The fuel system leaks.

(c) A lift cylinder of a load-engaging means allows a downward drift of the load-engaging means, loaded or unloaded, in excess of 5 inches in 5 minutes.

(d) A hydraulic system leaks and creates a hazard for an employee or equipment in the area.

(e) The tractor runs in excess of normal operating temperature thereby creating a hazardous condition.

(4) Repairs to a tractor shall not be made in a location made hazardous by the following conditions:

(a) Flammable gases or vapors.

(b) Combustible dusts.

(c) Ignitable fibers.

(5) A replacement part that affects the safety of the operation of the tractor shall provide not less than the equivalent safety of the original part.

(6) All repairs and modifications shall be made by authorized and qualified personnel.

(7) Before servicing or repairing a hydraulic system of a tractor the pressure of the system shall be relieved.

History: 1954 ACS 99, p. 114, Eff. June 16, 1979.

R 408.12236 Blocks and safety stands.

Rule 2236. An employer shall provide and require the use of blocks or safety stands as a secondary support for tractors or attachments elevated from the floor by a floor jack, hoist, or chain fall.

History: 1954 ACS 99, p. 115, Eff. June 16, 1979.

R 408.12237 Fuel.

Rule 2237. (1) An employer shall provide and require the use of approved safety fuel cans where tractors are refueled with gasoline at other than a gas pump area or tank wagon.

(2) A tractor shall not be refueled while the engine is running or while a source of ignition is within 25 feet of the tractor. Spilled fuel shall be carefully washed away or completely evaporated, and the fuel tank cap replaced before restarting the engine.

History: 1954 ACS 99, p. 115, Eff. June 16, 1979.

R 408.12239 Lift platforms.

Rule 2239. (1) An employee shall not be lifted by a fork-lift tractor, except when a platform is attached to the forks by enclosed sleeves and a safety chain, or other mechanical device, in such a manner that the platform cannot tip or slip.

(2) A platform shall be equipped with a top railing approximately 42 inches high, an intermediate rail, and a toeboard. The railing shall consist of 1 of the following materials:

(a) Wood posts of at least 2 x 4 inches nominal stock, the top rail shall be made of 2 right angle pieces of not less than 1 x 4 inch nominal stock and an intermediate rail of 1 x 4 inch nominal stock.

(b) Steel or aluminum pipe posts and rails with an inside diameter of not less than 1 inch and an intermediate rail of ¾-inch inside-diameter pipe.

(c) Structural steel or aluminum posts, rails, and intermediate rails of angle iron of not less than 1 x 1 x 3/16 inch size, or other shapes of equal strength.

(3) The toeboard shall be made of not less than 1 inch x 4 inch nominal wood stock or a material of equal strength.

(4) The intermediate rail may be omitted from 1 side if necessary to perform the work.

(5) Any pinch point or shear point on the lifting mechanism to which an employee on the lift platform is exposed shall be guarded.

(6) An employee shall not be transported in a front-end loader bucket.

History: 1954 ACS 99, p. 115, Eff. June 16, 1979.

R 408.12240 Load backrest extensions.

Rule 2240. A load backrest extension shall be used on a fork-lift tractor whenever necessary to minimize the possibility of a load, or part of it, falling rearward.

History: 1954 ACS 99, p. 115, Eff. June 16, 1979.

R 408.12241 Spinner knobs.

Rule 2241. A spinner knob shall not be attached to a steering wheel on a tractor.

History: 1954 ACS 99, p. 115, Eff. June 16, 1979.

R 408.12242 Signs, lights, and warning devices.

Rule 2242. (1) A tractor that is operated on a public street or road shall display a slow moving vehicle sign, as prescribed in rule 3721 of Part 37. Accident Prevention Signs and Tags, being R 408.13721 of the Michigan Administrative Code. The tractor shall be equipped with an amber flashing or rotating light visible from 360 degrees.

(2) A tractor that is operated between dawn and dusk on a public street or road, or in an area where general lighting is less than 2 footcandles, shall be equipped with headlights and a taillight.

(3) Where an employee's safety may be affected, a tractor used in areas where general lighting is less than 2 footcandles shall be equipped with auxiliary lights that illuminate the work in progress.

History: 1954 ACS 99, p. 115, Eff. June 16, 1979.

R 408.12243 Tractor inspection; reporting defects.

Rule 2243. (1) A tractor shall be visually inspected prior to each shift to assure that there are no visible defects which would adversely affect the safe operation of the tractor and to assure that the prescribed safety devices are in place and functional.

(2) A tractor having any safety defects shall be reported to the supervisor for appropriate action.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12251 Operating rules generally.

Rule 2251. (1) At the start of his shift, the operator of a tractor shall perform those checks of his equipment required by R 408.12243.

(2) An operator shall not drive a tractor up to anyone who is standing in front of any fixed object.

(3) An operator shall not allow anyone to stand or pass under the elevated portion of any tractor or its attachment.

(4) An operator shall not put his arms or legs outside of the moving wheels of a tractor.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12252 Seat belt use.

Rule 2252. (1) An employee operating a tractor equipped with ROPS shall be required to wear a seat belt when the tractor is moving on a slope or under other

conditions that affect its stability. The seat belt shall be adjusted so that it secures the operator to the seat.

(2) Where a suspended seat is used, the seat belt shall be fastened to the moveable portion of the seat to accommodate the ride-motion of the operator.

(3) Any seat belt hardware or webbing with defects that adversely affect the purpose of the seat belt shall be repaired or replaced.

(4) No one except the operator shall ride on a tractor unless a seat is provided. Where ROPS is required, the seat shall be within the ROPS and a seat belt shall be worn to secure the rider to the seat.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12253 Parking.

Rule 2253. (1) When the tractor is temporarily parked within the vision of or within 25 feet of the operator, the operator shall neutralize the controls and set the parking brake or park lock.

(2) When a tractor is parked overnight or is left unattended, the power shall be shut off and the controls and attachments set so as to preclude any motion.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12254 Path of travel; clear access.

Rule 2254. (1) Before moving or stacking materials, an operator shall observe his path of travel in order to avoid obstacles.

(2) When depositing a load, an operator shall maintain the clear access to fire aisles, to stairways, and to fire equipment.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12255 Reporting accidents.

Rule 2255. A tractor operator shall promptly report to his supervisor or other designated person all accidents involving injury to an employee or damage to buildings and equipment.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12259 Repairs; authorization; qualifications.

Rule 2259. An operator shall not make any repairs or adjustments unless specifically authorized and qualified to do so.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12260 Operation.

Rule 2260. (1) An operator shall do the following:

(a) Operate a tractor according to the rules of this part and in accordance with local traffic rules when on a public road.

(b) Look in the direction of and keep a clear view of the direction of travel.

(c) Travel with the load-engaging means elevated only sufficiently to clear obstacles on floor or roadway.

(d) Start, stop, and turn in a manner that will prevent a load from shifting or overturning the tractor.

(e) Drive at a slow speed over wet or slippery surfaces.

(2) Stunt driving and horseplay shall not be permitted.

(3) Before starting a tractor equipped with a power take-off shaft that is attached to equipment, the power take-off shall be disengaged when an unexpected start-up of the attachment could be hazardous.

(4) The operator shall disengage power to any power take-off attachment when it is not in use.

(5) The operator of a tractor shall transport a load in a bucket or front-end loader with the attachment in the lowest possible position.

History: 1954 ACS 99, p. 116, Eff. June 16, 1979.

R 408.12261 Operating on slopes and grades.

Rule 2261. A tractor shall not be operated on a slope or grade unless consideration is given to the type of tractor and attachment, type and condition of the surface, speed and direction of movement, and other factors that may cause the tractor to overturn.

History: 1954 ACS 99, p. 117, Eff. June 16, 1979.

PART 23. HYDRAULIC POWER PRESSES

GENERAL PROVISIONS

R 408.12301 Scope.

Rule 2301. This part applies to power presses which shear, punch, form, or assemble metal or any other material by means of tools or dies attached to plungers or slides, commonly referred to as hydraulic power presses. This part does not apply to mechanical power presses, air-powered presses, press brakes, bulldozers, hot-metal presses, forging hammers, hot-bending presses, tube-bending machines, molding machines, welder presses, riveting or similar fastener machines, nut clinching machines, metal stitching machines, 4 slide machines, or a hydraulic press for nonproductive straightening or for the assembly or the removal of items such as cutting tools, bearings, or bushings from spindles, shafts, axles, or housings.

History: 1954 ACS 65, p. 28, Eff. Nov. 15, 1970; 1954 ACS 87, p. 48, Eff. May 4, 1976.

R 408.12303 Definitions; A.

Rule 2303. (1) "Adjustable press-barrier device" means an enclosure that permits adjustment for each job or die setup.

(2) "Anti-creep device" means an attachment installed on the feet of a press, which prevents the press from moving across the floor.

(3) "Automatic feeding or ejection" means placing material or a part within, or removing it from, the point of operation by a method or device that does not require an action by an operator at each stroke of the slide.

(4) "Automatic press" means a press equipped with automatic feeding and ejection, and operated in a continuous mode.

History: 1954 ACS 65, p. 28, Eff. Nov. 15, 1970; 1954 ACS 68, p. 45, Eff. Sept. 15, 1971; 1954 ACS 87, p. 48, Eff. May 4, 1976.

R 408.12304 Definitions; C.

Rule 2304. (1) "Concurrent" means acting in conjunction, not necessarily simultaneously, and is used to describe a situation wherein 2 or more controls exist in an operated condition at the same time.

(2) "Counterbalance" means a mechanism used to balance or support the weight of the slide and upper dies.

History: 1954 ACS 65, p. 28, Eff. Nov. 15, 1970; 1954 ACS 68, p. 45, Eff. Sept. 15, 1971; 1954 ACS 87, p. 48, Eff. May 4, 1976.

R 408.12305 Definitions; D, E.

Rule 2305. (1) "Die-enclosure guard" means an enclosure attached to the die shoe, punch shoe or bolster, and fixed in position.

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(2) "Die set" means a unit consisting of a lower die shoe and an upper die shoe or punch holder. It is essentially a tool holder held in correct alignment by heel blocks, guide pins or posts, and bushings.

(3) "Die-setting" means the process of placing dies in, or removing dies from, a hydraulic press, and the process of adjusting dies, other tooling, and safeguarding means to cause them to function properly and safely.

(4) "Die shoe" means a plate or block on which die sections and details are mounted. A die shoe functions primarily as a base for the complete die assembly, and, when used, is bolted or clamped to the bolster plate or slide.

(5) "Ejector" means a device for removing work or material from between dies.

History: 1954 ACS 65, p. 26, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971; 1954 ACS 87, p. 48, Eff. May 4, 1976.

R 408.12306 Definitions; E.

Rule 2306. (1) "Ejector" means a device for removing work or material from between dies.

(2) "Electronic-control device" means a device so designed and controlled that when the operator's hand or any other part of his body is within the point of operation, the press cannot be tripped, and if the hand or any other part of the operator's body is inserted into the point of operation area while the slide is descending, the device shall automatically stop the slide. Such a device may employ active circuit elements such as vacuum tubes, gas tubes, or semiconductor amplifiers (but not magnetic amplifiers) in conjunction with passive circuit elements such as transformers, inductors, capacitors, resistors or magnetic device operating coils.

History: 1954 ACS 65, p. 27, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971.

R 408.12307 Definitions; F.

Rule 2307. (1) "Face of the slide" means the surface of the slide (ram) to which the punch or die is usually attached.

(2) "Fixed barrier guard" means a die enclosure attached to the press frame.

(3) "Foot control" means a foot-operated control mechanism which activates a press.

History: 1954 ACS 65, p. 27, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971; 1954 ACS 87, p. 48, Eff. May 4, 1976.

R 408.12308 Definitions; G, H.

Rule 2308. (1) "Gate or movable barrier device" means a movable barrier so arranged that it encloses the point of operation before the press cycle (stroke) can be started.

(2) "Guard" (point of operation) means an enclosure that prevents entry of the operator's hands or fingers into the point of operation. See also definitions of "die enclosure guard," "fixed barrier guard," and "interlocked press barrier guard."

(3) "Hand tool" means a hand-held tool designed for placing material in position between dies or for removal after the material has been processed.

(4) "Hand-tool feeding" means placing material within, or removing it from, the point of operation by use of a hand tool.

(5) "Holdout or restraint device" means a mechanism, including attachments for the operator's hands, that, when anchored and adjusted, prevents the operator's hands from entering the point of operation.

History: 1954 ACS 65, p. 27, Eff. Nov. 15, 1970; 1954 ACS 87, p. 49, Eff. May 4, 1976.

R 408.12309 Definitions; I to M.

Rule 2309. (1) "Interlocked press-barrier guard" means an enclosure which is interlocked so that the press cycle cannot be started normally unless the guard or hinged or movable sections enclose the point of operation.

(2) "Knockout" means a mechanism for releasing material from either die. A stripper or liftout is a type of knockout.

(3) "Manual feeding" means handling by an operator at each stroke of the power press the material or part being processed.

History: 1954 ACS 65, p. 27, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971

R 408.12310 Definitions; P.

Rule 2310. (1) "Pinch point" means any point, other than the point of operation, at which it is possible for a part of the body to be injured by being caught between the moving parts of the press or auxiliary equipment, or between moving and stationary parts of the press or auxiliary equipment, or between the material and moving parts of the press or auxiliary equipment.

(2) "Point of operation" means the area of the press where material is actually positioned, and where work is being performed, during any process such as shearing, punching, or forming.

(3) "Point of operation device" means a press control or attachment that does any of the following:

(a) Restrains the operator from inadvertently reaching into the point of operation.

(b) Prevents normal press operation if the operator's hands are inadvertently within the point of operation.

(c) Automatically withdraws the operator's hands if they are inadvertently within the point of operation as the dies close.

(4) "Presence sensing device" means a device designed, constructed, and arranged to create a sensing field or area, and to deactivate the control of the press when an operator's hand or other part of his body is within such field or area.

(5) "Press," as referred to in this part, means a powered machine, having a liquid energy transfer media that actuates the slide motion toward and away from the bed surface (the slide being guided in a definite path by a frame or cylinder).

(6) "Primary operation" means a preliminary press operation applied to material to be subsequently processed. Examples of primary operation include blanking, piercing, and corner cutting.

(7) "Pull-out device" means a mechanism attached to the operator's hands or arms and connected to the slide or upper die, and designed to withdraw the operator's hands from the point of operation as the slide or upper die descends.

History: 1954 ACS 65, p. 27, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971; 1954 ACS 87, p. 49, Eff. May 4, 1976.

R 408.12311 Definitions; S.

Rule 2311. (1) "Safety block" means a prop that, when inserted between the upper and lower dies or, in absence of a die, between bolster plate and face of the slide, prevents the slide or upper die from falling of its own dead weight.

(2) "Secondary operation" means a press operation in which a preworked part is further processed. This operation includes forming, drawing, and coining.

(3) "Semiautomatic feeding" means placing or removing material or parts within the point of operation, by an auxiliary device, controlled by an operator at each stroke of the press slide.

(4) "Slide" means the main reciprocating press member (also called the ram, plunger, or platen).

(5) "Slide lock device" means a positive mechanical lock or block capable of preventing the slide from closing of its own dead weight.

(6) "Stripper" means a device for removing the material or part from the punch.

(7) "Sweep device" means a single or double arm attached to the slide or upper die of the press, which moves the hands of an operator from within the point of operation as the slide or upper die descends.

History: 1954 ACS 65, p. 28, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971; 1954 ACS 87, p. 49, Eff. May 4, 1976.

R 408.12312 Definitions; T, U.

Rule 2312. (1) "Two-hand control" means an actuation device that requires the concurrent use of both hands of an operator to trip or control the press.

(2) "Unitized tooling" means a type of die in which the upper and lower members are incorporated in a self-contained unit so arranged as to hold the die members in alignment.

History: 1954 ACS 65, p. 28, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971; 1954 ACS 87, p. 50, Eff. May 4, 1976.

R 408.12316 Duties of employer.

Rule 2316. The employer shall:

(a) Use dies or operating methods, or both, designed to control or eliminate hazards to operating personnel.

(b) Furnish, and require the use of, a hand tool for freeing and removing stuck work or scrap pieces from the die, so that an employee need not reach into the point of operation for such purposes.

History: 1954 ACS 87, p. 50, Eff. May 4, 1976.

GUARDING

R 408.12321 Safeguarding in general at point of operation.

Rule 2321. (1) Where operator exposure exists, a press shall be equipped and operated with a point of operation guard or a point of operation protection device for every press operation performed, except where the point of operation is limited to an opening of ¼ inch or less.

(2) One or more means of safeguarding a press operator at the point of operation shall be provided and used on a press, depending upon the method of feeding and in accordance with table 1.

(3) During die tryout, R 408.12322 to R 408.12341 and R 408.12365 do not apply.

TABLE 1

Method of Feeding Press	Safeguarding Required
A. Automatic feed Automatic roll feed Automatic push, pull, transfer, or dial feed	Fixed barrier guard, or die enclosure guard, or gate or movable barrier device, or interlocked press barrier, or an operating device that assures press action will be stopped before the operator can reach into the point of operation.[1]
B. Semiautomatic feed Chute feed (both gravity and follow feed) Slide or push feed Sliding dies Dial feed Revolving dies	Fixed barrier guard, or die enclosure guard, or gate or movable barrier device, or 2-hand control.

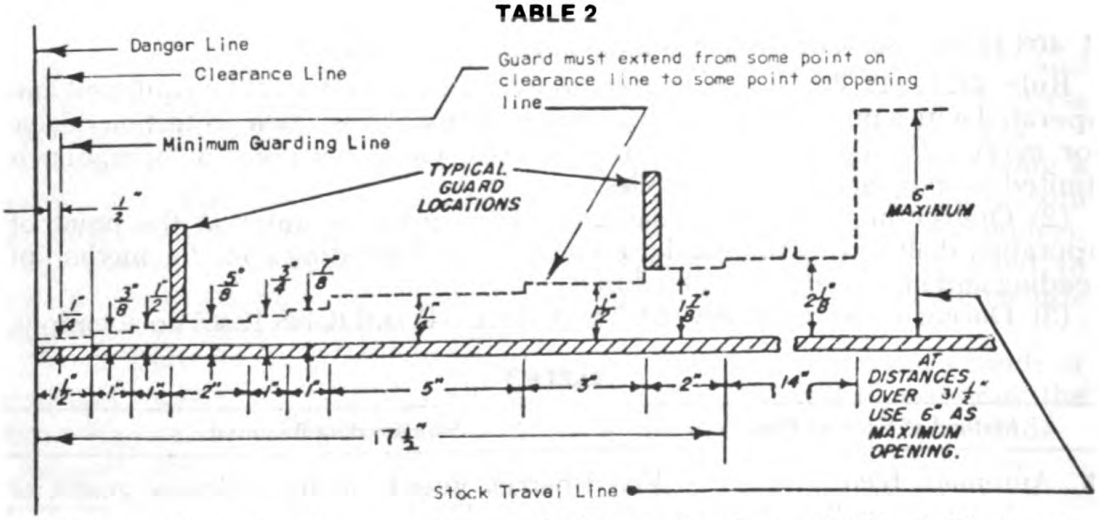
TABLE 1 (Cont.)

Method of Feeding Press	Safeguarding Required
C. Manual feed	Fixed barrier guard, or die enclosure guard, or gate or movable barrier device, or sweep device, or pull out device, or restraint device, or electronic control device, or 2-hand control.

[1]Where 2 or more presses are used in in-line operations with automatic loading and unloading equipment, either the safeguards required in "A" or an interlocked enclosure shall be used in conjunction with each press.

History: 1954 ACS 65, p. 28, Eff. Nov. 15, 1970; 1954 ACS 68, p. 46, Eff. Sept. 15, 1971; 1954 ACS 87, p. 50, Eff. May 4, 1976.

R 408.12322 Point of operation guards.



Rule 2322. (1) A point of operation guard shall be reliable in construction, application, and adjustment, and shall be attached to the press or to the die. The guard itself shall not offer any hazard and shall be so designed and constructed as to facilitate inspection and minimize the possibility of removing or misusing essential parts.

(2) The guard shall be designed and constructed in accordance with table 2, except as prescribed in subrule (3), to prevent entry of an operator's hand or fingers within the point of operation.

(3) A barrier guard may have feed holes for the stock which shall be of such size and distance from the die as to prevent entry of a hand or finger of each operator into the point of operation or other nip points.

(4) A guard shall be installed, maintained, and adjusted to provide safe operation.

TABLE 2

This diagram shows the safe openings between the bottom edge of a guard and feed table at various distances from the danger line.

The various openings are such that for average size hands they do not permit the operator's fingers to reach the nip zone even though the guard contact is on the back of the fingers, hand or forearm.

Any barrier extending from the dotted opening line to the clearance line will create a wedging of the fingers, hand or forearm between the barrier and the feed table preventing movement of the fingers to the danger line.

The clearance line marks the distance required to prevent contact between guard and moving parts.

The minimum guarding line is the distance between the infeed side of the guard and danger line. Recommended minimum distance is ½" from the danger line.

CAUTION: When installing guards with openings over ¼" careful tests should be made by operators who have small hands to make certain the guard is effective before the machine is operated. Check also for stability of mounting and rigidity of construction.

TABLE 2A

Distance of Opening From Point of Operation Hazard	Maximum Width of Opening
½" to 1½"	¼"
1½" to 2½"	⅜"
2½" to 3½"	½"
3½" to 5½"	⅝"
5½" to 6½"	¾"
6½" to 7½"	⅞"
7½" to 12½"	1¼"
12½" to 15½"	1½"
15½" to 17½"	1⅞"
17½" to 31½"	2⅛"
31½" or greater	6"

This chart shows the distances that guards shall be positioned from the danger line in accordance with the required feed openings.

History: 1954 ACS 65, p. 28, Eff. Nov. 15, 1970; 1954 ACS 68, p. 47, Eff. Sept. 15, 1971; 1954 ACS 87, p. 50, Eff. May 4, 1976; 1954 ACS 101, p. 57, Eff. Sept. 21, 1979.

R 408.12323 Die-enclosure and fixed barrier guards.

Rule 2323. (1) A die-enclosure guard shall be attached to the die shoe or stripper or bolster in a fixed position and shall be so designed and constructed that the operator cannot reach over, under or around the guard and into the point of operation.

(2) At least a 1-inch clearance shall be provided between the top edge of the guard and the slide or any projection thereon, to prevent a shearing hazard caused by slide travel. The guard shall extend at least 1 inch above the bottom of the slide at the top of the stroke in order to prevent a shearing hazard.

(3) The guard shall afford at least 50% die visibility where visibility is necessary for proper placement of materials and permit easy feeding of the stock through openings in accordance with table 2. Where rods are used, they shall be vertical.

(4) A fixed barrier guard shall enclose the point of operation in accordance with table 2 and shall be secured to the press frame, die or bolster by fasteners that would discourage removal by unauthorized personnel.

(5) A die enclosure or fixed barrier guard that does not meet the requirements of R 408.12322 to R 408.12324 and table 2 shall be used only with point of operation devices prescribed in R 408.12325 to R 408.12341.

History: 1954 ACS 65, p. 30, Eff. Nov. 15, 1970; 1954 ACS 68, p. 47, Eff. Sept. 15, 1971.

R 408.12324 Interlocked press-barrier guards.

Rule 2324. An interlocked press-barrier guard, when required by table 1 shall enclose the die space or work area, and shall be so interlocked that the slide cannot be actuated unless the guard or hinged or moveable section is in position in accordance with table 2.

History: 1954 ACS 65, p. 30, Eff. Nov. 15, 1970; 1954 ACS 68, p. 48, Eff. Sept. 15, 1971; 1954 ACS 87, p. 52, Eff. May 4, 1976.

R 408.12325 Point of operation devices.

Rule 2325. (1) A point of operation device differs from a guard inasmuch as it allows the operator access to the point of operation for loading and unloading the die. It either prevents actual operation until the hands are removed or removes the hands from the point of operation as the press slide descends. A point of operation

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

device may be a barrier device, which does not meet the requirements outlined in R 408.12322 to R 408.12324.

(2) A point of operation device shall be so designed, constructed, and located as to prevent, during normal operations, employee's hands or fingers from remaining within the point of operation during downward movement of the slide.

History: 1954 ACS 65, p. 30, Eff. Nov. 15, 1970; 1954 ACS 68, p. 48, Eff. Sept. 15, 1971; 1954 ACS 80, p. 56, Eff. Sept. 11, 1974; 1954 ACS 87, p. 52, Eff. May 4, 1976.

R 408.12326 Adjustable press-barrier devices.

Rule 2326. (1) An adjustable press-barrier device shall be attached to the frame of the press or die shoe and shall have front and side sections adjustable for dies or jobs of any size.

(2) Adjustments shall be verified by qualified and authorized personnel before the press is returned to production. Qualifications for such personnel shall include a knowledge of table 2. With the use of an adjustable press-barrier device, authorized personnel shall be instructed regarding proper adjustments of the device and that these adjustments are an important part of their jobs. An operator shall not be allowed to make any change in the adjustments without approval of supervisory personnel.

(3) Where the adjustable press-barrier device cannot be adjusted to give clearance within the limitations of table 2 (as, for example, for the insertion or removal of an irregularly shaped piece), mechanical feeds, ejectors, and/or other point of operation devices shall be used.

History: 1954 ACS 65, p. 31, Eff. Nov. 15, 1970; 1954 ACS 87, p. 52, Eff. May 4, 1976.

R 408.12327 Gate or movable barrier devices.

Rule 2327. (1) A gate or movable barrier device shall enclose the point of operation before power is transmitted to the slide.

(2) The device shall be interlocked with the press-control circuit so that the downward motion of the slide cannot begin until the device encloses the point of operation.

History: 1954 ACS 65, p. 31, Eff. Nov. 15, 1970; 1954 ACS 87, p. 52, Eff. May 4, 1976.

R 408.12331 Two-hand controls.

Rule 2331. (1) A 2-hand control shall require the application of both hands to operate the press, and shall require concurrent pressure on both controls until a point is reached in the downward stroke where the die opening is such that the operator cannot remove his hands and place them within the point of operation. Removal of 1 hand or both hands, before the closing portion of the cycle, shall either stop the slide or return the slide to its starting position.

(2) Two-hand controls for single-stroke operation, manufactured and installed on or after August 31, 1971, shall be designed to require release of all operator's hand controls before a second stroke can be initiated.

(3) Controls for more than 1 operating station shall be designed to be activated and deactivated in complete sets of 2-hand controls per operating station by means capable of being supervised by the employer.

(4) If foot control is provided, the selection method between hand and foot control shall be separated from the stroking selector, and shall be designed so that the selection may be supervised by the employer.

(5) A 2-hand control may be a mechanically, pneumatically, or electrically controlled system.

(6) A 2-hand control shall be installed to prevent "bridging" controls, and so that it can be operated by 2 hands only.

Digitized by Google

(7) In a press operation requiring more than 1 operator, a set of 2-hand controls shall be provided for each operator. However, a foot control may be used with 2-hand controls if arranged to operate concurrently (otherwise, no cycle) and if the operator is not exposed to the point of operation.

(8) If each of the operating stations is provided with a lockout arrangement, provision shall be made to prevent an unintentional press cycle when all of the operating controls are locked out.

History: 1954 ACS 65, p. 31, Eff. Nov. 15, 1970; 1954 ACS 68, p. 48, Eff. Sept. 15, 1971; 1954 ACS 87, p. 52, Eff. May 4, 1976.

R 408.12332 Two-hand devices; controls.

Rule 2332. (1) A 2-hand device may be a mechanically, pneumatically or electrically controlled system.

(2) A 2-hand device shall be installed to prevent "bridging" controls, and so that it can be operated by 2 hands only.

(3) In a power press operation requiring more than 1 operator, a set of 2-hand devices shall be provided for each operator. However a foot control may be used with 2-hand devices if arranged to operate concurrently (otherwise, no cycle) and if the operator is not exposed to the point-of-operation. If each of the operating stations is provided with a lockout arrangement, provision shall be made to prevent an unintentional press cycle when all of the operating controls are locked out.

History: 1954 ACS 65, p. 31, Eff. Nov. 15, 1970.

R 408.12334 Pull-out devices.

Rule 2334. (1) A pull-out device shall include attachments for the operator's hands or arms. The attachments shall be connected to the slide or upper die of the press so that the operator's hands or fingers are removed from the point of operation as the slide descends.

(2) Authorized personnel shall be trained and shall be responsible for proper adjustment of the device for each die setup and operator change. They shall make periodic inspections to determine condition of worn and broken parts which shall be replaced before permitting operation.

(3) If more than 1 operator is required on a press, a set of pull-out devices shall be provided for each operator.

(4) Each pull-out device in use shall be visually inspected and checked for proper adjustment at the start of each operator shift, following a new die set-up, and when operators are changed. Necessary maintenance or repair, or both, shall be performed and completed before the press is operated. Records of maintenance shall be kept pursuant to R 408.12373.

History: 1954 ACS 65, p. 31, Eff. Nov. 15, 1970; 1954 ACS 87, p. 53, Eff. May 4, 1976.

R 408.12336 Sweep devices.

Rule 2336. (1) A sweep device shall be activated by the slide or upper die. A sweep device shall be either double or single sweep arms and shall be designed to push the hands out of the point of operation area before, or as, the slide descends. A sweep device activated by any other means shall not be used. The press should be fed right-handedly when the device sweeps from right to left, and if fed left-handedly it should sweep from left to right. If reversed, the sweep device may bend the elbow without removing the hand from the point of operation. A single sweep device shall be provided with a barrier attached to the sweep arm to prevent reaching into the die as the slide descends. A sweep device shall be carefully installed and adjusted so that the sweep is timed with the slide stroke to remove hands before the point of operation is reached.

(2) A sweep device shall be installed so that it will not create an impact hazard or a shear hazard between the sweep arm and the press tie rods, dies, or any other parts of the press or barrier. On fast-acting sweeps the area of contact shall be padded to prevent injury.

(3) A sweep device shall be used only on dies with a point of operation hazard that is not more than 9 inches in width. The die shoes shall not be counted in this measurement unless they or their attachment means create a pinch point when the dies close.

(4) A sweep device shall not be used as a point of operation safeguard after December 31, 1976.

(5) A partial enclosure, conforming to R 408.12326 as to the area of entry which it protects, shall be provided on both sides of the point of operation to prevent the operator from reaching around, or behind, the sweep device and into the point of operation after the dies start to close. The partial enclosure shall not create a pinch point or shear hazard.

History: 1954 ACS 65, p. 32, Eff. Nov. 15, 1970; 1954 ACS 68, p. 48, Eff. Sept. 15, 1971; 1954 ACS 87, p. 53, Eff. May 4, 1976.

R 408.12338 Holdout and restraint devices.

Rule 2338. A holdout or restraint device shall be securely anchored and adjusted so that the operator is restrained from reaching into the point of operation. A set of restraints shall be provided for each operator if more than 1 operator is required on a press.

History: 1954 ACS 65, p. 32, Eff. Nov. 15, 1970; 1954 ACS 87, p. 54, Eff. May 4, 1976.

R 408.12341 Presence sensing devices.

Rule 2341. (1) A presence sensing device shall be so designed and installed that, when the operator's hands or any other part of his body disturbs the sensing field, the downward travel of the slide is prevented or stopped. This device shall not be used as a tripping means.

(2) Equipment shall be installed so that failure of light or photoelectric relay or other energy source makes the press inoperative.

(3) These devices shall not, in themselves, create a physical or organic hazard to the operator.

(4) The safety distance (Ds) from the sensing field to the point of operation shall be greater than the distance determined by the following formula:

Ds = 63 inches/second X TS where:

Ds = minimum safety distance (inches); 63 inches/second = hand speed constant; and

Ts = stopping time of press measured when slide has completed approximately half of the downward stroke.

(5) To protect all areas of entry to the point of operation not protected by the presence sensing device, the partial enclosure shall be used and shall not create a pinch point or shear hazard.

History: 1954 ACS 65, p. 32, Eff. Nov. 15, 1970; 1954 ACS 68, p. 48, Eff. Sept. 15, 1971; 1954 ACS 87, p. 54, Eff. May 4, 1976.

R 408.12343 Hand-feeding tools.

Rule 2343. Hand-feeding tools, such as but not limited to pushers, pliers, pinchers, tweezers, suction discs or magnets, are intended for placing and removing materials, in order to permit safe feeding of material by the operator. Such tools shall not be accepted in lieu of other guards or devices as required in R 408.12321 to R 408.12341.

History: 1954 ACS 65, p. 32, Eff. Nov. 15, 1970.

R 408.12344 Slide lock device.

Rule 2344. (1) When a slide lock device or block is used, an additional point of operation guard or device shall be used to protect the operator before the slide lock device is in position and secures the slide from closing. Visual indication of the operation of the slide lock device shall be provided.

(2) The slide lock device and area of contact with die or slide shall be of such design and strength as not to create an additional hazard.

History: 1954 ACS 87, p. 54, Eff. May 4, 1976.

R 408.12351 Foot pedal.

Rule 2351. The pedal mechanism shall be protected to prevent unintended operation from falling or moving objects, or by accidental stepping onto the pedal.

History: 1954 ACS 65, p. 32, Eff. Nov. 15, 1970; 1954 ACS 87, p. 54, Eff. May 4, 1976.

R 408.12353 Foot-operated pedals.

Rule 2353. (1) Mechanical pedal return springs shall be the compression type, operated on a rod or guided within a hole or tube. If operated on a rod, the inside diameter of the spring shall be no greater than the diameter of the rod, plus ⅛ inch. If guided within a hole or tube, the inside diameter of the hole or tube shall be no greater than the outside diameter of the spring coil, plus ⅛ inch. A spring, in its initial compressed position, shall be so wound that the space between coils is less than the diameter of the wire.

(2) A pedal counterweight, if provided, shall have the path of the travel of the weight enclosed or guarded.

(3) A mechanical foot pedal shall be securely mounted on a press leg where the pedal is an integral part of the press.

History: 1954 ACS 65, p. 32, Eff. Nov. 15, 1970; 1954 ACS 87, p. 54, Eff. May 4, 1976.

R 408.12355 Hand-operated levers.

Rule 2355. (1) A hand lever operated press shall be equipped with a spring latch on the operating lever to prevent premature, accidental tripping.

(2) The operating lever on a hand-tripped press having more than 1 operating station shall be so interlocked as to prevent operation of the press except by concurrent action of all levers.

(3) A guard or device shall be used in conjunction with the hand-operated lever to safeguard the point of operation, or the lever shall be located so that the operator cannot reach into the point of operation.

History: 1954 ACS 65, p. 33, Eff. Nov. 15, 1970; 1954 ACS 87, p. 54, Eff. May 4, 1976.

HYDRAULICS—DIES—SCRAP

R 408.12356 Hydraulic systems.

Rule 2356. A hydraulic pump used as a source of power for a press shall have the capability to sustain the required capacity.

History: 1954 ACS 87, p. 55, Eff. May 4, 1976.

DESIGN, CONSTRUCTION, AND SETTING OF DIES

R 408.12361 Design and construction of dies.

Rule 2361. (1) A die shall be so designed and constructed as to permit the use of guards as required in R 408.12322 to R 408.12324, or to permit safeguarding with point-of-operation devices as required in R 408.12325 to R 408.12341.

(2) Where hand-feeding tools are to be employed, a die shall be designed and constructed to allow easy access to the nest for loading and unloading.

History: 1954 ACS 65, p. 33, Eff. Nov. 15, 1970.

R 408.12363 Ejecting stock and scrap.

Rule 2363. (1) Spring pads or rubber strippers, or equivalent means, shall be provided where required on punching or piercing dies to assure that parts are stripped or knocked out.

(2) Automatic ejection of stock and scrap should be considered during die design.

(3) The employee shall provide means for safely handling scrap from roll feed or random length stock operations. Scrap cutters used in conjunction with scrap handling systems shall be safeguarded pursuant to table 2. Scrap recoil devices may be used instead of scrap cutters.

History: 1954 ACS 65, p. 33, Eff. Nov. 15, 1970; 1954 ACS 68, p. 48, Eff. Sept. 15, 1971; 1954 ACS 87, p. 55, Eff. May 4, 1976.

R 408.12365 Guide pins.

Rule 2365. Where there is exposure to guide pins, spring enclosures or guide-pin covers shall be used if the guide pins separate from the bushing more than ¼ inch. Where dies are guarded in accordance with R 408.12321 to R 408.12324, guide-pin protection is not necessary.

History: 1954 ACS 65, p. 33, Eff. Nov. 15, 1970; 1954 ACS 68, p. 48, Eff. Sept. 15, 1971.

R 408.12366 Unitized tooling.

Rule 2366. When a unitized tooling is used, the opening between the top of the die and face of the slide or striking pad shall be guarded pursuant to the requirements of table 1.

History: 1954 ACS 65, p. 33, Eff. Nov. 15, 1970; 1954 ACS 87, p. 55, Eff. May 4, 1976.

R 408.12367 Die fastening.

Rule 2367. (1) Provision shall be made in both the upper and lower shoes for securely mounting a die to the bolster and slide. Where clamp caps or setscrews are used in conjunction with punch stems, additional means of securing the upper shoe to the slide shall be used.

(2) A die should be handled with equipment of proper capacity and designed for that purpose.

History: 1954 ACS 65, p. 33, Eff. Nov. 15, 1970; 1954 ACS 68, p. 49, Eff. Sept. 15, 1971.

R 408.12369 Die setting.

Rule 2369. (1) A die setting procedure shall be established that will:

(a) Insure that enclosure guards or protective devices are used and properly installed prior to production, and

(b) Require the diesetter or authorized personnel to ascertain that all point of operation safety devices are effective before releasing the press for operation.

(2) Stops shall be provided to prevent losing control of the die while setting or removing the die on an inclined press.

History: 1954 ACS 65, p. 33, Eff. Nov. 15, 1970; 1954 ACS 68, p. 49, Eff. Sept. 15, 1971; 1954 ACS 87, p. 55, Eff. May 4, 1976.

R 408.12370 Die and press repair.

Rule 2370. (1) Repair work to a die while in a press, or mechanical repair work to a press, shall not commence until power to the press pump motor is

disconnected. Where multiple presses use a common power source, other means shall be taken to assure that no press motion can occur to cause an injury.

(2) Safety blocks shall be used when a die is being repaired while in a press.

(3) Means shall be provided to prevent cycling a press with the safety block in place between the upper and lower dies, or between the bolster plate and slide face, unless the safety block is of such design and material as to safely withstand the total press capacity.

History: 1954 ACS 68, p. 49, Eff. Sept. 15, 1971; 1954 ACS 87, p. 55, Eff. May 4, 1976.

TRAINING AND INSPECTION

R 408.12371 Instruction of operators.

Rule 2371. Before starting work on a press and before starting work on an operation with which the operator is not familiar, he shall be carefully instructed in the particular operation and in the safe method of work.

History: 1954 ACS 65, p. 34, Eff. Nov. 15, 1970; 1954 ACS 87, p. 55, Eff. May 4, 1976.

R 408.12372 Die and stock lubrication.

Rule 2372. Brushes, swabs, lubricating rolls, and automatic or manual pressure guns shall be provided so that an operator will not be required to reach between dies to lubricate stock, punches or dies.

History: 1954 ACS 68, p. 49, Eff. Sept. 15, 1971.

R 408.12373 Inspection and maintenance records.

Rule 2373. The employer shall establish and follow a program of periodic and regular inspections of his presses to insure that all their parts, auxiliary equipment, and safeguards are in a safe operating condition and adjustment. The employer shall maintain records of these inspections and the maintenance work performed.

History: 1954 ACS 87, p. 55, Eff. May 4, 1976.

PART 24. MECHANICAL POWER PRESSES

GENERAL PROVISIONS

R 408.12401 Scope.

Rule 2401. This part applies to power presses which shear, punch, form or assemble metal or any other material by means of tools or dies attached to plungers or slides and which are commonly referred to as mechanical power presses. This part does not apply to hydraulic presses, iron workers, press brakes, bulldozers, hot-metal presses, forging hammers, hot-bending presses, molding or riveting machines, welder presses, nut clinching machines, metal stitching machines, or 4 slide machines.

History: 1954 ACS 87, p. 56, Eff. May 1, 1976.

R 408.12403 Definitions; A to C.

Rule 2403. (1) "Adjustable barrier guard" means a barrier requiring adjustment for each job or die setup.

(2) "Anti-repeat" means the part of the clutch/brake control system designed to limit the press to a single stroke if the tripping means is hand operated. Anti-repeat requires release of all tripping mechanisms before another stroke can be initiated. "Anti-repeat" is also called single stroke reset or reset circuit.

(3) "Automatic feeding" means feeding wherein the material or part being processed is placed within or removed from the point of operation by a method or means not requiring action by an operator on each stroke of the press.

(4) "Bolster plate" means the plate attached to the top of the bed of the press having drilled holes or T-slots for attaching the lower die or die shoe.

(5) "Brake" means the mechanism used on a mechanical press to stop, hold, or both, the crankshaft, either directly or through a gear train, when the clutch is disengaged.

(6) "Brake monitor" means a sensor designed, constructed, and arranged to monitor the effectiveness of the press braking system.

(7) "Clutch" means the coupling mechanism used on a mechanical press to couple the flywheel to the crankshaft, either directly or through a gear train. See R 408.12404(9), R 408.12405(7), and R 408.12407(4).

(8) "Concurrent" means acting in conjunction, not necessarily simultaneously, and is used to describe a situation wherein 2 or more controls exist in an operated condition at the same time.

(9) "Continuous" means uninterrupted multiple strokes of the slide without intervening stops (or other clutch control action) at the end of individual strokes.

(10) "Control system" means the combination of controls having effect on the cycling or stopping of the ram where the safety of the operator would be influenced.

(11) "Counterbalance" means the mechanism that is used to balance or support the weight of the connecting rods, slide, and slide attachments.

History: 1954 ACS 87, p. 56, Eff. May 1, 1976.

R 408.12404 Definitions; D.

Rule 2404. (1) "Device" means a press control or attachment that performs any 1 of the following functions:

(a) Restrains the operator from inadvertently reaching into the point of operation.

(b) Prevents normal press operation if the operator's hands are inadvertently within the point of operation.

(c) Automatically withdraws the operator's hands if the operator's hands are inadvertently within the point of operation as the dies close. See R 408.12406(1) and (5), R 408.12407(7) and (9), R 408.12408(10), and R 408.12409(3).

(2) "Die" means the tooling used in a press for cutting or forming material. An upper and a lower die make a complete set.

(3) "Die builder" means a person who builds dies for presses.

(4) "Die enclosure guard" means an enclosure attached to the die shoe or stripper, or both, in a fixed position.

(5) "Die set" means a tool holder held in alignment by guide posts and bushings and consisting of a lower shoe, an upper shoe or punch holder, and guide posts and bushings.

(6) "Die setter" means an individual who places dies in, or removes dies from, mechanical presses, and who, as a part of his duties, makes the necessary adjustments to cause the tooling to function properly and safely.

(7) "Die setting" means the process of placing dies in, or removing dies from, a mechanical press, and the process of adjusting the dies, other tooling, and safeguarding means to cause them to function properly and safely.

(8) "Die shoe" means a plate or block upon which a die holder is mounted. A die shoe functions primarily as a base for the complete die assembly, and, when used, is bolted or clamped to the bolster plate or the face of slide.

(9) "Direct drive" means the type of driving arrangement wherein no clutch is used (coupling and decoupling of the driving torque is accomplished by energization and deenergization of a motor). Even though not employing a clutch,

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

direct drives match the operational characteristics of "part revolution clutches" because the driving power may be disengaged during the stroke of the press.

History: 1954 ACS 87, p. 56, Eff. May 1, 1976.

R 408.12405 Definitions; E, F.

Rule 2405. (1) "Ejector" means a mechanism for removing work or material from between the dies.

(2) "Face of slide" means the bottom surface of the slide to which the punch or upper die is generally attached.

(3) "Feeding" means the process of placing material within, or removing material from, the point of operation. See R 408.12403(3), R 408.12407(2), and R 408.12408(3).

(4) "Fixed barrier guard" means a die space barrier attached to the press frame.

(5) "Foot control" means the foot-operated control mechanism designed to be used with a clutch or clutch/brake control system.

(6) "Foot pedal" means the foot-operated lever designed to operate the mechanical linkage that trips a full revolution clutch.

(7) "Full revolution clutch" means a type of clutch that, when tripped, cannot be disengaged until the crankshaft completes a full revolution and the press slide completes a full stroke.

History: 1954 ACS 87, p. 57, Eff. May 1, 1976.

R 408.12406 Definitions; G to K.

Rule 2406. (1) "Gate or movable barrier device" means a movable barrier arranged to enclose the point of operation before the press stroke can be started.

(2) "Guard" means a barrier that prevents entry of the operator's hands or fingers into the point of operation. See R 408.12403(1), R 408.12404(4), R 408.12405(4), and R 408.12406(7).

(3) "Guide post" means the pin attached to the upper or lower die shoe, operating within the bushing on the opposing die shoe, to maintain the alignment of the upper and lower dies.

(4) "Hand feeding tool" means a hand-held tool designed for placing or removing material or parts to be processed within or from the point of operation.

(5) "Holdout or restraint device" means a mechanism, including attachments for operator's hands, that, when anchored and adjusted, prevents the operator's hands from entering the point of operation.

(6) "Inch" means an intermittent motion imparted to the slide (on machines using part revolution clutches) by momentary operation of the "inch" operating means. Operation of the "inch" operating means engages the driving clutch so that a small portion of 1 stroke or indefinite stroking can occur, depending upon the length of time the "inch" operating means is held operated. "Inch" is a function used by the die setter for setup of dies and tooling, but is not intended for use during production operations by the operator.

(7) "Interlocked press barrier guard" means a barrier attached to the press frame and interlocked so that the press stroke cannot be started normally unless the guard itself, or its hinged or movable sections, enclose the point of operation.

(8) "Jog" means an intermittent motion imparted to the slide by momentary operation of the drive motor, after the clutch is engaged with the flywheel at rest.

(9) "Knockout" means a mechanism for releasing material from either die.

History: 1954 ACS 87, p. 57, Eff. May 1, 1976.

Digitized by Google

R 408.12407 Definitions; L to P.

Rule 2407. (1) "Liftout" means the mechanism also known as knockout.

(2) "Manual feeding" means feeding wherein the material or part being processed is handled by the operator on each stroke of the press.

(3) "Operator's station" means the complete complement of controls used by or available to an operator on a given operation for stroking the press.

(4) "Part revolution clutch" means a type of clutch that can be disengaged at any point before the crankshaft has completed a full revolution and the press slide a full stroke.

(5) "Pinch point" means any point, other than the point of operation, at which it is possible for a part of the body to be injured by being caught between the moving parts of a press or auxiliary equipment, or between moving and stationary parts of a press or auxiliary equipment, or between the material and moving part or parts of the press or auxiliary equipment.

(6) "Point of operation" means the area of the press where material is actually positioned and work is being performed during any process such as shearing, punching, forming, or assembling.

(7) "Presence sensing device" means a device designed, constructed, and arranged to create a sensing field or area, and to deactivate the clutch control of the press when an operator's hand or other part of his body is within such field or area.

(8) "Press," as referred to in this part, means a mechanically powered machine that shears, punches, forms, or assembles metal or other material by means of cutting, shaping, or combination dies attached to slides and commonly referred to as a mechanical power press. A press consists of a stationary bed or anvil, and a slide having a controlled reciprocating motion toward and away from the bed surface, the slide being guided in a definite path by the frame of the press.

(9) "Pull-out device" means a mechanism, attached to the operator's hands and connected to the upper die or slide of the press, that is designed, when properly adjusted, to withdraw the operator's hands, as the dies close, if the operator's hands are inadvertently within the point of operation.

History: 1954 ACS 87, p. 58, Eff. May 1, 1976.

R 408.12408 Definitions; R, S.

Rule 2408. (1) "Repeat" means an unintended or unexpected successive power stroke of the press resulting from a malfunction.

(2) "Safety block" means a prop that, when inserted between the upper and lower dies or between the bolster plate and the face of the slide, prevents the slide from falling of its own dead weight.

(3) "Semiautomatic feeding" means feeding wherein the material or part being processed is placed within, or removed from, the point of operation by an auxiliary means controlled by an operator on each stroke of the press.

(4) "Single stroke" means 1 complete stroke of the slide, usually initiated from a full open (or up) position, followed by closing (or down), and then a return to the full open position.

(5) "Single stroke mechanism" means an arrangement used on a full revolution clutch to limit the travel of the slide to 1 complete stroke at each engagement of the clutch.

(6) "Slide" means the main reciprocating press member. A slide is also called a ram, plunger, or platen.

(7) "Stop control" means an operator control designed to immediately deactivate the clutch control and activate the brake to stop slide motion.

(8) "Stripper" means a mechanism or die part for removing the parts or material from the punch.

(9) "Stroking selector" means the part of the clutch/brake control that determines the type of stroking when the operating means is actuated. The stroking selector generally includes positions for "off" (clutch control), "inch," "single stroke," and "continuous" (when continuous is furnished).

(10) "Sweep device" means a single or double arm (rod) attached to the upper die or slide of the press and designed to move the operator's hands to a safe position, as the dies close, if the operator's hands are inadvertently within the point of operation.

History: 1954 ACS 87, p. 58, Eff. May 1, 1976.

R 408.12409 Definitions; T, U.

Rule 2409. (1) "Trip" or "tripping" means activation of the clutch to "run" the press.

(2) "Turnover bar" means a bar used in die setting to manually turn the crankshaft of the press.

(3) "Two-hand control device" means a 2-hand actuating device that further requires concurrent pressure from both hands of the operator during a substantial part of the die-closing portion of the stroke of the press.

(4) "Two-hand trip" means a clutch actuating means requiring the concurrent use of both hands of the operator to trip the press.

(5) "Unitized tooling" means a type of die in which the upper and lower members are incorporated into a self-contained unit so arranged as to hold the die members in alignment.

History: 1954 ACS 87, p. 58, Eff. May 1, 1976.

R 408.12411 Employer responsibility.

Rule 2411. (1) The employer shall train and instruct the operator in the safe method of work before starting work on any operation covered by this part. The employer shall insure, by adequate supervision, that correct operating procedures are being followed and that all required safeguards are installed, are functional, and are being used.

(2) The employer shall insure the original and continuing competence of maintenance personnel caring for, inspecting, and maintaining presses.

(3) The employer shall provide clearance between machines so that movement of 1 operator does not interfere with the work of another. Ample room for cleaning machines, and for handling material, work pieces, and scrap, shall also be provided. All surrounding floors shall be kept in good condition and free from obstructions, grease, oil, and water.

(4) The employer shall operate his presses within the tonnage and attachment weight ratings specified by the manufacturer.

(5) The employer shall obtain, from any outside firm modifying a press, instructions needed to establish new or changed guidelines for the care and use of the press so modified.

History: 1954 ACS 87, p. 59, Eff. May 1, 1976.

R 408.12412 Inspection and maintenance records.

Rule 2412. The employer shall establish and follow a program of periodic and regular inspections of his presses to insure that all their parts, auxiliary equipment, and safeguards are in a safe operating condition and adjustment. The employer shall maintain records of these inspections and the maintenance work performed.

History: 1954 ACS 87, p. 59, Eff. May 1, 1976.

R 408.12413 Reports of injuries.

Rule 2413. The employer shall, within 30 days of the occurrence, report to the director of the bureau of safety and regulation of the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, all point of operation injuries or injuries, within the confines of the die, to operators or other employees. The following information shall be included in the report:

(a) Employer's name, address, and location of the workplace (establishment).

(b) Employee's name, injury sustained, and the task being performed (operation, set-up, maintenance, or other).

(c) Type of clutch used on the press (full revolution, part revolution, or direct drive).

(d) Type of safeguard being used (2-hand control, 2-hand trip, pull-outs, sweeps, or other). If the safeguard is not described herein, give a complete description.

(e) Cause of the accident (repeat of press, safeguard failure, removing stuck part or scrap, no safeguard provided, no safeguard in use, or other).

(f) Type of feeding (manual with hands in dies or with hands out of dies, semi-automatic, automatic, or other).

(g) Means used to actuate press stroke (foot trip, foot control, hand trip, hand control, or other).

(h) Number of operators required for the operation and the number of operators provided with controls and safeguards.

History: 1954 ACS 87, p. 59, Eff. May 1, 1976.

CONSTRUCTION—GENERAL

R 408.12421 Broken or falling machine components.

Rule 2421. Machine components shall be designed, secured, or covered to minimize hazards caused by breakage, loosening and falling, or release of mechanical energy.

History: 1954 ACS 87, p. 59, Eff. May 1, 1976.

R 408.12422 Brakes.

Rule 2422. (1) Friction brakes provided for stopping or holding the slide movement shall be set with compression springs. Brake capacity shall be sufficient to stop the motion of the slide quickly and shall be capable of holding the slide and its attachments at any point in its travel.

(2) When required by R 408.12461 of this part, the brake monitor shall meet the following requirements:

(a) Be so constructed as to automatically prevent the activation of a successive stroke if the stopping time or braking distance deteriorates to a point where the safety distance being utilized does not meet the requirements prescribed in R 408.12463(1) and (7). The brake monitor used with the type B gate or movable barrier device shall be installed in a manner to detect slide top-stop overrun beyond the normal limit reasonably established by the employer.

(b) Be installed on a press in such a way that it indicates when the performance of the braking system has deteriorated to the extent described in subdivision (a) of this subrule.

(c) Be constructed and installed in a manner to monitor brake system performance on each stroke or each time the brakes are applied.

History: 1954 ACS 87, p. 60, Eff. May 1, 1976.

R 408.12423 Electrical.

Rule 2423. All A.C. control circuits and solenoid valve coils shall be powered by not more than a nominal 120-volt A.C. supply obtained from a transformer with an isolated secondary. Higher voltages that may be necessary for operation of machine or control mechanisms shall be isolated from any control mechanism handled by the operator, but motor starters with integral start-stop buttons may utilize line voltage control. All D.C. control circuits shall be powered by not more than a nominal 240-volt D.C. supply isolated from any higher voltages.

History: 1954 ACS 87, p. 60, Eff. May 1, 1976.

R 408.12424 Component failure.

Rule 2424. Electrical clutch/brake control circuits shall incorporate features to minimize the possibility of an unintended stroke in the event of the failure of a control component to function properly, including relays, limit switches, and static output circuits.

History: 1954 ACS 87, p. 60, Eff. May 1, 1976.

R 408.12425 Slide counterbalance systems.

Rule 2425. (1) Spring counterbalance systems, when used, shall incorporate means to retain system parts in event of breakage.

(2) Spring counterbalances, when used, shall have the capability to hold the slide and its attachments at midstroke, without brake applied.

(3) An air counterbalance cylinder shall:

(a) Incorporate means to retain the piston and rod in case of breakage or loosening.

(b) Have adequate capability to hold the slide and its attachments at any point in stroke, without brake applied.

(c) Incorporate means to prevent failure of capability (sudden loss of pressure) in event of air supply failure.

History: 1954 ACS 87, p. 60, Eff. May 1, 1976.

R 408.12426 Air controlling equipment.

Rule 2426. (1) Air controlling equipment shall be protected against foreign material and water entering the pneumatic system of the press.

(2) A means of air lubrication shall be provided when needed.

History: 1954 ACS 87, p. 60, Eff. May 1, 1976.

R 408.12427 Hydraulic equipment.

Rule 2427. The maximum anticipated working pressures in any hydraulic system on a press shall not exceed the safe working pressure rating of any component used in that system.

History: 1954 ACS 87, p. 60, Eff. May 1, 1976.

R 408.12428 Pressure vessels.

Rule 2428. A pressure vessel used in conjunction with a press shall be as prescribed in the ASME pressure vessel code, section VIII, unfired pressure vessels, 1974, which is adopted by reference and may be inspected at the Lansing office of the Michigan department of labor. This code may be purchased at a cost of $40.00 from the American Society of Mechanical Engineers, 345 E. 47th Street, New York, New York 10017 or the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

History: 1954 ACS 87, p. 60, Eff. May 1, 1976.

R 408.12429 Control reliability.

Rule 2429. When required by R 408.12461 of this part, the control system shall be constructed so that a failure within the system does not prevent the normal stopping action from being applied to the press when required, but does prevent initiation of a successive stroke until the failure is corrected. The failure shall be detectable by a simple test, or indicated by the control system. This requirement does not apply to those elements of the control system which have no effect on the protection against point of operation injuries.

History: 1954 ACS 87, p. 61, Eff. May 1, 1976.

R 408.12431 Single stroke.

Rule 2431. (1) Presses using full-revolution clutches shall incorporate a single-stroke mechanism, except that the single-stroke mechanism may be omitted if either of the following conditions is met:

(a) A press has barrier guards as prescribed in R 408.12462(1), (2), and (3) on all 4 sides and a second action is required to initiate the cycle after the machine has been energized by the start switch.

(b) A press is operated by 2 hand anti-repeat trips.

(2) If the single-stroke mechanism is dependent upon spring action, the spring shall be of the compression type, operating on a rod or guided within a hole or tube, and designed to prevent interleaving of the spring coils in event of breakage.

History: 1954 ACS 87, p. 61, Eff. May 1, 1976; 1954 ACS 101, p. 58, Eff. Sept. 21, 1979.

R 408.12432 Foot pedals.

Rule 2432. (1) The pedal mechanism shall be protected to prevent unintended operation from falling or moving objects, or by accidental stepping onto the pedal.

(2) A pad with a nonslip contact area shall be firmly attached to the pedal.

(3) The pedal return spring shall be of the compression type, operating on a rod or guided within a hole or tube, or designed to prevent interleaving of spring coils in event of breakage.

(4) If pedal counterweights are provided, the path of the travel of the weight shall be enclosed.

History: 1954 ACS 87, p. 61, Eff. May 1, 1976.

R 408.12433 Hand-operated levers.

Rule 2433. (1) Handlever-operated presses shall be equipped with a spring latch on the operating lever to prevent premature or accidental tripping.

(2) The operating levers on handtripped presses having more than 1 operating station shall be interlocked to prevent the tripping of the press except by the concurrent use of all levers.

History: 1954 ACS 87, p. 61, Eff. May 1, 1976.

R 408.12434 Two-hand trips.

Rule 2434. (1) A 2-hand trip shall have the individual operator's hand controls protected against unintentional operation, and shall have the individual operator's hand controls arranged by design and construction, separation, or both, to require the use of both hands to trip the press and use a control arrangement requiring concurrent operation of the individual operator's hand controls.

(2) Two-hand trip systems on full revolution clutch machines shall incorporate an anti-repeat feature.

(3) If 2-hand trip systems are used on multiple operator presses, each operator shall have a separate set of controls.

History: 1954 ACS 87, p. 61, Eff. May 1, 1976.

CONSTRUCTION—PART REVOLUTION CLUTCH PRESSES

R 408.12441 Removal of engaging force.

Rule 2441. The clutch shall release and the brake shall be applied when the external clutch engaging means is removed, deactivated, or deenergized.

History: 1954 ACS 87, p. 61, Eff. May 1, 1976.

R 408.12442 Stop control.

Rule 2442. (1) A red color stop control shall be provided with the clutch/brake control system.

(2) Momentary operation of the stop control shall immediately initiate deactivation of the clutch and apply the brake.

(3) The stop control shall override any other control, and reactuation of the clutch shall require use of the operating (tripping) means which has been selected.

History: 1954 ACS 87, p. 61, Eff. May 1, 1976.

R 408.12443 Stroking selector.

Rule 2443. A means of selecting "off," "inch," and all other modes that the press operates under shall be supplied with the clutch/brake control to select the type of operation of the press. Fixing of selection shall be by a means capable of supervision by the employer.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976; 1954 ACS 101, p. 58, Eff. Sept. 21, 1979.

R 408.12444 Inch control.

Rule 2444. The "inch" operating means shall be designed to prevent exposure of the worker's hands within the point of operation by either of the following:

(a) Requiring the concurrent use of both hands to actuate the clutch.

(b) Being a single control protected against accidental actuation and so located that the worker cannot reach into the point of operation while operating the single control.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976.

R 408.12445 Two-hand controls.

Rule 2445. Two-hand controls for single stroke shall conform to the following requirements:

(a) Each hand control shall be protected against unintended operation and arranged by design and construction, separation, or both, so that the concurrent use of both hands is required to trip the press.

(b) The control system shall be designed to permit an adjustment which will require concurrent pressure from both hands during a substantial part of the die-closing portion of the stroke.

(c) The control system shall incorporate an anti-repeat feature.

(d) Two-hand controls for single stroke operation, manufactured, and installed on or after August 31, 1971, shall be designed to require release of all operator's hand controls before a second stroke can be initiated.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976.

R 408.12446 Multiple operating stations.

Rule 2446. (1) Controls for more than 1 operating station shall be designed to be activated and deactivated in complete sets of 2 hand controls per operating station by means capable of being supervised by the employer.

(2) The clutch/brake control system shall be designed and constructed to prevent actuation of the clutch if all operating stations are bypassed.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976.

R 408.12447 Continuous functions.

Rule 2447. Those clutch/brake control systems which contain both single and continuous functions shall be designed so that completion of continuous circuits may be supervised by the employer. The initiation of continuous run shall require a prior action or decision by the operator, in addition to the selection of continuous on the stroking selector, before actuation of the operating means results in continuous stroking.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976.

R 408.12448 Foot controls.

Rule 2448. (1) If foot control is provided, the selection method between hand and foot control shall be separated from the stroking selector, and shall be designed so that the selection may be supervised by the employer.

(2) Foot-operated tripping controls, if used, shall be protected so as to prevent operation from falling or moving objects, or from unintended operation by accidental stepping onto the foot control.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976.

R 408.12449 Clutch/brake air valve failure.

Rule 2449. Air-clutch controls shall be designed to prevent a significant increase in the normal stopping time due to a failure within the operating valve mechanism, and to inhibit further operation if such failure does occur. This requirement shall apply only to those clutch/brake air-valve controls manufactured and installed on or after August 31, 1971, but shall not apply to presses intended only for continuous, automatic feeding applications.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976.

R 408.12450 Drive motor interlock.

Rule 2450. The clutch/brake control shall incorporate an automatic means to prevent initiation or continued activation of the single stroke or continuous functions unless the press drive motor is energized and in the forward direction.

History: 1954 ACS 87, p. 62, Eff. May 1, 1976.

R 408.12451 Engaging means failure.

Rule 2451. The clutch/brake control shall automatically deactivate in event of failure of the electrical power or pressure supply for the clutch engaging means. Reactivation of the clutch shall require restoration of the electrical power or pressure supply and the use of the tripping mechanism.

History: 1954 ACS 87, p. 63, Eff. May 1, 1976.

R 408.12452 Counterbalance air supply failure.

Rule 2452. The clutch/brake control shall automatically deactivate in event of failure of the counterbalance air supply. Reactivation of the clutch shall require restoration of normal air supply and use of the tripping mechanism.

History: 1954 ACS 87, p. 63, Eff. May 1, 1976.

R 408.12453 Turnover bar operation selection.

Rule 2453. Selection of turnover bar operation shall be by means capable of being supervised by the employer. A separate pushbutton shall be employed to activate the clutch, and the clutch shall be activated only if the driver motor is deenergized.

History: 1954 ACS 87, p. 63, Eff. May 1, 1976.

R 408.12454 Accidental grounding.

Rule 2454. All clutch/brake control electrical circuits shall be protected against the possibility of an accidental ground in the control circuit causing false operation of the press.

History: 1954 ACS 87, p. 63, Eff. May 1, 1976.

SAFEGUARDING THE POINT OF OPERATION

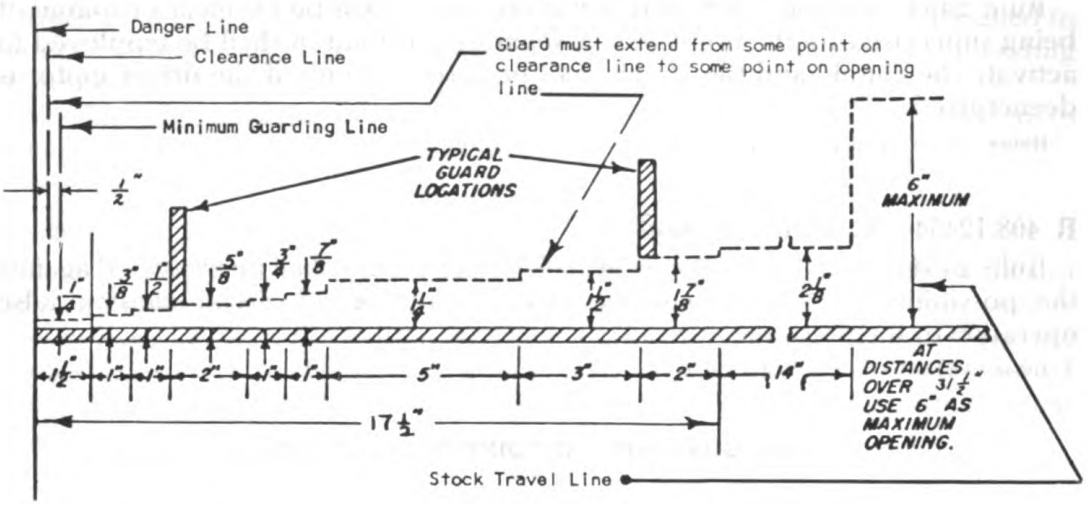
R 408.12461 General requirements.

Rule 2461. (1) The employer shall provide and insure the usage of "point of operation guards," or properly applied and adjusted point of operation devices, on every production operation performed on a press. Point of operation guards shall conform to table 1 and figure 1, except when the point of operation opening is less than ¼ inch.

(2) Where the operator feeds or removes parts by placing 1 or both hands in the point of operation, and a 2-hand control, presence sensing device, type B gate, or movable barrier (on a part revolution clutch) is used for safeguarding:

(a) The employer shall use a control system and a brake monitor which comply with R 408.12422(2) and R 408.12429 of this part. This requirement shall be complied with by November 1, 1975.

(b) Air clutch controls shall be designed to prevent a significant increase in the normal stopping time due to a failure within the operating valve mechanism, and to inhibit further operation if such failure does occur, where a part revolution clutch is employed.



(3) The August 31, 1971, exceptions in R 408.12445 and R 408.12449 do not apply to the requirements of this rule.

TABLE 1

Distance of opening from point of operation hazard (inches)	Maximum width of opening (inches)
½ to 1½	¼
1½ to 2½	⅜
2½ to 3½	½
3½ to 5½	⅝
5½ to 6½	¾
6½ to 7½	⅞
7½ to 12½	1¼
12½ to 15½	1½
15½ to 17½	1⅞
17½ to 31½	2⅛

FIGURE 1

Explanation of above diagram:

This diagram shows the accepted safe openings between the bottom edge of a guard and feed table at various distances from the danger line (point of operation).

The clearance line marks the distance required to prevent contact between guard and moving parts.

The minimum guarding line is the distance between the infeed side of the guard and the danger line which is ½ inch from the clearance line.

The various openings are such that, for average size hands, an operator's fingers won't reach the point of operation.

After installation of point of operation guards, and before a job is released for operation, a check should be made to verify that the guard prevents the operator's hands from reaching the point of operation.

History: 1954 ACS 87, p. 63, Eff. May 1, 1976.

R 408.12462 Point of operation guards.

Rule 2462. (1) A point of operation guard shall meet the following design, construction, application, and adjustment requirements:

(a) It shall prevent entry of hands or fingers into the point of operation by reaching through, over, under, or around the guard.

(b) It shall conform to the maximum permissible openings of table 1 and figure 1, except that a barrier guard may have feed holes for the stock, which shall be of such size and distance from the die as to prevent entry of a hand or finger of each operator into the point of operation or nip point.

(c) It shall, in itself, create no pinch point between the guard and moving machine parts.

(d) It shall utilize fasteners not readily removable by the operator so as to minimize the possibility of misuse or removal of essential parts.

(e) It shall facilitate its inspection.

(f) It shall offer maximum visibility of the point of operation consistent with the other requirements.

(2) A die enclosure guard shall be attached to the die shoe or stripper in a fixed position.

(3) A fixed barrier guard shall be attached securely to the frame of the press or to the bolster plate.

(4) An interlocked press barrier guard shall be attached to the press frame or bolster, and shall be interlocked with the press clutch control so that the clutch cannot be activated unless the guard itself, or the hinged or movable sections of the guard, are in position to conform to the requirements of table 1 and figure 1.

(5) The hinged or movable sections of an interlocked press barrier guard shall not be used for manual feeding. The guard shall prevent opening of the interlocked section and reaching into the point of operation prior to die closure or prior to the cessation of slide motion. See R 408.12463(2) regarding manual feeding through interlocked press barrier devices.

(6) The adjustable barrier guard shall be securely attached to the press bed, bolster plate, or die shoe, and shall be adjusted and operated in conformity with table 1 and figure 1 and the requirements of this rule. Adjustments shall be verified before the press is returned to production operations by authorized personnel whose qualifications include a knowledge of the provisions of table 1 and figure 1 and the requirements of this rule.

(7) A point of operation enclosure which does not meet the requirements of this rule and table 1 and figure 1 shall be used only in conjunction with point of operation devices.

History: 1954 ACS 87, p. 64, Eff. May 1, 1976; 1954 ACS 101, p. 58, Eff. Sept. 21, 1979.

R 408.12463 Point of operation devices.

Rule 2463. (1) Point of operation devices shall protect the operator by 1 of the following:

(a) Preventing or stopping, or both, the normal stroking of a press if the operator's hands are inadvertently placed in the point of operation.

(b) Withdrawing his hands if they are inadvertently located in the point of operation as the dies close, or preventing the operator from inadvertently reaching into the point of operation.

(c) Preventing the operator from inadvertently reaching into the point of operation at all times.

(d) Requiring application of both of the operator's hands to machine operating controls and locating the controls at a distance from the point of operation as will permit the slide to complete the downward travel or stop before the operator can reach into the point of operation with his hands.

(e) Enclosing the point of operation before a press stroke can be initiated, and maintaining this closed condition until the motion of the slide ceases.

(f) Enclosing the point of operation before a press stroke can be initiated, so as to prevent an operator from reaching into the point of operation prior to die closure or prior to cessation of slide motion during the downward stroke.

(2) A gate or movable barrier device shall protect the operator as follows:

(a) A type "A" gate or movable barrier device shall protect the operator as prescribed in subrule (1)(e) of this rule.

(b) A type "B" gate or movable barrier device shall protect the operator as prescribed in subrule (1)(f) of this rule.

(3) The presence sensing point of operation device shall protect the operator as provided in subrule (1)(a) of this rule, and shall be interlocked into the control circuit to prevent or stop slide motion if the operator's hand or other part of his body is within the sensing field of the device during the downstroke of the press slide. The device shall conform to the following:

(a) The device may not be used on machines using full revolution clutches.

(b) The device may not be used as a tripping means to initiate slide motion.

(c) The device shall be constructed so that a failure within the system does not prevent the normal stopping action from being applied to the press when required, but does prevent the initiation of a successive stroke until the failure is corrected. The failure shall be indicated by the system.

(d) Bypassing of the protection function of such device, during the upstroke of the press slide, is permitted for the purpose of parts ejection, circuit checking, and feeding.

(e) The safety distance (Ds) from the sensing field to the point of operation shall be greater than the distance determined by the following formula:

Ds = 63 inches/second x Ts where:

Ds = minimum safety distance (inches); 63 inches/second = hand speed constant; and

Ts = stopping time of the press measured at approximately 90 degree position of crankshaft rotation (seconds).

(f) Guards shall be used to protect all areas of entry to the point of operation not protected by the presence sensing device.

(4) The pull-out device shall protect the operator as prescribed in subrule (1)(b) of this rule, and shall include attachments for each of the operator's hands. The device shall conform to the following:

(a) Attachments shall be connected to and operated only by the press slide or upper die.

(b) Attachments shall be adjusted to prevent the operator from reaching into the point of operation or to withdraw the operator's hands from the point of operation before the dies close.

(c) A separate pull-out device shall be provided for each operator if more than 1 operator is used on a press.

(d) Each pull-out device in use shall be visually inspected and checked for proper adjustment at the start of each operator shift, or following a new die set-up, or when operators are changed. Necessary maintenance or repair, or both, shall be performed and completed before the press is returned to production. The employer shall maintain records of these inspections and the maintenance work performed.

(5) The sweep device shall protect the operator, as prescribed in subrule (1)(b) of this rule, by removing his hands safely to a safe position if they are inadvertently located in the point of operation as the dies close or prior to tripping the clutch. Devices operating in this manner shall have a barrier attached to the sweep arm in such a manner as to prevent the operator from reaching into the point of operation, past the trailing edge of the sweep arm on the downward stroke of the press. This device shall not be used for point of operation safeguarding after December 31, 1976. The device shall conform to the following:

(a) The sweep device shall be activated by the slide.

(b) The sweep device shall be designed, installed, and operated so as to prevent the operator from reaching into the point of operation before the dies close.

(c) The sweep device shall be installed so that it does not, itself, create an impact or shear hazard between the sweep arm and the press tie rods, dies, or any other part of the press or barrier.

(d) Partial enclosures conforming to this rule, as to the area of entry which they protect, shall be provided on both sides of the point of operation to prevent the operator from reaching around or behind the sweep device and into the point of operation after the dies start to close. Partial enclosures shall not themselves create a pinch point or shear hazard.

(6) A holdout or a restraint device shall protect the operator as prescribed in subrule (1)(c) of this rule, and shall include attachments for each of the operator's hands. These attachments shall be securely anchored and adjusted in such a way that the operator is restrained from reaching into the point of operation. A

separate set of restraints shall be provided for each operator if more than 1 operator is required on a press.

(7) The 2-hand control device shall protect the operator as prescribed in subrule (1)(d) of this rule. The device shall conform as follows:

(a) When used in press operations requiring more than 1 operator, separate 2-hand controls shall be provided for each operator and shall be designed to require concurrent application of all operator's controls to activate the slide. The removal of a hand from any control button shall cause the slide to stop.

(b) Each 2-hand control shall meet the construction requirements of R 408.12445.

(c) When hand-in-die loading or unloading is used, the safety distance (Ds) between each 2-hand control device and the point of operation shall be greater than the distance determined by the formula prescribed in subrule (3)(e) of this rule.

(d) The position of the 2-hand controls shall be established and fixed, or physically indicated, in accordance with subrule (1)(d) of this rule or subrule (7)(c) of this rule, whichever shall apply. Only the supervisor or safety engineer may authorize relocating the controls consistent with the above.

(8) The 2-hand trip device shall protect the operator as prescribed in subrule (1)(d) of this rule. The device shall conform as follows:

(a) When used in press operations requiring more than 1 operator, separate 2-hand trips shall be provided for each operator, and shall be designed to require concurrent application of all operators' controls to activate the slide.

(b) Each 2-hand trip shall meet the construction requirements of R 408.12434.

(c) The safety distance (Dm) between the 2-hand trip and the point of operation shall be greater than the distance determined by the following formula:

Dm = 63 inches/second x Tm; where:

Dm = minimum safety distance (inches); 63 inches/second = hand speed constant; and

Tm = the maximum time the press takes for the die closure after it has been tripped (seconds). For full revolution clutch presses with only 1 engaging point Tm is equal to the time necessary for 1½ revolutions of the crankshaft. For full revolution clutch presses with more than 1 engaging point, Tm shall be calculated as follows:

$$Tm = \left\{ \frac{1}{2} + \frac{1}{\text{Number of engaging points per revolution}} \right\} \times \text{time necessary to complete 1 revolution of the crankshaft (seconds)}$$

(d) Two hand trips shall be established and fixed or physically indicated, and only a supervisor or safety engineer may authorize their relocation.

History: 1954 ACS 87, p. 65, Eff. May 1, 1976.

R 408.12464 Hand feeding tools.

Rule 2464. Hand feeding tools are intended for placing materials in, and removing materials from, the press. Hand feeding tools are not a point of operation guard or protection device, and shall not be used in lieu of the "guards" or devices required in this part.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

DIE DESIGN, CONSTRUCTION, SETTING, AND FEEDING

R 408.12471 Dies; general rules.

Rule 2471. The employer shall:

Digitized by Google

(a) Use dies and operating methods designed to control or eliminate hazards to operating personnel.

(b) Furnish and enforce the use of a handtool for freeing and removing stuck work or scrap pieces from the die, so that an employee need not reach into the point of operation for such purposes.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

R 408.12472 Scrap handling.

Rule 2472. The employer shall provide means for handling scrap from roll feed or random length stock operations. Scrap cutters used in conjunction with scrap handling systems shall be safeguarded as prescribed in R 408.12421 to R 408.12464 and in Part 7. Guards for Power Transmission, being R 408.10701 to R 408.10763 of the Michigan Administrative Code.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

R 408.12473 Guide post hazards.

Rule 2473. The hazard created by a guide post located in the immediate vicinity of the operator, when separated from its bushing by more than ¼ inch, shall be considered as a point of operation hazard and be protected as prescribed in R 408.12461 to R 408.12464.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

R 408.12474 Unitized tooling.

Rule 2474. If unitized tooling is used, the opening between the top of the punch holder and the face of the slide or striking pad shall be safeguarded as prescribed in R 408.12421 to R 408.12464.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

R 408.12475 Tonnage, stroke, and weight requirements.

Rule 2475. All dies shall be:

(a) Stamped with the tonnage and stroke requirements, or the requirements may be recorded if the records are readily available to the die setter.

(b) Stamped to indicate upper die weight when necessary for air counterbalance pressure adjustment.

(c) Stamped to indicate complete die weight when handling equipment may become overloaded.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

R 408.12476 Die fastening.

Rule 2476. Provisions shall be made in both the upper and lower shoes for securely mounting the die to the bolster and slide. Where clamp caps or setscrews are used in conjunction with punch stems, additional means of securing the upper shoe to the slide shall be used.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

R 408.12477 Die-setting.

Rule 2477. (1) The employer shall establish a die-setting procedure that will insure compliance with R 408.12421 to R 408.12464.

(2) The employer shall provide spring-loaded turnover bars for presses designed to accept such turnover bars.

(3) The employer shall provide die stops or other means to prevent losing control of the die while setting or removing die in presses which are inclined.

Digitized by Google

(4) The employer shall provide and enforce the use of safety blocks for use whenever dies are being adjusted or repaired in the press. Means shall be provided to prevent cycling a press with the safety block in place between the upper and lower dies, or between the bolster plate and slide face.

(5) The employer shall provide brushes, swabs, lubricating rolls, and automatic or manual pressure guns, so that operators and die setters shall not be required to reach into the point of operation or other hazard areas to lubricate material, punches, or dies.

(6) Handling equipment attach points shall be provided on all dies requiring mechanical handling.

History: 1954 ACS 87, p. 67, Eff. May 1, 1976.

PART 26. METALWORKING MACHINERY

R 408.12601 Scope.

Rule 2601. This part sets forth rules, not covered in other standards, for the safety of employees in all places of employment where a hazard may exist in the use of metalworking machinery. Press brakes and handheld portable powered tools are not included in this part.

History: 1954 ACS 79, p. 67, Eff. Apr. 16, 1974.

R 408.12602 Applicability.

Rule 2602. (1) A metalworking machine with the point of operation inaccessible or remote from the operator and other assigned employees shall not be required to have guarding for the point of operation.

(2) The general rules of this part shall apply to all metalworking machinery.

(3) The specific rules shall apply only to those metalworking machines specified.

History: 1954 ACS 79, p. 67, Eff. Apr. 16, 1974.

R 408.12603 Definitions; A to C.

Rule 2603. (1) "Aisle" means a designated path of travel for vehicles and employees.

(2) "Alligator shear" means a machine having a powered blade and a fixed blade which creates a shearing action when the moving blade meets the fixed blade.

(3) "Awareness device" means a device that will warn the operator that he is approaching the point of operation.

(4) "Barrier" means protection for an operator from a hazard point on machinery and equipment.

(5) "Boring machine" means a machine with a boring tool which, when brought into contact with metal by force, increases the size of a hole.

(6) "Circular metal saw" means a machine with a support for the material and with a circular blade which is used for cutting metal.

(7) "Cold header" means a machine consisting of a set of dies that, when closed by a ram with a hammer action, forms headed parts such as bolts or rivets from rod stock.

History: 1954 ACS 79, p. 67, Eff. Apr. 16, 1974.

R 408.12604 Definitions; F to L.

Rule 2604. (1) "Fixed barrier" means a type of guard, attached by fasteners that cannot be readily removed, that keeps the operator from the point of operation.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(2) "Interlocked barrier" means a type of guard with a control interlocked with a machine circuit that will stop the machine if the barrier is removed or opened.

(3) "Lockout" means to secure by use of a lock.

History: 1954 ACS 79, p. 68, Eff. Apr. 16, 1974.

R 408.12605 Definitions; M to O.

Rule 2605. (1) "Metal band saw" means a machine equipped with 2 wheels on which a continuous blade rides against which the metal is pushed and cut.

(2) "Metal embossing machine" means a machine that imparts a design to a piece of metal by pressure.

(3) "Metalworking machinery" means a machine which removes, forms, works or shapes metal, or is used to assemble parts.

(4) "Milling machine" means a machine with a multi-edged revolving cutter which, when brought into contact with metal, makes a desired cut.

(5) "Multiple slide" means a machine with dies attached to ends of multiple slides which, when actuated, brings the dies together to pierce, form or bend coil stock into a desired shape.

(6) "Operator's position" means that location where an operator controls a machine or operation.

History: 1954 ACS 79, p. 68, Eff. Apr. 16, 1974.

R 408.12606 Definitions; P.

Rule 2606. (1) "Pay off," sometimes called a top hat, means an uncoiling device upon which the undrawn coil of wire rests.

(2) "Pinch point" means a point where it is possible to be caught between the moving parts of a machine and the material in process or between moving and stationary parts of a machine.

(3) "Planer" means a machine with a cutting tool held stationary while the work is moved back and forth underneath it to reduce 1 of its dimensions.

(4) "Point of operation" means that point at which cutting, shaping, working, assembly or forming is accomplished upon the stock.

(5) "Point of operation device" means a control or attachment which:

(a) Restrains the operator from inadvertently reaching into the point of operation.

(b) Prevents normal machine operation if the operator's hands are inadvertently within the point of operation.

(c) Automatically withdraws the operator's hands if they are within the point of operation as the machine cycles.

(6) "Powered bender" means a machine consisting of dies or fixtures located between a moving and a fixed machine part. When metal is placed between the parts, the moving part is pressed against the fixed part, bending the metal to a desired shape.

(7) "Powered feed rolls" means parallel rolls that run inward to move material into the point of operation of a machine.

(8) "Presence sensing device" means a device designed, constructed and arranged to create a sensing field or area and to deactivate the point of operation when an operator's hand or other body part is within such field or area.

History: 1954 ACS 79, p. 68, Eff. Apr. 16, 1974.

R 408.12607 Definitions; R, S.

Rule 2607. (1) "Remote" means that the operator would not be required or expected to place any part of his body within the point of operation during any phase of the operation.

Digitized by Google

(2) "Riveter" means a machine consisting of a ram with a tool attached so that when pressed against a fixed part with a rivet or other fastener in between, it will cause pieces of material to be joined together.

(3) "Roll form machine" means a machine with in-running rolls so arranged to form a desired shape of metal when the metal is fed through the rolls.

(4) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(5) "Slitter" means a machine with circular knives mounted on powered shafts with the cutting faces adjacent to each other in a manner that shears metal when it is fed through the knives.

(6) "Squaring shear" means a machine having a table and utilizing a driven ram with a blade for shearing action. The ram moves a nonrotary blade, at a constant rate, past the edge of a fixed blade at the table and cuts metal.

History: 1954 ACS 79, p. 68, Eff. Apr. 16, 1974.

R 408.12608 Definitions; T to W.

Rule 2608. (1) "Tumbling mill" means a machine with a powered revolving container which is used to dry, smooth or polish metal parts.

(2) "Wire drawing machine" means a machine that draws or pulls metal wire or rod through a predetermined size of die to reduce its diameter.

History: 1954 ACS 79, p. 69, Eff. Apr. 16, 1974.

R 408.12611 Employer responsibility.

Rule 2611. An employer shall:

(a) Provide training to each employee as to the potential hazards and safe operation of the assigned job.

(b) Maintain metalworking machinery, in conformance with this part.

(c) Establish and maintain a lockout procedure as prescribed in subrule (1) of R 408.12618.

History: 1954 ACS 79, p. 69, Eff. Apr. 16, 1974.

R 408.12612 Employee responsibility.

Rule 2612. An employee shall:

(a) Not use machinery and equipment unless authorized and trained in its use.

(b) Report defective machinery and equipment and hazardous conditions, when detected, to his supervisor.

(c) Not remove guards from machinery and equipment except when necessary for servicing. The guard shall be replaced before returning the machinery or equipment to normal operation.

(d) Not wear loose clothing and neckwear encircling the neck or exposed jewelry, such as rings and necklaces, near a machine having reciprocating or rotating shafts or spindles.

History: 1954 ACS 79, p. 69, Eff. Apr. 16, 1974.

R 408.12613 Personal protective equipment.

Rule 2613. (1) Eye protection shall be worn by all employees in an area where metalworking is performed as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(2) An employee shall wear personal protective equipment when required by the hazard of the job.

History: 1954 ACS 79, p. 69, Eff. Apr. 16, 1974.

R 408.12614 Illumination.

Rule 2614. Machinery and equipment shall be provided with natural light, artificial light or both so that not less than 20 footcandles intensity falls on the operator's position.

History: 1954 ACS 79, p. 69, Eff. Apr. 16, 1974.

R 408.12615 Aisles, floors, and platforms.

Rule 2615. (1) The outline of a designated aisle shall be marked or otherwise indicated.

(2) A designated aisle shall be not less than 4 feet wide and access shall be maintained from a work station to an aisle.

(3) A designated aisle, floor work area or platform shall be maintained free of protruding objects, holes and accumulations of grease, oil or water which would constitute a hazard for an employee.

History: 1954 ACS 79, p. 69, Eff. Apr. 16, 1974.

R 408.12616 Machine and equipment installation.

Rule 2616. (1) A metalworking machine or equipment shall be installed so that the normal operator's position is not in an aisle, or the employee shall be protected by a standard barrier as prescribed in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10231 of the Michigan Administrative Code.

(2) Metalworking machines and equipment, except portable types, shall be fastened to a floor, platform or bench to prevent tipping or inadvertent movement, or be equipped with nonslip pads.

(3) Electrically powered metalworking machines and equipment shall be grounded.

(4) Provision shall be made to prevent metalworking machines and equipment from automatically restarting upon restoration of power after a power interruption, if such restart would be hazardous.

History: 1954 ACS 79, p. 70, Eff. Apr. 16, 1974.

R 408.12617 Controls.

Rule 2617. (1) When a presence sensing device is used as a safety device, the control shall incorporate a fail safe feature.

(2) Machine start controls shall be designed and installed or guarded to prevent unintentional activation by contact with objects or a part of the body.

(3) A machine shall be provided with a stop device within reach of the operator's designated position.

(4) A foot control shall be provided with a cover or guard to prevent accidental activation. The construction of the cover or guard shall be as prescribed in rule 2351 of the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12351 of the Michigan Administrative Code.

History: 1954 ACS 79, p. 70, Eff. Apr. 16, 1974.

R 408.12618 Maintenance and lubrication.

Rule 2618. (1) A power source of any metalworking machine or equipment to be repaired or serviced shall be locked out and, where required, residual pressure relieved by each employee doing such work if unexpected motion would cause injury, except where power is essential for testing and set up.

(2) Lubrication shall be accomplished by 1 of the following:

(a) Manually, when the machine can be shut off and locked out.

(b) Automatic pressure or gravity feed system.

(c) Extension pipe leading to an area outside of guards or away from any hazard.

(d) A means which would provide equal or greater protection to the employee than (a), (b) or (c).

(3) In any case, rule 732 of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10732 of the Michigan Administrative Code, shall be followed.

History: 1954 ACS 79, p. 70, Eff. Apr. 16, 1974.

R 408.12619 Hydraulic and pneumatic systems.

Rule 2619. (1) A hydraulic or pneumatic system shall be designed and constructed to have a safety factor of not less than 4.

(2) Hydraulic or pneumatic flexible lines shall be protected from chaffing.

(3) When hydraulic, air or steam lines are bled, equipment supported by these systems shall be physically blocked or otherwise secured by means other than components in the circuit, to provide for the safety of employees working on or about the equipment.

History: 1954 ACS 79, p. 70, Eff. Apr. 16, 1974.

R 408.12620 Chip and splash guards.

Rule 2620. (1) Chips which create a hazard shall be controlled by a chip guard located between the point of operation and any employee within range.

(2) Where a machine uses a coolant, an employee shall be protected from coolant splash.

History: 1954 ACS 79, p. 70, Eff. Apr. 16, 1974.

R 408.12622 Electric magnets and vacuum chucks.

Rule 2622. (1) A grinding machine with a rotating table and equipped with a magnetic or vacuum chuck to hold the stock shall be interlocked to prevent contact between the stock and tool, unless the stock is secured to the table or chuck and the employee is protected by a guard capable of retaining flying stock within the machine.

(2) A grinding machine with a reciprocating table and equipped with a magnetic or vacuum chuck to hold the stock shall have an end guard to protect an employee from flying stock or tools, or the machine shall meet the following conditions:

(a) The machine shall be located so that, in case of chuck or magnet failure, any flying material or object will carry into a solid wall.

(b) The wall shall be covered with an energy absorptive material capable of absorbing the shock and preventing the ricocheting of flying materials. Plasterboard shall not be used where coolant is used in the operation.

(c) The machine shall be positioned so as not to allow room for an employee to pass between the machine and the wall.

History: 1954 ACS 79, p. 70, Eff. Apr. 16, 1974; 1954 ACS 99, p. 117, Eff. Apr. 18, 1979.

SPECIFIC EQUIPMENT

R 408.12631 Squaring shear.

Rule 2631. (1) A squaring shear, mechanical or manual, shall have 1 of the following:

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(a) The blade and hold-down clamp guarded by a fixed barrier set in accordance with figure 1.

(b) Automatic clamps set within ¼ inch of the table or stock with the cutouts filled in so that the fingers of the operator cannot enter the pinch point.

(c) A self-adjusting barrier with a limit of not more than ¼ inch above the table or material.

(2) Where small stock is being sheared, a pusher stick shall be provided and used.

(3) An employee tending the backside of a squaring shear shall be separated from the moving parts by a table, rack or chute, such as the back gauge, shear blade or work piece on which the sheared stock shall fall before being handled, or the point of operation shall be guarded as prescribed in subdivision (a) of subrule (1). The table, rack or chute shall maintain the employee's position not less than 3 feet from the point of operation or a hazardous moving part.

(4) An automatically fed squaring shear shall be guarded by a barrier so located to prevent access to the point of operation. The guard may be swung aside for hand feeding, providing the control is on inch setting.

FIGURE 1
Positioning of Guards

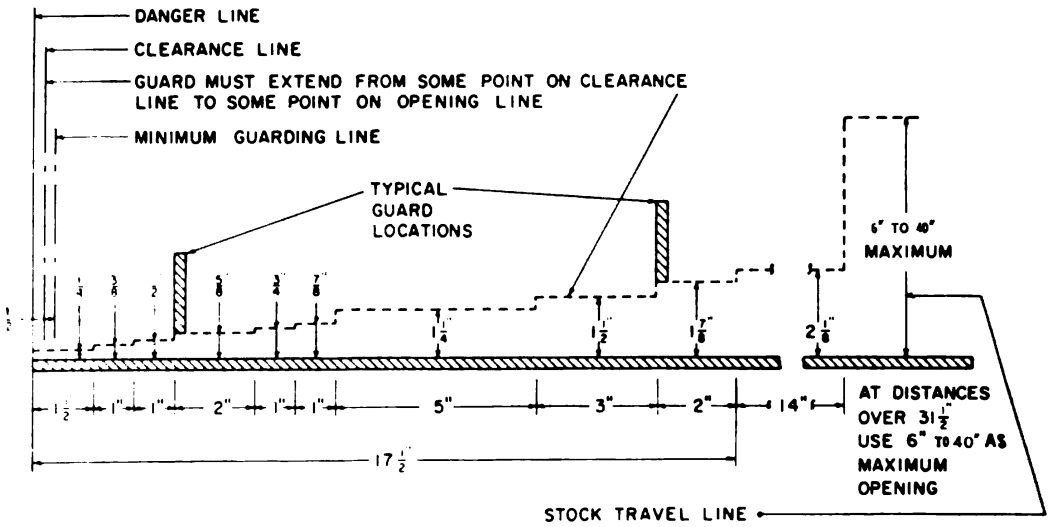

Figure 1 shows the accepted safe openings between the bottom edge of a guard and feed table at various distances from the danger line (point of operation).

The clearance line marks the distance required to prevent contact between guard and moving parts.

The minimum guarding line is the distance between the infeed side of the guard and the danger line which is ½ inch from the danger line.

The various openings are such that for average size hands, an operator's fingers will not reach the point of operation.

After installation of point of operation guards, and before a job is released for operation, a check shall be made to vertify that the guard will prevent the operator's hands from reaching the point of operation.

History: 1954 ACS 79, p. 71, Eff. Apr. 16, 1974.

R 408.12632 Circular metal saws.

Rule 2632. (1) A circular metal saw shall meet all of the following:

(a) Have a guard made of material not less than ⅛ inch thick and capable of protecting the operator from broken teeth of the blade and chips. The guard shall enclose not less than the upper half of the blade, including the arbor and nut, and be positioned to stop sparks and chips from striking the operator.

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(b) Have a water tank below the table or an enclosure to trap sparks and chips.

(c) Have a braking means capable of stopping the saw within 20 seconds, or the operator shall stand by until the blade stops.

(2) A circular metal saw wheel or blade shall be operated at not more than its rated speed.

History: 1954 ACS 79, p. 72, Eff. Apr. 16, 1974.

R 408.12633 Bar stock and rod machines, screw machines, and thread machines.

Rule 2633. A bar stock and rod machine, screw machine or thread machine shall have the bar stock extending beyond the machine guarded by a trough or tube, or shall be guarded by a standard barrier as prescribed in Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10201 to R 408.10241 of the Michigan Administrative Code.

History: 1954 ACS 79, p. 72, Eff. Apr. 16, 1974.

R 408.12634 Planers.

Rule 2634. (1) A planer shall have the openings in the bed under the table covered, and have a barrier protecting an employee if the table or material travels within 18 inches of a fixed object, such as a wall or post.

(2) An employee shall not ride the table of a planer unless he is protected against falling off the table.

History: 1954 ACS 79, p. 72, Eff. Apr. 16, 1974.

R 408.12635 Metal band saws.

Rule 2635. (1) A vertical metal band saw shall meet both of the following:

(a) Have all portions of the blade enclosed, except for the working portion of the blade.

(b) Have the band wheels fully enclosed by solid material around the periphery and solid mesh or perforated metal on front and back. The mesh or perforated metal shall be not less than .037 inch (gauge #20) and the openings not greater than ⅜ inch.

(2) The guard for the portion of the blade of a vertical metal band saw between the sliding guide and the upper saw wheel guard shall protect an employee from the blade at front and sides. This portion of the guard shall be adjustable and raised and lowered with the guide.

(3) A horizontal band saw shall be as prescribed in subrule (1).

History: 1954 ACS 79, p. 72, Eff. Apr. 16, 1974.

R 408.12636 Metal embossing machines.

Rule 2636. (1) A press type metal embossing machine shall be guarded at the point of operation as prescribed in the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12301 to R 408.12391 of the Michigan Administrative Code.

(2) A powered roll-type metal embossing machine shall be guarded as prescribed in R 408.12637.

History: 1954 ACS 79, p. 72, Eff. Apr. 16, 1974.

R 408.12637 Powered feed rolls.

Rule 2637. Powered feed rolls shall have 1 of the following:

(a) The in-running side of the feed rolls guarded by a barrier, fixed or adjustable, so designed that the material can be fed without permitting the fingers to be caught between the feed rolls or feed rolls and guard.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j

(b) An emergency stop device which can be activated by the body to stop the feed rolls. When an emergency stop device has been actuated, it shall be required that the machine be restarted manually.

History: 1954 ACS 79, p. 72, Eff. Apr. 16, 1974.

R 408.12638 Wire drawing machines.

Rule 2638. (1) A wire drawing machine shall have 1 of the following:

(a) An emergency stop device adjacent to the block available to shut down the machine.

(b) An emergency stop device, such as a bar, rope or cable, along the operating side of a continuous drawing frame or unit so designed that the device will stop the machine at any point along the unit. When an emergency stop device has been actuated, the machine shall be restarted manually.

(2) The live block, capstan and straightening rolls of a wire drawing machine shall be enclosed with a barrier guard.

(3) A wire drawing machine shall be equipped with a stopping device so arranged to stop the block automatically if the operator can be caught in the wire or the reel drawn to the machine, or the area from and including the payoff to the machine shall be enclosed with a standard barrier as prescribed in R 408.1231 of Part 2. Floor and Wall Openings, Stairways and Skylights. The stop device shall be as prescribed in subdivision (b) of subrule (1).

(4) Where straightening rolls are not used, a snarl switch interlocked with the live block or capstan shall be provided.

(5) A pinch point less than 8 feet from a floor or platform, created by the moving wire or rod passing over or through the equipment, shall be guarded by a barrier if exposed to contact.

(6) All barrier guards or enclosures which can be removed or opened without tools shall be interlocked with the live block or capstan.

(7) A pinch pointer used to prepare wire or rod for insertion into a die shall be guarded if the opening is more than ¼ larger than the material being fed into it.

History: 1954 ACS 79, p. 72, Eff. Apr. 16, 1974.

R 408.12639 Boring, honing, reaming, and drilling.

Rule 2639. (1) When boring, honing, reaming or drilling:

(a) Chips, dust or sludge shall be removed by brush, tools or mechanical means. Where air pressure is used, the discharge of a hand held nozzle shall be less than 30 pounds per square inch under a static flow condition.

(b) Except for hand held honing, the work piece shall be secured by a device to prevent turning by the tool.

(c) Manual measuring at the point of operation shall be done only when the tool or rotating work piece has stopped.

(d) A vertical metal cutting machine with a rotary table shall have a rim guard either fixed or portable around the table of a height to cover any pinch point or rotating hazard at the lower side and to a point not less than 2 inches above the work piece or fixture, whichever is higher. Where the rotating table is at floor level, a removable standard barrier shall be installed as prescribed in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10231 of the Michigan Administrative Code.

(e) Multiple-spindle heads, except when used for tapping and those with cam operated slides, shall have an emergency return control at each station.

(2) A chuck key used on a drill press should be as prescribed in subrule (2) of R 408.12648.

History: 1954 ACS 79, p. 73, Eff. Apr. 16, 1974.

R 408.12640 Milling.

Rule 2640. When milling:

(a) Chips, dust or sludge shall be removed by a brush, tool or mechanical means. Where air pressure is used, the discharge of a hand-held nozzle shall be less than 30 pounds per square inch under a static flow condition.

(b) Manual adjustments or measurements at the point of operation shall be made only after the tool or work piece has stopped.

(c) Machine torque shall not be used to remove nuts.

(d) Except in a tool room type operation, the cutter shall be guarded with a self-closing enclosure or a barrier guard installed between the operator and the point of operation.

(e) The work piece shall be securely clamped before the table moves in the direction of the cutter, or the cutter moves to the work piece.

History: 1954 ACS 79, p. 73, Eff. Apr. 16, 1974.

R 408.12641 Roll-form machines.

Rule 2641. (1) Ninety days after the effective date of this part, an automatically fed roll-form machine shall have a shield running the entire length of the point of operation which will prevent horizontal access to the rolls or a continuous stop cable shall be provided along the length of the machine. The shield shall be secured to the machine.

(2) A manually fed roll forming machine shall be guarded as prescribed in R 408.12637.

History: 1954 ACS 79, p. 73, Eff. Apr. 16, 1974.

R 408.12642 Powered benders.

Rule 2642. (1) A powered bender shall have 1 of the following:

(a) A barrier or enclosure guard designed to protect the operator from the clamping point of operation.

(b) Be activated by a single stroke hand control device with 1 hand holding the work piece, remote from the point of operation or a single stroke foot control device where both hands hold the work piece, remote from the point of operation.

(c) A 2-hand single stroke control device.

(2) Where the sweep of the stock intrudes into the aisle or work area of another employee, or endangers the operator or other employees, a standard barrier, as specified in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10231 of the Michigan Administrative Code, shall be provided.

History: 1954 ACS 79, p. 74, Eff. Apr. 16, 1974.

R 408.12643 Tumbling mills, barrels and revolving cylinders.

Rule 2643. (1) A tumbling mill, barrel or revolving cylinder shall have an enclosure to a height of 42 inches to protect an employee if there are any moving projections.

(2) The enclosure shall have an interlocked gate or barrier at the machine opening which shall cut the power off when the gate or barrier is removed. An inch control may be used for positioning or emptying when the gate or barrier is removed.

History: 1954 ACS 79, p. 74, Eff. Apr. 16, 1974.

R 408.12644 Alligator shears.

Rule 2644. An alligator shear shall have the jaws enclosed with a guard which adjusts to the size and shape of the material.

History: 1954 ACS 79, p. 74, Eff. Apr. 16, 1974.

R 408.12645 Riveters, braders and stakers.

Rule 2645. (1) A vertical or horizontal ram on a riveter, brader or staker shall be guarded by a barrier, device or enclosure to protect the operator from the point of operation or an awareness device shall be used to warn the operator he is approaching the point of operation. The guard shall extend to within ⅜ inch of the material.

(2) Lodged rivets shall be removed only by a tool.

History: 1954 ACS 79, p. 74, Eff. Apr. 16, 1974.

R 408.12646 Powered clamping device.

Rule 2646. An operator of a powered clamping device, except a pivoted pillar buck used for holding a work piece, unless remote from the point of operation, shall be protected by 1 of the following:

(a) Guarded or adjusted so that the opening between the clamp and work piece insertion is not more than ¼ inch.

(b) Two-hand controls furnished to and used by each operator.

(c) A single control for each operator if the operator is remote from the point of operation.

(d) A means which would prevent the clamping device from closing while the employee is in the point of operation.

History: 1954 ACS 79, p. 74, Eff. Apr. 16, 1974.

R 408.12647 Slitter.

Rule 2647. A slitter shall have:

(a) The in-running side guarded as specified in R 408.12637.

(b) A device to cut the scrap into short lengths or a rewinder to rewind the scrap for safe handling.

(c) A method to secure the loose end to the coil before removing it from the rewinder.

History: 1954 ACS 79, p. 74, Eff. Apr. 16, 1974.

R 408.12648 Lathes.

Rule 2648. (1) A lathe face plate or chuck with projections on the periphery shall not be used unless guarded.

(2) A chuck key for a lathe chuck shall be 1 of the following:

(a) Counterweighted to return it to storage position.

(b) Interlocked to prevent the chuck from being power driven when the key is in the chuck.

(c) Spring loaded to eject it from the chuck.

History: 1954 ACS 79, p. 74, Eff. Apr. 16, 1974.

R 408.12649 Cold header.

Rule 2649. (1) The sliding head and the dies of a cold header shall be blocked before starting any service work on the dies.

(2) All points of operation from the straightening rolls to, and including the dies, shall be enclosed.

History: 1954 ACS 79, p. 75, Eff. Apr. 16, 1974.

R 408.12650 Multiple slide machine.

Rule 2650. A multiple slide machine shall have all moving parts guarded by barriers or an enclosure.

History: 1954 ACS 79, p. 75, Eff. Apr. 16, 1974.

PART 27. WOODWORKING MACHINERY

R 408.12701 Scope.

Rule 2701. This part establishes standards for the safe installation, operation and maintenance of woodworking machinery and equipment, including the making of veneer. It deals primarily with point of operation hazards on woodworking machinery.

History: 1954 ACS 69, p. 74, Eff. Nov. 15, 1971.

R 408.12705 Definitions; A to C.

Rule 2705. (1) "Aisle" means a path of travel for vehicles and employees.

(2) "Band saw" means a machine equipped with a lower and an upper wheel on which a continuous blade rides and past which the material is pushed.

(3) "Block" means a short block of wood, provided with a handle similar to that of a plane and a shoulder at the rear end and used for pushing stock over revolving cutters.

(4) "Circular saw" means a machine with a table to support the material and with a circular blade and used for ripping, cross-cutting dadoing and rabbeting.

(5) "Combination or universal machine" means a machine combining several operations, including but not limited to sawing, jointing and drilling.

(6) "Cutter head" means a powered holder for a cutting blade.

History: 1954 ACS 69, p. 74, Eff. Nov. 15, 1971.

R 408.12706 Definitions; D to J.

Rule 2706. (1) "Drag saw" means a chain saw on which an end of the chain arm is held at a fixed point with the opposite end moving in an arc downward through a log.

(2) "Guillotine veneer cutter" means a machine with a blade which cuts veneer by moving downward through the material, similar to a metal shear.

(3) "Interlocked barrier" means a guard attached to a machine and interlocked so that if the guard is not in place the machine will not start or, if running, the power will be cut off.

(4) "Inverted cut-off, jump saw" or "underslung saw" means a machine similar to a circular saw except the blade moves through stationary material.

(5) "Jointer" means a machine with a revolving cutter head set into an adjustable table over which the material is moved over the cutter head.

History: 1954 ACS 69, p. 75, Eff. Nov. 15, 1971.

R 408.12707 Definitions; M to P.

Rule 2707. (1) "Molding or sticker machine" means a machine equipped with revolving cutter heads and used to cut irregular contours on straight strips of wood.

(2) "Mortiser" means a boring machine used to cut square or rectangular holes.

(3) "Planer" means a machine with a revolving cutter head set above an adjustable table on which material is passed under the cutter head by powered rollers.

(4) "Point of operation" means the area of a machine where material is actually worked.

(5) "Profile or swing head lathe" means a machine with multiple fixed knives suspended from a carriage over revolving stock which shapes the stock to a predetermined design.

(6) "Push stick" means a narrow strip of wood or other soft material with a notch or sharp point on 1 end which is used to push material through a point of operation.

History: 1954 ACS 69, p. 75, Eff. Nov. 15, 1971.

R 408.12708 Definitions; R to T.

Rule 2708. (1) "Radial saw" means a machine with a circular blade suspended from a horizontal arm which is pulled through the material.

(2) "Revolving tool lathe" means a lathe where revolving multiple cutters shape cut revolving stock held between 2 points.

(3) "Router" means a machine with a revolving vertical cutter and a motor suspended over a table and used to cut to a predetermined design.

(4) "Run" means the distance from pulley to pulley.

(5) "Swing saw" means a machine suspended above a table and equipped with a circular blade which swings forward from an overhead pivot point.

(6) "Tenoner" means a machine equipped with horizontal and vertical circular blades to cut tenons and perform trimming operations.

History: 1954 ACS 69, p. 75, Eff. Nov. 15, 1971.

R 408.12709 Definitions; V, W.

Rule 2709. (1) "Veneer clipper" means a machine which cuts multiple layers of veneer to predetermined sizes.

(2) "Veneer jointer" means a machine which machines the edges of veneer.

(3) "Veneer rotary lathe" means a machine which peels thin pieces of veneer from a log as it revolves past a blade.

(4) "Veneer slicer" means a machine which cuts thin pieces of veneer from a log by moving a vertical blade against the log.

(5) "Veneer splicer" means a machine which glues veneer along the edges to make a larger piece.

(6) "Walkway" means a path of travel for foot traffic only.

History: 1954 ACS 69, p. 75, Eff. Nov. 15, 1971.

R 408.12711 Plant layout; machinery.

Rule 2711. (1) A machine shall be located to allow space in which to handle material without interference from or to employees or machines. A machine shall not be so placed to require the operator to stand in an aisle unless protection is provided.

(2) A machine shall be secured to a floor, foundation, bench, table or stand of sufficient strength and design to prevent overturning or unintentional movement. This subrule does not apply to portable hand tools.

(3) A machine shall be located so that light of 50 footcandle power minimum intensity from both natural and artificial light falls on the work. Supplementary illumination at the point of operation shall be provided where necessary.

History: 1954 ACS 69, p. 76, Eff. Nov. 15, 1971.

R 408.12712 Plant layout; floors and aisles.

Rule 2712. (1) A floor shall be kept in good repair and free from protruding nails, holes, unevenness and loose boards.

(2) A floor at the operator's station of a machine shall be maintained free of any slip or trip hazard.

(3) An aisle for powered traffic moving in 1 direction at a time shall be not less than the width of the widest vehicle or load plus 3 feet. An aisle for powered traffic moving in 2 directions at a time shall be not less than twice the width of the widest vehicle or load plus 3 feet. Lines shall be painted on the floor, or a similar method used to mark an aisle. This subrule applies to an aisle in a new layout after the effective date of this part. An existing aisle shall comply with this subrule by January 1, 1973.

(4) A walkway shall be kept clear of material and other obstructions.

History: 1954 ACS 69, p. 76, Eff. Nov. 15, 1971.

R 408.12714 Machines and equipment; construction.

Rule 2714. (1) The height of the table or working surface of a machine, auxiliary table and supports shall be designed to provide for safety of the operator. An auxiliary table or supports shall be provided so that large or unwieldy pieces can be handled safely.

(2) The vibration of a machine shall not create a hazard to the operator.

(3) An arbor and mandrel shall have a firm and secure bearing.

(4) The frames and all exposed metal parts of electric woodworking machinery shall be grounded. A portable motor driving an electric tool shall be grounded unless it has approved double insulation.

History: 1954 ACS 69, p. 76, Eff. Nov. 15, 1971.

R 408.12715 Machines and equipment; lock out procedure.

Rule 2715. A woodworking machine shall have a disconnect switch that can be locked in the off position. This rule does not apply to hand-held tools. An employer shall establish and maintain a lock out procedure. A machine connected to an electrical source by a plug-in cord shall be considered in compliance if the plug is disconnected and tagged.

History: 1954 ACS 69, p. 76, Eff. Nov. 15, 1971; 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.12716 Machines and equipment; controls.

Rule 2716. (1) A machine shall have a mechanical or electrical power control to permit the operator to cut off the power from the machine without leaving his position at the work station.

(2) A woodworking machine shall not automatically restart upon restoration of power after a power failure. A machine wired to a 110-volt line before the effective date of this part is excepted from this rule.

(3) Operating controls shall be located within reach of the operator while he is at his regular work station, making it unnecessary to reach over the cutters. The controls shall be installed to eliminate the danger of accidental activation. This subrule does not apply to a constant pressure control used only for setup purposes.

(4) An operating treadle shall be protected with a cover guard to prevent unexpected or accidental tripping.

(5) The control on hand-held, power driven tools shall be located so it cannot be accidentally activated.

(6) A hand-held, power driven saw shall have a "dead man" control, such as a spring-actuated switch, valve or equivalent device, so the power will be automatically shut off when the operator releases the control. This subrule applies to a control switch which can be locked in the "On" position.

History: 1954 ACS 69, p. 76, Eff. Nov. 15, 1971; 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.12717 Machines and equipment; self feed.

Rule 2717. Automatic feeding devices on a machine should be installed where the nature of the work will permit. The feed rolls or other moving parts on a feeder attachment shall be covered or guarded to protect the operator from in-running nip points.

History: 1954 ACS 69, p. 77, Eff. Nov. 15, 1971.

R 408.12718 Saws; general.

Rule 2718. (1) A wooden band-saw wheel not of commercial manufacture shall not be used.

(2) A cut-off saw that strokes automatically without the operator's control of each stroke shall have a guard to keep the operator's hands from getting in contact with a blade.

(3) An automatic cut-off saw that strokes continuously without the operator being able to control each stroke shall not be used.

(4) Lugs shall be cast on saw frame or tables or another means shall be provided to limit the saw blade size that can be mounted, to avoid overspeed caused by mounting a saw larger than intended.

(5) A circular saw fence shall be firmly secured to the table or table assembly without changing its alignment with the saw. For a saw with a tilting table or tilting arbor the fence shall remain in alignment with the saw, regardless of the angle of the saw with the table.

(6) A circular saw gauge shall slide in grooves or tracks that are accurately machined, to insure exact alignment with the saw for all positions of the gauge.

(7) A hinged saw table in use shall be firmly secured in position and in true alignment with the saw.

History: 1954 ACS 69, p. 77, Eff. Nov. 15, 1971; 1954 ACS 90, p. 56, Eff. July 23, 1974.

R 408.12719 Saws; speeds.

Rule 2719. (1) The operating speed as designated by the manufacturer shall be etched or otherwise permanently marked on a circular saw blade more than 20 inches in diameter. A saw blade shall not be operated at a higher speed than shown on the blade.

(2) When a marked saw blade is retensioned for a different speed, the marking shall be corrected to show the new speed.

History: 1954 ACS 69, p. 77, Eff. Nov. 15, 1971.

R 408.12720 Cracked blades.

Rule 2720. A cracked circular saw blade shall not be repaired or used.

History: 1954 ACS 69, p. 77, Eff. Nov. 15, 1971.

R 408.12721 Saws; circular.

Rule 2721. The exposed part of a saw blade either beneath or behind a table shall be covered with an exhaust hood. If an exhaust system is not required, the exposed part shall be covered with a guard arranged to prevent accidental contact with the saw.

History: 1954 ACS 69, p. 77, Eff. Nov. 15, 1971.

R 408.12722 Circular saw guards.

Rule 2722. (1) A circular saw shall have a hood-type guard covering the blade at all times when not in use.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j
Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(2) When in use, the hood type guard shall enclose that part of the blade above the table and that part of the blade above the material by adjusting automatically to the thickness of the material being cut, or it may be a fixed or manually adjusted hood type guard if the hood remains in contact with the material.

(3) A hood type guard shall be made of 14 gauge metal or thicker. Plastic may be used if it can resist blows and strains incidental to reasonable operation, adjusting and handling and is designed to protect the operator from flying splinters and broken saw teeth.

(4) The guard shall be made of material soft enough so that it will be unlikely to cause tooth breakage.

(5) The hood shall be mounted so that its operation will be positive, reliable and in true alignment with the saw. The mounting shall be of sufficient strength to resist any reasonable side thrust or other force tending to throw it out of line.

(6) Where a hood type guard cannot be used because of unusual shapes or cuts, a jig or fixture providing equal safety of the operator shall be used. On the completion of these operations, the guard shall be replaced immediately.

(7) A push stick shall be used in cutting short or narrow stock.

History: 1954 ACS 69, p. 77, Eff. Nov. 15, 1971; 1954 ACS 80, p. 57, Eff. July 23, 1974.

R 408.12723 Circular saw spreaders.

Rule 2723. A hand fed circular rip saw shall have a spreader to prevent material from squeezing the saw or being thrown back at the operator. The spreader shall be made of steel, or its equivalent, and shall be thinner than the saw kerf and slightly thicker than the saw disk. It shall be at least 1 inch wide at the table to provide adequate stiffness or rigidity to resist any reasonable side thrust or blow tending to bend or throw it out of position. The spreader shall be attached so it will remain in true alignment with the saw even when either the saw or table is tilted. It should be placed so there is not more than ½ inch space between the spreader and the back of the saw when the largest saw is mounted in the machine. If a blade smaller than maximum permissible size is used, the spreader shall be moved to within ½ inch of the blade. A spreader need not be used in connection with grooving, dadoing or rabbeting. On the completion of such operations, the spreader shall be replaced immediately.

History: 1954 ACS 69, p. 78, Eff. Nov. 15, 1971.

R 408.12724 Nonkickback fingers or dogs.

Rule 2724. A hand fed circular rip saw shall have nonkickback fingers or dogs located to oppose the thrust or tendency of the saw to pick up the material or to throw it back at the operator. They shall be designed to provide holding power for all the thicknesses of material being cut.

History: 1954 ACS 69, p. 78, Eff. Nov. 15, 1971.

R 408.12725 Multiple arbor saw guards.

Rule 2725. Revolving multiple arbor saws shall be fully guarded in accordance with R 408.12722.

History: 1954 ACS 69, p. 78, Eff. Nov. 15, 1971.

R 408.12726 Circular resaw guards.

Rule 2726. (1) A circular resaw shall be guarded by a hood type guard or shield of metal above the saw. This guard or shield shall comply with R 408.12722.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA

(2) Each circular resaw, except self-feed saws with a roller or wheel at back of the saw, shall have a spreader fastened securely behind the saw. The spreader shall be thinner than the saw kerf and slightly thicker than the saw disk.

History: 1954 ACS 69, p. 78, Eff. Nov. 15, 1971

R 408.12727 Self-fed circular saw hoods.

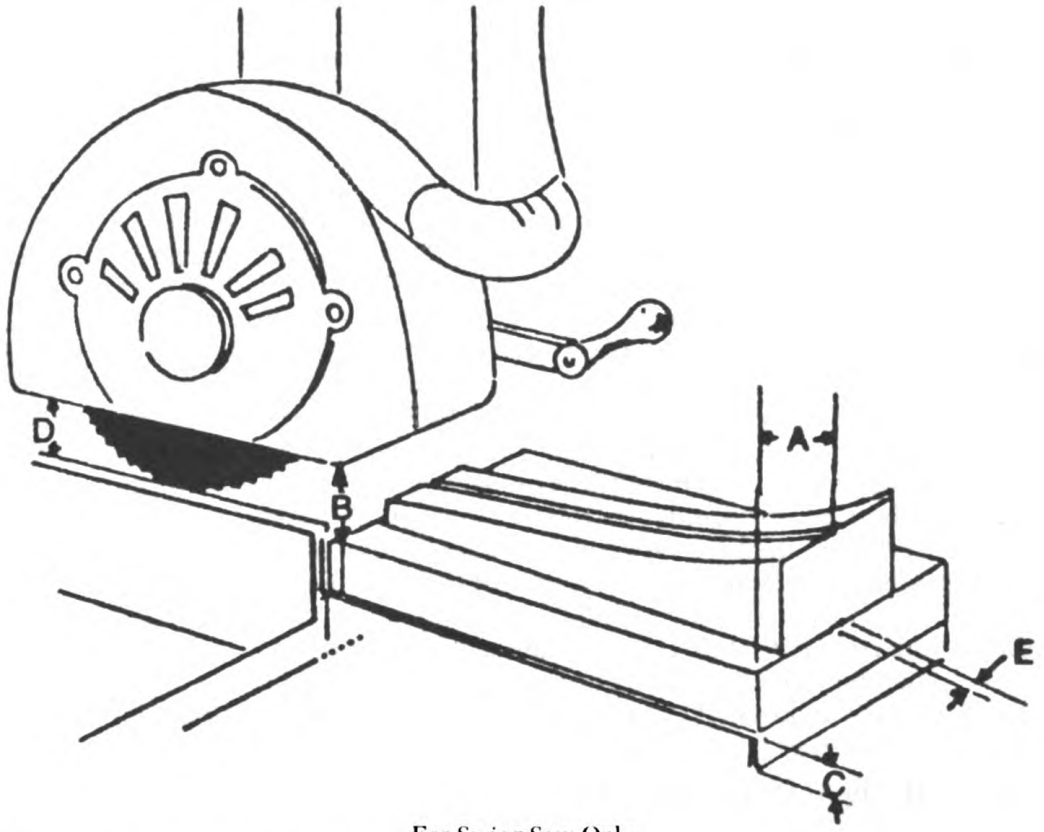
Rule 2727. (1) In addition to guards over blades, as specified in R 408.12722, feed rolls on a self-feed circular saw shall be protected by a hood or guard to prevent the hands of the operator from coming in contact with the in-running rolls at any point. The guard shall be constructed of not less than 14-gauge sheet metal or the equivalent, and the bottom of the guard shall come down to within ⅜ inch of the plane formed by the bottom of working surfaces of the feed rolls. This distance may be increased to ¾ inch if the lead edge of the hood is extended to not less than 5½ inches in front of the nip point between the front roll and the work.

(2) A self-feed circular rip saw shall have sectional nonkickback fingers along the full width of the feed rolls. They shall be located in front of the saw and arranged to be in continual contact with the wood being fed.

History: 1954 ACS 69, p. 78, Eff. Nov. 15, 1971; 1954 ACS 88, p. 94, Eff. Sept. 16, 1976.

R 408.12728 Swing and sliding cut-off saws.

Rule 2728. (1) Swing and sliding cut-off saws or any other saw mounted above the table, except radial saws, shall have a hood-type guard designed so the upper half of the blade, arbor, and nut will be covered at all times. A hood-type guard or a device shall cover the lower half of the blade. It shall automatically adjust to the thickness of the stock. It shall remain in contact with the stock or table as it moves forward to cut or returns to the back of the table. It shall be constructed of not less than 14 gauge sheet metal or equivalent material and designed to protect the operator from flying splinters and broken saw teeth.



(2) A box-type guard, as prescribed in figure 1, or other fixed or adjustable barrier guard that prevents employee exposure to the saw blade, may be used to protect the operator from the bottom portion of the blade in lieu of the self-adjusting lower blade guard if the upper portion of the blade, including the saw arbor, is completely enclosed.

(3) A swing cut-off saw shall have an effective device to return the saw automatically to the back of the table when released at any point in its travel. The device shall not depend upon any rope, cord, or spring for its proper functioning. A device shall be installed that prevents a rebound of the saw blade. If there is a counterweight, bolts supporting the bar and counterweight shall have cotter pins, and the counterweight shall be prevented from dropping by a bolt passing through both the bar and counterweight or by a bolt put through the extreme end of the bar or, where the counterweight does not encircle the bar, by a safety chain attached to it. If the counterweight is exposed to contact, it shall be enclosed by a guard to the floor area guard that will hold twice the weight of the counterweight.

(4) A swing cut-off saw shall have limit chains or other equally effective devices to prevent the saw from swinging beyond the front or back edges of the table or beyond a forward position where the gullets of the lowest saw teeth will rise above the table top.

FIGURE 1

For Swing Saw Only

A = Must be twice the "C" dimension, minimum 6 inches
B = ⅜ inch maximum
C = Open, depends on stock thickness
D = ⅜ maximum
E = ¼ inch maximum on each side of blade.

History: 1954 ACS 69, p. 78, Eff. Nov. 15, 1971; 1954 ACS 99, p. 117, Eff. Apr. 18, 1979.

R 408.12729 Inverted swing cut-off; jump saws; underslung saws.

Rule 2729. A hood type guard shall be securely fastened to the table that will cover the blade when running idle. The hood or guard shall extend not less than 2 inches in front of the saw teeth when the blade is in back position. A traveling guard shall move with the blade over the material and cover the exposed part of the blade above the material. The width of the hood shall be limited to provide not more than ¼ inch clearance on each side of the blade.

History: 1954 ACS 69, p. 79, Eff. Nov. 15, 1971.

R 408.12730 Radial saws.

Rule 2730. (1) The upper hood shall completely enclose the upper portion of the blade down to a point that includes the end of the saw arbor. The upper hood shall be constructed of not less than 14 gauge minimum sheet metal or equivalent material in a manner that protects the operator from flying splinters and broken saw teeth and deflects sawdust away from the operator. The sides of the lower exposed portion of the blade shall be guarded to the full diameter of the blade by a device that automatically adjusts itself to the thickness of the stock and remains in contact with the stock being cut to give maximum protection possible for the operation being performed.

(2) A box-type guard, as prescribed in figure 2, or other fixed or adjustable barrier guard that prevents employee exposure to the saw blade, may be used to protect the operator from the bottom portion of the blade in lieu of the self-adjusting lower blade guard if the upper portion of the blade, including the saw arbor, is completely enclosed.

(3) When radial saws are used for ripping, a spreader should be provided, in compliance with R 408.12733.

(4) Nonkickback fingers or dogs shall be located on both sides of each radial saw used for ripping to oppose the thrust or tendency of the saw to pick up the material or throw it back toward the operator. They shall be designed to provide adequate holding power for the total thickness of the material being cut.

(5) An adjustable stop shall be provided to prevent the forward travel of the blade beyond the position necessary to complete the cut in repetitive operations. A limit chain or other equally effective device shall be provided to prevent the saw blade from sliding beyond the edge of the table or the table, at that place, shall be extended to eliminate overrun. The front end of the unit shall be slightly higher than the rear, or shall meet the requirements of R 408.12728(3), to cause the cutting head to return gently to the starting position when released by the operator. The slope shall not be enough to cause rebound.

(6) Ripping and ploughing shall be against the direction in which the saw turns. The direction of the saw rotation shall be conspicuously marked on the hood. In addition, a permanent label, colored standard danger red not less than 1½ inches by ¾ inch shall be affixed to the rear of the guard at approximately the level of the arbor, reading as follows: "DANGER: Do Not Rip or Plough From This End."

History: 1954 ACS 69, p. 79, Eff. Nov. 15, 1971; 1954 ACS 99, p. 119, Eff. Apr. 18, 1979.

R 408.12731 Portable circular saws.

Rule 2731. A portable, power driven saw shall have guards above and below the base plate or shoe. The upper guard shall cover the saw to the depth of the teeth, except for the minimum arc required to permit the base to be tilted for bevel cuts. The lower guard shall cover the saw to the depth of the teeth, except for the minimum arc required to allow proper retraction and contact with the work. When the tool is withdrawn from the work, the lower guard shall automatically and instantly return to the covering position.

History: 1954 ACS 69, p. 79, Eff. Nov. 15, 1971.

R 408.12732 Band saws.

Rule 2732. (1) All portions of the band saw blade shall be enclosed or guarded except for the working portion of the blade between the bottom of the guide and the table.

(2) A band saw wheel shall be fully encased. The outside periphery of the enclosure shall be solid. The front and back of the band wheels shall be enclosed by either solid material, wire mesh, or perforated metal. Mesh or perforated metal shall be not less than 0.037 inch (U.S. gauge no. 20) and the openings shall be not more than ⅜ inch. Solid material used for this purpose shall be of an equivalent strength and firmness. The upper wheel guard shall be made to conform to the travel of the saw on the wheel. The top member of the guard should have at least a 2-inch clearance outside the saw and be lined with smooth material.

(3) A guard for the portion of the blade between the sliding guide and the upper saw wheel guard shall protect the saw blade at the front and outer side. The guard shall be self-adjusting to raise and lower with the guide.

(4) The sliding blade guide shall be kept to within ¼ inch of the work piece.

History: 1954 ACS 69, p. 79, Eff. Nov. 15, 1971; 1954 ACS 88, p. 94, Eff. Sept. 16, 1976.

R 408.12733 Band resaws; feed rolls.

Rule 2733. Feed rolls of band resaws shall be protected with a suitable guard to prevent the hands of the operator from coming in contact with the in-running rolls at any point. The guard shall be constructed of 11 gauge sheet metal or stronger material, preferably metal. The edge of the guard shall come to within ⅜ inch of the plane formed by the inside face of the feed roll in contact with the stock being cut or the work table.

History: 1954 ACS 69, p. 80, Eff. Nov. 15, 1971.

R 408.12736 Jointers and planers; general.

Rule 2736. (1) Each hand fed planer and jointer with a horizontal or vertical head shall have a cylindrical cutting head, the knife projection of which shall not extend more than ⅛ inch beyond the cylindrical body of the head.

(2) Square cutting heads shall not be used on jointers and planers.

(3) The opening in the jointer table shall be kept as small as possible. The clearance between the edge of the rear table and the cutter head shall be not more than ⅛ inch. The table throat opening shall be not more than 2½ inches when tables are set or aligned for zero cut.

(4) A proper push block shall be used when jointing short or narrow stock.

History: 1954 ACS 69, p. 80, Eff. Nov. 15, 1971.

R 408.12737 Jointers; guards.

Rule 2737. (1) A hand fed jointer with a horizontal or vertical cutting head shall have an automatic guard covering all the sections of the cutting head on the working side of the fence or gauge. The guard shall effectively keep the operator's hand from coming in contact with the revolving knives. The guard shall adjust itself automatically to cover the unused portion of the head, and shall remain in contact with the material at all times.

(2) A hand fed jointer with a horizontal cutting head shall have a guard covering the section of the head back of the gauge or fence.

(3) Each wood jointer with vertical head shall have either an exhaust hood or other guard so arranged as to enclose completely the revolving head, except for a slot of such width as may be necessary and convenient for the application of the material to be jointed.

History: 1954 ACS 69, p. 80, Eff. Nov. 15, 1971; 1954 ACS 88, p. 95, Eff. Sept. 16, 1976.

R 408.12739 Tenoning machines and automatic edge banders.

Rule 2739. (1) A tenoning machine and an automatic edge bander shall have all cutting heads and saws covered by guards. The guards shall cover at least the unused part of the periphery of the cutting head. If a guard is constructed of sheet metal, the material used shall be not less than 14 gauge in thickness. If cast iron is used, it shall be not less than 3/16 inch in thickness. Other materials of equivalent strength may be used. If interlocked barriers are used at load and unload ends the enclosure guards specified in this subrule need not be used. It is not required that the above hoods retain a thrown or broken knife.

(2) If an exhaust system is used on a tenoner or edge bander, the guard shall form part or all of the exhaust hood. It shall be constructed of material of a thickness not less than that specified in subrule (1).

History: 1954 ACS 69, p. 80, Eff. Nov. 15, 1971.

R 408.12740 Double end tenoner drives.

Rule 2740. (1) Feed chains and sprockets of double end tenoning machines shall be completely enclosed, as prescribed in occupational safety standards commission standard, Part 7. Power Transmission Guarding, being R 408.10701 to R 408.10763 of the Michigan Administrative Code, except for that portion of chain used for conveying the stock.

(2) At the rear ends of frames over which feed conveyors run, sprockets and chains shall be guarded at the sides by plates projecting beyond the periphery of sprockets and the ends of lugs.

(3) The unloading end of the frame over which the feed conveyors run shall be extended so the material, as it leaves the machine, will be guided to a point where the operator cannot reach the point of operation.

History: 1954 ACS 69, p. 80, Eff. Nov. 15, 1971.

R 408.12741 Hold downs.

Rule 2741. Hold downs shall be guarded with an enclosure to within ¼ inch of the work piece or in accordance with table 1.

TABLE 1

Distance of Opening From Point of Operation Hazard	Maximum Width of Opening
½" to 1½"	¼"
1½" to 2½"	⅜"
2½" to 3½"	½"
3½" to 5½"	⅝"
5½" to 6½"	¾"
6½" to 7½"	⅞"
7½" to 12½"	1¼"
12½" to 15½"	1½"
15½" to 17½"	1⅞"
17½" to 31½"	2⅛"

This table shows the distances that guards shall be positioned from the danger line in accordance with the required feed openings.

History: 1954 ACS 69, p. 81, Eff. Nov. 15, 1971.

R 408.12742 Hand fed tenoners.

Rule 2742. Hand fed tenoning machines shall have a clamping or hold down device on the fixture to help the operator hold the material being cut.

History: 1954 ACS 69, p. 81, Eff. Nov. 15, 1971.

R 408.12744 Boring and mortising machines.

Rule 2744. (1) A safety bit chuck without projecting set screws shall be used on a boring or mortising machine.

(2) Boring bits should have a guard enclosing all portions of the bit and chuck above the material being worked.

(3) The top of the cutting chain and driving mechanism on a chain mortiser shall be enclosed.

(4) If there is a counterweight, it shall be guarded as prescribed in R 408.12728(2).

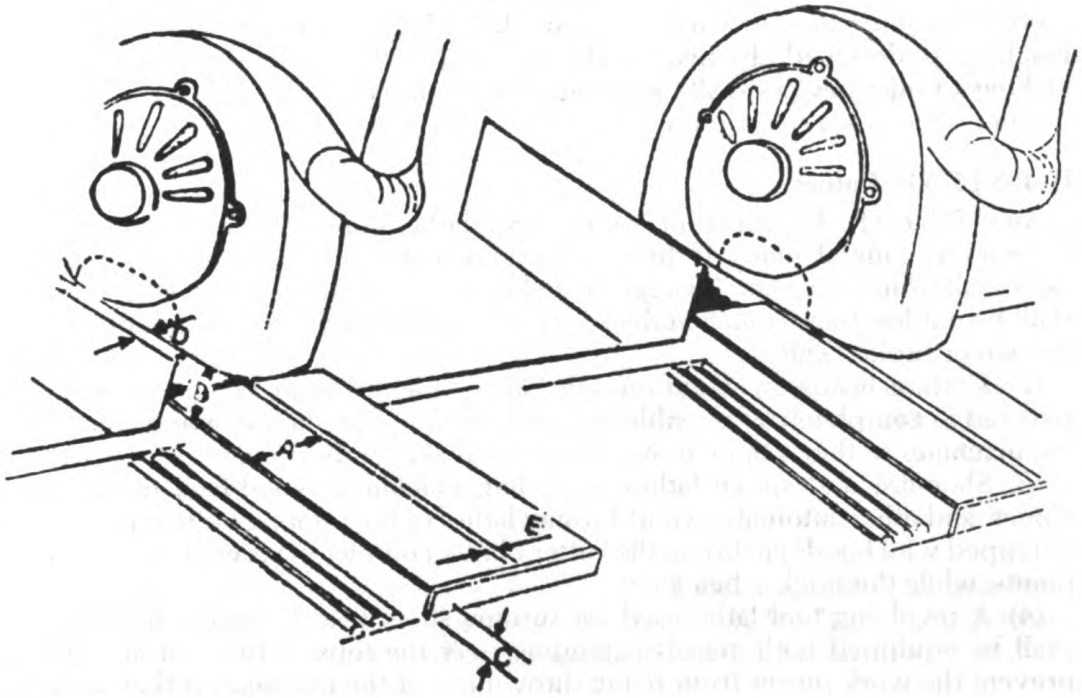
(5) Universal joints and spindles of boring machines shall be guarded to prevent accidental contact by the operator.

History: 1954 ACS 69, p. 81, Eff. Nov. 15, 1971.



R 408.12751 Wood shapers.

Rule 2751. (1) The cutting heads of a wood shaper, hand fed panel raiser, or a similar machine that is not automatically fed shall be enclosed with a cage or adjustable guard designed to prevent contact with cutter blades by the operator's hands. The diameter of circular shaper guards shall be not less than the greatest diameter of the cutter. A warning device of leather or other material shall not be attached to the spindle. Prototype operations, involving a single item, where an unusual configuration precludes the use of a guard, is exempt from this rule.

(2) Cylindrical heads should be used whenever the nature of the work permits their use. Single cutter knives in shaper heads shall not be used unless they are properly balanced.

(3) Templates, jigs, and fixtures that remove the operator's hands from the point of operation shall be used whenever the nature of the work permits their use.

FIGURE 2

"A" dimension must be 6 inches minimum or twice "C" dimension.
"B" dimension is ⅜ inch maximum.
"D" dimension is ⅜ inch maximum.
"E" dimension is ¼ inch maximum on each side of blade.
Top of side barriers must be within ⅜ inch of bottom of guard when saw is retracted. Dotted line in bottom of guard shows possible relief if teeth are not exposed.

History: 1954 ACS 69, p. 81, Eff. Nov. 15, 1971; 1954 ACS 99, p. 119, Eff. Apr. 18, 1979.

R 408.12752 Double spindle shapers.

Rule 2752. Double spindle shapers shall be provided with a spindle starting and stopping device for each spindle.

History: 1954 ACS 69, p. 81, Eff. Nov. 15, 1971.

R 408.12755 Planing, molding, sticking, and matching machines.

Rule 2755. (1) Each planing, molding, sticking, and matching machine shall have all cutting heads and saws covered by a metal guard. If the guard is constructed of sheet metal, the material used shall be not less than 14 gauge in thickness or the equivalent. If cast iron is used, it shall be not less than 3/16 inch in thickness. It is not required that the hoods retain a thrown or broken knife.

(2) If an exhaust system is used, the guards shall form part or all of the exhaust hood and shall be constructed of metal of a thickness not less than that specified in subrule (1).

History: 1954 ACS 69, p. 82, Eff. Nov. 15, 1971; 1954 ACS 88, p. 95, Eff. Sept. 16, 1976.

R 408.12756 Feed rolls.

Rule 2756. (1) A feed roll on a planing, molding, sticking or matching machine shall be guarded by a hood or suitable guard to prevent the hands of the operator from coming in contact with the in-running rolls at any point. The guard shall be fastened to the frame carrying the rolls so as to remain in adjustment for any thickness of stock.

(2) Surfacers or planers used in thicknessing multiple pieces of material simultaneously shall have sectional infeed rolls with sufficient yield in the construction of the sections to provide feeding contact pressure on the stock over the permissible range of variation in stock thickness specified or for which the machine is designed. In lieu of the yielding sectional rolls, suitable section kickback finger devices shall be provided at the infeed end.

History: 1954 ACS 69, p. 82, Eff. Nov. 15, 1971.

R 408.12759 Lathes.

Rule 2759. (1) A profile or swing-head lathe shall have all cutting heads covered by a metal guard. If the guard is constructed of sheet metal, the material used shall be not less than 14 gauge in thickness or equivalent. If cast iron is used, it shall be not less than 3/16 inch in thickness. It is not required that the hoods retain a thrown or broken knife.

(2) Cutting heads on wood-turning lathes, whether rotating or not, shall be covered as completely as possible by hoods or shields, which should be hinged to the machines so they can be moved back for making adjustments.

(3) Shoe-last and spoke lathes, doweling machines, wood-heel turning machines, and other automatic wood-turning lathes of the rotating knife type shall be equipped with hoods enclosing the cutter blades completely, except at the contact points, while the stock is being cut.

(4) A revolving tool lathe used for turning stock held between the 2 centers shall be equipped with guards extending over the tops of the tool in order to prevent the work pieces from being thrown out of the machines if they become loose.

(5) A revolving tool lathe shall be equipped with a suction hood properly connected to an exhaust system. The hood shall be formed over the revolving tools to serve as a guard. They shall be constructed of metal of a thickness not less than that specified in subrule (1).

History: 1954 ACS 69, p. 82, Eff. Nov. 15, 1971; 1954 ACS 88, p. 95, Eff. Sept. 16, 1976.

R 408.12761 Sanding machines.

Rule 2761. Feed rolls of self-feed sanding machines shall be protected with a semi-cylindrical guard to prevent the hands of the operator from coming in contact with the in-running rolls at any point. The guard shall be constructed of

not less than 18 gauge sheet metal or stronger material, preferably metal, and shall be firmly secured to the frame carrying the rolls to remain in adjustment for any thickness of stock. The bottom of the guard should come down to within ⅜ inch of a plane formed by the bottom or contact face of the feed roll where it touches the stock.

History: 1954 ACS 69, p. 82, Eff. Nov. 15, 1971.

R 408.12762 Drum sanding machines.

Rule 2762. A drum sanding machine shall have an exhaust hood, or other guard if an exhaust system is not required, arranged to enclose the revolving drum, except for that portion of the drum above the table.

History: 1954 ACS 69, p. 82, Eff. Nov. 15, 1971; 1954 ACS 88, p. 95, Eff. Sept. 16, 1976.

R 408.12763 Disk sanding machines.

Rule 2763. A disk sanding machine shall have the exhaust hood, or other guard if an exhaust system is not required, arranged to enclose the revolving disk, except for that portion of the disk above the table. The distance between the disk and the table edge shall be not more than ¼ inch.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971; 1954 ACS 88, p. 95, Eff. Sept. 16, 1976.

R 408.12764 Belt sanding machines.

Rule 2764. (1) Belt sanders shall have all pulleys enclosed including sides and periphery except the working end of an edge sander. An exhaust hood may be part of the guard.

(2) The edges of the unused run of the belt shall be guarded.

(3) These guards shall effectively prevent the hands or fingers of the operator from coming in contact with the nip points.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971; 1954 ACS 88, p. 95, Eff. Sept. 16, 1976.

R 408.12767 Combination or universal woodworking machines.

Rule 2767. On combination or universal woodworking machines, each point of operation shall be guarded as specified in the rules of this part for each separate machine. The machines shall have a separate stopping and starting device for each point of operation.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971.

R 408.12768 Routers.

Rule 2768. The pulleys, spindles and cutting tools on routers shall be guarded. Turn plates, jigs and fixtures requiring the operator's hands to be removed from the point of operation may be used as a point of operation guard.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971.

R 408.12769 Roll type glue spreaders.

Rule 2769. (1) The feed rolls on a roll type glue spreader shall be guarded at all nip points. The bottom of the guard at the feed side shall come to within ⅜ inch of a plane formed by bottom or contact face of the feed roll where it touches the stock.

(2) A reversing bar or switch, or a kick plate may be used in addition to the nip guard.

(3) The rolls shall be fully opened when they are being cleaned.

(4) A long-handled brush or swab shall be used to clean them.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971.

R 408.12770 Other machines not excluded.

Rule 2770. The mention of specific machines in R 408.12721 to R 408.12769 does not exclude other woodworking machines from the requirement that suitable guards and exhaust hoods be provided to reduce to a minimum the hazard due to the point of operation of these machines.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971.

R 408.12773 Veneer steaming and soaking vats.

Rule 2773. (1) The sides of veneer steam and soaking vats shall extend to a height of not less than 36 inches above the floor, working platform or ground or all sides shall be enclosed with a standard barrier as prescribed in occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10201 to R 408.10239 of the Michigan Administrative Code.

(2) Large veneer steam and soaking vats divided into sections shall have a walkway between sections. A walkway shall have a standard barrier, as prescribed in occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, on each exposed side. The handrails may be removed if necessary but shall be immediately replaced. If the size of the stock handled permits, it is advisable to keep the size of the vat sections to 9 feet or less.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971.

R 408.12774 Vat loading and unloading.

Rule 2774. One or more of the following means shall be used in loading and unloading veneer steam and soaking vats:

(a) The employee shall be provided with a safety belt attached to a lifeline of ¾ inch manila rope or ½ inch nylon rope. The lifeline shall be attached to a traveling trolley on a monorail or to a fixed anchorage or similar arrangement. The lifeline shall be permanently adjusted so that if the employee slips, falls or trips he cannot fall into the vat.

(b) Mechanical handling or conveying equipment shall be provided and designed so the logs are removed without the assistance of an employee at the edge of the veneer steam and soaking vat.

(c) The floor surface at the sides of the vats being used shall be anti-slip.

History: 1954 ACS 69, p. 83, Eff. Nov. 15, 1971.

R 408.12776 Ventilation.

Rule 2776. (1) Veneer steam and soaking vats should be located in buildings or in special sheds heated in cold weather to keep the amount of steam at a minimum.

(2) Means shall be provided to ventilate buildings in which steam and soaking vats are located. High ceilings with roof ventilators or louvers are desirable. Where ceilings or roofs are under 15 feet, exhaust fans shall be provided.

History: 1954 ACS 69, p. 84, Eff. Nov. 15, 1971.

R 408.12779 Log handling equipment.

Rule 2779. All gears, sprockets and other dangerous parts on cranes and log trolleys shall be enclosed with guards as prescribed in occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10701 to R 408.10763 of the Michigan Administrative Code. The use of log trolleys or cranes is urgently recommended except where the stock handled is very small.

History: 1954 ACS 69, p. 84, Eff. Nov. 15, 1971.

R 408.12781 Drag saws.

Rule 2781. A drag saw shall be located to allow at least a 4-foot clearance for passage when the saw is at the extreme end of the stroke. If such clearance is not obtainable, the saw and its driving mechanism shall be provided with a standard barrier as prescribed in occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

History: 1954 ACS 69, p. 84, Eff. Nov. 15, 1971.

R 408.12784 Veneer cutters.

Rule 2784. (1) Slicer knives shall be guarded at both front and rear to prevent accidental contact with the knife edge.

(2) Veneer slicers and rotary veneer cutting lathes shall be shut off when logs are inserted or adjustments are made.

(3) Operators shall not ride the carriage of a veneer slicer.

(4) Power driven guillotine veneer cutters shall have 1 or both of the following:

(a) Starting devices which require the simultaneous action of both hands to start the cutting motion and of at least 1 hand on a control during the complete stroke of the knife.

(b) An automatic guard which will remove the hands of the operator from the danger zone at every descent of the blade, used in conjunction with 1 hand starting devices which require 2 distinct movements of the device to start the cutting motion and designed to return positively to the nonstarting position after each complete cycle of the knife.

(5) Where 2 or more employees are engaged at the same time on the same power driven guillotine veneer cutter, it shall have 2 hand controls for each employee and the device shall be arranged so each employee is required to use both hands simultaneously on the controls to start the cutting motion and at least 1 hand of each employee on a control to complete the cut.

(6) Power driven guillotine veneer cutters, other than continuous trimmers, shall be provided with an emergency device to prevent the machine from operating in the event of failure of the brake when the starting mechanism is in the nonstarting position, in addition to the brake or other stopping mechanism.

(7) Where practicable, hand and foot-power guillotine veneer cutters shall be provided with rods or plates, or other satisfactory means, so arranged on the feeding side that the hands cannot reach the cutting edge of the knife while feeding or holding the stock in place.

(8) Whenever veneer slicers or rotary veneer-cutting machines have been shut down for the purpose of inserting logs or making adjustments, operators shall make sure that the machine is clear and other workmen are not in a hazardous position before starting the machine.

History: 1954 ACS 69, p. 84, Eff. Nov. 15, 1971; 1954 ACS 88, p. 98, Eff. Sept. 16, 1976.

R 408.12785 Veneer clippers.

Rule 2785. (1) A veneer clipper shall have a guard to keep the fingers from the point of operation while feeding or removing the stock.

(2) The sprockets on a chain or slat belt conveyor of a veneer clipper shall be enclosed. It is recommended that conveyors or traveling tables be installed to remove material from clippers.

(3) Where 2 or more operators work on a veneer clipper, each shall have a control button which shall be pressed simultaneously to activate the machine.

History: 1954 ACS 69, p. 84, Eff. Nov. 15, 1971.

R 408.12786 Veneer splicer.

Rule 2786. A veneer splicer shall have a barrier at the feed end to keep fingers from the in-running pinch point.

History: 1954 ACS 69, p. 84, Eff. Nov. 15, 1971.

R 408.12787 Veneer jointers.

Rule 2787. Saw blades and vertical heads on a veneer jointer shall be enclosed and 2-hand controls shall be provided for each operator and shall be held down until the cut is complete. Pinch points formed by a moveable bed shall be guarded.

History: 1954 ACS 69, p. 84, Eff. Nov. 15, 1971.

R 408.12791 Operating rules; inspection and maintenance.

Rule 2791. (1) A supervisor or employee shall not remove or make inoperable any safety device or guard specified in this standard.

(2) Dull, badly set, improperly filed, or improperly tensioned saws shall be immediately removed from service before they begin to cause the material to stick, jam, or kick back when it is fed to the saw at a normal speed. Saws to which gum has adhered on the sides shall be immediately cleaned.

(3) Knives and cutting heads of woodworking machines shall be kept sharp, properly adjusted, and firmly secured. If 2 or more knives are used in 1 head, they shall be properly balanced.

(4) Bearings shall be kept free of lost motion and shall be well lubricated.

(5) Arbors of circular saws shall be free from play.

(6) The sharpening or tensioning of saw blades or cutters shall be done only by persons of demonstrated skill.

(7) Shavings and dust shall be removed to prevent a hazardous accumulation.

(8) A saw blade, cutter head, or tool collar shall not be placed or mounted on a machine arbor unless the tool has been machined as to size and shape to fit the arbor.

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971; 1954 ACS 80, p. 57, Eff. July 23, 1974; 1954 ACS 88, p. 98, Eff. Sept. 16, 1976.

R 408.12792 Operating rules; selection of machines.

Rule 2792. Machines shall not be used for operations of such variety as to necessitate the removal of safeguards suitable for the usual service. The specific operations involving special hazards shall be assigned to machines suitable for such work.

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971.

R 408.12793 Operating rules; saws.

Rule 2793. (1) The practice of inserting wedges between the saw disk and the collar to form what is commonly known as a wobble saw is prohibited.

(2) Tension on a band saw and resaw should be released from the blade when it is not in use.

(3) The back thrust shall be adjusted carefully to the normal position of the band saw blade.

(4) A band saw shall not be stopped quickly by thrusting a piece of wood against the cutting edge of teeth when the power is off.

(5) Twists or kinks in a band saw blade shall be promptly removed.

(6) To avoid vibration, brazed or butt joints shall be the same thickness as the band saw blade.

(7) To detect cracks or other defects, each band saw blade shall be carefully examined as it is put on and taken off the band wheel. Cracked saws or saws which indicate probability of breakage shall be removed promptly to avoid injury both to the saw and to the operator.

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971.

R 408.12795 Operating rules; jointers.

Rule 2795. The minimum length of the piece jointed shall be not less than 4 times the distance between the 2 tables. Neither half of the jointer table should be adjusted horizontally so that the clearance between the edge of the table and the revolving knives is more than ¼ inch.

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971.

R 408.12796 Operating rules; lathes.

Rule 2796. Material in a lathe shall be fastened securely to faceplates or between centers.

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971.

R 408.12797 Guard substitutes.

Rule 2797. Combs, featherboards, or suitable jigs shall be provided at the work place for use when a standard guard cannot be used, as in dadoing, grooving, jointing, moulding, and rabbeting, as prescribed in R 408.12722(6).

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971; 1954 ACS 88, p. 98, Eff. Sept. 16, 1978.

R 408.12798 Clothing.

Rule 2798. Anti-kickback aprons shall be provided and worn where material can be kicked back. Loose flowing garments, sleeves and neckties shall not be worn by operators of machines. Gloves should not be worn while operating machines.

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971.

R 408.12799 Selection and training of operators.

Rule 2799. Before an inexperienced workman is permitted to operate a woodworking machine, he shall be given careful instructions in the hazards of the machine and the safe method of operation.

History: 1954 ACS 69, p. 85, Eff. Nov. 15, 1971.

PART 31. PERSONAL PROTECTIVE EQUIPMENT GENERAL PROVISIONS

R 408.13101 Scope.

Rule 3101. This part provides specifications, methods and frequency of testing and the requirements for use of personal protective equipment for employees in, around or about a place of employment.

History: 1954 ACS 82, p. 104, Eff. Dec. 31, 1974.

R 408.13102 Applicability.

Rule 3102. (1) Rules covering foot protection, safety nets, safety belts and harnesses, lifelines, lanyards, gloves and body protection shall apply to all places of employment except construction and mining.

(2) Rules covering electrical protective equipment shall apply to those employees working on energized conductors and apparatus, except construction employees.

History: 1954 ACS 82, p. 104, Eff. Dec. 31, 1974.

R 408.13104 Definitions; A to F.

Rule 3104. (1) "Apparatus" means electrical equipment.

(2) "Bare handed technique" means a method of working on energized conductors by isolating the employee from any ground potential and by placing the employee in continuous firm contact with the energized electric field.

(3) "Conductor" means a material such as a bus bar, wire or cable suitable for carrying an electric current.

(4) "Electrical worker" means an operational or maintenance employee working on electrical conductors or equipment, except mining and construction operations.

(5) "Energized," sometimes known as live, means to be electrically charged, or that to which voltage is being applied.

(6) "Foot or toe protection" means a device or equipment such as, but not limited to, safety toe footwear, toe protectors or foot guards that protect an employee's foot or toes against injury.

History: 1954 ACS 82, p. 105, Eff. Dec. 31, 1974.

R 408.13105 Definitions; I to L.

Rule 3105. (1) "Inservice load" means an imposed physical load on a safety belt or harness from a free fall of more than 3 feet.

(2) "Insulated barrier" means a separation from another conducting surface by a dielectric substance or air space.

(3) "Isolated" means that all energized conductors or the exposed energized parts of equipment are isolated from the work area by an insulated barrier. Conductors may be isolated by moving them out of reaching distance by use of hot line tools.

(4) "Lanyard" means a tether attached to a safety belt or harness at 1 end and to a life line or fixed object at the other.

(5) "Lifeline" means a rope line, except where used in tree trimming, attached at 1 end to a fixed object or attended by a person and to which a safety belt or lanyard is secured.

History: 1954 ACS 82, p. 105, Eff. Dec. 31, 1974.

R 408.13106 Definitions; R, S.

Rule 3106. (1) "Reaching distance" means the employee's reach as extended by a conductive material or equipment.

(2) "Safety belt" means a belt worn around the waist and capable of restraining a pull or fall of an employee.

(3) "Safety harness" means a belt with a shoulder strap worn around the waist and shoulder, and capable of restraining a pull or fall of an employee.

(4) "Safety strap" means a restraining line secured at both ends to a safety belt or harness to hold an employee to a fixed object.

(5) "Safety toe footwear" means footwear containing a safety toe box of steel or equivalent material capable of meeting the requirements of this part.

(6) "Supplier" means a manufacturer or an authorized dealer representative.

History: 1954 ACS 82, p. 105, Eff. Dec. 31, 1974.

FOOT PROTECTION

manufacturer's name or trademark and certification of compliance with U.S.A. standard, Z41.1-1967, men's safety toe footwear, which is incorporated herein by reference and may be inspected at the Lansing office of the Michigan department of labor. This standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018 or the Michigan Department of Labor, 300 E. Michigan Avenue, Lansing, Michigan 48926 at a cost of $2.75 each.

History: 1954 ACS 82, p. 105, Eff. Dec. 31, 1974.

R 408.13112 Toe protection.

Rule 3112. Where toe protection other than safety toe footwear is worn, the toe protection shall have an impact value of not less than that required for the safety toe footwear.

History: 1954 ACS 82, p. 105, Eff. Dec. 31, 1974.

R 408.13113 Foot protection, requirements.

Rule 3113. (1) An employee shall wear foot protection, toe protection or both when the conditions of regularly assigned jobs would be likely to cause a foot injury.

(2) Safety shoes and boots, which are not worn over shoes, worn by more than 1 employee shall be maintained, cleaned and sanitized inside and out before being issued to another employee.

(3) Where a hazard is created from a process, environment, chemical or mechanical irritant, which would cause an injury or impairment to the feet by absorption or physical contact, other than from impact, footwear such as boots, overshoes, rubbers, wooden-soled shoes or their equivalent shall be provided and worn.

History: 1954 ACS 82, p. 106, Eff. Dec. 31, 1974.

ELECTRICAL PROTECTIVE EQUIPMENT

R 408.13121 Certification.

Rule 3121. (1) Rubber insulating gloves, rubber matting for use around electrical apparatus, rubber insulating blankets, rubber insulating hoods, rubber insulating line hose and rubber insulating sleeves for an electrical worker purchased 90 days after the effective date of this part shall bear a permanent mark to show the manufacturer's name or trademark and certification of compliance with the appropriate ANSI standard, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor:

(a) J6.6-1971, rubber insulating gloves.
(b) J6.7-1935 (1971), rubber matting for use around electric apparatus.
(c) J6.4-1971, rubber insulating blankets.
(d) J6.2-1950 (1971), rubber insulating hoods.
(e) J6.1-1950 (1971), rubber insulating line hose.
(f) J6.5-1971, rubber insulating sleeves.

(2) These standards may be purchased as a unit from the American National Standards Institute, 1430 Broadway, New York, New York 10018 or the Michigan Department of Labor, 300 E. Michigan Avenue, Lansing, Michigan 48926 at a cost of $1.75 each unit.

(3) Materials other than rubber that offer equivalent or greater protection may be used for items (a) to (f) if they are certified by the manufacturer to meet the appropriate ANSI standard tests.

History: 1954 ACS 82, p. 106, Eff. Dec. 31, 1974.

R 408.13122 Inspection.

Rule 3122. (1) Personal protective equipment for an electrical worker, except matting, hoods and hoses, shall be given a visual inspection and an electrical test by a trained employee or outside service within 12 months after purchase and at intervals of at least 12 months thereafter. The equipment shall be dated or coded with the date of purchase or issuance and date of periodic test. The electrical test shall be performed in accordance with the applicable American national standards institute standard listed in R 408.13121.

(2) Equipment listed in R 408.13121 shall be visually inspected by the using employee before each use. Where insulating gloves are required and used, they shall be manually air tested daily before starting work.

(3) Equipment not meeting the electrical test requirements, visual inspection or manual air test due to flaws, scuffs, snags and punctures shall not be used.

History: 1954 ACS 82, p. 108, Eff. Dec. 31, 1974.

R 408.13123 Requirements for use.

Rule 3123. (1) An insulated barrier, blanket, hood or line hose shall be capable of withstanding the voltage to which it may be subjected.

(2) Exposed conductors, equipment or both, except that being directly worked on and energized from 750 volts to 28,000 volts phase to ground, into which an employee may reach or touch, shall be isolated or covered with not less than 1 of the following:

(a) Insulating blanket.

(b) Insulating hoods.

(c) Insulating line hose.

(d) Insulating barrier.

(3) An employee shall wear insulating gloves and sleeves capable of withstanding the imposed voltage when performing the following:

(a) When working directly on or within reaching distance of a conductor or equipment at a nominal 750 volts or more phase to ground, except when using bare hand techniques or a hot stick. Sleeves shall not be required for an employee performing routine switching operations in a substation or powerhouse. An employee using gloves and sleeves and working directly on or within reaching distance of a conductor or equipment energized at more than 5,000 volts phase to ground shall do so from an insulated platform or board or an aerial device with an insulated basket.

(b) Connecting or disconnecting primary neutrals, pole ground wires or other conductors normally connected to static wires or energized equipment except the gloves and sleeves need not be worn while connecting and disconnecting a service neutral or secondary neutral.

(c) Working on a deenergized conductor which extends into an area in which contact may be made with an energized conductor or exposed parts of energized equipment, unless it is grounded or isolated. Insulating sleeves are optional at voltages less than 750 volts phase to ground.

(4) An employee shall wear insulating gloves capable of withstanding the imposed voltage when performing the following:

(a) When working with a powered or manual hole digger while using booms or using winch lines to install or remove poles or equipment where it may contact conductors or equipment energized at a voltage of 300 volts or more phase to ground. An employee need not wear the gloves while in the enclosed cab of the equipment.

(b) When working directly on a conductor or equipment energized at a voltage of more than 240 volts phase to ground. This does not include the use of test equipment.

History: 1954 ACS 82, p. 106, Eff. Dec. 31, 1974.

OTHER PROTECTIVE EQUIPMENT

R 408.13133 Safety belts, safety harnesses, lifelines, and lanyards.

Rule 3133. (1) Unless a safety net is used as prescribed in R 408.40603 of the construction safety commission standard, Part 6. Personal Protective Equipment, or an employee is protected by a perimeter guard rail or is working on a portable ladder, the employee shall be safeguarded by a safety belt or safety harness secured to a lifeline or structure capable of sustaining the imposed load, whenever the employee's work station is more than 25 feet above the ground, floor, water or other surface. The safety belt and harness and any lifeline and lanyard shall be used only for safeguarding the employee. A safety belt, safety harness, lifeline or lanyard subjected to inservice loading, rather than static loading, shall be removed from service and shall not be used again for employee safeguarding.

(2) Safety belt, safety harness and lanyard hardware shall be made of cadmium plated drop forged or pressed steel or metal of equivalent strength with edges free of sharp edges. The safety belt and lanyard hardware shall withstand a tensile load of 4,000 pounds without cracking, breaking or permanent deformation. A lineman's body belt "D" ring and snaps shall withstand 5,000 pounds tensile test and the buckle 2,000 pounds tensile test.

(3) A lifeline shall be secured above the employee's workplace to an anchorage of structural member capable of supporting a dead weight of not less than 5,400 pounds.

(4) A lifeline shall be not less than ¾-inch manila or a material of equivalent strength, having a breaking strength of not less than 5,400 foot pounds except where the lifeline is used on rock-scaling operation or in areas where the lifeline may be subject to cutting or abrasion, the line shall be not less than ⅞-inch manila rope with a wire core.

(5) A lanyard or safety strap shall be not less than ½-inch nylon or its equivalent with a maximum length to provide a free fall of not more than 6 feet. The breaking strength of the lanyard shall be not less than 5,400 pounds.

(6) A safety belt, safety strap, safety harness, lanyard or lifeline, including the hardware, shall be inspected before each daily use.

(7) A safety belt, safety harness, lifeline or lanyard shall be stored in a clean dry area away from excessive heat or other deteriorating condition.

(8) A lifeline or lanyard made of synthetic fibers shall not be kinked, run over sharp corners, used when frozen, left in freezing temperatures when wet or exposed to sources of ignition or flame.

History: 1954 ACS 82, p. 107, Eff. Dec. 31, 1974.

R 408.13134 Gloves; general.

Rule 3134. (1) Unless an entanglement hazard exists, an employee required to handle work pieces wet with a liquid which irritates the skin or creates a health hazard by absorption shall be provided and shall wear gloves unaffected by such a liquid and of a length to prevent entrance of the liquid into the tops of the gloves.

(2) The interiors shall be kept free of corrosive or irritating contaminants. Where more than 1 employee wears a pair of gloves, the gloves shall be sanitized before reissuance.

History: 1954 ACS 82, p. 107, Eff. Dec. 31, 1974.

R 408.13135 Body protection.

Rule 3135. An employee required to work in a manner that his clothing becomes wet by a condition other than the weather and perspiration, shall be provided and shall wear such aprons, coats, jackets, sleeves or other garments as required to keep his clothing dry. The material shall be unaffected by the wetting agent. Provision of dry, clean, acid resistant clothing along with rubber shoes or short boots and an apron shall be considered a satisfactory substitute where small parts are cleaned, plated or acid dipped in an open tank.

History: 1954 ACS 82, p. 108, Eff. Dec. 31, 1974.

PART 32. HEAD PROTECTION EQUIPMENT

R 408.13201 Scope.

Rule 3201. This part includes requirements for provision by an employer and use by the employees of head protection equipment where workers are required to be present in areas where a hazard exists from falling or flying objects or from other harmful contacts or exposures or where there is a risk of injury from electric shock, hair entanglement, chemicals or temperature extremes.

History: 1954 ACS 62, p. 43, Eff. May 18, 1970.

R 408.13203 Definitions.

Rule 3203. (1) "Bump hat or cap" means a device worn on the head to protect the wearer from bumps or blows but which does not meet the requirements of class A, B, C, and D protective helmets.

(2) "Hair enclosure" means a hat, cap or hair net specifically designed to protect the wearer from hair entanglement in moving machinery.

(3) "Hood" means a device that is worn to provide protection against acids, chemicals, abrasives and temperature extremes and entirely encloses the whole head including face and neck. Air line hoods and hoods used to protect wearers from inhalation of harmful atmospheres are not included in this part.

(4) "Protective helmet," "protective hat or cap," or "safety hat or cap" means a rigid device, often referred to as a safety cap or hat, that is worn to provide protection for the head or portions thereof against impact, flying particles or electric shock or any combination thereof, and which is held in place by a suitable suspension.

History: 1954 ACS 62, p. 43, Eff. May 18, 1970.

R 408.13205 Certification.

Rule 3205. A protective helmet purchased 90 days after the effective date of this rule shall bear on the inside of the shell a certificate by the manufacturer that a class A, C, or D helmet has been produced according to American national standards institute standard, Z 89.1-1969, or that a class B helmet has been produced according to American national standards institute standard, Z 89.2-1971, which are incorporated herein by reference and are available for inspection at the Lansing office of the Michigan department of labor. These standards may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018 or the Michigan Department of Labor, 300 East Michigan, Lansing, Michigan 48926 at a cost of $3.25 each.

History: 1954 ACS 71, p. 72, Eff. May 17, 1972.

R 408.13211 Employers' and employees' responsibilities.

Rule 3211. (1) An employer shall provide suitable head protection equipment when such equipment is necessary to protect his employees from the potential

hazards mentioned in R 408.13201. An employer shall provide accessories designed for use with head protection equipment and which are suitable for their intended purpose. An employer shall provide service facilities for the sanitizing and replacement of needed parts when necessary and before head protection equipment is reissued.

(2) Head protection equipment that has been physically altered or damaged shall not be worn or reissued to an employee.

(3) An employee shall use the provided head protection equipment in accordance with instructions and training received. An employee shall not physically alter, and shall guard against damage to, the head protection equipment provided. An employee shall not use head protection equipment provided that has been physically altered or damaged.

History: 1954 ACS 62, p. 44, Eff. May 18, 1970.

R 408.13221 Protective helmets.

Rule 3221. (1) Protective helmets or safety hats and caps shall be of the following types:

Class A—Limited voltage protection
Class B—High voltage protection
Class C—No voltage protection
Class D—Limited voltage protection—fire fighters service helmets with full brim.

(2) A class C helmet or any metallic head device shall not be furnished by an employer or used by an employee for head protection except where it has been definitely determined that the use of other types is impractical, such as deterioration from chemical reaction.

(3) A protective helmet furnished by an employer shall be identified on the inside of the shell with the name of the manufacturer.

(4) When used in conjunction with protective helmets, face shields, welding helmets and goggles shall meet the requirements set forth in occupational safety standards commission standard, Part 35. Eye Protection, being R 408.13501, et seq. of the Michigan Administrative Code, and Michigan department of public health standards for hearing protection.

(5) Winter liners and chin straps used in conjunction with class B helmets for high voltage protection shall not contain any metallic parts or other conductive materials. Winter liners and chin straps used in areas where there is a danger of ignition from heat, flame or chemical reaction shall be made of materials that are nonburning or flame retardant.

(6) Bump hats or caps or other limited protection devices shall not be used as a substitute for protective helmets for the hazards described in R 408.13201.

History: 1954 ACS 62, p. 44, Eff. May 18, 1970.

R 408.13222 Rescinded.

History: 1954 ACS 62, p. 44, Eff. May 18, 1970; rescinded 1954 ACS 71, p. 72, Eff. May 17, 1972

R 408.13231 Hoods.

Rule 3231. (1) A hood shall be made of materials that combine mechanical strength and lightness of weight to a high degree, shall be nonirritating to the skin when subjected to perspiration, and shall be capable of withstanding frequent cleaning and disinfection. Materials used in the manufacture of hoods shall also be suitable to withstand the hazards to which the user may be exposed.

(2) A hood shall bear a permanent and legible marking by which the manufacturer may be readily identified.

(3) A hood shall be designed to provide adequate ventilation for the wearer. Where air lines are used they shall be installed and used in accordance with Michigan department of public health standards.

(4) A protective helmet shall be used in conjunction with a hood where there is a head injury hazard and the hood shall be designed to accommodate such helmet.

History: 1954 ACS 62, p. 45, Eff. May 18, 1970.

R 408.13241 Hair enclosures.

Rule 3241. (1) A hat, cap or net shall be worn by a person where there is danger of hair entanglement in moving machinery or equipment, or where there is exposure to means of ignition. It shall be designed to be reasonably comfortable to the wearer, completely enclose all loose hair and be adjustable to accommodate all head sizes. Material used for a hair enclosure shall be fast dyed, nonirritating to the skin when subjected to perspiration and capable of withstanding frequent cleaning. It shall not be reissued from 1 employee to another unless it has been thoroughly sanitized.

(2) A hair enclosure used in an area where there is a danger of ignition from heat, flame or chemical reaction shall be made of materials that are nonburning or flame retardant.

History: 1954 ACS 62, p. 45, Eff. May 18, 1970.

PART 35. FACE AND EYE PROTECTION
GENERAL PROVISIONS

R 408.13501 Scope.

Rule 3501. This standard shall apply to all places of employment in this state and includes requirements by the employer and use by the employee of eye and face protective equipment and provides reasonable and adequate means, ways and methods for the proper selection and safe use of this equipment.

History: 1954 ACS 65, p. 34, Eff. Oct. 15, 1970.

R 408.13503 Definitions; A to E.

Rule 3503. (1) "Absorptive lens" means a filter lens whose physical properties are designed to attenuate the effects of glare, reflective and stray light.

(2) "Cover lens" means a removable disc of colorless glass, plastic coated glass or plastic that covers a filter lens and protects it from weld spatter, pitting or scratching when used in a goggle.

(3) "Cover plate" means a removable pane of colorless glass, plastic coated glass or plastic that covers a filter plate and protects it from weld spatter, pitting or scratching when used in a helmet, hood or goggle.

(4) "Eye size" means a measurement expressed in millimeters and denoting the size of the lens-holding section of an eye frame.

History: 1954 ACS 65, p. 34, Eff. Oct. 15, 1970.

R 408.13504 Definitions; F, G.

Rule 3504. (1) "Face shield" means a device worn in front of the eyes and a portion or all of the face, whose predominant function is protection of the eyes and face.

(2) "Filter lens" means a removable disc in the eyecup of a goggle that absorbs varying proportions of the ultraviolet, visible and infrared rays according to the composition and density of the lens.

(3) "Filter plate" means a removable pane in the window of a helmet, hood or goggle that absorbs varying proportions of the ultraviolet, visible and infrared rays according to the composition and density of the plate.

(4) "Goggle" means a device with contour shaped eyecups or facial contact with glass or plastic lenses, worn over the eyes and held in place by a headband or other suitable means, for the protection of the eyes and eye sockets.

History: 1954 ACS 65, p. 34, Eff. Oct. 15, 1970.

R 408.13505 Definitions; H, I.

Rule 3505. (1) "Headband" means that part of a goggle, helmet or hood suspension consisting of a supporting band that encircles the head.

(2) "Headgear" means that part of a protective helmet, hood or face shield that supports the device on the wearer's head, usually consisting of a headband and crown strap.

(3) "Hood" means a device that completely covers the head, neck and portions of the shoulders.

(4) "Interpupillary distance" means the distance in millimeters between the centers of the pupils of the eyes.

History: 1954 ACS 65, p. 34, Eff. Oct. 15, 1970.

R 408.13506 Definitions; L to R.

Rule 3506. (1) "Lens" means the transparent glass or plastic device through which a wearer of protective goggles or spectacles sees.

(2) "Lens, corrective" means a lens ground to the wearer's individual corrective prescription.

(3) "Lens, plano" means a lens which does not incorporate correction.

(4) "Lift front" means a type of mounting frame for a welding helmet, hood or goggles which is made of 2 connected parts: the front part, which can be removed from the line of vision, contains the high density filter plate with its cover plate, and the back part, which is fixed to the helmet, contains a low density or clear impact resistant plate.

(5) "Protector" means a device that provides eye or face protection against the hazards of processes encountered in employment.

(6) "Radiant energy or radiation" means 3 kinds of radiant energy which are pertinent to this standard: (a) ultraviolet, (b) visible light and (c) infrared.

History: 1954 ACS 65, p. 35, Eff. Oct. 15, 1970.

R 408.13508 Definitions; S, T.

Rule 3508. (1) "Sanitizing" means an act or process of destroying organisms that may cause disease.

(2) "Shield" means a device to be held in the hand, or supported without the aid of the operator, whose predominant function is protection of the eyes and face.

(3) "Side shield" means a device of metal, plastic or other material fixed to a spectacle lens frame to protect an eye from side exposure.

(4) "Snood" means a flexible attachment to the back of a hood or helmet for protection against injury to the back of the head and neck.

(5) "Spectacle" means a device patterned after conventional type spectacle eyewear but of more substantial construction, with or without side shields, and with plano or corrective impact resistant lenses of clear or absorptive filter glass or plastic.

(6) "Temple" means that part of a spectacle or other protector extending to and dropping behind the ear of the wearer and intended to position the device before the eyes.

(7) "Temple length" means the measured length of a temple designated in inches.

History: 1954 ACS 65, p. 35, Eff. Oct. 15, 1970.

R 408.13511 Certification.

Rule 3511. All eye and face protection devices, or if impractical the container for the device, shall bear a certification after October 15, 1971, by the manufacturer that the device, covered by this part, has been produced according to American national standards institute, standard no. Z-87.1-1968, which is incorporated herein by reference. This standard may be purchased from American National Standards Institute, 1430 Broadway, New York, New York 10018 at a cost of $4.50 each or from the Michigan Department of Labor, 300 East Michigan, Lansing, Michigan 48926.

History: 1954 ACS 65, p. 35, Eff. Oct. 15, 1970.

R 408.13512 Employers' and employees' responsibilities.

Rule 3512. (1) Face and eye protection in a manner provided by this part is required where there is a probability of injury that can be prevented or reduced by such protection.

(2) An employer shall provide a type of protector suitable for the work to be performed, and an employee shall use such protector.

(3) An unprotected person shall not knowingly be subjected to an environmental condition hazardous to face and eyes.

(4) A suitable eye protector shall be provided where machines or operations present the hazard of flying object, glare, liquids, injurious radiation or a combination of these hazards.

History: 1954 ACS 65, p. 35, Eff. Oct. 15, 1970.

R 408.13513 General requirements for protection.

Rule 3513. (1) A face or eye protector shall meet the following minimum requirements:

(a) It shall protect against the particular hazards for which it is designed.

(b) It shall fit snugly and shall not unduly interfere with movements of the wearer.

(c) It shall be capable of withstanding sanitizing.

(2) A protector shall be distinctly marked to identify the manufacturer.

(3) Limitations or precautions indicated by the manufacturer shall be transmitted to the user and care taken to see that they are strictly observed.

History: 1954 ACS 65, p. 35, Eff. Oct. 15, 1970.

R 408.13514 Maintenance and cleanliness of protectors.

Rule 3514. (1) A face or eye protector shall be kept clean and in good repair.

(2) Cleaning facilities for protectors shall be provided away from the hazard, but readily accessible to the wearer.

(3) A slack, wornout, sweat-soaked, knotted or twisted headband shall be replaced.

(4) A face or eye protector is a personal item and shall be for the individual and exclusive use of the person to whom it is issued. If circumstances require reissue, the protector shall be thoroughly cleaned, sanitized and in good condition.

History: 1954 ACS 65, p. 36, Eff. Oct. 15, 1970.

WELDING HELMETS AND HAND SHIELDS

R 408.13521 Purposes, types, styles, and marking.

Rule 3521. (1) The devices described in R 408.13521 to R 408.13531 are designed to provide protection for the face, eyes, ears and neck against intense radiant energy and spatter resulting from welding.

(2) A helmet and a hand shield are the only permissible types.

(3) A helmet and a hand shield shall be made with the same basic design and of the same basic materials, an opaque, bowl shaped, or modified bowl shaped device containing a window with filter plate which allows the wearer to see the radiant object, yet prevents harmful intensities of radiation from reaching his eyes. A helmet shall be supported on the head by an adjustable headgear. A hand shield shall have a handle attached to the bottom by which it is held in the hand. The basic designs may be modified to provide protection against special hazards, but modified equipment shall meet the same requirements as the basic design.

(4) A helmet and a hand shield shall bear a permanent and legible marking by which the manufacturer may be readily identified.

History: 1954 ACS 65, p. 38, Eff. Oct. 15, 1970.

R 408.13522 Rigid helmet bodies.

Rule 3522. A helmet body of a rigid helmet shall be of such size and shape as to protect the face, forehead, ears and neck to a vertical line back of the ears. It shall have 1 or more openings in the front for filter plates or filter lenses. The helmet body shall be attached to the headgear so that it will not come in contact with any part of the head and so that it can be lifted up from in front of the face and hold its position in front of the head. The helmet body shall be made of vulcanized fiber, reinforced plastic or other suitable material which shall be thermally insulating, noncombustible or slow burning, opaque to visible, ultraviolet and infrared radiations and capable of withstanding sanitizing. The inside of the helmet body shall have a low light reflecting finish. Rivets or other metal parts, if terminating on the inside surface, shall be adequately separated from the wearer's head.

History: 1954 ACS 65, p. 38, Eff. Oct. 15, 1970.

R 408.13523 Rigid helmet headgear or cradles.

Rule 3523. A rigid helmet shall have a headgear or cradle that shall hold the helmet body comfortably and firmly on the wearer's head, but shall permit the helmet body to be tilted back over the head. The headgear shall be readily adjustable for all head sizes from 6¼ to 7⅞, without the use of tools. The headgear shall be made of materials which are thermally insulating, noncombustible or slow burning, resistant to heat and capable of withstanding sanitizing. Where required, the headgear shall be fitted with a removable and replaceable sweatband covering at least the forehead portion of the headband. The sweatband shall be made of leather or other suitable material which is slow burning and nonirritating.

History: 1954 ACS 65, p. 38, Eff. Oct. 15, 1970.

R 408.13524 Rigid helmet headgear substitutes.

Rule 3524. A headgear for a rigid helmet may be replaced by an impact resistant hat or cap that meets requirements of Part 32. Head Protection Equipment of the occupational safety standards commission standard, being R 408.13201 to R 408.13241 of the Michigan Administrative Code, or other suitable device to which the helmet body is connected, if the helmet body can be lifted and adjusted to permit unobstructed vision or lowered to furnish complete

protection, as required. The alternative device shall meet the requirements for sanitizing and resistance to heat, and, in addition, shall meet the applicable requirements of any additional functions such as protection against falling objects.

History: 1954 ACS 65, p 38, Eff Oct. 15, 1970.

R 408.13525 Rigid helmet filter plates.

Rule 3525. (1) A filter plate on a rigid helmet shall be of such dimensions as to fit into the frame and to cover the window.

(2) Both surfaces of a filter plate shall be well polished, and shall be free from striae, waves or other defects which would impair their optical quality. Filter plate surfaces shall be flat and substantially parallel.

(3) A filter plate shall conform to the radiant energy transmittance requirements shown in table 1 for shades 4.0 through 14.0.

(4) When specified, a filter plate shall be impact resistant, unless impact resistant eye protection is worn in conjunction with a welding helmet.

(5) A filter plate shall be marked with the shade designation and a permanent and legible marking by which the manufacturer may be readily identified. In addition, a glass filter plate, when treated for impact resistance, shall be marked with the letter "H."

(6) A cover plate, made of plain glass, of glass coated on 1 or on both sides with plastic, or of a slow burning solid plastic sheet shall be used to protect a filter plate from damage. The cover plate shall be the same peripheral size and shape as the filter plate, and the thickness of a cover plate shall not be less than 0.050 inches. It shall transmit not less than 75% of the luminous radiation and shall be substantially free from optical imperfections.

R 408.13526 Nonrigid helmets.

Rule 3526. A helmet may be made of nonrigid materials where it is to be used in confined spaces, or may be collapsible for convenience in carrying or storing. The helmet may be of the same general shape as a rigid helmet except that a more complete covering of the top of the head is necessary in order to maintain the face, side and windows in proper position. The requirements for the filter plates, cover plates and lens mounting frame are the same as for a rigid helmet. A headgear may be used. The material shall be nonconducting and opaque to ultraviolet, visible and infrared radiations. Stitched seams shall be welted. No stitching shall be exposed.

History: 1954 ACS 65, p. 39, Eff. Oct. 15, 1970.

R 408.13528 Hand shields.

Rule 3528. A hand shield shall be constructed of materials similar to those used for a helmet and in like manner. The materials, lens mounting arrangement, and filter and cover plates shall conform to the requirements for the corresponding parts of the helmet body with headgear. The handle shall be made of a material that is a nonconductor of electricity and is noncombustible or slow burning. It shall be of such size and shape as to be held easily by 1 hand and shall be firmly attached to the lower portion of the shield. A hand shield intended for use by other than a welding operator shall have filter and cover plates suitable for the intended use.

History: 1954 ACS 65, p. 39, Eff. Oct. 15, 1970.

R 408.13530 Helmet and hand shield lift fronts and chin rests.

Rule 3530. (1) The lift front of a helmet shall be fabricated from metal, plastic or other suitable material. A snap hinge shall be provided so that the front part will stay up or down but will not remain in a partially opened position. The lift front seal against the helmet shall be light tight. The lift front shall be designed to accommodate 3 plates: a clear impact resisting plate in the back or fixed part; a filter plate, impact resisting when specified; and a cover plate in the front part. The back or fixed part plate shall be clear heat treated glass or plastic not more than $\frac{3}{16}$ inch thick or less than $\frac{1}{8}$ inch and capable of withstanding the impact test.

(2) To avoid contact of a helmet or hand shield with the face of the wearer, a chin rest or adjustable position stop shall be provided. They shall be constructed of suitable, rigid material and shall be detachable from the body of the helmet or hand shield.

History: 1954 ACS 65, p. 39, Eff. Oct. 15, 1970.

R 408.13531 Helmet snoods, neck protectors, and aprons.

Rule 3531. (1) A snood or back-of-head-and-neck protector where required shall be of material that is flame resistant, that is a good insulator of heat and electricity, and that is capable of withstanding sanitizing. They shall be designed for easy attachment to the helmet, helmet headgear or cradle.

(2) An apron or bib where required for a helmet shall be of nonflammable, nonconducting material that is flexible and capable of withstanding sanitizing.

History: 1954 ACS 65, p. 39, Eff. Oct. 15, 1970.

R 408.13533 Effect of head protection standards.

Rule 3533. The characteristics and performance requirements of these rules for welding helmets shall in no way be altered through their attachment to protective hats and caps, as required by Part 32. Head Protection Equipment, of the

occupational safety standards commission standard, being R 408.13201 to R 408.13241 of the Michigan Administrative Code.

History: 1954 ACS 65, p. 39, Eff. Oct. 15, 1970.

FACE SHIELDS

R 408.13541 Purposes and uses.

Rule 3541. (1) The devices described in R 408.13541 to R 408.13547 are designed to provide protection to the front part of the head including forehead, cheeks, nose, mouth and chin, and to the neck, where required, from flying particles and sprays of hazardous liquids, and to provide filter protection where required. Such devices shall be worn over suitable basic eye protection devices.

(2) Typical uses for face shields include, but are not limited to, the following situations:

(a) Woodworking operations where chips and particles fly.

(b) Metal machining causing flying particles.

(c) Buffing, polishing, wire brushing and grinding operations causing flying particles or objects.

(d) Spot welding.

(e) Handling of hot or corrosive materials.

History: 1954 ACS 65, p. 39, Eff. Oct. 15, 1970.

R 408.13542 Types and materials.

Rule 3542. (1) Face shields are of 3 basic styles: headgear without crown protector; headgear with crown protector; headgear with crown protector and chin protector. Each of these styles shall accommodate any of the following styles of windows:

(a) Clear transparent.

(b) Colored transparent.

(c) Wire screen.

(d) Combination of plastic and wire screen.

(e) Fiber window with filter plate mounting.

(2) Materials used in the manufacture of a face shield shall be nonirritating to the skin when subjected to perspiration, and shall be capable of withstanding frequent sanitizing. Metals, when used, shall be resistant to corrosion. Plastic materials shall be slow burning. Clear or colored plastic materials used in windows shall be of an optical grade. Plastic windows shall not be used in connection with welding operations unless they meet the requirements of table 1 of this part.

History: 1954 ACS 65, p. 40, Eff. Oct. 15, 1970.

R 408.13543 Components.

Rule 3543. A face shield shall consist of a detachable transparent plastic window, wire screen window or opaque frame with window, a tilting support, an adjustable headgear and, as required, a crown protector and chin protector.

History: 1954 ACS 65, p. 40, Eff. Oct. 15, 1970.

R 408.13544 Windows.

Rule 3544. (1) A window shall be designed to fit the contour of the window support.

(2) A window supporting or window holding member, which shall be a band or crown protector, shall be attached to the headgear. The window support shall

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

position the window in front of the face to provide clearance for the nose and eyeglasses of the wearer.

(3) The attachment of the window to the window support shall be secure and shall permit easy removal and replacement. The several sizes and types of windows for a face shield shall be interchangeable for attachment to the window support.

(4) A plastic or wire screen window without frame shall be not less than 9½ inches wide at the top and 8½ inches wide at the bottom, measured over its curved surfaces when attached and in position on the window support, and not less than 6 inches high. A window, when used in a frame, shall be not less than 4 inches wide and 2 inches high, and the frame shall conform to the dimensions specified for a window without a frame. A plastic window shall be not less than 0.040 inch nominal thickness.

(5) The exposed borders of a wire screen window shall be suitably bound or otherwise finished to eliminate sharp, rough or unfinished edges. A wire screen window shall not be less than 20-mesh screen.

(6) A window support shall be pivotally attached to the sides of the headgear to permit easy tilting, either upward, or downward, of the supporting member and of the window attached thereto. The window shall be capable of being tilted sufficiently upward so that the center of its bottom edge shall be out of the line of horizontal vision. The tension of the tilting mechanism shall be sufficient to hold the window without slippage in either the up or down position.

History: 1954 ACS 65, p. 40, Eff. Oct. 15, 1970.

R 408.13545 Headgear.

Rule 3545. (1) A headgear shall consist of at least a headband and a crown strap. The headgear shall be made from materials having a low heat conductivity. The design shall hold the window and window support comfortably and firmly in place on the wearer's head, and shall provide for tilting the window away from the face.

(2) A headgear shall be readily adjustable to head sizes from 6¼ to 7⅞ without the use of tools. The crown strap or band shall be attached to and extend between the front and rear centers or from the middle sides of the headband. It shall form an arc over the head to assist in positioning and holding the headgear in place. An adjusting device shall be positive and hold firmly in place after being adjusted. Its mechanisms and movements shall be protected so that the wearer's hair cannot catch in the device.

(3) For greater protection, a headgear may be replaced by an impact resistant hat or cap to which the window support is connected. The attachment may be either rigid or swiveled. If swiveled, the design shall permit lifting and adjusting of the window to permit unobstructed vision or lowering to furnish protection.

History: 1954 ACS 65, p. 40, Eff. Oct. 15, 1970.

R 408.13546 Crown and chin protectors.

Rule 3546. (1) A crown protector and chin protector shall be made of material having an impact resistance not less than that of the plastic window. When the crown protector is used in conjunction with the chin protector for protection against sprays of hazardous liquids, the assembly of the crown protector and window support and the assembly of the chin protector and window shall not allow liquids to pass through any opening in the assembly and reach the face, forehead or chin of the wearer.

(2) A crown protector shall be shaped to cover at least the frontal portion of the head and shall extend around each side at least to a vertical line at the front of the ears. It may be an integral part of the window support or a separate assembly. The design shall provide a comfortable clearance over the forehead and head of the wearer.

(3) A chin protector shall be shaped to cover at least the chin and upper part of the neck. The design shall provide a comfortable clearance under the chin of the wearer.

History: 1954 ACS 65, p. 41, Eff. Oct. 15, 1970.

R 408.13547 Marking.

Rule 3547. (1) When a face shield is used in atmospheres or working areas requiring special conditions of nonconductivity or nonsparking, materials used shall meet these requirements. A face shield shall be plainly and permanently labeled, identifying it as a "nonconductive face shield" or "nonsparking face shield."

(2) A headgear and a plastic window shall bear a permanent and legible marking by which the manufacturer may be readily identified. A window offered for protection against glare shall also bear its shade designation.

History: 1954 ACS 65, p. 41, Eff. Oct. 15, 1970.

EYE PROTECTORS

R 408.13551 Types.

Rule 3551. (1) A person whose vision requires the use of corrective lenses in spectacles, and who is required by this part to wear eye protection, shall wear goggles or spectacles of 1 of the following types:

(a) Spectacles whose protective lenses provide optical correction.

(b) Goggles that can be worn over corrective spectacles without disturbing adjustment of the spectacles.

(c) Goggles that incorporate corrective lenses mounted behind protective lenses.

History: 1954 ACS 65, p. 41, Eff. Oct. 15, 1970.

R 408.13552 Materials.

Rule 3552. Materials used in the manufacture of eye protectors shall combine mechanical strength and lightness of weight to a high degree, shall be nonirritating to the skin when subjected to perspiration, and shall withstand frequent sanitizing. Metals, where used, shall be corrosion resistant. Plastic materials, when used, shall be noncombustible or slow burning. Cellulose nitrate, or materials having flammability characteristics approximating those of cellulose nitrate, shall not be used.

History: 1954 ACS 65, p. 41, Eff. Oct. 15, 1970.

R 408.13553 Lenses.

Rule 3553. (1) Lenses intended for use in eye protectors are of 4 basic types, as follows:

(a) Clear lenses, which are impact-resisting and provide protection against flying objects.

(b) Absorptive lenses of shades 1.7 through 3.0, which are impact-resisting and provide protection against flying objects and glare or which are impact-resisting and provide protection against flying objects, and narrow-band spectral transmittance of injurious radiation.

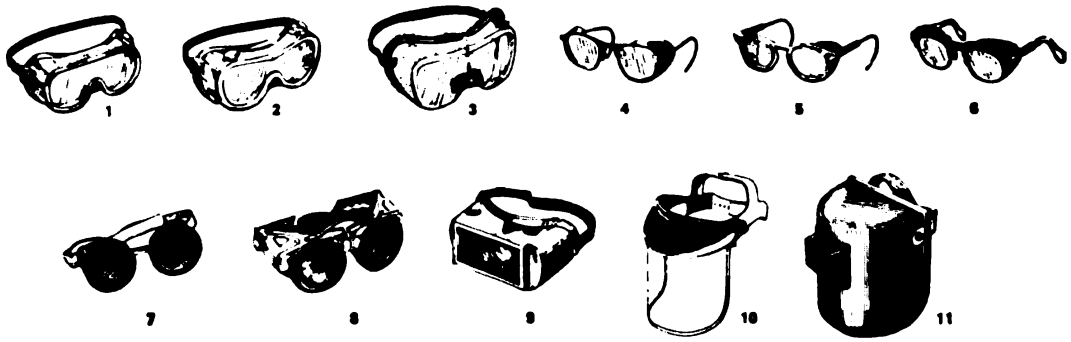
(c) Protective-corrective lenses which are impact-resisting and either clear or absorptive, as specified for persons requiring visual correction.

(d) Filter lenses which are impact-resisting and provide protection against flying objects and narrow-band spectral transmittance of injurious radiation.

(2) Glass filter lenses intended for use in eyecup goggles shall be heat treated.

(3) The height of the safety lens shall not be less than 30 millimeters.



History: 1954 ACS 65, p. 41, Eff. Oct. 15, 1970.

R 408.13555 Eyecup goggles; components.

Rule 3555. Eyecup goggles shall consist of 2 eyecups with lenses and lens retainers, connected by an adjustable bridge, and a replaceable and adjustable headband or other means for retaining the eyecups comfortably in front of the eyes. Recommended applications for the use of eyecup goggles are shown in figure 8.

History: 1954 ACS 65, p. 42, Eff. Oct. 15, 1970.

R 408.13556 Eyecup goggles; types and models.

Rule 3556. (1) Eyecup goggles shall be of 2 types as follows:

(a) Cup-type goggles designed to be worn by individuals who do not wear corrective spectacles.

(b) Cover-cup type goggles designed to fit over corrective spectacles.

(2) The 2 types of eyecup goggles are subdivided into the following classes:

(a) Chippers' models providing impact protection against flying objects.

(b) Dust and splash models providing protection against fine dust particles or liquid splashes and impact.

(c) Welders' and cutters' models providing protection against glare, injurious radiations and impact.

(3) The basic designs may be modified to provide more protection against special hazards, but the modified equipment shall meet the same requirements as the basic design.

History: 1954 ACS 65, p. 43, Eff. Oct. 15, 1970.

R 408.13557 Eyecup goggles; fit.

Rule 3557. (1) The edge of the eyecup of eyecup goggles which bears against the face shall have a smooth surface free from roughness or irregularities which might exert undue pressure or cause discomfort to the wearer. The eyecups shall be of such shape and size as to protect the entire eye sockets.

(2) Cover-cup type goggles shall provide ample clearance and not interfere with the spectacles of the wearer. The edges of the goggles which bear against the

face shall have a smooth surface free from roughness or irregularities which might exert undue pressure or cause discomfort to the wearer.

History: 1954 ACS 65, p. 43, Eff. Oct. 15, 1970.

R 408.13559 Eyecup ventilation.

Rule 3559. (1) Eyecups of chippers' models shall be ventilated in a manner to permit circulation of air.

(2) Eyecups of dust and splash models shall be ventilated in a manner to permit circulation of air. The ventilation openings shall be baffled or screened to prevent direct passage of dust or liquids into the interior of the eyecups.

(3) Eyecups of welders' and cutters' models shall be ventilated in a manner to permit circulation of air and shall be opaque. The ventilation opening shall be baffled to prevent passage of light rays into the interior of the eyecups.

History: 1954 ACS 65, p. 43, Eff. Oct. 15, 1970.

R 408.13560 Eyecup lenses and retaining rings.

Rule 3560. (1) An eyecup shall be provided with a rigidly constructed lens retaining ring of metal or of plastic designed to accommodate lenses and to permit their ready removal and replacement without damage to the eyecup or to the lenses and without the use of tools. The ring shall provide a complete clamping action against the lens. Lens retainers for welders' and cutters' models shall accommodate a filter lens, fiber gasket and cover lens.

(2) A filter lens shall be marked with the shade designation and a permanent and legible marking by which the manufacturer may be readily identified. A glass filter lens, when treated for impact resistance, shall also be marked with the letter "H."

History: 1954 ACS 65, p. 44, Eff. Oct. 15, 1970.

R 408.13562 Flexible and cushioned fitting goggles; construction.

Rule 3562. (1) Flexible and cushioned fitting goggles shall consist of a wholly flexible frame, forming a lens holder, or with separable lens holder; or a rigid frame with integral lens or lenses, having a separate, cushioned fitting surface on the full periphery of the facial contact area. Materials used shall be chemical-resistant, nontoxic, nonirritating and slow burning. There shall be a positive means of support on the face, such as an adjustable headband of suitable material or other suitable means of support to retain the frame comfortably and snugly in place in front of the eyes. A frame which is a lens holder or has a separable lens holder shall hold the lenses firmly and tightly and be removable or replaceable without the use of tools. The goggles may be ventilated or not, as required by their intended use. Where chemical goggles are ventilated, the openings shall be such as to render the goggles splashproof.

History: 1954 ACS 65, p. 44, Eff. Oct. 15, 1970.

R 408.13563 Flexible and cushioned fitting goggles; protection.

Rule 3563. (1) Chippers' models of flexible and cushioned fitting goggles shall provide protection against impact.

(2) Dust and splash models shall provide protection from fine dusts, fumes, liquids, splashes, mists and spray, alone or with reflected light or glare, wind and impact.

(3) Gas welders' and cutters' models shall provide protection against glare, injurious radiations and impact.

History: 1954 ACS 65, p. 44, Eff. Oct. 15, 1970.

R 408.13564 Flexible and cushioned fitting goggles; marking.

Rule 3564. (1) The frame of flexible and cushioned fitting goggles shall bear a trademark or name identifying the manufacturer.

(2) Each separate lens shall be distinctly marked in a manner by which the manufacturer may be identified.

(3) A heat-treated glass filter plate or lens shall also be marked with the shade designation and the letter "H."

(4) The marking shall be clear cut and permanent and so placed as not to interfere with the vision of the wearer.

History: 1954 ACS 65, p. 44, Eff. Oct. 15, 1970.

R 408.13566 Foundrymen's goggles; construction.

Rule 3566. A foundryman's goggles shall consist of a mask made of a flexible, nonirritating and noncombustible or slow-burning material, such as leather or flexible plastic, suitable lens holders attached thereto, lenses, and a positive means of support on the face, such as an adjustable headband, to retain the mask comfortably and snugly in place in front of the eyes. The edge of the mask on contact with the face shall be provided with a binding of corduroy or other suitable material. The lens holders shall hold the lenses firmly and tightly and may be readily removable or replaceable. The lens holders shall be ventilated to permit circulation of air.

History: 1954 ACS 65, p. 44, Eff. Oct. 15, 1970.

R 408.13567 Foundrymen's goggles; protection.

Rule 3567. (1) A foundryman's goggles shall provide protection against impact and hot-metal splash hazards encountered in foundry operations such as melting, pouring, chipping, babbitting, grinding and riveting. Where required, they shall also provide protection against dusts.

(2) Applications for use of foundrymen's goggles are shown in figure 8.

(3) Materials shall resist flame, corrosion, water and sanitizing.

History: 1954 ACS 65, p. 44, Eff. Oct. 15, 1970.

R 408.13569 Metal, plastic, and combination metal and plastic spectacles.

Rule 3569. (1) Spectacles of metal, plastic or a combination thereof, shall consist of 2 lenses in a frame which supports the lenses around their entire periphery, of suitable size and shape for the purpose intended, connected by a nose bridge, and retained on the face by temples or other suitable means. The spectacles shall be furnished with or without sideshields depending upon their intended use. The frames, temples and sideshields may be metal or plastic and when made of plastic shall be of the slow-burning type.

(2) Spectacles shall provide protection to the eye from flying objects, and when required, from glare and injurious radiations. Spectacles without sideshields are intended to provide frontal protection. Where side as well as frontal protection is required, the spectacles shall be provided with sideshields. See figure 8.

(3) Frames shall be designed for industrial exposure and shall bear a trademark identifying the manufacturer on both fronts and temples. The frame front shall carry a designation of the eye size and bridge size, where applicable. Temples shall be marked as to the overall length or fitting value.

(4) Temples may be of the cable or spatula type as specified, and shall be of such design as to permit adjustment and fit comfortably and securely on the wearer. The size of the temples shall be clearly marked.

(5) Safety lenses in frames which do not comply with this part shall not be worn.

History: 1954 ACS 65, p. 45, Eff. Oct. 15, 1970.

PART 37. ACCIDENT PREVENTION SIGNS AND TAGS

GENERAL PROVISIONS

R 408.13701 Scope.

Rule 3701. This part provides specifications for the design, application and use of signs or symbols and tags to define or signal a specific hazard in, around or about a place of employment where the failure to designate the hazard could lead to an injury. This part does not apply to public air navigation, railroads, streets, highways, marine operations, radiation and biological hazards.

History: 1954 ACS 82, p. 108, Eff. Dec. 31, 1974.

R 408.13702 Applicability.

Rule 3702. An employer who has an established sign or tag system or policy on the effective date of this part which is equivalent to that prescribed in this part may continue with the policy or system if the key color prescribed in the rule is used. The key color:

(a) Of danger is red.

(b) Of caution is yellow.

(c) Of safety is green.

History: 1954 ACS 82, p. 108, Eff. Dec. 31, 1974.

R 408.13703 Definitions; A to D.

Rule 3703. (1) "Accident prevention sign" means the surface on which letters or markings are used to warn of a hazard, provide safety instructions or directions which are temporarily or permanently affixed or placed.

(2) "Accident prevention tag" means the surface on which letters or markings are used to warn of an existing or immediate hazard and is temporarily attached to a part of equipment or structure.

(3) "Caution sign or tag" means a sign or tag used to warn of a potential hazard or to warn against an unsafe practice.

(4) "Danger sign or tag" means a sign or tag used to signal an immediate hazard.

(5) "Directional sign" means a sign having an arrow to point out a direction.

(6) "Do not start tag" means a tag used to tag out a starting mechanism which would cause a hazard if started.

History: 1954 ACS 82, p. 108, Eff. Dec. 31, 1974.

R 408.13704 Definitions; E to S.

Rule 3704. (1) "Exit sign" means a sign used to designate a point of discharge from a room or building.

(2) "In plant traffic sign" means a sign used to direct the safe use of a vehicle on plant property.

(3) "Out of order tag" means a tag used to indicate a machine is malfunctioning and its use might create a hazard.

(4) "Plant thoroughfare" means the company streets on plant property.

(5) "Safety instruction sign" means a sign used for general instruction or suggestion relative to safety.

History: 1954 ACS 82, p. 108, Eff. Dec. 31, 1974.

R 408.13706 Employer responsibility.

Rule 3706. An employer shall provide, install and maintain signs and tags as prescribed by this part where an employee might be or would likely be injured if not alerted to the hazard.

History: 1954 ACS 82, p. 109, Eff. Dec. 31, 1974.

R 408.13707 General rules; signs.

Rule 3707. (1) The type or design of a sign shall be as specified in this part. Safety instruction, directional and in plant traffic signs in use before the effective date of this part are excepted.

(2) A sign shall be furnished with rounded or blunt corners and shall be free of sharp edges, burrs, splinters or other sharp projections. Fastening devices shall not constitute a hazard.

(3) Where conditions warrant the use of a sign size not covered in tables 1 to 5, the ratio of the height of the identifying panel (danger, caution, etc.) to the width of the sign shall be maintained as prescribed in the tables.

(4) A sign shall have colors as prescribed in table 1 of ANSI standard, Z53.1-1971, safety color code, which is incorporated herein by reference and is available for inspection at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.00 from the American National Standards Institute, 1430 Broadway, New York, New York 10018 or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 82, p. 109, Eff. Dec. 31, 1974.

R 408.13708 Lettering.

Rule 3708. (1) A letter shall be block style, upper case for the upper panel, and upper or upper and lower case for the lower panel.

(2) Letter size shall be determined by the length of the message and maximum visibility and readability. See table 1 for guide for minimum letter height at safe viewing distance.

TABLE 1

Minimum Height of Letters (Inches)	Viewing Distance (Feet)
5	200-500
4½	150-200
4	120-150
3½	105-120
3	90-105
2½	75-90
2	60-75
1½	40-60
1	30-40
¾	20-30
½	10-20
¼	Less than 10

Note 1: Crowding of letters and words reduces legibility.

Note 2: A rule of thumb of 35-40 feet viewing distance per inch of letter height may be used for heights of letters greater than 5 inches.

History: 1954 ACS 82, p. 109, Eff. Dec. 31, 1974.

R 408.13709 Sign placement and illumination.

Rule 3709. (1) An accident prevention sign shall be so placed:

(a) To alert and inform in time to avoid the hazard or to take appropriate action.

(b) As to be legible, without distraction and not create a hazard in itself.

(c) On a movable object or adjacent so that it will not be obscured when the object is moved.

(2) An accident prevention sign shall be displayed with not less than 2 foot-candles of illumination at or near the point of installation during hours when an employee would be present.

History: 1954 ACS 82, p. 109, Eff. Dec. 31, 1974.

CLASSIFICATION OF SIGNS

R 408.13711 Danger signs.

Rule 3711. (1) A danger sign shall be used only where an immediate hazard exists. The sign shall be removed when the hazard is removed.

(2) The proportions for a danger sign shall be not less than those prescribed in table 2 and the format of figure 1 shall be followed.

(3) A danger sign shall have the signal word "danger" in white within a red oval outlined in white on a black rectangular background in the upper panel. The lower panel where additional wording may be used shall be black or red letters on a white background. (See examples in table 6.)

(4) An employee shall be instructed that a danger sign indicates immediate danger and that special precautions are necessary.

R 408.13714 Exit signs.

Rule 3714. (1) An exit sign shall be as prescribed in subrule (3) of rule 685 and rule 686 of the occupational safety standards commission standard, Part 6. Fire Exits, being R 408.10685(3) and R 408.10686 of the Michigan Administrative Code, and is available from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

(2) An exit sign installed after the effective date of this part shall consist of red or white letters on a contrasting red or white field. An internally illuminated sign shall consist of translucent letters either red or white on a contrasting background of red or white. The background may be either opaque or translucent.

(3) A directional arrow used on an exit sign shall be the same color as the word "exit."

History: 1954 ACS 82, p. 111, Eff. Dec. 31, 1974.

R 408.13715 Safety instruction signs.

Rule 3715. (1) A safety instruction sign shall be used for a general instruction or suggestion relative to safety measures.

(2) The proportions for a safety instruction sign shall be not less than those prescribed in table 4 and the format of figure 3 shall be followed.

(3) A safety instruction sign shall have the signal word in white on a green background in the upper panel. The lower panel where additional wording may be used shall be black letters on a white background. (See examples in table 6.)

R 408.13717 In plant traffic signs.

Rule 3717. A plant traffic control sign for the safe movement of vehicles and employees on plant thoroughfares shall be as prescribed in ASA standard, D6.1-1971, manual on uniform traffic control devices, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.50 each from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

History: 1954 ACS 82, p. 113, Eff. Dec. 31, 1974.

R 408.13718 Informational signs.

Rule 3718. An informational sign shall be blue with white lettering or a blue upper panel with white lettering and white lower panel with blue or black lettering. (See examples in table 6.)

History: 1954 ACS 182, p. 113, Eff. Dec. 31, 1974.

SYMBOLS

R 408.13721 Emblem for slow-moving vehicles.

Rule 3721. (1) An emblem, as prescribed in figure 5 shall be used on the rear of a vehicle used on a public road, which, by design, moves at 25 miles per hour or

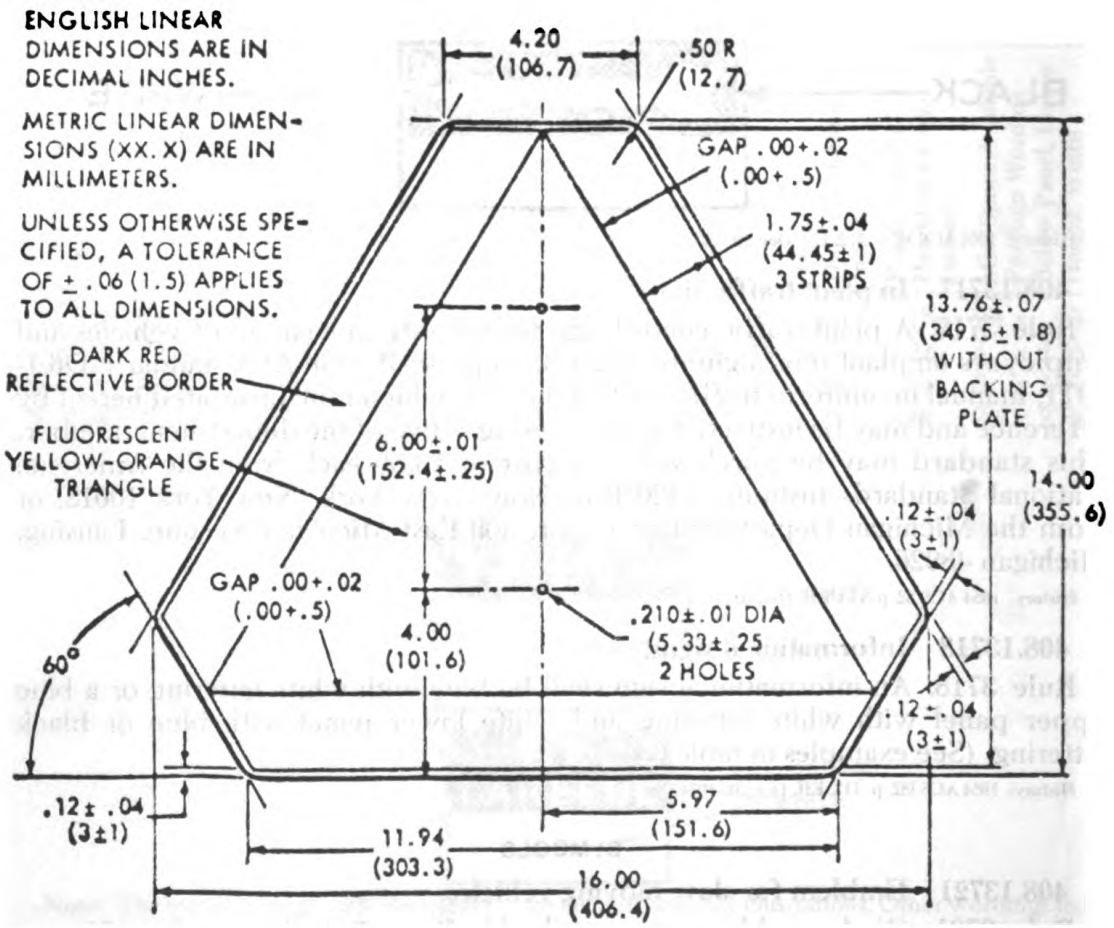
less outside a building. Such an emblem shall not be used as a clearance marker for wide machinery or a replacement for required lighting. Advertising or other markings shall not be placed on it.



(2) This emblem shall consist of a fluorescent yellow-orange triangle with a dark red reflective border. (See figure 5.) It shall be entirely visible in daylight and in night from all distances between 600 and 100 feet from the rear when directly in front of lawful upper beam of the headlamps.

(3) The emblem shall be mounted, point up, in a plane perpendicular to the direction of travel, plus or minus 10 degrees. It shall be placed centrally at the rear of the vehicle, unobscured, and 2 to 6 feet above the ground measured from the lower edge of the emblem. It shall be securely attached to the vehicle.

(4) The requirements for color and reflectivity, durability and test procedures shall be as prescribed in SAE-J943, slow moving vehicle identification emblem, which is incorporated herein by reference and is available for inspection at the Lansing office of the department of labor. This standard may be purchased at a cost of $1.50 each from the Society of Automotive Engineers, Inc., 2 Penn Plaza, New York, New York 10001, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926.

FIGURE 5

Identification Emblem

R 408.13722 Other symbols.

Rule 3722. (1) A symbol, except a slow moving vehicle emblem prescribed in R 408.13721, shall be used only as a supplementary sign or panel to the right of the required sign or as required in the lower panel. A supplementary sign or panel shall be square in shape and no wider than the height of the required sign.

(2) A symbol shall be in the same color as the lettering specified for the required upper panel unless the symbol color is specifically defined by another standard.

History: 1954 ACS 82, p. 114, Eff. Dec. 31, 1974.

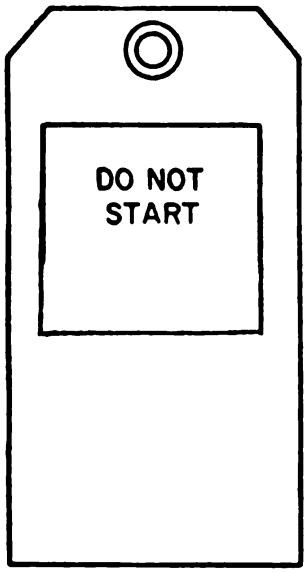
TAGS

R 408.13731 General.

Rule 3731. (1) An accident prevention tag shall be used as a temporary means of warning an employee of an existing hazard, such as defective tools or equipment. A tag shall not be used in place of an accident prevention sign or considered a complete warning method.

(2) A tag shall be affixed by string, wire or adhesive.

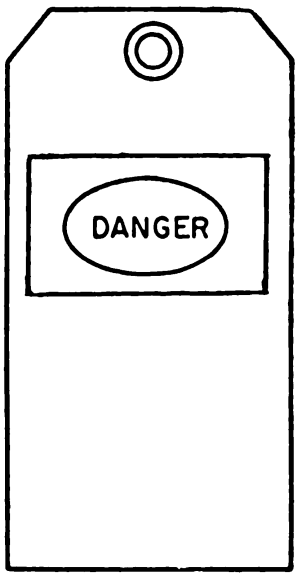
(3) A tag shall be large enough to attract attention to the hazard but not less than 2⅜ by 4¾ inches.



(4) The signal word shall be in bold type.

History: 1954 ACS 82, p. 114, Eff. Dec. 31, 1974.

R 408.13732 "Do not start" tags.



Rule 3732. A "do not start" tag shall be used to tag out the starting mechanism of equipment that would cause a hazardous condition if activated, unless it is locked out. The background color shall be white with white lettering on a red square. (See figure 6.)

FIGURE 6

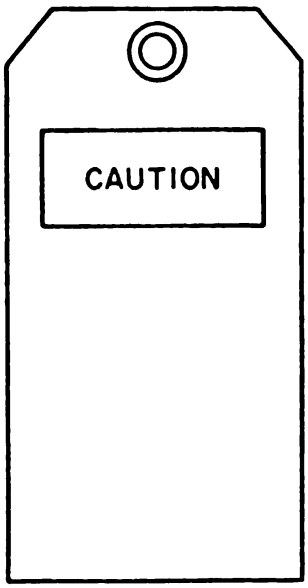
R 408.13733 "Danger" tags.

Rule 3733. A "danger" tag shall be placed where an immediate hazard or probability of injury exists. The background color shall be white with white letters on a red oval within a black rectangle. (See figure 7.) Example: A "danger—defective equipment" tag shall be placed on a damaged ladder and immediately taken from service.

History: 1954 ACS 82, p. 115, Eff. Dec. 31, 1974.

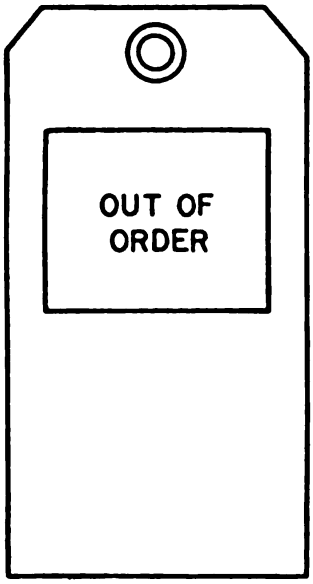
R 408.13734 "Caution" tags.



Rule 3734. A "caution" tag shall be used to warn of a potential hazard or to caution against an unsafe practice. The background color shall be yellow with yellow letters on a black rectangle. (See figure 8.)

History: 1954 ACS 82, p. 115, Eff. Dec. 31, 1974.

R 408.13735 "Out of order" tags.



Rule 3735. An "out of order" tag shall be used only for the specific purpose of indicating equipment or machinery is out of order and its use might create a hazard. The background shall be white with white letters on a black square. (See figure 9.)

Danger—Keep Away.
Danger—Men in Boiler.
Danger—Insufficient Clearance.
Danger—2,300 Volts.
Danger—Keep Out.
Danger—Crane Overhead.
Danger—Keep Off.

Caution Signs—
Caution—Do Not Operate, Men Working on Repairs.
Caution—Hands Off Switch, Men Working on Line.
Caution—Working on Machines, Do Not Start.
Caution—Goggles Must Be Worn When Operating This Machine.
Caution—This Door Must Be Kept Closed.
Caution—Electric Trucks. Go Slow.
Caution—This Space Must Be Kept Clear at All Times.
Caution—Stop Machinery to Clean, Oil, or Repair.
Caution—Keep Aisles Clear.
Caution—Operators of This Machine Shall Wear Snug Fitting Clothing—No Gloves.
Caution—Close Clearance.
Caution—Watch Your Step.
Caution—Electric Fence.

Safety Instruction Signs—
Report All Injuries to the First-Aid Room at Once.
Walk—Don't Run.
Report All Injuries No Matter How Slight.
Think, If Safe Go Ahead.
Make Your Work Place Safe Before Starting the Job.
Report All Unsafe Conditions to Your Foreman.
Help Keep This Plant Safe and Clean.

Directional Signs—
This Way Out (below arrow panel).
This Way (inside arrow) Out (below arrow panel).
Fire Exit (below arrow panel).
Fire (inside arrow) Extinguisher (below arrow panel).
To the (inside arrow) Fire Escape (below arrow panel).
To the (inside arrow) First Aid (below arrow panel).
Manway (below arrow panel).
This Way to (inside arrow) First-Aid Room (below arrow panel).

Informational Signs—
No Trespassing Under Penalty of the Law.
This Elevator Is for Freight Only, Not for Passengers.
No Admittance Except to Employees on Duty.
No Admittance.
No Admittance, Apply at Office.
No Trespassing.
Men.
Women.
For Employees Only.
Office.

PART 38. HAND AND PORTABLE POWERED TOOLS

R 408.13801 Scope.

Rule 3801. This part provides for the safe maintenance, operation and use of hand tools and portable powered tools, regardless of ownership in, around or about a place of employment.

History: 1954 ACS 80, p. 57, Eff. July 23, 1974.

R 408.13804 Definitions; C to F.

Rule 3804. (1) "Chain fall" means a manually powered hoisting device employing a load bearing chain and an endless hand chain to raise or lower loads.

(2) "Explosive load" means a substance capable of producing a propellant force in a powder actuated tool.

(3) "Fastener driver" means a portable powered tool such as a nut runner, impact wrench, stapler, screw driver, nailer and riveter.

History: 1954 ACS 80, p. 57, Eff. July 23, 1974.

R 408.13805 Definitions; H.

Rule 3805. (1) "Hammer actuated piston tool" means a device which, when struck by a hammer and supplemented by an explosive load, moves a captive piston to drive a fastener into a work surface.

(2) "Hand tool" means an instrument used or worked by hand.

(3) "High velocity tool" means a device which, when used with an explosive load, propels a fastener at a velocity more than 300 feet per second when measured 6½ feet from the muzzle end of the tool.

(4) "Hoist and puller," sometimes called a come-along, means a portable, manually operated device for lifting, lowering or moving by a pulling force.

(5) "Hot stick" means a dielectric tool extension used when working on energized conductors and apparatus.

History: 1954 ACS 80, p. 57, Eff. July 23, 1974.

R 408.13806 Definitions; J to M.

Rule 3806. (1) "Jack" or "ram" means a device, except an automobile bumper jack, used for lifting, lowering or moving a load by application of a pushing force.

(2) "Low velocity tool" means a device which, when used with an explosive load, propels a fastener at a velocity less than 300 feet per second when measured 6½ feet from the muzzle end of the tool.

(3) "Mushroom" means to overrun the shank or head of a tool by battering the striking end.

History: 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.13807 Definitions; P.

Rule 3807. (1) "Platen sander" means a portable powered tool which has abrasive paper fastened to a base or platen which moves in an orbital oscillating motion.

(2) "Pneumatic powered nut runner" means an air operated wrench used to drive a threaded fastener into or onto a work piece.

(3) "Portable powered stapler and nailer," other than general office staplers, means a tool which drives a staple or nail by mechanical, pneumatic or electrical power into a work piece.

(4) "Portable powered tool" means a tool carried and moved by hand and powered by something other than manual force.

(5) "Powder actuated tool" means a device for making instantaneous forced entry into materials by use of a tool, a fastener and an explosive load.

(6) "Protective shield" means a device or guard attached to the muzzle end of a powder actuated tool to confine flying particles.

History: 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.13808 Definitions; R, S.

Rule 3808. (1) "Rating" means the maximum working load for which an object is designed to handle under given circumstances.

(2) "Stall type tool" means a powered nut runner which stalls out under load but maintains pressure on the fastener until the power supply to the motor is manually terminated by means of a throttle release or other power disconnect.

History: 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.13811 Employer responsibility.

Rule 3811. An employer shall:

(a) Ensure that an employee has been trained in the use of hand tools and portable powered tools before authorizing their use. Where an employee is required to use a powder actuated tool, the employer shall check the employee's capability by demonstration before authorizing use of the tool.

(b) Maintain or require to be maintained hand tools and portable powered tools free of defects which could cause injury to an employee.

History: 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.13812 Employee responsibilities.

Rule 3812. An employee shall:

(a) Use personal protective equipment where required by the employer or dictated by the hazard of the job.

(b) Not use a tool for other than its designed or approved use.

(c) Report defective hand tools and portable power tools to his supervisor.

History: 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.13821 Storage and handling.

Rule 3821. (1) A hand tool or portable powered tool shall be stored in a manner to prevent damage to it.

(2) A sharp or pointed tool such as, but not limited to, chisels, drill bits and awls shall be carried in 1 of the following ways:

(a) With the edges or points protected.

(b) In a tool tray.

(c) In a cart.

(d) In a sheath.

(e) In the hand with the sharp edges turned away from the body.

(3) A sharp or pointed tool, when stored in a rack or bin, shall have the sharp edge or point inward or otherwise protected or stored to prevent injury.

History: 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.13822 Inspection.

Rule 3822. (1) A tool shall be inspected visually by the employee using the tool for safe operation before daily use and, when found defective, it shall be removed from service.

(2) The speed of a portable air grinder shall be checked with a tachometer or other device for reading r.p.m. (revolutions per minute), when issued for use and

after repair. A grinding wheel shall not be installed if its rated speed is less than the grinder.

History: 1954 ACS 80, p. 58, Eff. July 23, 1974.

R 408.13823 Controls.

Rule 3823. (1) A hand held powered circular saw having a blade diameter more than 2 inches; an electric, hydraulic or pneumatic chain saw and a percussion tool without positive accessory holding means shall be equipped with a constant pressure switch or control that will shut off the power when the pressure is released. A gasoline powered chain saw shall be equipped with a constant pressure throttle control that will shut off the power to the saw chain when the pressure is released.

(2) A hand held powered drill, tapper, fastener driver, grinder with a wheel more than 2 inches in diameter, disc sander with disc more than 2 inches in diameter, belt sander, reciprocating saw, saber saw, scroll saw and jig saw with a blade shank more than a nominal ¼ inch and similarly operating power tools shall be equipped with a constant pressure switch or control and may have a lock-on control if turn off can be accomplished by a single motion of the same finger or fingers that turn it on.

(3) Other hand held powered tools such as, but not limited to, a platen sander, grinder with a wheel 2 inches or less in diameter, disc sander with discs 2 inches or less in diameter, router, planer, laminate trimmer, nibbler, shear, saber saw, scroll saw and jig saw with blade shank of a nominal ¼ inch or less may be equipped with either a positive on—off control or other control prescribed in subrules (1) and (2).

(4) The operating control on a hand held power tool shall be located so as to prevent accidental operation, if such operation would constitute a hazard to an employee.

(5) A hand held power tool shall be disconnected from its power source whenever it is serviced or the point of operation device is changed by a device or tool, except for a hand held drill less than ⅜ inch, platen sander, 2-inch belt sander or scroll saw.

(6) Subrules (1) through (5) do not apply to concrete vibrators, concrete breakers, powered tampers, jack hammers, rock drills, garden appliances, household and kitchen appliances, personal care appliances, medical or dental equipment or to fixed machinery or equipment.

History: 1954 ACS 80, p. 59, Eff. July 23, 1974.

R 408.13824 Modification.

Rule 3824. A tool and its power source shall not be modified, except by an authorized and trained employee or qualified outside service.

History: 1954 ACS 80, p. 59, Eff. July 23, 1974.

HAND TOOL PROVISIONS

R 408.13831 General; hand tools.

Rule 3831. A hand tool shall be used only for the purpose for which it was designed or approved.

History: 1954 ACS 80, p. 59, Eff. July 23, 1974.

R 408.13832 Air blow guns.

Rule 3832. (1) Air pressure at the discharge end of a portable air blow gun shall be less than 30 pounds per square inch gauge when dead-ended.

Digitized by Google

(2) Where an air blow gun is used to remove chips and dust, a chip guard, such as a fixed or removable shield, shall be provided to protect an employee in an adjacent area.

(3) An air blow gun shall not be used for cleaning clothes while being worn, or blown at any part of the body.

History: 1954 ACS 80, p. 59, Eff. July 23, 1974.

R 408.13833 Abrasive blast cleaning nozzles.

Rule 3833. (1) An abrasive blast cleaning nozzle shall be equipped with a constant pressure control.

(2) An abrasive blast cleaning nozzle shall be mounted on a support when not in use.

History: 1954 ACS 80, p. 59, Eff. July 23, 1974.

R 408.13834 Axes, hatchets, hammers, and mauls.

Rule 3834. An axe, hatchet, hammer, or maul handle shall be replaced when it becomes cracked, broken or splintered. A wood handle shall be secured with wedges or equivalent means.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13835 Chisels, punches, star drills, drift pins, and wedges.

Rule 3835. (1) A chisel, punch, star drill, drift pin, or wedge with a metal striking end shall not be used when the end becomes mushroomed. The striking end shall be ground with a crowned radius and beveled edge.

(2) The working end of a chisel, punch, star drill, drift pin, or wedge shall be maintained as designed.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13836 Files and rasps.

Rule 3836. A file or rasp with a tang shall be equipped with a handle fitted and secured to the tang, when in use.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13838 Jacks; use.

Rule 3838. (1) The rated capacity of a jack shall not be exceeded. The rated capacity shall be permanently marked on the jack.

(2) A jack shall be set on or against a firm foundation or blocking. If a jack, at the point of contact with the load, can slip, a wood block or nonslip device shall be placed between the cap and the load.

(3) A jack shall be equipped with a means such as, but not limited to, a stop, a bypass, an indicator or other device which shall be watched to prevent overrun.

(4) After a load has been raised or moved, it shall be secured by cribbing, blocks or stands before work is started under or between the supported load.

(5) A hydraulic jack exposed to freezing temperatures shall be protected by use of an anti-freeze liquid.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13839 Jacks; inspection.

Rule 3839. (1) A jack shall be inspected for leaks, mechanical defects and lubrication according to the following requirements:

(a) Not less than semi-annually.

Digitized by Google

(b) Before and after a special use or abnormal shock.
(c) After repairs or servicing.
(2) A defective jack shall be tagged and removed from service.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13840 Knives.

Rule 3840. (1) A fixed blade knife shall be carried in a sheath, in a tray or other equivalent protective means.

(2) A folding knife which cannot be locked in place shall not be used in a manner where the blade could fold on the fingers.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13841 Pliers.

Rule 3841. Pliers with sprung jaws, a worn face or worn joint pin shall be replaced.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13843 Screwdrivers.

Rule 3843. (1) An object being worked on with a screwdriver shall not be held in the hand, on the lap or under the arm, except when protection is afforded by the object or other means.

(2) A screwdriver used for electrical work shall be equipped with a nonconductive handle. The shank and fasteners shall not project through the handle.

(3) A blade type screwdriver shall be maintained with a flat tip at right angles to the shank and have almost parallel faces.

(4) A screwdriver with 1 of the following defects shall not be used:
(a) Split or broken handle.
(b) Cracked or broken blade.
(c) Loose shank in handle.
(d) Worn blade.
(e) Bent shank of a straight screwdriver.

History: 1954 ACS 80, p. 60, Eff. July 23, 1974.

R 408.13844 Wrenches.

Rule 3844. (1) A wrench with spread, distorted or cracked jaws shall not be used.

(2) A wrench, except a wrench designed for that purpose, shall not be subjected to hammering.

History: 1954 ACS 80, p. 61, Eff. July 23, 1974.

R 408.13845 Chain falls and hoist and pullers; capacity.

Rule 3845. (1) A chain fall or hoist and puller shall be used at not more than its rated capacity.

(2) The capacity of a chain fall or hoist and puller shall be permanently labeled or marked on it.

(3) An accessory, such as a chain or cable used to secure or support a chain fall or hoist and puller, shall have a capacity of not less than the chain fall or hoist and puller.

(4) An object subject to a lift or pull by a chain fall shall have the capacity to absorb the lift or pull without creating a hazard to an employee in the area.

History: 1954 ACS 80, p. 61, Eff. July 23, 1974.

R 408.13846 Chain falls and hoist and pullers; use.

Rule 3846. (1) A chain fall or hoist and puller shall be secured to an anchorage and the load attached to the chain fall or hoist and puller in a manner which will prevent inadvertent disengagement.

(2) When a chain fall or hoist and puller are under tension of a load, a positive action shall be required to release the tension.

(3) A hoist and puller lever handle shall not be operated with an extension handle except as furnished by the manufacturer.

(4) A chain fall or hoist and puller shall be visually inspected for observable defects before each job use by the employee using the tool.

History: 1954 ACS 80, p. 61, Eff. July 23, 1974.

R 408.13847 Hot sticks.

Rule 3847. (1) The hot stick and any tool attached to it shall be wiped clean and inspected for damage before use on a job shift. A hot stick with a defect, such as, but not limited to, a surface rupture shall be repaired or replaced.

(2) A hot stick shall not be used in excess of its rated capacity.

(3) The minimum working distance and minimum clear hot stick distances, prescribed in table 1, when using live-line tools shall not be violated.

(4) A hot stick shall not be used unless it has been certified by the manufacturer to meet the following:

(a) Fiberglass, 100,000 volts per foot of length for 5 minutes.

(b) Wood, 75,000 volts per foot of length for 3 minutes.

(c) Or any equivalent test.

(5) A hot stick shall be stored in a manner to protect it from damage and moisture.

TABLE 1

Alternating Current—Minimum Distances

Voltage range (phase to phase) kilovolt	Minimum working and clear hot stick distance
2.1 to 15	2 ft. 0 in.
15.1 to 35	2 ft. 4 in.
35.1 to 46	2 ft. 6 in.
46.1 to 72.5	3 ft. 0 in.
72.6 to 121	3 ft. 4 in.
138 to 145	3 ft. 6 in.
161 to 169	3 ft. 8 in.
230 to 242	5 ft. 0 in.
345 to 362	[1]7 ft. 0 in.
500 to 552	[1]11 ft. 0 in.
700 to 765	[1]15 ft. 0 in.

[1]Note: For 345-362 kv., 500-552 kv., and 700-765 kv., the minimum working distance and the minimum clear hot stick distance may be reduced provided that such distances are not less than the shortest distance between the energized part and a grounded surface.

History: 1954 ACS 80, p. 61, Eff. July 23, 1974.

PORTABLE POWERED TOOL PROVISIONS

R 408.13861 Portable powered tools; generally.

Rule 3861. (1) An electrically powered tool shall have an approved ground unless it is double insulated and carries a permanent label or mark so stating.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA
Generated for Susan K Kendall (Michigan State University) on 2018-09-05 17:20 GMT / http://hdl.handle.net/2027/umn.31951d01149929j

(2) A pneumatically powered tool shall be equipped with a tool retainer where the absence of a retainer would result in a tool being ejected.

(3) Hose and hose fittings used with pneumatic powered tools shall have a pressure rating not less than the supply source.

(4) Hose connections shall have a positive locking action or the connecting sections shall have a safety chain to restrain any whipping action if the sections become disconnected.

(5) An air supply line shall be regulated to maintain the pressure at not more than the pneumatic tool rating.

History: 1954 ACS 80, p. 62, Eff. July 23, 1974.

R 408.13863 Portable circular saws.

Rule 3863. (1) A portable, power driven circular saw with a blade more than 2 inches in diameter shall have guards above and below the base plate or shoe. The upper guard shall cover the saw to the depth of the teeth, except for the minimum arc required to permit the base to be tilted for bevel cuts. The lower guard shall cover the saw to the depth of the teeth, except for the minimum arc required to allow proper retraction and contact with the work. When the tool is withdrawn from the work, the lower guard shall return to the covering position automatically and instantly.

(2) The guard shall not be tied back or removed except for servicing.

(3) A cracked circular saw blade shall be removed from service.

History: 1954 ACS 80, p. 62, Eff. July 23, 1974.

R 408.13864 Portable pneumatic grinders.

Rule 3864. (1) A portable pneumatic grinder shall be operated at a speed of not more than the grinder's rated speed.

(2) A line supplying air to a portable pneumatic grinder regulated by a governor shall be equipped with a filter to remove water, contaminated oil and dirt.

(3) A portable pneumatic grinder regulated by a governor shall be provided with a continuous lubrication means.

History: 1954 ACS 80, p. 62, Eff. July 23, 1974.

R 408.13865 Powered stapler and nailers.

Rule 3865. (1) A portable powered stapler or nailer, capable of driving a fastener with a diameter more than .0475 inch—18 gauge A.W.G., at more than 75 feet per second, shall be designed so that the operator is required to make not less than 2 separate operations to activate the tool with 1 operation being to place the tool against the work surface.

(2) The design shall prevent discharge of the stapler during loading or when dropped.

(3) A portable powered stapler or nailer shall not be pointed or discharged at other than the work piece.

(4) The operator of a portable powered stapler or nailer and those employees within the striking distance of its fastener shall wear eye protection as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(5) A positive actuation of the operation control shall be required to propel each fastener from a powered stapler or nailer.

(6) When relieving a jam-up of a fastening device, the source of power shall be disconnected.

(7) At the beginning of each shift, a portable powered stapler and nailer shall be tested for safe operation.

(8) Safety devices and operating controls shall not be made inoperative.

History: 1954 ACS 80, p. 63, Eff. July 23, 1974.

R 408.13866 Pneumatic powered nut runner.

Rule 3866. (1) A pneumatic powered angle nut runner with a trigger type operating control shall have the control located so that the reaction force of the runner does not create additional pressure on the trigger.

(2) A mechanical means shall be provided to absorb torque reaction of a stall type tool and used where:

(a) The resultant sustained force on an operator of an angle head nut runner or an inline tool with dual offset handles is more than 50 pounds.

(b) The reaction torque from an inline nut runner with a single offset handle is more than 100 inch pounds.

(c) The reaction torque of an inline nut runner without an offset handle is more than 30 inch pounds.

(3) A powered nut runner other than a stall type shall be provided a device, such as a reaction bar, when the reaction force on the operator is such that the operator cannot control the tool.

History: 1954 ACS 80, p. 63, Eff. July 23, 1974.

POWDER ACTUATED TOOLS

R 408.13871 General requirements for powder actuated tools.

Rule 3871. (1) A powder actuated tool shall be so designed:

(a) That the tool cannot fire during loading, preparation to fire or if the tool should be dropped. Activation shall require not less than 2 operations by the employee; first the tool shall be placed in position and then actuated.

(b) That an employee shall have the option to use a power level capable of performing the desired work with minimum force (see R 408.13875).

(c) That the breeching parts shall allow a visual inspection for foreign matter.

(d) That the tool shall be capable of resisting the maximum stresses imposed by any specifically manufactured commercial explosive load which will fit in the tool.

(2) Fasteners used in a powder actuated tool shall be only those specifically manufacturered for such a tool.

History: 1954 ACS 80, p. 63, Eff. July 23, 1974.

R 408.13872 High velocity tools.

Rule 3872. (1) A high velocity tool shall be equipped with a protective shield not less than 3½ inches in diameter, mounted perpendicular to and concentric with the barrel. The shield shall be designed to confine any fragments or particles that would create a hazard. The shield shall be interlocked to the tool so that if it is not attached, the tool will not fire.

(2) Where a standard shield cannot be used or does not cover the escape of fragments from a high velocity tool, a special shield, guard, fixture or jig shall be designed and used to provide the required protection which shall be interlocked as prescribed in subrule (1).

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(3) The design of a high velocity tool shall require that the tool be held against the work surface with a force of not less than 5 pounds greater than the weight of the tool before actuation.

(4) The tool shall be designed to make it inoperable if, when equipped with a standard shield indexed to the center position, any bearing surface of the guard is tilted more than 8 degrees from contact with the work surface.

History: 1954 ACS 80, p. 63, Eff. July 23, 1974.

R 408.13873 Low velocity tools.

Rule 3873. The design of a low velocity tool shall:

(a) Be such that the muzzle end of the tool will hold a protective shield, a guard, a fixture or a jig, built by the tool manufacturer perpendicular to the barrel.

(b) Require that the tool be held against the work surface with a force of not less than 5 pounds greater than the weight of the tool before actuation.

History: 1954 ACS 80, p. 64, Eff. July 23, 1974.

R 408.13874 Hammer actuated piston tools.

Rule 3874. (1) The fastener of a hammer actuated piston tool shall have a velocity not to exceed 300 feet per second when measured 6½ feet from the muzzle end of the tool.

(2) Such a tool shall be designed as prescribed in subdivision (a) of R 408.13873.

(3) The firing mechanism of such a tool shall require not less than a 3 foot pound blow to achieve activation.

History: 1954 ACS 80, p. 64, Eff. July 23, 1974.

R 408.13875 Power levels.

Rule 3875. The power level for cased or caseless loads shall be identified by a color and numbering system as prescribed in table 2, except caseless loads are limited to power levels 1 to 6. The combination of the case color and load color shall designate the load level. Both the explosive load and the carton or box shall provide visual indication of the load level.

TABLE 2
Identification of Cased Loads

Power Level	Color Identification		Nominal Velocity (± 45 fps)
	Case Color	Load Color	
1	Brass	Gray	300
2	Brass	Brown	390
3	Brass	Green	480
4	Brass	Yellow	570
5	Brass	Red	660
6	Brass	Purple	750
7	Nickel	Gray	840
8	Nickel	Brown	930
9	Nickel	Green	1,020
10	Nickel	Yellow	1,110
11	Nickel	Red	1,200
12	Nickel	Purple	1,290

Note: The nominal velocity applies to ⅜-inch diameter 350-grain ballistic slug fired in a test device and has no reference to actual fastener velocity developed in any specific size or type of tool.

History: 1954 ACS 80, p. 64, Eff. July 23, 1974.

R 408.13876 Operation of powder actuated tools.

Rule 3876. (1) A powder actuated tool shall:

(a) Be inspected for defects and the safety devices tested before use. A defective tool shall be removed from service until repaired.

(b) Used with the shield, guard or attachment required by the job.

(c) Not be loaded until firing time. A loaded tool shall not be left unattended.

(d) Not be fired in an explosive or flammable atmosphere.

(e) Not be pointed, loaded or empty, at another employee or fired at objects not in contact with the tool.

(2) In case of a misfire, the employee shall hold the tool in operating position for 30 seconds, then try again. At a second misfire, he shall wait again for 30 seconds with the tool in operating position; he shall then remove the load and place it in a container of water and consult his supervisor for disposition.

(3) A fastener shall not be driven:

(a) Into very hard or brittle materials, such as, but not limited to, cast iron, glazed tile, hollow tile, face brick, glass block or surface hardened steel.

(b) Into a material which is easily penetrated unless the material is backed by another material which will prevent the fastener from passing completely through and creating a flying hazard on the other side.

(c) Through an existing hole unless a guide is used to secure alignment.

(d) Into a spalled area caused by an unsatisfactory fastening.

(e) Into materials such as masonry less than 3 inches from an unsupported edge or corner, or into steel surfaces less than ½ inch from an unsupported edge or corner, except that when using a low velocity tool the distances can be narrowed to 2 inches for masonry materials and ¼ inch for steel surfaces.

History: 1954 ACS 80, p. 64, Eff. July 23, 1974.

FUEL POWERED TOOLS

R 408.13881 General.

Rule 3881. (1) A fuel powered tool shall be stopped while being refueled, serviced, or maintained.

(2) A fuel powered tool shall not be operated in an enclosed area, unless the toxic fumes are below the maximum allowable limits prescribed by the state department of public health, being R 325.2430 of the Michigan Administrative Code.

(3) Where refueling is done with a portable container, the container shall be an approved safety can with an automatic closing cap and flame arrestor.

History: 1954 ACS 80, p. 65, Eff. July 23, 1974.

R 408.13882 Chain saws.

Rule 3882. (1) A chain saw shall be used only for cutoff work such as, but not limited to, cutting trees, limbs, poles, and beams. A chain saw shall not be used to open a hole in a solid object, such as a floor, wall, or panel.

(2) A chain saw shall be equipped with a positive type on-off ignition switch conveniently located for the operator to move it into the off position without relinquishing his grip on the saw.

(3) A manual chain oiler control, if provided on a chain saw, shall be located so that it can be operated without relinquishing a secure grip on the saw.

(4) An engine throttle control, if provided on a chain saw, shall be located so that it can be operated without relinquishing a secure grip on the saw.

(5) A chain saw shall have a guard that protects the throttle lever from casual contact from brush or other foreign objects.

(6) A chain saw equipped with a centrifugal clutch shall have a throttle control, carburetor and clutch system so that if the throttle control is released, the engine idle speed shall become lower than the clutch engagement speed, allowing the chain to come to a complete stop.

(7) A chain saw's moving parts, such as a flywheel, rotating screen, or clutch, shall be guarded. A saw's chain shall be guarded adjacent to the handle area and the sawdust shall be directed away from the operator.

(8) A saw's chain shall be stopped if it is not being used for sawing.

(9) A chain saw shall be carried by the top handle with the guide bar to the rear.

(10) A chain saw shall not be started within 10 feet of the place where it was refueled.

History: 1954 ACS 80, p. 65, Eff. July 23, 1974.

PART 42. FORGING
GENERAL PROVISIONS

R 408.14201 Scope.

Rule 4201. This part provides safety for life, limb, and health in or about places of employment and applies to all classes of power-forging machinery both for drop forging and flat-die forging, including steam hammers, pneumatic hammers, mechanically operated hammers, forging presses, forging rolls, trimming presses, bulldozers, upsetting machines, bolt-heading and rivet-making machines and power shears, and incidental operations and equipment in connection with such machinery. Excluded are cold forging operations.

History: 1954 ACS 72, p. 53, Eff. June 22, 1972.

R 408.14203 Definitions; A to C.

Rule 4203. (1) "Aisle" means a path of travel for vehicles and employees and which is not used for work and storage space.

(2) "Board drop hammer" means a hammer equipped with boards attached to the ram which when propelled by motor driven friction rolls raises the ram and attachments.

(3) "Cylinder head" means a cover attachment for the top of a steam cylinder.

History: 1954 ACS 72, p. 53, Eff. June 22, 1972.

R 408.14204 Definitions; F, G.

Rule 4204. (1) "Foot protection" means protective equipment worn on an employee's foot and designed to protect against injury.

(2) "Forging press" means a mechanically or hydraulically operated press using closed or flat dies.

(3) "Forging rolls (reducing rolls)" means rolls used as equipment for forging or swagging operations. Forging rolls are required essentially for reducing short, thick stock sections into long, slender sections and to preform or reduce cross-sectional areas of billets before the finished forging operation.

(4) "Guide bolt" means a bolt which passes through the hammer columns and secures the ram guides in the pocket.

History: 1954 ACS 72, p. 53, Eff. June 22, 1972.

R 408.14205 Definitions; H to P.

Rule 4205. (1) "Hammer" means a machine designed to shape forgings by means of impact between dies. The force of the impact is by gravity or power supplied by steam, air or mechanical means.

Digitized by Google

(2) "Mechanical hammer" means a gravity hammer which uses hydraulic or mechanical devices, such as friction rolls with boards, belts, or ropes to raise the ram and attachments.

(3) "Point of operation" means the area of a machine, die, or tool where material is actually worked.

(4) "Power shear" means a machine equipped with opposing shear blades and which cuts bar stock.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972.

R 408.14207 Definitions; R, S.

Rule 4207. (1) "Rod gland" means a sleeve at the bottom of a cylinder through which a piston rod passes.

(2) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the actual safe load or working stress when in use.

(3) "Steam or pneumatic hammer" means a hammer using steam or air to provide energy in a cylinder to raise the hammer for a gravity drop and in case of a double action hammer to increase the force of the impact on the forging.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972.

R 408.14208 Definitions; T to W.

Rule 4208. (1) "Tie plate" means a plate located and attached to the upper structure of hammer columns and on which the steam cylinder is mounted.

(2) "Trained and authorized" means to have received instructions regarding specified duties and to have permission to perform those duties.

(3) "Trim press" means a class of auxiliary forging equipment which removes flash or excess metal from a forging.

(4) "Upsetting machine" means a horizontal forging machine employing a set of gripper dies that holds stock while the ram or header slide forces the stock into shape and size.

(5) "Walkway" means a path of travel for foot traffic only.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972; 1954 ACS 79, p. 75, Eff. Apr. 16, 1974.

R 408.14221 Working space.

Rule 4221. Machines shall be so located as to give:

(a) Enough clearance between machines so that the movement of 1 operator will not interfere with the work of another.

(b) Ample room for cleaning machines and handling the work, including material and flashings. The arrangement of machines shall be such that an operator's work station shall not be in an aisle.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972.

R 408.14222 Aisles.

Rule 4222. An aisle for vehicular traffic shall be not less than the width of the widest vehicle or load plus 3 feet. An aisle shall be outlined by marking.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972.

R 408.14223 Platforms.

Rule 4223. A platform used on the floor in front of a machine shall be designed to hold the weight imposed on it without creating a tripping hazard.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972.

R 408.14224 Lighting and controls.

Rule 4224. (1) Machinery and equipment shall be provided with a minimum of 15 footcandles light intensity to fall upon the general area. When natural light is insufficient, artificial light shall be provided. Direct or reflected glare and shadows, including moving shadows, should be avoided.

(2) A manually operated valve or switch for power forging equipment shall be identified as to function and accessible to the operator.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972; 1954 ACS 79, p. 75, Eff. Apr. 16, 1974.

R 408.14225 Fans.

Rule 4225. (1) Where a fan is used, the blades, where exposed to contact, shall be enclosed on all sides with a material which conforms to rules 751, 754, and 757 of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10751, R 408.10754, and R 408.10757 of the Michigan Administrative Code.

(2) An electrical cord shall be arranged to eliminate electrical or tripping hazards.

History: 1954 ACS 72, p. 54, Eff. June 22, 1972.

R 408.14226 Use of lead.

Rule 4226. The following safety requirements apply to lead casts or other use of lead in a forge shop or die shop:

(a) Thermostatic control of heating elements shall be provided to maintain melting temperature at not more than 750 degrees Fahrenheit.

(b) A covered container shall be provided to store dross skimmings.

(c) Equipment shall be kept clean, particularly from accumulations of lead oxide.

(d) A sign shall be posted in the work area prohibiting eating in the area and calling attention to dangers of oral ingestion of lead dust from hands and clothing.

History: 1954 ACS 72, p. 55, Eff. June 22, 1972.

R 408.14227 Scale removers, oil swabs, and tongs.

Rule 4227. (1) If an oil swab, scale brush, or other device is required to remove scale, it shall be long enough to enable the employee to perform the job without placing his hands within the point of operation.

(2) Tongs shall be of sufficient length to clear the body of the worker in case of kickback, and shall not have sharp handle ends. The worker should be instructed in the proper body position when using tongs. Tongs should be checked periodically to see that they remain at the proper hardness level for the job. When rings or equivalent devices for locking tongs are used, they should be inspected periodically to ensure safe condition.

History: 1954 ACS 72, p. 55, Eff. June 22, 1972; 1954 ACS 88, p. 97, Eff. Sept. 16, 1976.

R 408.14231 Guards; general.

Rule 4231. (1) A press, hammer, upsetter, bolt header, riveting machine or bulldozer having a flywheel, shaft, clutch and gears not confined within the frame shall be arranged with guards as prescribed in the occupational safety standards commission standard, Part 7. Guards for Power Transmission.

(2) An overhead part which may fall or fly off shall be secured or by other means prevented from falling.

History: 1954 ACS 72, p. 55, Eff. June 22, 1972; 1954 ACS 79, p. 75, Eff. Apr. 16, 1974.

R 408.14232 Personal protective equipment.

Rule 4232. (1) Protective goggles or spectacles as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code, shall be worn by all employees in a forge plant.

(2) Head protection, as prescribed in the occupational safety standards commission standard, Part 32. Head Protection, being R 408.13201 to R 408.13241 of the Michigan Administrative Code, shall be worn by all employees working in a forge department.

(3) An employee shall wear foot protection where a falling object would cause injury.

(4) An employee shall wear other types of protective clothing, such as, but not limited to, aprons, gloves and leggings, when and where such clothing is necessary for protection against injury.

(5) Hearing protection shall be provided by the employer and worn by an employee where the noise level exceeds the levels prescribed by the department of public health.

History: 1954 ACS 72, p. 55, Eff. June 22, 1972; 1954 ACS 79, p. 75, Eff. Apr. 16, 1974.

R 408.14241 Guards, hammers, and forge presses.

Rule 4241. (1) The portion of a treadle at the rear of a hammer shall be guarded so that scrap or other material cannot collect below this portion of the treadle and prevent it from returning to normal position.

(2) A treadle shall be blocked or otherwise secured during the time an employee is exposed under the ram or between the dies.

(3) A scale guard constructed of not less than 20 gauge sheet steel or equivalent material shall be provided at the back of a hammer, so arranged as to stop flying objects and anchored or secured so that it cannot tip or fall.

(4) A foot operated device, such as a treadle, pedal, bar, valve, or switch, shall be substantially and effectively protected from unintended operation.

History: 1954 ACS 72, p. 55, Eff. June 22, 1972; 1954 ACS 79, p. 76, Eff. Apr. 16, 1974; 1954 ACS 88, p. 97, Eff. Sept. 16, 1976.

HAMMER AND FORGE PRESSES

R 408.14242 Hammer installation.

Rule 4242. (1) A hammer shall be installed on or anchored to a foundation of such strength as to support the imposed weight and normal work stress.

(2) A press shall be installed in a manner that it will remain in position or it shall be anchored to a foundation of such strength as to support the imposed weight and normal work stress.

History: 1954 ACS 72, p. 55, Eff. June 22, 1972; 1954 ACS 79, p. 76, Eff. Apr. 16, 1974.

R 408.14243 Ram props and blocks.

Rule 4243. A ram prop or block shall be provided and used at each hammer when dies are changed or repaired. The prop or block shall have a handle on the side. One of the following shall be used:

(a) A wooden ram prop or block of hardwood and complying with not less than the specifications of table 1. The ends shall be square.

(b) A steel ram prop of not less than 2½-inch outside diameter by 2-inch inside diameter, or a structural shape of equal strength, with squared ends.

(c) Other material which shall be of equal or greater strength as required for steel in subdivision (b).

TABLE 1
Minimum Strength and Dimensions for Wood Ram Props

Size of Timber, In.*	Square Inches in Cross Section	Minimum Allowable Crushing Strength Parallel to Grain, Psi†	Maximum Static Load Within Short Column Range‡	Safety Factor	Maximum Recommended Weight of Forging Hammer for Timber Used	Maximum Allowable Length of Timber, In.
4 x 4	16	5,000	80,000	10	8,000	44
6 x 6	36	5,000	180,000	10	18,000	66
8 x 8	64	5,000	320,000	10	32,000	88
10 x 10	100	5,000	500,000	10	50,000	110
12 x 12	144	5,000	720,000	10	72,000	132

*Actual dimension.

†Adapted from U.S. department of agriculture technical bulletin 479. Hardwoods recommended are those whose ultimate crushing strengths in compression parallel to grain are 5,000 psi (pounds per square inch) or greater.

‡Slenderness ratio formula for short columns is $L/d=11$, where L=length of timber in inches and d=least dimension in inches; this ratio should not exceed 11.

History: 1954 ACS 72, p. 55, Eff. June 22, 1972.

R 408.14244 Hammer die keys.

Rule 4244. (1) A hammer die key and shims shall be made from a grade of material which does not crack or splinter when treated. A die key shall project not more than 3 inches in front or in back of the ram or die.

(2) A head of a key shall be kept free of mushrooming and splitting by grinding off any flaring.

(3) A head of a manual key driver shall be kept free of mushrooming by grinding or machining. A cutting torch shall never be used for this. A driver shall be suspended from a securely fastened beam with chain or cable of sufficient size to handle the weight of the driver plus a safety factor of 5. Chain, cable and fasteners shall be kept free of twisted, bent or elongated links. A driver shall be made of steel that will not chip on impact.

(4) A pneumatic key driver is recommended. The driver shall be made of steel that will not chip on impact.

History: 1954 ACS 72, p. 56, Eff. June 22, 1972; 1954 ACS 88, p. 97, Eff. Sept. 16, 1976.

R 408.14245 Hammer cylinder heads and fasteners.

Rule 4245. Parts, such as, but not limited to, a cylinder head and fasteners for a cylinder head, glands, tie plates and guide bolts, which are subject to failure shall be secured by use of a safety cable strung to them.

History: 1954 ACS 72, p. 56, Eff. June 22, 1972.

R 408.14246 Steam and pneumatic hammers.

Rule 4246. (1) A steam or air hammer shall be equipped with a functional safety cylinder head to act as a cushion if the piston rod breaks or pulls out of the ram.

(2) A steam hammer shall be provided with a quick access emergency shut-off valve identified by name or color in the supply, sometimes called admission, pipeline at a location within reach of the operator. This valve shall be closed and

locked in the "off" position while the hammer is being adjusted, repaired, or serviced, or when the dies are being changed, except where necessary to move the ram.

(3) If the steam hammer cylinder is constructed without a self-draining arrangement, a drain cock shall be provided which shall be piped to a sump or drain pipe.

(4) A pneumatic hammer shall have a drain cock on the main head cylinder and on the clamp cylinder, if a clamp cylinder is provided.

(5) Steam or air pressure at the hammer shall be no higher than that for which the hammer is designed. A pressure regulator and safety valve at the source of power or at the equipment, whichever is applicable, shall be used to insure this.

(6) A steam pipe shall be covered where exposed to contact. Pipe supports or other effective means shall be provided to prevent failure from vibration, expansion or contraction.

(7) Steam or air piping shall be as prescribed in ANSI B31.1.0-1967, power piping, with addenda issued before April 28, 1971, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at a cost of $8.00 each.

(8) Where it is necessary to service a steam cylinder, a fixed platform, as prescribed in R 408.14249(2), shall be provided, or the employee shall wear a safety belt and lanyard, with the lanyard secured to the hammer or a structural member.

History: 1954 ACS 72, p. 56, Eff. June 22, 1972; 1954 ACS 79, p. 76, Eff. Apr. 16, 1974; 1954 ACS 88, p. 97, Eff. Sept. 16, 1976.

R 408.14247 Mechanically operated hammers and forging presses.

Rule 4247. (1) A mechanically operated hammer or forging press shall be provided with a means for disconnecting the power. Acceptable methods include the following:

(a) A disconnect switch ahead of the starter on the primary line with provision for locking and within reach from the floor. Power shall be locked off when the machine is being repaired or serviced.

(b) A tight and loose pulley on a countershaft, with a belt shifter, with a means to lock it in the "off" position. The belt shifter shall be within easy reach of the operator.

(c) A clutch or drive pulley, with a clutch handle, with a means to lock it in the "off" position. The clutch handle shall be within easy reach of the operator.

(2) Springs suspending the ram in a mechanically operated hammer shall be enclosed or restrained from flying in case of breakage.

History: 1954 ACS 72, p. 56, Eff. June 22, 1972.

R 408.14248 Point of operation devices.

Rule 4248. Effective August 31, 1974, the following shall pertain to a mechanically operated hammer used for cold re-strike operations:

(a) Where only 1 hand is used for holding the material, a safety stop, dog or catch shall be provided to prevent the ram from descending until this device has been released and is held out of the way by the other hand, or a hand lever instead of a foot treadle shall be provided for tripping the hammer.

(b) On a hammer where neither hand is used for holding the material, there shall be provided a point of operation device that restrains the operator from

inadvertently reaching into the point of operation or which automatically withdraws the operator's hands if they are within the point of operation as the dies close, or a tripping lever or safety stop or both that will require concurrent use of both hands to trip the hammer.

History: 1954 ACS 72, p. 57, Eff. June 22, 1972.

R 408.14249 Board drop hammers.

Rule 4249. (1) On a board drop hammer a guard constructed of 20 gauge sheet steel or stronger shall be provided around the board above the rolls to prevent the board from falling if the board breaks or comes loose from the ram.

(2) Where work must be done at or near the rolls of a board hammer, a fixed or portable platform equipped with handrail and toeboards as prescirbed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10201 to R 408.10241 of the Michigan Administrative Code and the occupational safety standards commission standard, Part 3. Fixed Ladders, being R 408.10301 to R 408.10365 of the Michigan Administrative Code, shall be provided and used.

(3) Roll release levers and front friction rods on a board hammer shall be prevented from falling by being secured to the hammer frame by cable, chain or an equally effective means.

History: 1954 ACS 72, p. 57, Eff. June 22, 1972.

R 408.14251 Forging presses.

Rule 4251. (1) Forging press operating valves shall be located so that the operator will have a clear and unobstructed view of the press when standing in the usual operation position. If this arrangement is impossible, a mirror shall be installed in front of the operator to assist him in obtaining a full view of the press.

(2) When dies are being changed or maintenance is being performed on a press, the following shall be accomplished:

(a) The energy source to a mechanical press shall be locked out, and the flywheel shall be at rest before work begins.

(b) The hydraulic pumps and power apparatus of the hydraulic press shall be locked out.

(c) Blocking shall be provided and used to prevent the ram from dropping. The material shall equal or exceed specifications in table 1. Die design shall take into consideration the need for a flat spot for the block.

(3) Location of steam, air, or water headers and scale or splash aprons shall give the operator sufficient clearance at the front of the forging press for any upward or downward movement of the tongs without creation of a pinch point between these facilities and the tongs.

(4) A hot forging press shall be equipped with a scale guard, as prescribed in R 408.14241(3).

(5) A forging press shall be provided with a positive means for retaining a piston and head assembly inside the counterbalance cylinder in case of failure or breakage of the piston and rod assembly.

(6) An electrical motor shall be provided with a disconnect switch, as prescribed in R 408.14247(1). A hydraulic forging press shall be equipped with a positive type lockout disconnecting switch or valve.

(7) Fire resistant fluids shall be used in a hydraulic press forming hot work.

(8) Die bolts shall not be worn or damaged, and shall be long enough to permit being threaded into die bolt holes a distance not less than 1½ times the diameter of the bolt. Washers shall not be used in multiple to compensate for excessive lengths of bolts.

(9) A mechanical foot pedal or foot switch shall be covered on both sides and top with a substantial guard to prevent accidental tripping. The guard shall have rolled, broad, or covered edges to prevent injury or discomfort. The mechanical foot pedal shall be mounted to a press leg or anchored to the floor.

History: 1954 ACS 72, p. 57, Eff. June 22, 1972; 1954 ACS 79, p. 76, Eff. Apr. 16, 1974; 1954 ACS 88, p. 98, Eff. Sept. 16, 1976.

R 408.14252 Inspection.

Rule 4252. (1) Daily visual observation, without dismantling, shall be made of a forging hammer and forge press to insure the safe condition of bolts, screws, keys, valves, and all parts of treadles and clutches and other operating mechanisms that might become loose by vibration.

(2) A periodic and regular maintenance safety inspection shall be made of forging machinery and equipment, including guards and point of operation protection devices by a trained and authorized employee.

(3) A record shall be made and maintained to show the date of inspection, equipment number and condition found.

History: 1954 ACS 72, p. 58, Eff. June 22, 1972; 1954 ACS 79, p. 77, Eff. Apr. 16, 1974.

OTHER MACHINES

R 408.14261 Trim presses.

Rule 4261. (1) A trim press shall be provided with a main disconnect switch as prescribed in R 408.14247(1).

(2) A trim press shall be provided with a safety block or prop as prescribed in R 408.14243. Die design shall take into consideration and provide a suitable flat area in the die for locating and using blocking material.

(3) A trim press shall be fed by devices as prescribed in R 408.14251(10).

History: 1954 ACS 72, p. 58, Eff. June 22, 1972.

R 408.14263 Bulldozers.

Rule 4263. (1) A guard shall be attached to the side of the moving head of a bulldozer and shall extend past the stationary head to prevent persons from stepping between the dies, or another method may be used which offers equal protection.

(2) A bulldozer shall be provided with a positive-type lockout device as prescribed in R 408.14247(1).

History: 1954 ACS 72, p. 58, Eff. June 22, 1972.

R 408.14265 Bolt heading and rivet making machines.

Rule 4265. (1) A treadle (pedal) of a bolt heading or rivet making machine shall be guarded as prescribed in R 408.14251(9).

(2) A bolt header or rivet making machine shall be equipped with a positive-type lockout device as prescribed in R 408.14247(1).

(3) A screen shield shall be installed across point-of-operation on a bolt heading or rivet-making machine to protect against flying pieces.

(4) Tension or relief springs on a bolt heading or rivet making machine shall be guarded.

(5) Safety blocks as prescribed in R 408.14243 shall be used when required while working on, removing or setting dies.

History: 1954 ACS 72, p. 58, Eff. June 22, 1972.

R 408.14267 Power shears.

Rule 4267. (1) A positive-type lockout device for disconnecting the power to a power shear shall be provided as prescribed in R 408.14247(1).

(2) The maximum size and specification of material being sheared on a power shear, as recommended by the manufacturer of the shear, shall not be exceeded.

(3) Effective point-of-operation guarding shall be provided at both the feeding end and discharge end of a power shear.

History: 1954 ACS 72, p. 58, Eff. June 22, 1972.

R 408.14268 Material-handling equipment.

Rule 4268. Material-handling equipment shall be of such capacity and size as to safely handle the imposed load of the dies and containers.

History: 1954 ACS 79, p. 77, Eff. Apr. 16, 1974; 1954 ACS 88, p. 98, Eff. Sept. 16, 1976.

R 408.14269 Tumbling barrels and shot blasts.

Rule 4269. (1) A tumbling barrel shall:

(a) Have all means of power transmission guarded as prescribed in the occupational safety standards commission standard, Part 7. Guards for Power Transmission.

(b) Have fittings to the barrel dust-tight or the barrel shall be enclosed in a booth with an exhaust system as approved by the state department of public health.

(c) Be locked in place while being loaded or unloaded.

(d) Have an interlocked barrier across the front before it can be started.

(e) Have a positive type lockout device for disconnecting the power to the barrel, as prescribed in R 408.14247(1).

(2) A shot blast cleaning chamber shall have doors, curtains including silhouettes or guards to protect the operator.

History: 1954 ACS 72, p. 58, Eff. June 22, 1972; 1954 ACS 79, p. 77, Eff. Apr. 16, 1974.

R 408.14271 Upsetting machines.

Rule 4271. (1) An upsetter pedal (treadle) shall be guarded as prescribed in R 408.14251(9).

(2) A shut-off valve or safety switch for service equipment on an upsetter, such as air lines, electric lines and water and oil lines, shall be located conveniently for the operator, and each shall be distinctly marked for ease of identification.

(3) A positive type lockout device for disconnecting the power to the upsetter shall be provided as prescribed in R 408.14247(1).

(4) An upsetting machine shall be installed so that it will remain on its foundation.

History: 1954 ACS 72, p. 59, Eff. June 22, 1972; 1954 ACS 79, p. 77, Eff. Apr. 16, 1974.

R 408.14273 Billet heating furnaces.

Rule 4273. (1) A billet heating furnace shall be equipped with an automatic valve on the main fuel line which will shut off in case of electrical or fuel supply failure.

(2) Radiant heat from a billet furnace shall be controlled by 1 or more of the following methods:

(a) Reflective shields of aluminum or materials of equal reflectivity.

(b) Controlled openings.

(c) Evaporative cooling.

(d) Water jackets.

(e) Chain curtains.

(3) An exhaust system shall be provided as prescribed by the state department of public health.

History: 1954 ACS 72, p. 59, Eff. June 22, 1972.

PART 44. FOUNDRIES

R 408.14401 Scope.

Rule 4401. This part applies to manufacturing and maintenance operations relating to the safety of employees engaged in making of ferrous and nonferrous castings, including smelting operations when applicable, but excluding die casting operations.

History: 1954 ACS 69, p. 86, Eff. Oct. 15, 1971; 1954 ACS 75, p. 59, Eff. Apr. 14, 1973.

R 408.14405 Definitions; A to C.

Rule 4405. (1) "Aisle" means a passageway between molds leading from a gangway, and its width shall be understood to be the clear distance between molds, machinery and equipment, posts, partitions, or other obstructions on 1 side of a passageway and similar objects on the other side.

(2) "Charging box or bucket" means a container which transports, to a cupola or furnace, scrap, coke, limestone, pig iron, ingots, alloys, briquets, and any other material to be melted.

(3) "Chipping" means a process of removing excess metal, flash, fins, and other unwanted material from a casting.

(4) "Coreblower" means a pneumatic machine which makes cores.

(5) "Crucible" means a vessel of refractory material used to hold or transport molten metal.

(6) "Crucible furnace" means a device which encloses a crucible in which metal is melted by gas, oil, or electric heat.

(7) "Cupola" means a vertical furnace used for melting metals and having tuyeres and a tapping spout.

History: 1954 ACS 69, p. 86, Eff. Oct. 15, 1971.

R 408.14406 Definitions; D to I.

Rule 4406. (1) "Draw furnace" means a device designed to heattreat or anneal metals.

(2) "Ferrous foundry" means a place where malleable iron, grey iron, nodular iron, or steel or a combination of these metals are melted and poured into molds in the making of castings.

(3) "Footcandles" means a standard measurement of light.

(4) "Foot protection" means a protective cap worn on an employee's foot designed to protect against probable injury.

(5) "Gangway" means a well defined passageway dividing or bordering working areas, but does not include an aisle.

(6) "Interlock" means a device or method of controlling the source of power so that if a guard, gate or similar protective device is removed or out of place, the equipment becomes inoperative.

History: 1954 ACS 69, p. 86, Eff. Oct. 15, 1971.

R 408.14407 Definitions; L to R.

Rule 4407. (1) "Ladle" means a vessel used for transporting and pouring molten metals.

Digitized by Google

(2) "Melting furnace" means a device used to melt metals or hold molten metals.

(3) "Nonferrous foundry" means a place where brass, aluminum, lead, copper, tin, zinc, gold, silver, or combination of metals are melted or poured into molds in the making of castings.

(4) "Oven" means a chamber designed to bake, heat, or dry.

(5) "Overhead crane" means a machine for lifting and lowering which moves on a bridge and travels under power on a fixed overhead runway.

(6) "Reverbatory furnace" means a furnace in which heat is radiated from the roof onto the material to be melted.

History: 1954 ACS 69, p. 86, Eff. Oct. 15, 1971.

R 408.14408 Definitions; S.

Rule 4408. (1) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the actual load or stress when in use.

(2) "Sampling cone" means a cup with an attached handle used to collect a sample of sand.

(3) "Service" means the repair or adjustment of equipment or machinery.

(4) "Shell or hot box core making" means a process of making cores of sand and resin mix that is cured in a heated box or pattern.

(5) "Shell molding" means a process of making a mold of sand and resin mix and curing on a heated pattern.

(6) "Single stroke mechanism" means a method or device which prevents action or cycling of a part of a machine more than once when the control is continuously held down.

(7) "Slag or dross" means the refuse from melting of metals.

(8) "Smelting" means to separate metals by melting.

History: 1954 ACS 69, p. 86, Eff. Oct. 15, 1971; 1954 ACS 75, p. 59, Eff. Apr. 14, 1973.

R 408.14409 Definitions; T to W.

Rule 4409. (1) "Two-hand control" means an actuating device that requires the concurrent use of both hands of an operator to trip or control the equipment.

(2) "Trunnion" means the support attached to the sides of a ladle, flask or other device to facilitate the tilting or rotation of the device.

(3) "Walkway" means a path of travel for personnel only.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14421 Eye protection and clothing.

Rule 4421. (1) An employee shall wear eye protection as specified in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(2) To protect an employee from burns while handling molten metal, he shall wear leggings, spats, an apron or other equivalent personal protective equipment.

(3) An employee shall wear foot protection where there is a probability of foot injury.

(4) An employee assigned to handle hot cores, hot shell molds or hot castings shall wear heat resistant gloves.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14423 Personal protection during cleaning in booths.

Rule 4423. (1) An employee shall wear an air-supplied hood, sleeves, gloves and an apron while doing abrasive cleaning inside a booth.

Digitized by Google

(2) An air line which furnishes air to an air supplied hood shall have pressure regulators and filters as required by the state department of public health.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14425 Cold weather protection.

Rule 4425. Employees working indoors in regularly designated work areas shall be protected during cold weather by artificial heat and ventilation to insure healthful working conditions as prescribed by the state department of public health.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14426 Sanitation.

Rule 4426. An employer shall furnish and maintain sanitation facilities as prescribed by the state department of public health.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14427 Toxic fumes.

Rule 4427. (1) Toxic fumes or dust exceeding the maximum allowable concentration limits prescribed by the state department of public health shall be exhausted or maintained by other means within the limits.

(2) A salamander, coke burner or other receptacle using coal, coke or other fuel which gives off toxic fumes in an enclosed area shall not be used unless the area is vented by a monitor roof, or unless the fumes are exhausted as prescribed by the state department of public health.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14431 Illumination.

Rule 4431. Natural or artificial lighting shall be furnished to provide the following minimums:

(a) For a work area, such as core making, molding, grinding, charging, cleaning and annealing operations, 25 footcandle intensity.

(b) For a walkway, gangway or aisleway, 10 footcandle intensity.

(c) For active storage, 5 footcandle intensity.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14433 Gangways and aisles.

Rule 4433. (1) A gangway or aisle in which molten metal is being transported shall be clear of obstructions and water.

(2) A gangway shall be not less than 4 feet wide or shall be 3 feet wider than the widest load using it.

(3) A work station shall be not less than 2 feet from aisles and gangways, except when protected by a standard barrier as specified in the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10201 to R 408.10239 of the Michigan Administrative Code.

(4) Access to and from a work station shall be free of obstructions.

History: 1954 ACS 69, p. 87, Eff. Oct. 15, 1971.

R 408.14434 Aisles.

Rule 4434. (1) An aisle shall be not less than 24 inches wide where molten metal is poured from hand or bull ladles or crucibles carried by 1 or 2 employees. However, if a mold is 20 inches or more in height, an aisle shall be not less than 36 inches wide.

(2) An aisle shall be not less than 36 inches wide where molten metal is poured by more than 2 employees.

History: 1954 ACS 69, p. 88, Eff. Oct. 15, 1971.

R 408.14436 Metal platforms, ladders, and steps.

Rule 4436. (1) A metal platform shall be provided at a cupola and a furnace for preparation of tap holes, runner spouts and slagholes.

(2) A metal platform and ladder or steps shall be provided at a furnace or oven where employees go on refractory roofs.

(3) A platform used at a crucible or similar type furnace shall be of metal and not less than 3 feet wide. Railings shall be installed according to the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

History: 1954 ACS 69, p. 88, Eff. Oct. 15, 1971.

R 408.14438 Cranes.

Rule 4438. (1) An overhead crane shall be equipped with a signal or device such as a horn, bell, or flashing light. An employer shall establish a procedure for use of the warning signal or device.

(2) A crane load, including but not limited to a magnet, bucket, ball or pallet, shall not pass above employees unless guarding is provided to prevent injury from falling objects.

(3) An employee shall not ride on a crane hook, ball, bucket or load.

History: 1954 ACS 69, p. 88, Eff. Oct. 15, 1971.

R 408.14439 Wire rope and chain.

Rule 4439. (1) A wire rope or chain on a crane, lift or hoist used to lift or carry molten metal shall:

(a) Be inspected weekly for wear or defects and shall be replaced if worn or defective.

(b) Have a designed safety factor of not less than 8.

(2) A wire rope shall have an independent wire rope core.

History: 1954 ACS 69, p. 88, Eff. Oct. 15, 1971.

R 408.14441 Charge boxes.

Rule 4441. A charge box shall be free of moisture, including ice or snow when a furnace is charged.

History: 1954 ACS 69, p. 88, Eff. Oct. 15, 1971.

R 408.14443 Cupolas.

Rule 4443. (1) A skip hoist or charging machine, unless completely enclosed, shall be equipped with:

(a) A warning device to announce movement.

(b) An interlocking gate across the bucket loading opening.

(2) An employee working in a cupola shall be protected from falling objects by an overhead guard.

(3) A cupola bottom shall be:

(a) Supported by 2 or more metal props of structural strength with overall safety factor of not less than 10 to support a full capacity load and adjusted to proper height by wedges or screw jacks.

(b) Dropped only after a general warning has been sounded and all persons are removed to a safe distance or protected by a permanent or movable enclosure or screen.

(c) Dropped into an area free of water.

(4) A slag hole shall be shielded to protect an employee from spattering slag.

(5) Where oxygen is used to blow or cut tapping holes, a screen or guard shall be used to protect nearby employees from hot blown material.

(6) An employee not wearing light attenuating goggles or shields shall be protected by a screen or wall from the arc of an electric furnace.

History: 1954 ACS 69, p. 88, Eff. Oct. 15, 1971.

R 408.14445 Scrap.

Rule 4445. (1) An alligator shear shall be guarded to prevent injury to an employee by flying particles.

(2) Scrap shall not be broken by drops unless employees are protected from flying fragments by a permanent shield of hardwood planks not less than 2 inches thick, ¼ inch steel plate or material of equal strength.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14447 Hopper bins.

Rule 4447. (1) An employee entering a hopper bin shall wear a safety belt and lifeline and shall be attended by another employee similarly equipped and in position to render immediate assistance.

(2) An open hopper bin accessible to an employee shall have a grating over the opening or be enclosed by standard railing as specified in the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14448 Conveyors.

Rule 4448. A conveying device introducing stock to a draw furnace or oven in which a flammable or volatile hazard may exist shall be controlled to prevent its operation during pre-ignition or purge. It shall be arranged to stop automatically in case of a ventilation failure.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14451 Melting furnace pits.

Rule 4451. A melting furnace pit shall:

(a) Be free of water during operation.

(b) Be enclosed with standard railing and toeboard as specified by the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

(c) Be clear of employees during tapping or pouring.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14453 Crucibles.

Rule 4453. A crucible shall:

(a) Not be used if it shows cracks, thin spots, flaws or dampness.

(b) Be stored in a dry place and protected from moist air.

(c) Be carefully charged to prevent damage.

(d) A crucible made of clay shall not be allowed to cool after being placed in service.

(e) Be covered while transporting molten metal emitting toxic fumes or be mechanically ventilated.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14455 Ladles.

Rule 4455. (1) A shield shall be provided between a hand ladle and an employee's hand on a single hand ladle.

(2) A ladle not held in the hand shall be equipped with a manually operated or an automatic safety latch or brake.

(3) A ladle of 2,000 pounds' capacity or more shall be mechanically tilted and equipped with an automatic safety latch or brake which shall hold the ladle at any attitude.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14457 Molten slag.

Rule 4457. Slag which is not disposed of by conversion to granular form shall be collected in pots, ladles, tubs or sand pigs and allowed to solidify throughout before dumping.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14461 Sand mullers.

Rule 4461. (1) A manually loaded batch-type sand muller shall have interlocked enclosures over openings to prevent operation when loading or unloading.

(2) A muller shall have a sampling door or the employer shall provide sampling cones.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14463 Sand mixers.

Rule 4463. A dough-type sand mixer shall have a grating made of ⅜-inch rod or material of equal strength with openings not more than ¾ inch covering the opening and interlocked to the mixer. When the cover is raised, the motor shall not start again until the cover is closed and starter button activated.

History: 1954 ACS 69, p. 89, Eff. Oct. 15, 1971.

R 408.14465 Molding machine controls.

Rule 4465. A manually controlled molding machine shall have a 2-hand control, single stroke mechanism for the squeeze cycle for each operator assigned to the machine. A 2-hand control shall be installed so as to prevent "bridging" the control buttons and so it can be operated by 2 hands only.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14466 Molding machine squeezers.

Rule 4466. (1) The squeezer head of a molding machine shall be positioned so as to avoid a pinch point with the sand chute.

(2) A squeeze machine used in shell mold assembly shall be equipped with a 2-hand control as specified in R 408.14465.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14468 Molding machine sand hoppers.

Rule 4468. A sand hopper release door shall be out of reach to the operator or guarded to eliminate the pinch point.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14471 Core blowing.

Rule 4471. (1) A manually controlled shell, hot box core equipment, and a core blower machine shall be equipped with a 2-hand control as specified in R 408.14465.

(2) An employee handling hot cores or hot boxes shall wear heat resistant gloves.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14473 Chipper area shields and enclosures.

Rule 4473. A chipper area shall have shields or enclosures to reduce the hazard of flying objects.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14474 Tumbling mills.

Rule 4474. A tumbling mill shall be equipped with an interlocked guard to prevent employees from contact with the revolving mill.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14475 Shake-out.

Rule 4475. An employee on manual shake-out operations shall wear hand, eye, and foot guards.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14476 Cleaning castings in enclosures.

Rule 4476. (1) Sand or abrasive cleaning shall be done in an enclosed machine or room which shall be dust tight or have exhaust systems as prescribed by the state department of public health.

(2) When a core is blown out of a casting, it shall be done in an enclosure equipped with an exhaust system as prescribed by the state department of public health.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14477 Casting repair.

Rule 4477. Casting repair by gas or arc welding shall be done in an area with shields or a ventilated enclosure to protect other employees from the hazards of the arc, hot materials and flying fragments.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14478 Lost wax or investment casting.

Rule 4478. Manually operated lost wax injection equipment shall be equipped with a 2-hand control as specified in R 408.14465.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14479 Fluidizing.

Rule 4479. A fluidizing coating bin shall be exhausted as prescribed by the state department of public health.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14481 Counterweights.

Rule 4481. (1) Sliding doors using a counterweight shall have the counterweight enclosed. Counterweights, cable pulleys and wheel guides shall be guarded as specified in the occupational safety standards commission standard, Part 7. Power Transmission, being R 408.10701 to R 408.10763 of the Michigan Administrative Code.

(2) Chains and wire ropes shall have a designed safety factor of not less than 5.

History: 1954 ACS 69, p. 90, Eff. Oct. 15, 1971.

R 408.14483 Foot controls.

Rule 4483. Foot controls shall be guarded as specified in the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12301 to R 408.12371 of the Michigan Administrative Code.

History: 1954 ACS 69, p. 91, Eff. Oct. 15, 1971.

R 408.14485 Lockout.

Rule 4485. (1) A power source of equipment to be repaired, serviced or set up shall be locked out with any residual pressure relieved before and during the work by each employee doing the work if unexpected motion would cause injury.

(2) An employer shall establish and maintain a written procedure for lockout of equipment.

History: 1954 ACS 69, p. 91, Eff. Oct. 15, 1971.

R 408.14486 Stop buttons.

Rule 4486. When a conveyor emergency stop button or cable is actuated, the conveyor shall be inoperative until that specific switch is manually re-activated.

History: 1954 ACS 69, p. 91, Eff. Oct. 15, 1971.

R 408.14488 Water testing.

Rule 4488. (1) Water testing equipment shall be designed and maintained to protect the operator and adjacent employees from injuries.

(2) Where wet conditions exist, an employer shall provide and an employee shall wear water repellant equipment.

History: 1954 ACS 69, p. 91, Eff. Oct. 15, 1971.

R 408.14491 Reverbatory furnaces.

Rule 4491. A reverbatory furnace in a nonferrous foundry shall:

(a) Be charged with dry material.

(b) Have clear space on the load and unload sides to permit use of material handling equipment in a nonhazardous manner.

History: 1954 ACS 69, p. 91, Eff. Oct. 15, 1971.

R 408.14492 Permanent mold equipment.

Rule 4492. Manually operated permanent mold equipment in a nonferrous foundry shall be equipped with 2-hand controls as specified in R 408.14465.

History: 1954 ACS 69, p. 91, Eff. Oct. 15, 1971.

R 408.14493 Crucible and similar type furnaces.

Rule 4493. (1) Where a crucible or similar type furnace in a nonferrous foundry is at floor or below floor level, a grating shall cover the opening or a railing shall be installed according to the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways.

(2) Where crucible or similar type furnaces are above the floor level, they shall be not less than 3 feet apart.

History: 1954 ACS 69, p. 91, Eff. Oct. 15, 1971.

R 408.14494 Airborne toxic substances.

Rule 4494. Exposure of an employee to airborne concentrations of lead, chlorine and other toxic substances shall be controlled as required by the state department of public health.

History: 1954 ACS 75, p. 59, Eff. Apr. 14, 1973.

R 408.14495 Chlorine, caustic and acid.

Rule 4495. (1) Liquid chlorine shall be stored in an unoccupied ventilated room. The exhaust pickup shall be at floor level.

(2) A room used for storage of chlorine gas shall have not less than 2 exits.

(3) A tank car containing chlorine and connected to a pipe or hose line shall be protected by a derail device and a blue flag.

(4) A pipe or hose line carrying chlorine, caustic or acid shall be identified by a sign or color label.

(5) Where chlorine is piped through a wall, shut-off valves shall be located on both sides of the wall and at the inlet and outlet.

History: 1954 ACS 75, p. 59, Eff. Apr. 14, 1973.

R 408.14496 Use of lead.

Rule 4496. When melting lead:

(a) A covered container shall be provided to store dross skimmings.

(b) Equipment shall be kept clean, particularly from accumulation of lead oxide.

(c) A sign shall be posted in the work area prohibiting eating in the area and calling attention to dangers of oral ingestion of lead dust from hands and clothing.

History: 1954 ACS 75, p. 59, Eff. Apr. 14, 1973.

R 408.14497 Pumps.

Rule 4497. A pump suspended by a hoist above a melting pot shall be secured to the hoist hook to prevent it being dropped.

History: 1954 ACS 75, p. 59, Eff. Apr. 14, 1973.

R 408.14498 Powered industrial trucks.

Rule 4498. Where a powered industrial truck is used for loading a furnace, an operator, exposed to splash or splatter, shall be protected by a shield.

History: 1954 ACS 75, p. 59, Eff. Apr. 14, 1973.

PART 45. DIE CASTING
GENERAL PROVISIONS

R 408.14501 Scope.

Rule 4501. This part provides for safe maintenance and operation of machinery and equipment by employers and their safe use by employees in, around and about die casting operations, which are not covered by other standards. Permanent-mold casting is not included.

History: 1954 ACS 76, p. 67, Eff. July 27, 1973.

R 408.14503 Definitions; A to G.

Rule 4503. (1) "Automatic die casting machine" means a machine which will cycle continuously without the attention of an operator.

(2) "Bull ladle," also known as a transfer ladle, means a large vessel used for transporting and pouring molten metals.

(3) "Cold chamber machine" means a die casting machine where the injection plunger and cylinder is not submerged in molten metal, but the molten metal is transferred into the cylinder.

(4) "Die casting" means the injection of molten metal under pressure into dies to make various shaped parts.

(5) "Guard" means a physical barrier or a device which protects a machine or an employee.

History: 1954 ACS 76, p. 67, Eff. July 27, 1973; 1954 ACS 87, p. 68, Eff. Mar. 24, 1976.

R 408.14504 Definitions; H to M.

Rule 4504. (1) "Holding furnace" means a furnace designed to hold molten metal within a desired temperature range.

(2) "Hot chamber machine" means a die casting machine where the injection mechanism is submerged in the molten metal.

(3) "Lockout procedure" means a method of shutting off the power to equipment and securing it by means of a lock and key.

(4) "Manually tended" means a machine which has an operator who controls the cycle, inserts or removes a part or ladles molten metal.

(5) "Melting furnace," also known as a breakdown furnace, means a furnace designed to convert solid metals into a molten state. It includes a furnace designed as a combination melting and holding furnace.

History: 1954 ACS 76, p. 67, Eff. July 27, 1973; 1954 ACS 87, p. 68, Eff. Mar. 24, 1976.

R 408.14505 Definitions; P to T.

Rule 4505. (1) "Parting plane" means the line formed where segments or halves of a die meet.

(2) "Safety door" means a movable guard interlocked to a control system and located between the operator and the die.

(3) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(4) "Two hand control" means an anti-tie down, anti-repeat actuating device that requires concurrent use of both hands of an operator to activate or control a machine.

History: 1954 ACS 76, p. 67, Eff. July 27, 1973.

R 408.14507 Employer responsibility.

Rule 4507. (1) An employer shall provide training to an employee regarding the operating procedures, hazards and safeguards of his assigned job.

(2) An employer shall not allow a machine to be operated which is not guarded as prescribed by this part or where the machine has a known defect which would affect the safety of an employee.

(3) An employer shall establish and maintain a lockout procedure as prescribed in R 408.14525(1).

History: 1954 ACS 76, p. 67, Eff. July 27, 1973.

R 408.14508 Employee responsibility.

Rule 4508. (1) An employee shall not operate a machine until he has been trained in its operating procedures, hazards and safeguards and has been authorized to operate it.

(2) An employee shall report immediately to his supervisor a machine, equipment or safeguard which is defective.

(3) An authorized employee shall remove guards from a machine for maintenance or set up only. The guard shall be replaced before the machine is returned for production.

History: 1954 ACS 76, p. 67, Eff. July 27, 1973.

R 408.14511 Personal protective equipment.

Rule 4511. (1) Eye protection with side shields shall be worn by an employee operating a die casting machine or tending a melting or holding furnace. Such eye protection shall be as prescribed by the occupational safety standards commission

Digitized by Google

standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(2) Except for the operator of a cold chamber machine, a face shield shall be worn by an employee handling molten metals or tending a furnace. Such face shield shall be as prescribed by the occupational safety standards commission standard, Part 35. Face and Eye Protection.

(3) An employee manually tending a die casting machine or a melting or holding furnace shall wear clothing which will cover the arms to hands, legs to his feet and have his feet covered with hard soled shoes. Spats or leggings shall be worn by an employee manually ladling a cold chamber die casting machine, tending a melting or holding furnace or transferring molten metal unless the employee wears moulders shoes with pant legs covering the tops.

(4) Other personal protective equipment dictated by the hazard and provided by the employer shall be worn by the employee.

(5) Open sandals, cloth shoes, exposed rings or necklaces shall not be worn in the work areas. Rings covered by gloves or tape shall not be regarded as exposed.

History: 1954 ACS 76, p. 67, Eff. July 27, 1973; 1954 ACS 87, p. 68, Eff. Mar. 24, 1976.

R 408.14513 Illumination.

Rule 4513. A machine shall have a minimum of 20 footcandles of illumination at the operator's work station.

History: 1954 ACS 76, p. 68, Eff. July 27, 1973.

R 408.14515 Floors.

Rule 4515. A floor or operator platform shall be maintained and kept free of holes, oil, and water that constitute a hazard.

History: 1954 ACS 76, p. 68, Eff. July 27, 1973; 1954 ACS 87, p. 69, Eff. Mar. 24, 1976.

R 408.14517 Housekeeping.

Rule 4517. Scrap and spills of die cast materials shall be cleaned up and disposed of when they constitute a tripping, slipping and falling hazard.

History: 1954 ACS 76, p. 68, Eff. July 27, 1973.

EQUIPMENT INSTALLATION AND MAINTENANCE

R 408.14521 Machine installation.

Rule 4521. (1) An electrically powered machine shall be grounded.

(2) A machine shall be so located that there will be space for the employee to handle the material and operate the machine without interference to or from other employees or machines.

(3) A machine shall be so located that it will not be necessary for an operator to stand in an aisle.

(4) Control panels, pumps and other accessories shall not be located where they create a pinch point during the cycling operation, unless the pinch point is guarded.

(5) Equipment or conditions creating toxic fumes above the threshold limit value shall be provided with exhaust systems as prescribed by the Michigan department of public health.

History: 1954 ACS 76, p. 68, Eff. July 27, 1973.

R 408.14522 Machine controls.

Rule 4522. (1) An operating control on a machine, except a stop button, shall be so located or guarded to prevent accidental contact.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA

(2) A machine requiring more than 1 operator shall have controls for each operator which shall be activated concurrently before the machine will operate as prescribed in R 408.14541(1).

(3) A machine shall be provided at each work station with a nonconcealed emergency stop device distinguished by its size or color.

(4) A machine shall be equipped so that upon power failure it will not automatically restart upon restoration of the power.

(5) An automatic die casting machine shall be equipped with a time delay device or circuit that will prevent the machine from recycling if more than 2 seconds delay occurs between the automatic demand for recycle and its commencement. It shall be necessary for the operator to reset the controls before the machine will restart. Other equivalent means may be used that will prevent recycling until the machine is cleared if the intent of this subrule is met.

(6) A safety interlock, exposed to contact, shall be guarded against accidental actuation.

History: 1954 ACS 76, p. 68, Eff. July 27, 1973; 1954 ACS 87, p. 69, Eff. Mar. 24, 1976.

R 408.14523 Hydraulic and pneumatic systems.

Rule 4523. (1) Flexible and rigid hydraulic and pneumatic piping and its component parts shall have a designed safety factor of not less than 4 and shall be maintained to prevent leaks that constitute a hazard.

(2) A hydraulic pressure relief valve shall be provided on each separate system and set to open at a pressure of not more than 10% above the maximum operating pressure. The discharge of the valve shall not create a hazard for the employee. A die casting machine shall not be operated with the pressure relief valve removed.

(3) Fire resistant fluid shall be used in equipment where failure of a hydraulic system could cause ignition of the fluid by molten metal or flame.

(4) Hydraulic and pneumatic lines shall be protected from damage due to chafing or pinching.

History: 1954 ACS 76, p. 68, Eff. July 27, 1973; 1954 ACS 87, p. 69, Eff. Mar. 24, 1976.

R 408.14525 Maintenance and servicing.

Rule 4525. (1) A power source of a machine or equipment to be repaired or for die repair shall be locked out by each employee doing the work if unexpected motion would cause injury. Residual pressure shall be relieved or isolated before and during the work if unexpected motion would cause injury. The means of isolation shall also be locked out.

(2) An employee who services or sets up a hot chamber die casting machine shall do either of the following:

(a) Pull the plunger from the goose neck.

(b) Insert a safety bar to block action of the plunger.

(3) During service or set up, an extractor shall be locked out as prescribed in subrule (1).

History: 1954 ACS 76, p. 69, Eff. July 27, 1973.

R 408.14527 Lubrication.

Rule 4527. Machine lubrication shall be accomplished by 1 of the following:

(a) Scheduling when the machine can be shut off and locked out.

(b) An automatic pressure or gravity feed system.

(c) An extension pipe leading to an area outside of guards or away from any hazard.

(d) Other means of lubrication which offer equivalent or greater safety than subdivision (a), (b), or (c).

History: 1954 ACS 76, p. 69, Eff. July 27, 1973.

R 408.14533 Die handling and storage.

Rule 4533. (1) A die transported by a powered industrial truck shall be moved in a manner to prevent the die from falling off. The handling equipment shall be used within its rated capacity.

(2) A die rack, when provided, shall have a designed safety factor of not less than 2. The shelves shall be level or slanted to the back.

(3) A die shall not be piled on top of another die unless blocked to prevent slipping and falling.

(4) Where an eye bolt or swivel hoist ring is used in die handling, it shall be made of drop forged steel and include a shoulder or a collar set flush. An eye bolt or hoist ring shall have a designed safety factor not less than 4. An eye bolt or hoist ring which is cracked or bent or has damaged threads or open hooks shall not be used.

History: 1954 ACS 76, p. 69, Eff. July 27, 1973; 1954 ACS 87, p. 69, Eff. Mar. 24, 1976.

R 408.14535 Cylinder handling, storage, and use.

Rule 4535. A compressed gas cylinder shall be handled, stored and used as prescribed in rules 1221 to 1225 of the occupational safety standards commission standard, Part 12. Arc and Gas Welding and Cutting, being R 408.11221 to R 408.11225 of the Michigan Administrative Code.

History: 1954 ACS 76, p. 69, Eff. July 27, 1973.

SPECIFIC EQUIPMENT AND MATERIALS

R 408.14541 Die casting machines generally.

Rule 4541. (1) A manually tended die casting machine shall be equipped with 1 of the following:

(a) Two-hand constant pressure anti-repeat controls requiring concurrent use of both hands during the die closing cycle. The movable platen shall stop or reverse if either control is released before the die closes.

(b) A constant-pressure anti-repeat single hand control located at a point where the operator cannot reach the point of operation. The movable platen shall stop or reverse if the control is released before the die is closed.

(c) A safety door, interlocked with the control system, which when opened will prevent closing of the dies. The door shall be of a size to keep the operator from reaching into the point of operation when the door is closed.

(d) A manually tended die casting machine installed after July 11, 1973, shall be equipped with an interlocked safety door.

(2) A die casting machine shall have a barrier interlocked to the control system on the side opposite the operator. The barrier shall cover the die opening in a manner to prevent an employee from reaching into the point of operation. Where the operation requires a helper, the barrier may be removed but the controls prescribed in R 408.14522(2) shall be provided.

(3) A die casting machine shall be equipped with an interlocked safety door or by metal shielding which will protect the operator and other employees from inadvertent metal splash or squirting from the parting line.

(4) Either a long-handled tool shall be furnished and used to remove castings or flash from a die casting machine if they are not automatically extracted or ejected

or the employee shall be protected by a mechanical device which automatically prevents closing of the machine.

(5) An automatic die casting machine shall be equipped with interlocked doors or barrier guards of a size and design to keep an employee from reaching into the point of operation. A door or barrier may be removed or maintained in an open position where an extractor would interfere with its use, if the extractor is guarded as prescribed in R 408.14544.

History: 1954 ACS 76, p. 69, Eff. July 27, 1973; 1954 ACS 87, p. 70, Eff. Mar. 24, 1976.

R 408.14543 Die casting machines; hot and cold chamber types.

Rule 4543. (1) A hot chamber die casting machine shall be equipped with a control or cam operated switch which will prevent operation of the metal injection plunger until the machine is completely closed.

(2) A cold chamber die casting machine shall be equipped with a control which will prevent the injection of molten metal unless the machine is completely closed.

(3) A cold chamber die casting machine having a faulty plunger tip which allows metal to bypass the tip shall not be used until repaired.

(4) An automatic ladler on a cold chamber machine shall be so interlocked that it will ladle or feed only when the plunger is fully returned to the receiving position.

History: 1954 ACS 76, p. 70, Eff. July 27, 1973; 1954 ACS 87, p. 70, Eff. Mar. 24, 1976.

R 408.14544 Extractors.

Rule 4544. (1) A die casting machine using an automatic extractor to remove castings shall have the path of travel of the extractor guarded by a barrier if required to protect employees in the area.

(2) Where the extractor does not keep an employee from the point of operation, a fixed or interlocked barrier shall be provided.

History: 1954 ACS 76, p. 70, Eff. July 27, 1973; 1954 ACS 87, p. 70, Eff. Mar. 24, 1976.

R 408.14545 Automatic safety doors.

Rule 4545. One hundred eighty days after this part takes effect, a die casting machine purchased with an automatic safety door shall be equipped with a retractable safety edge which will function to stop and reopen the door in case it is obstructed while closing.

History: 1954 ACS 76, p. 70, Eff. July 27, 1973.

R 408.14551 Hand and bull ladles and syphons.

Rule 4551. (1) A bull ladle shall not be transported over the head of an employee or otherwise moved in a hazardous manner.

(2) A bull ladle or the tipping equipment shall be equipped with a safety latch or brake. A powered industrial truck carrying a ladle of molten metal shall not travel faster than 5 miles per hour.

(3) A bull ladle of 2,000-pound capacity or more shall be mechanically tilted and equipped with an automatic safety latch or brake which shall hold the bull ladle at any attitude.

(4) A bent pipe syphon, when used, shall be preheated before use.

(5) A ladle, trough or furnace tool shall be free of moisture and preheated before being filled with or immersed into molten metal.

History: 1954 ACS 76, p. 70, Eff. July 27, 1973.

R 408.14552 Hot chamber pots and chutes.

Rule 4552. (1) A hot chamber machine shall be provided with a sheet metal shield extending from the cover die platen beyond and on each side of the injection mechanism and the holding furnace. The shield shall contain any splashing of molten metal which may be caused by the injection system or by the furnace recharging operation. A window may be inserted for flame observation.

(2) A metal chute shall be provided for filling the holding furnace except where the molten metal can be transferred to the holding furnace without splash.

History: 1954 ACS 76, p. 70, Eff. July 27, 1973; 1954 ACS 87, p. 70, Eff. Mar. 24, 1976.

R 408.14553 Furnaces.

Rule 4553. (1) Cold or damp metal ingots shall be preheated and dried before being added to molten metal.

(2) A furnace which needs to be tilted for discharge shall have operating controls located outside any splash area or the operator shall be protected by a splash shield.

(3) A furnace tender shall be not less than 2 feet from the furnace when tapping or plugging, or the tender shall be protected by a splash shield.

(4) A gas or oil fired melting furnace installed or modified after the effective date of this part shall be equipped with a control system which shall:

(a) Prohibit ignition and combustion until completion of a purge cycle which will provide a minimum of 4 complete volume air changes in the ignition and combustion chamber.

(b) Positively and immediately shut off the fuel supply in case of a pilot light or combustion failure, or flame failure where direct ignition to the burner is used.

(5) A holding furnace installed or modified after the effective date of this part shall be equipped as prescribed in subrule (4)(b).

(6) The requirements of subrules (4) and (5) do not apply to a gas or oil melting or holding furnace that employs explosion resistant immersion tubes and where the products of combustion do not discharge into a closed equipment work chamber or into a confined space.

History: 1954 ACS 76, p. 70, Eff. July 27, 1973; 1954 ACS 87, p. 71, Eff. Mar. 24, 1976.

R 408.14554 Warning devices.

Rule 4554. Equipment other than an enclosed trough, used to deliver molten metal to a holding furnace or pot, shall be equipped with a warning device which shall be activated during delivery and at the beginning of a pour.

History: 1954 ACS 76, p. 71, Eff. July 27, 1973; 1954 ACS 87, p. 71, Eff. Mar. 24, 1976.

R 408.14555 Sprue cutting machines.

Rule 4555. A sprue cutting machine shall be equipped with a point of operation guard or point of operation device as prescribed in the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12301 to R 408.12371 of the Michigan Administrative Code.

History: 1954 ACS 76, p. 71, Eff. July 27, 1973.

R 408.14561 Magnesium generally.

Rule 4561. (1) Accumulations of magnesium dust on floors, ledges, and beams shall be avoided.

(2) Magnesium chips, shavings, and flash shall be cleaned up and disposed of daily or when they constitute a fire hazard. Storage of chips and shavings shall be in covered metal drums.

(3) Smoking, flames, and sparks shall not be allowed where magnesium dust, chips, or shavings are present.

(4) Powdered graphite or dry powdered extinguishing agents made specially for magnesium fires shall be used to extinguish a magnesium fire and be available in the work area. Water or other extinguishing agents shall not be provided or used.

History: 1954 ACS 76, p. 71, Eff. July 27, 1973; 1954 ACS 87, p. 71, Eff. Mar. 24, 1976.

PART 49. SLINGS
GENERAL PROVISIONS

R 408.14901 Scope.

Rule 4901. This part sets forth the requirements for slings and their construction, care, and use in, around, and about a place of employment. Types of slings included in this part are: chain, wire rope, metal mesh, 3-strand natural or synthetic rope, and synthetic web made from nylon, polyester, and polypropylene.

History: 1954 ACS 89, p. 53, Eff. Nov. 13, 1976.

Editor's Note: Former R 408.14901—R 408.14910, pertaining to the board of safety compliance and appeals, have been renumbered R 408.19901—R 408.19910.

R 408.14903 Definitions; A, B.

Rule 4903. (1) "Angle of loading" means the inclination of a leg or branch of a sling, measured from the horizontal or vertical plane as shown in figure 5, provided that an angle of loading of 5 degrees or less from the vertical may be considered a vertical angle of loading.

(2) "Basket hitch" means a sling configuration whereby the sling is passed under the load and has both ends, end attachments, eyes, or handles on the hook or a single master link.

(3) "Braided wire rope" means a wire rope formed by plaiting component wire ropes.

(4) "Bridle wire rope sling" means a sling composed of multiple wire rope legs, with the top ends gathered in a fitting that goes over the lifting hook.

History: 1954 ACS 89, p. 53, Eff. Nov. 13, 1976.

R 408.14904 Definitions; C.

Rule 4904. (1) "Cable laid endless sling-mechanical joint" means a wire rope sling made endless by joining the ends of a single length of cable laid rope with 1 or more metallic fittings.

(2) "Cable laid grommet-hand tucked" means an endless wire rope sling made from 1 length of rope wrapped 6 times around a core formed by hand, tucking the ends of the rope inside the 6 wraps.

(3) "Cable laid rope" means a wire rope composed of 6 wire ropes wrapped around a fiber or wire rope core.

(4) "Cable laid rope sling-mechanical joint" means a wire rope sling made from a cable laid rope, with eyes fabricated by pressing or swaging 1 or more metal sleeves over the rope junction.

(5) "Choker hitch" means a sling configuration with 1 end of the sling passing under the load and through an end attachment, handle, or eye on the other end of the sling.

(6) "Coating" means an elastomer, or other suitable material, applied to a sling or to a sling component to impart desirable properties.

(7) "Cross rod" means a wire used to join spirals of metal mesh to form a complete fabric. (See figure 2.)

History: 1954 ACS 89, p. 53, Eff. Nov. 13, 1976.

R 408.14905 Definitions; D to H.

Rule 4905. (1) "Designated" means to be selected or assigned by the employer or the employer's representative as being qualified to perform specific duties.

(2) "Female handle of a choker sling" means a handle with a handle eye and a slot of such dimension as to permit passage of a male handle, thereby allowing the use of a metal mesh sling in a choker hitch. (See figure 1.)

(3) "Handle" means a terminal fitting to which metal mesh fabric is attached. (See figure 1.)

(4) "Handle eye" means an opening in a handle of a metal mesh sling shaped to accept a hook, shackle, or other lifting device. (See figure 1.)

(5) "Hitch" means a sling configuration whereby the sling is fastened to an object or load, either directly to it or around it.

History: 1954 ACS 89, p. 54, Eff. Nov. 13, 1976.

R 408.14906 Definitions; L, M.

Rule 4906. (1) "Link" means a single ring of a chain.

(2) "Male handle," sometimes called a "triangle," means a handle with a handle eye.

(3) "Master coupling link" means an alloy steel welded coupling link used as an intermediate link to join alloy steel chain to master links. (See figure 3.)

(4) "Master link," sometimes called a "gathering ring" means a forged or welded steel link used to support all members (legs) of an alloy steel chain sling or wire rope sling. (See figure 3.)

(5) "Mechanical coupling link" means a nonwelded, mechanically closed steel link used to attach master links and hooks to alloy steel chain.

(6) "Metal mesh," sometimes called "fabric," means the flexible portion of a metal mesh sling, consisting of a series of transverse coils and cross rods.

History: 1954 ACS 89, p. 54, Eff. Nov. 13, 1976

R 408.14907 Definitions; P to R.

Rule 4907. (1) "Proof load" means a load applied in performance of a proof test.

(2) "Proof test" means a nondestructive tension test performed by the sling manufacturer, or an equivalent entity, to verify construction and workmanship of a sling.

(3) "Rated capacity" means the maximum working load permitted by the provisions of this part.

(4) "Reach" means the effective length of an alloy steel chain sling, measured from the top bearing surface of the upper terminal component to the bottom bearing surface of the lower terminal component.

History: 1954 ACS 89, p. 54, Eff. Nov. 13, 1976.

R 408.14908 Definitions; S to V.

Rule 4908. (1) "Selvage edge" means the finished edge of synthetic webbing designed to prevent unraveling.

(2) "Sling" means an assembly which connects the load to the material handling equipment for the purpose of lifting or hoisting.

(3) "Sling manufacturer" means a person or organization that assembles sling components into their final form for sale to users.

(4) "Spiral" means a single transverse coil that is the basic element from which metal mesh is fabricated. (See figure 2.)

(5) "Strand laid endless sling-mechanical joint" means a wire rope sling made endless from 1 length of rope, with the ends joined by 1 or more metallic fittings.

(6) "Strand laid grommet-hand tucked" means an endless wire rope sling made from 1 length of strand wrapped 6 times around a core formed by hand tucking the ends of the strand inside the 6 wraps.

(7) "Strand laid rope" means a wire rope made with strands, usually 6 or 8, wrapped around a fiber core, wire strand core, or independent wire rope core.

(8) "Vertical hitch" means a method of supporting a load by a single, vertical part or leg of the sling. (See figure 4.)

History: 1954 ACS 89, p. 54, Eff. Nov. 13, 1976.

FIGURE 4

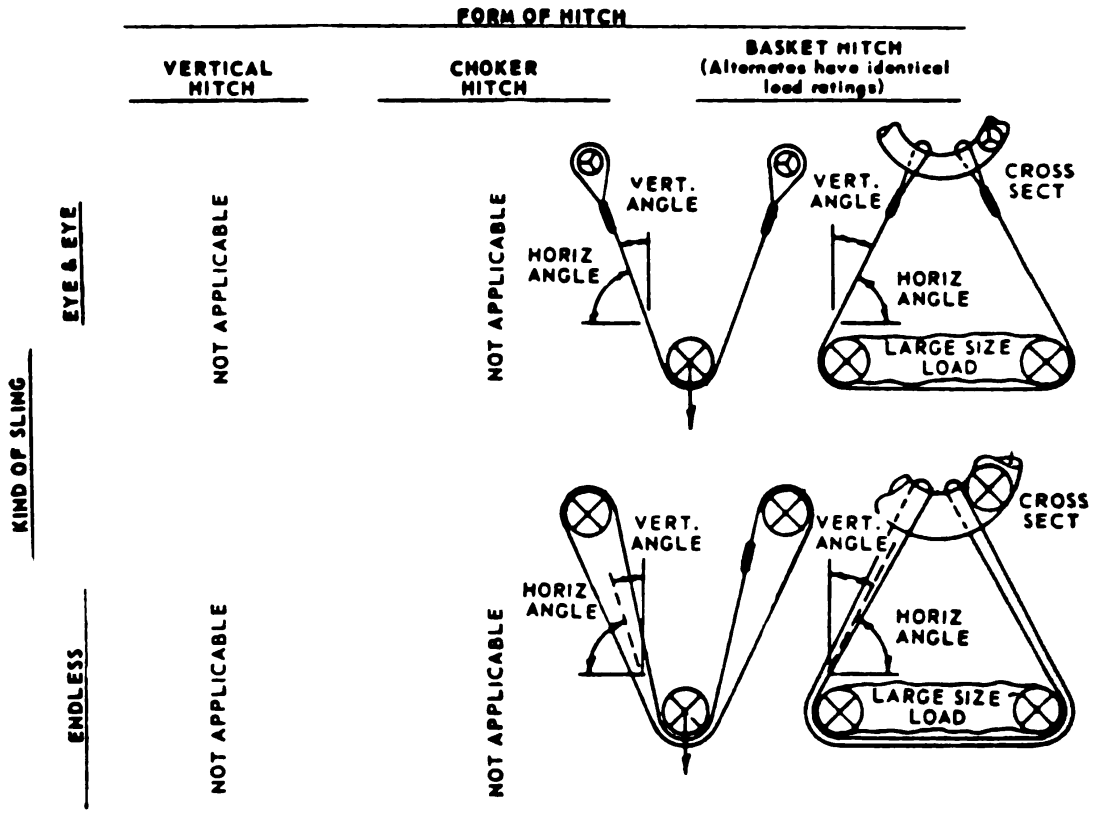
Basic Sling Configurations With Vertical Legs

NOTES: Angles 5 degrees or less from the vertical may be considered vertical angles.

For slings with legs more than 5 degrees off vertical, the actual angle as shown in figure 5 must be considered.

EXPLANATION OF SYMBOLS: MINIMUM DIAMETER OF CURVATURE

Represents a contact surface which shall have a diameter of curvature at least double the diameter of the rope from which the sling is made.



Represents a contact surface which shall have a diameter of curvature at least 8 times the diameter of the rope.

Represents a load in a choker hitch and illustrates the rotary force on the load and/or the slippage of the rope in contact with the load. Diameter of curvature of load surface shall be at least double the diameter of the rope.

FIGURE 5
Sling Configurations With Angled Legs

NOTES: For vertical angles of 5 degrees or less, refer to figure 4, "Basic Sling Configurations with Vertical Legs."
See figure 4 for explanation of symbols.

History: 1954 ACS 89, p. 54, Eff. Nov. 13, 1976.

R 408.14911 General operating practices.

Rule 4911. Whenever a sling is used, the following practices shall be followed:

(a) A damaged or defective sling, as described in this standard, shall not be used.

(b) A sling shall not be shortened with bolts, knots, or other makeshift devices.

(c) Sling legs shall not be kinked.

(d) A sling shall not be loaded in excess of its rated capacity.

(e) A sling used in a basket hitch shall have the load balanced to prevent slipping.

(f) A sling shall be securely attached to its load.

(g) A sling, other than an alloy steel chain, shall be padded or protected from the sharp corners of its load.

(h) A suspended load shall be kept clear of all obstructions.

(i) An employee shall be kept clear of a suspended load and a load about to be lifted.

(j) An employee's hand or finger shall not be placed between the load and sling while the sling is being tightened.

(k) Slack in a sling shall be removed gradually.

(l) A sling shall not be pulled from under a load when the load is resting on the sling.

History: 1954 ACS 89, p. 57, Eff. Nov. 13, 1976.

R 408.14912 Inspections generally; removal of sling from service.

Rule 4912. (1) A sling and all fastenings shall be inspected for damage and defects by a designated employee before each day's use.

(2) Where service conditions warrant, additional inspections shall be performed during sling use.

(3) A damaged or defective sling, as described in this part, shall be immediately removed from service.

History: 1954 ACS 89, p. 57, Eff. Nov. 13, 1976.

R 408.14913 Safety factor.

Rule 4913. A sling not covered by this part shall have a safety factor of not less than 5.

History: 1954 ACS 89, p. 58, Eff. Nov. 13, 1976.

ALLOY STEEL CHAIN SLINGS

R 408.14921 Alloy steel chain slings; identification.

Rule 4921. An alloy steel chain sling shall have a permanently affixed, durable identification, stating the size, grade, rated capacity, and reach.

History: 1954 ACS 89, p. 58, Eff. Nov. 13, 1976.

R 408.14922 Alloy steel chain slings; rated capacity of attachments.

Rule 4922. (1) A hook, ring, oblong link, pear-shaped link, welded or mechanical coupling link, or other attachment shall have a rated capacity at least equal to that of the alloy steel chain with which they are used, or the sling shall not be used in excess of the rated capacity of the weakest component.

(2) A makeshift link or fastener formed from bolts or rods, or other such attachments, shall not be used.

History: 1954 ACS 89, p. 58, Eff. Nov. 13, 1976.

R 408.14923 Alloy steel chain slings; inspections; records; removal from service; proof testing.

Rule 4923. (1) In addition to the inspection prescribed by R 408.14912, a thorough periodic inspection of an alloy steel chain sling in use shall be made on a regular basis, to be determined on the basis of:

(a) Frequency of sling use.

(b) Severity of service conditions.

(c) Nature of lifts being made.

(d) Experience gained on the service life of slings used in similar circumstances.

Inspection shall not be at an interval greater than once every 12 months.

(2) The employer shall make and maintain a record of the most recent month in which each alloy steel chain sling was thoroughly inspected, and shall make the record available for examination.

(3) The thorough inspection of an alloy steel chain sling shall be performed by an employee designated by the employer, and shall include a thorough inspection for wear, defective welds, deformation, and increase in length beyond acceptable limits established in this part. Where such defects or deterioration are present, the sling shall be immediately removed from service.

(4) The employer shall ensure that, before use, each new, repaired, or reconditioned alloy steel chain sling, including all welded components in the sling assembly, shall be proof tested by the sling manufacturer in accordance with paragraph 5.2 of the American society of testing and materials specification,

R 408.14924 Alloy steel chain slings; rated capacities; high temperature limit.

Rule 4924. (1) An alloy steel chain sling shall not be used with a load in excess of the rated capacities prescribed in table 2. A sling not included in this table shall be used only in accordance with manufacturer's recommendations.

(2) An alloy steel chain sling shall be permanently removed from service if it is heated above 1,000 degrees Fahrenheit. When exposed to a service temperature of more than 600 degrees Fahrenheit, the maximum working load limit permitted in table 2 shall be reduced in accordance with the manufacturer's recommendations.

TABLE 2

Rated Capacity (Working Load Limit), For Alloy Steel Chain Slings

⅞	28,750	49,800	40,600	28,750	74,500	61,000	43,000
1	38,750	67,100	54,800	38,750	101,000	82,000	58,000
1⅛	44,500	77,000	63,000	44,500	115,500	94,500	66,500
1¼	57,500	99,500	81,000	57,500	149,000	121,500	86,000
1⅜	67,000	116,000	94,000	67,000	174,000	141,000	100,500
1½	80,000	138,000	112,500	80,000	207,000	169,000	119,500
1¾	100,000	172,000	140,000	100,000	258,000	210,000	150,000

[1]Rating of multileg slings adjusted for angle of loading measured as the included angle between the inclined leg and the vertical as shown in Figure 5.

[2]Rating of multileg slings adjusted for angle of loading between the inclined leg and the horizontal plane of the load, as shown in Figure 5.

[3]Quadruple sling rating is same as triple sling because normal lifting practice may not distribute load uniformly to all 4 legs.

History: 1954 ACS 89, p. 59, Eff. Nov. 13, 1976.

R 408.14925 Alloy steel chain slings; repairing, reconditioning, and proof testing.

Rule 4925. (1) A worn or damaged alloy steel chain sling or attachment shall not be used until repaired.

(2) When welding or heat treating is performed, a sling shall not be used unless repaired, reconditioned, and proof tested by the sling manufacturer.

(3) A mechanical coupling link or low carbon steel repair link shall not be used to repair broken lengths of chain.

History: 1954 ACS 89, p. 60, Eff. Nov. 13, 1976.

R 408.14926 Alloy steel chain slings; cracked or deformed links or hooks; removal from service.

Rule 4926. (1) Alloy steel chain slings with cracked or deformed master links, coupling links, or other components shall be removed from service.

(2) A sling shall be removed from service if the hook is cracked, has been opened more than 15% of the normal throat opening measured at the narrowest point, or twisted more than 10 degrees from the plane of the unbent hook.

History: 1954 ACS 89, p. 60, Eff. Nov. 13, 1976.

WIRE ROPE SLINGS

R 408.14931 Wire rope slings; rated capacity; temperature limits.

Rule 4931. (1) A wire rope sling shall not be used with loads in excess of the rated capacities shown in tables 3 to 14. A sling not included in these tables shall be used only in accordance with the manufacturer's recommendations.

(2) A fiber core wire rope sling of any grade shall be permanently removed from service if it is exposed to a temperature in excess of 200 degrees Fahrenheit.

(3) When a nonfiber core wire rope sling of any grade is used at a temperature above 400 degrees Fahrenheit or below minus 60 degrees Fahrenheit, recommendations of the sling manufacturer regarding use at that temperature shall be followed.

TABLE 3

Rated Capacities For Single Leg Slings
6 x 19 And 6 x 37 Classification Improved Plow Steel Grade Rope
With Fiber Core (FC)

Rope		Rated Capacities, Tons (2,000 lb)								
		Vertical			Choker			Vertical Basket*		
Dia (Inches)	Constr	HT	MS	S	HT	MS	S	HT	MS	S
1/4	6 x 19	0.49	0.51	0.55	0.37	0.38	0.41	0.99	1.0	1.1

1 5/8	6 x 37	16.0	18.0	21.0	12.0	14.0	15.0	33.0	37.0	41.0
1 3/4	6 x 37	19.0	21.0	24.0	14.0	16.0	18.0	38.0	43.0	48.0
2	6 x 37	25.0	28.0	31.0	18.0	21.0	23.0	49.0	55.0	62.0

HT = Hand Tucked Splice and Hidden Tuck Splice
For hidden tuck splice (IWRC) use values in HT columns.
MS = Mechanical Splice
S = Swaged or Zinc Poured Socket

*These values only apply when the D/d ratio for HT slings is 10 or greater, and for MS and S slings is 20 or greater where:
D = Diameter of curvature around which the body of the sling is bent.
d = Diameter of rope.

*These values only apply when the D/d ratio is 5 or greater where:
D = Diameter of curvature around which cable body is bent.
d = Diameter of cable body.

History: 1954 ACS 89, p. 60, Eff. Nov. 13, 1976.

R 408.14932 Wire rope slings; minimum lengths.

Rule 4932. (1) Cable laid and a 6 x 19 and 6 x 37 sling shall have a minimum clear length of wire rope 10 times the component rope diameter between splices, sleeves, or end fittings.

(2) A braided sling shall have a minimum clear length of wire rope 40 times the component rope diameter between the loops or end fittings.

(3) A cable laid grommet, strand laid grommet, and endless sling shall have a minimum circumferential length of 96 times their body diameter.

History: 1954 ACS 89, p. 72, Eff. Nov. 13, 1976.

R 408.14933 Wire rope slings; welded end attachment; certificate of proof test.

Rule 4933. (1) Welding of an end attachment, except covers to thimbles, shall be performed prior to the assembly of the sling.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA

(2) All welded end attachments shall not be used unless proof tested by the manufacturer at twice their rated capacity prior to initial use. The employer shall retain a certificate of the proof test, and make it available for examination.

History: 1954 ACS 89, p. 72, Eff. Nov. 13, 1976.

R 408.14934 Wire rope slings; removal from service.

Rule 4934. A wire rope sling shall be removed from service if any of the following conditions are present:

(a) Ten randomly distributed broken wires in 1 rope lay, or 5 broken wires in 1 strand in 1 rope lay.

(b) Wear or scraping of ⅓ the original diameter of outside individual wires.

(c) Kinking, crushing, bird caging, or any other damage resulting in distortion of the wire rope structure.

(d) Evidence of heat damage.

(e) End attachments that are cracked, deformed, or worn.

(f) Hooks that have been opened more than 15% of the normal throat opening measured at the narrowest point, or twisted more than 10 degrees from the plane of the unbent hook.

(g) Corrosion of the rope or end attachments.

History: 1954 ACS 89, p. 73, Eff. Nov. 13, 1976.

R 408.14935 Wire rope slings; forming eyes.

Rule 4935. An eye in a wire rope sling shall not be formed by using a knot or a wire rope clip.

History: 1954 ACS 89, p. 73, Eff. Nov. 13, 1976.

METAL MESH SLINGS

R 408.14941 Metal mesh slings; marking; rated capacity; coatings.

Rule 4941. (1) Each metal mesh sling shall have permanently affixed to it a durable marking that states the rated capacity for vertical basket hitch and choker hitch loadings.

(2) A handle shall have a rated capacity at least equal to the metal fabric and exhibit no deformation after proof testing.

(3) Coatings which diminish the rated capacity of a sling shall not be applied.

History: 1954 ACS 89, p. 73, Eff. Nov. 13, 1976.

R 408.14942 Metal mesh slings; attachment of handle.

Rule 4942. The fabric and handles shall be joined so that:

(a) The rated capacity of the sling is not reduced.

(b) The load is evenly distributed across the width of the fabric.

(c) Sharp edges will not damage the fabric.

History: 1954 ACS 89, p. 73, Eff. Nov. 13, 1976.

R 408.14943 Metal mesh slings; testing.

Rule 4943. All new and repaired metal mesh slings, including handles, shall not be used unless proof tested by the manufacturer at a minimum of 1½ times their rated capacity. Elastomer impregnated slings shall be proof tested before coating.

History: 1954 ACS 89, p. 73, Eff. Nov. 13, 1976.

R 408.14944 Metal mesh slings; use; temperature limits.

Rule 4944. (1) A metal mesh sling shall not be used to lift loads in excess of their rated capacities as prescribed in table 15.

(2) A sling not included in this table shall be used only in accordance with the manufacturer's recommendations.

(3) A metal mesh sling which is not impregnated with elastomers may be used in a temperature range from minus 20 degrees Fahrenheit to plus 550 degrees Fahrenheit without decreasing the working load limit. A metal mesh sling impregnated with polyvinyl chloride or neoprene may be used only in a temperature range from zero degrees to plus 200 degrees Fahrenheit. For operations outside these temperature ranges or for metal mesh slings impregnated with other materials, the sling manufacturer's recommendations shall be followed.

R 408.14945 Metal mesh slings; removal from service; repairs; records.

Rule 4945. (1) A metal mesh sling shall be immediately removed from service if any of the following conditions are present:

(a) A broken weld or broken brazed joint along the sling edge.

(b) Reduction in wire diameter of 25% due to abrasion or 15% due to corrosion.

(c) Lack of flexibility due to distortion of the fabric.

(d) Distortion of the female handle so that the depth of the slot is increased more than 10%.

(e) Distortion of either handle so that the width of the eye is decreased more than 10%.

(f) A 15% reduction of the original cross sectional area of metal at any point around the handle eye.

(g) Distortion of either handle out of its plane.

(2) A metal mesh sling which is repaired shall not be used unless repaired by a metal mesh sling manufacturer.

(3) Once repaired, each sling shall be permanently marked or tagged, or a written record maintained, to indicate the date and nature of the repairs and the person or organization that performed the repairs. Records of repairs shall be made available for examination.

History: 1954 ACS 89, p. 75, Eff. Nov. 13, 1976.

FIBER ROPE SLINGS

R 408.14951 Natural and synthetic fiber rope slings; rated capacity; diameter of curvature; temperature limits.

Rule 4951. (1) A fiber rope sling made from conventional 3 strand construction fiber rope shall not be used with a load in excess of the rated capacities prescribed in tables 16 to 19.

(2) A fiber rope sling shall have a diameter of curvature meeting not less than the minimums prescribed in figures 4 and 5.

(3) A sling not included in these tables shall be used only in accordance with the manufacturer's recommendations.

(4) A natural or synthetic fiber rope sling, except for a wet frozen sling, may be used in a temperature range from minus 20 degrees Fahrenheit to plus 180 degrees Fahrenheit without decreasing the working load limit. For operations outside this temperature range and for wet frozen slings, the sling manufacturer's recommendations shall be followed.

R 408.14952 Natural and synthetic fiber rope slings; splicing.

Rule 4952. A spliced fiber rope sling shall not be used unless it has been spliced in accordance with the following minimum requirements and in accordance with any additional recommendations of the manufacturer:

(a) In manila rope, an eye splice shall consist of at least 3 full tucks, and short splices shall consist of at least 6 full tucks, 3 on each side of the splice center line.

(b) In synthetic fiber rope, an eye splice shall consist of at least 4 full tucks, and short splices shall consist of at least 8 full tucks, 4 on each side of the center line.

(c) A strand end tail shall not be trimmed flush with the surface of the rope immediately adjacent to the full tucks. This applies to all types of fiber rope and both eye and short splices. For fiber rope under 1 inch in diameter, the tail shall project at least 6 rope diameters beyond the last full tuck. For fiber rope 1 inch in diameter and larger, the tail shall project at least 6 inches beyond the last full tuck. Where a projecting tail interferes with the use of the sling, the tail shall be tapered and spliced into the body of the rope, using at least 2 additional tucks, which will require a tail length of approximately 6 rope diameters beyond the last full tuck.

(d) A fiber rope sling shall have a minimum clear length of rope between eye splices equal to 10 times the rope diameter.

(e) A knot shall not be used in lieu of a splice.

(f) A clamp not designed specifically for fiber ropes shall not be used for splicing.

(g) For any eye splice, the eye shall be of a size to provide an included angle of not greater than 60 degrees at the splice when the eye is placed over the load or support.

History: 1954 ACS 89, p. 80, Eff. Nov. 13, 1976.

R 408.14953 Natural and synthetic fiber rope slings; end attachments.

Rule 4953. A fiber rope sling shall not be used if an end attachment in contact with the rope has a sharp edge or projection.

History: 1954 ACS 89, p. 80, Eff. Nov. 13, 1976.

R 408.14954 Natural and synthetic fiber rope slings; removal from service; prohibition.

Rule 4954. (1) A natural and synthetic fiber rope sling shall be immediately removed from service if any of the following conditions are present:

(a) Abnormal wear.

(b) Powdered fiber between strands.

(c) Broken or cut fibers.

(d) Variations in the size or roundness of strands.

(e) Discoloration or rotting.

(f) Distortion of hardware in the sling.

(2) Only a fiber rope sling made from new rope shall be used. Use of a repaired or reconditioned fiber rope sling is prohibited.

History: 1954 ACS 89, p. 80, Eff. Nov. 13, 1976.

SYNTHETIC WEB SLINGS

R 408.14961 Synthetic web slings; marking or coding rated capacities.

Rule 4961. Each sling shall be marked or coded to show the rated capacities for each type of hitch and type of synthetic web material.

History: 1954 ACS 89, p. 80, Eff. Nov. 13, 1976.

R 408.14962 Synthetic web slings; webbing size and edges.

Rule 4962. Synthetic webbing shall be of uniform thickness and width, and selvage edges shall not be split from the webbing's width.

History: 1954 ACS 89, p. 80, Eff. Nov. 13, 1976.

R 408.14963 Synthetic web slings; fittings.

Rule 4963. (1) Fittings shall be:

(a) Of a minimum breaking strength equal to that of the sling.

(b) Free of all sharp edges that could in any way damage the webbing.

(2) Stitching shall be the only method used to attach end fittings to webbing and to form eyes. The thread shall be in an even pattern and contain a sufficient number of stitches to develop the full breaking strength of the sling.

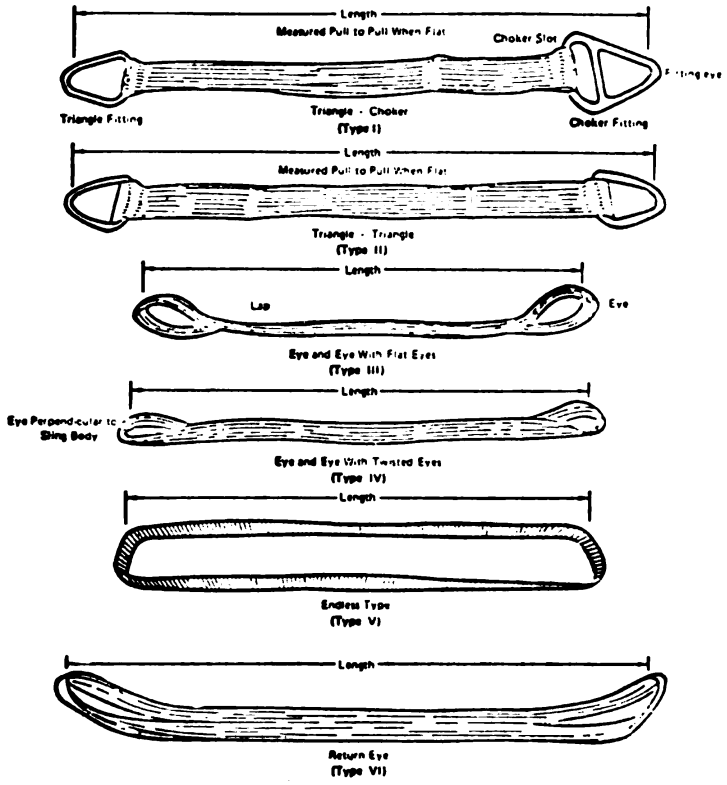
History: 1954 ACS 89, p. 80, Eff. Nov. 13, 1976.

R 408.14964 Synthetic web slings; rated capacity; use; temperature limits.

Rule 4964. (1) A synthetic web sling illustrated in figure 6 shall not be used with loads in excess of the rated capacities specified in tables 20 to 22. A sling not included in these tables shall be used only in accordance with the manufacturer's recommendations.

(2) When a synthetic web sling is used, the following precautions shall be taken:

(a) A nylon web sling shall not be used where fumes, vapors, sprays, mists, or liquids of acids or phenolics are present.



(b) A polyester and polypropylene web sling shall not be used where fumes, vapors, sprays, mists, or liquids of caustics are present.

(c) A web sling with aluminum fittings shall not be used where fumes, vapors, sprays, mists, or liquids of caustics are present.

(3) A synthetic web sling of polyester and nylon shall not be used at a temperature in excess of 180 degrees Fahrenheit. A polypropylene web sling shall not be used at a temperature in excess of 200 degrees Fahrenheit.

R 408.14965 Synthetic web slings; removal from service; repairs; certificate of proof test; prohibition.

Rule 4965. (1) A synthetic web sling shall be immediately removed from service if any of the following conditions are present:

(a) Acid or caustic burns.

(b) Melting or charring of any part of the sling surface.

(c) Snags, punctures, tears, or cuts.

(d) Broken or worn stitches.

(e) Distortion of fittings.

(2) A synthetic web sling shall be repaired only by a sling manufacturer.

(3) Each repaired sling shall be proof tested by the manufacturer to twice the rated capacity prior to its return to service. The employer shall retain a certificate of the proof test and make it available for examination.

(4) A sling, including webbing and fittings, which has been repaired in a temporary manner shall not be used.

History: 1954 ACS 89, p. 85, Eff. Nov. 13, 1976.

PART 51. LOGGING
GENERAL PROVISIONS

R 408.15101 Scope.

Rule 5101. This part applies to employers and employees involved in logging or harvesting forest products in this state, including but not limited to sawlogs, pulpwood, posts, poles, chemical wood and lagging. The defined terms apply only to this part.

History: 1954 ACS 61, p. 60, Eff. Feb. 16, 1970.

R 408.15105 Definitions; A to C.

Rule 5105. (1) "A-frame" means 2 poles lashed together with a cross piece in the form of an "A," with a block hung in the apex, which is used to load logs.

(2) "Back-cut" means the final cut made in felling a tree. It is made on the side away from the direction of fall. See figure 1 of R 408.15156.

(3) "Binder" means a wrapper which is a chain or wire rope used to bind a load of logs or pulpwood.

(4) "Buck or bucking" means the act of cutting a felled tree into shorter lengths.

(5) "Bucker" means a person who cuts felled trees into shorter lengths.

(6) "Chain saw" means a saw powered by a gasoline engine or an electric motor, or other means, which has its cutting elements on an endless chain. The chain saw is usually hand held during use.

(7) "Chipper" means a mechanical device that reduces logs to small flakes or chips.

(8) "Choker" means a length of wire rope or chain with a loop or noose at 1 end used to secure trees or sections of trees for skidding.

History: 1954 ACS 61, p. 60, Eff. Feb. 16, 1970; 1954 ACS 79, p. 78, Eff. May 16, 1974; 1954 ACS 89, p. 85, Eff. Nov. 13, 1976.

R 408.15106 Definitions; D to H.

Rule 5106. (1) "Debarker" means a machine that removes bark from logs.

(2) "Decking" means the act of piling logs or pulpwood on a skidway for temporary storage.

(3) "Disabling injury or lost time injury" means an injury to a person which prevents him from reporting for his next scheduled work shift or causes a permanent-partial impairment.

(4) "Eye protection" means a device worn in front of the eyes whose predominant function is the protection of the eyes from hazards.

(5) "Faller or feller" means a person who cuts a tree from its stump.

(6) "Felling or falling" means the act of cutting a tree from its stump.

(7) "Gin pole" means a boom used in loading logs consisting of a single spar or leg set on end at an angle, with the bottom secured.

(8) "Grapple" means a hinged clamping device at the working end of a line or boom used to grasp and release forest products during skidding, yarding or loading.

(9) "Guarded" means that an object is covered, fenced or surrounded so that it is not exposed to contact.

(10) "Guyline" means a line used to stay or support spar trees or booms, or used for equipment needing support.

(11) "Hard hat" or "safety hat" means a rigid device which is designed to protect the head from flying and falling objects or electrical shock, or both, and is held on the head by a suitable suspension.

(12) "Hinge wood" means the portion of a tree left uncut, which controls the direction of the fall. See figure 1 of R 408.15156.

History: 1954 ACS 61, p. 60, Eff. Feb. 16, 1970; 1954 ACS 79, p. 78, Eff. May 16, 1974; 1954 ACS 89, p. 85, Eff. Nov. 13, 1976.

R 408.15107 Definitions; J to P.

Rule 5107. (1) "Jammer" means an A-frame mounted on a sled or vehicle.

(2) "Limb or limbing" means the act of cutting limbs from felled or standing trees.

(3) "Limber" means a person or machine that limbs.

(4) "Loader" means a mechanical device that loads logs.

(5) "Lodged tree" means a felled tree which is prevented by another tree from falling to the ground.

(6) "Logging or logging operation" means the act of harvesting trees and transporting logs.

(7) "Logging equipment" means a mechanically powered device used in a logging operation.

(8) "Mobile equipment" means that equipment, except an over the road vehicle, which includes mobility as a part of its work function.

(9) "Notch or undercut" means a notch made in a standing tree at the beginning of the felling operation that guides the direction of the fall. See figure 1 of R 408.15156.

(10) "Prehaul" means the hauling of forest products by off-the-road vehicles, nonhighway transport, or other movement prior to highway or rail movement, where the pulpwood travels clear of the ground.

History: 1954 ACS 61, p. 60, Eff. Feb. 16, 1970; 1954 ACS 79, p. 78, Eff. May 16, 1974; 1954 ACS 89, p. 86, Eff. Nov. 13, 1976.

R 408.15108 Definitions; S, T.

Rule 5108. (1) "Skid" or "skidding" means the act of dragging logs on the ground.

(2) "Skidder" means a person or machine that skids logs.

(3) "Slasher saw" means a mechanical saw used for bucking.

(4) "Snag" means a standing dead tree.

(5) "Spring pole" means a tree, sapling or limb which is bent under tension and which springs out after its tension is released.

(6) "Tractor" means a powered vehicle for off-the-road hauling or towing and equipped with crawler tracks or wheels.

(7) "Tree harvester" means a mechanized self-propelled machine designed to perform 1 or several logging functions such as felling, limbing, bucking, chipping, skidding or loading.

History: 1954 ACS 61, p. 60, Eff. Feb. 16, 1970; 1954 ACS 79, p. 79, Eff. May 16, 1974.

EMPLOYER—EMPLOYEE RESPONSIBILITIES

R 408.15111 Rules; employers' duties.

Rule 5111. An employer shall review these rules with each new employee.

History: 1954 ACS 61, p. 61, Eff. Feb. 16, 1970; 1954 ACS 79, p. 79, Eff. May 16, 1974.

R 408.15112 New jobs; employers' duties.

Rule 5112. Before an employee is put to work on a new job, an employer shall:

(a) Familiarize the employee with the type of work to be performed in the job.

(b) Instruct the employee in the safeguards and hazards of his assigned job.

History: 1954 ACS 61, p. 61, Eff. Feb. 16, 1970; 1954 ACS 79, p. 79, Eff. May 16, 1974.

R 408.15113 Supervision; maintenance and inspection by employers.

Rule 5113. An employer shall:

(a) Provide supervision necessary to enforce compliance with these rules.

(b) Maintain buildings, equipment and workplaces in a safe and orderly condition.

(c) Conduct inspections as necessary to insure compliance with these rules.

(d) Not permit an employee to work in an area or with equipment which is in a dangerous condition.

(e) Account for the presence of each employee at the end of each workday.

(f) Have an operator's manual or operating instructions for mobile equipment. It shall describe the operation, maintenance and safe practices.

History: 1954 ACS 61, p. 61, Eff. Feb. 16, 1970; 1954 ACS 79, p. 79, Eff. May 16, 1974.

R 408.15114 Injuries and first aid.

Rule 5114. (1) An employer shall:

(a) Provide on the job site, a stretcher and a first aid kit which has been approved by a consulting physician and a first aid kit on all over the road logging vehicles. The first aid kit shall contain a snake bite kit where poisonous snakes may be encountered; shall be sized to the number of employees on the job site and shall be maintained.

(b) Instruct each employee in the location of first aid equipment and how to obtain emergency assistance and medical attention.

(c) Investigate all lost time injuries.

(2) An employer shall have not less than 1 employee at a job site trained in red cross first aid or equivalent training.

History: 1954 ACS 61, p. 61, Eff. Feb. 16, 1970; 1954 ACS 79, p. 79, Eff. May 16, 1974.

R 408.15116 Employees; general duties.

Rule 5116. An employee shall:

(a) Abide by the safety procedures pertaining to the job as prescribed by the employer and shall comply with these rules.

(b) Examine the work area and equipment that he is going to use before he begins work and report a dangerous or unsafe condition in the work area or equipment to his immediate supervisor.

(c) Refrain from a reckless practice or action which could result in an accident or injury to himself or any other person.

(d) Not operate a machine without experience, instruction and authorization.

History: 1954 ACS 61, p. 61, Eff. Feb. 16, 1970.

R 408.15117 Weather and light.

Rule 5117. (1) All work shall stop and the employees shall be moved to a place of safety during an electrical storm or period of high wind or other hazardous weather conditions which would be dangerous to the employees.

(2) A falling operation shall stop if a wind prevents a tree from falling in the desired direction or if the faller's vision is impaired by a weather condition or darkness.

History: 1954 ACS 61, p. 61, Eff. Feb. 16, 1970; 1954 ACS 79, p. 79, Eff. May 16, 1974.

R 408.15118 Fire prevention.

Rule 5118. (1) Smoking or an open flame shall be prohibited within 10 feet of an engine being refueled.

(2) Refueling shall not be done in an area where conditions are conducive to fire.

(3) An approved fire extinguisher, as prescribed in the occupational safety standards commission standard, Part 8. Portable Fire Extinguishers, being R 408.10801 to R 408.10839 of the Michigan Administrative Code, shall be provided where mobile equipment is operated and on each vehicle.

(4) Gasoline shall be stored in an approved container located not less than 25 feet from a source of ignition.

(5) Machinery shall be kept free of accumulations of flammable material.

(6) Flammable liquids shall not be transported on a personnel carrier unless a storage box is provided.

(7) Engine fuel shall not be used to start a fire or as a cleaning solvent.

History: 1954 ACS 61, p. 61, Eff. Feb. 16, 1970; 1954 ACS 79, p. 80, Eff. May 16, 1974; 1954 ACS 89, p. 86, Eff. Nov. 13, 1976.

PROTECTIVE CLOTHING

R 408.15121 Clothing of workers near moving machinery.

Rule 1521. A person working near moving machinery shall wear close fitting, fastened clothing.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970.

R 408.15122 Hard hats.

Rule 5122. An employer shall provide and an employee shall wear a hard hat on the job site as prescribed in the occupational safety standards commission standard, Part 32. Head Protection Equipment, being R 408.13201 to R 408.13241 of the Michigan Administrative Code.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970; 1954 ACS 79, p. 80, Eff. May 16, 1974.

R 408.15123 Eye protection.

Rule 5123. An employer shall provide, and an employee shall wear, eye protection as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970; 1954 ACS 79, p. 80, Eff. May 16, 1974; 1954 ACS 89, p. 86, Eff. Nov. 13, 1976.

POWER SAWS

R 408.15131 Stop switches.

Rule 5131. A chain saw shall be equipped with a positive type on-off ignition switch conveniently located for the operator to move it into the off position without relinquishing his grip on the saw.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970.

R 408.15132 Manual chain oiler controls.

Rule 5132. A manual chain oiler control, if provided on a chain saw, shall be located so that it can be operated without relinquishing a secure grip on the saw.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970.

R 408.15133 Throttles.

Rule 5133. (1) An engine throttle control, if provided on a chain saw, shall be located so that it can be operated without relinquishing a secure grip on the saw.

(2) A throttle position lock, if provided on a chain saw, shall be self-releasing when the throttle is being operated or shall be within reach of the throttle control hand of the operator for unlatching.

(3) A chain saw shall have a guard that protects the throttle lever from casual contact from brush or other foreign objects.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970.

R 408.15134 Clutch.

Rule 5134. A chain saw shall be adjusted so that the saw chain will not be driven after the throttle control is released.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970; 1954 ACS 79, p. 80, Eff. May 16, 1974.

R 408.15135 Guards; moving parts.

Rule 5135. Guards provided by the manufacturer of a chain saw shall be maintained in place when the saw is in operation.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970; 1954 ACS 79, p. 80, Eff. May 16, 1974.

R 408.15136 Chain saw operations.

Rule 5136. (1) A chain saw operator shall shut off the saw motor when carrying it for a distance of more than from tree to tree or in a hazardous situation. The saw motor shall be at idle speed even when carried a short distance. A chain saw shall be carried so as to avoid an employee coming in contact with the saw chain or muffler.

(2) A chain saw shall not be started within 10 feet of a refueling area.

(3) A chain saw shall be held by both hands during its use.

(4) Before starting a cut, a chain saw operator shall clear away brush and other items which would interfere with the cutting operation.

(5) A chain saw shall not be used to cut directly overhead or in a position which could cause the operator to relinquish his grip on the saw.

(6) Chain saw operators shall be instructed to follow manufacturer's instructions as to operation and adjustment.

History: 1954 ACS 61, p. 62, Eff. Feb. 16, 1970; 1954 ACS 79, p. 80, Eff. May 16, 1974; 1954 ACS 89, p. 86, Eff. Nov. 13, 1976.

R 408.15137 Slasher saws.

Rule 5137. A slasher saw blade shall be guarded.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970.

LOGGING EQUIPMENT

R 408.15141 Flying particles.

Rule 5141. The working parts of a machine shall be guarded to prevent flying particles from injuring the operator or any other person in the immediate area.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970.

R 408.15142 Operator stands.

Rule 5142. A machine operator stand shall be kept clean and clear of obstructions. A stand shall have means of access such as steps, ladder, footholds and handholds. If the stand is totally enclosed, it shall be ventilated.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970.

R 408.15143 Controls.

Rule 5143. A machine control shall be:

(a) Located within easy reach of the operator.

(b) Easily identified.

(c) Grounded if 110 volt power or more is used.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970; 1954 ACS 79, p. 81, Eff. May 16, 1974.

R 408.15144 Canopy and cab guards.

Rule 5144. (1) A metal protective canopy guard shall:

(a) Be installed on mobile equipment used in logging.

(b) Be so constructed as to protect the driver from falling overhead hazards such as trees or limbs, or other objects which might enter the compartment side areas.

(c) Be strong enough to support the mobile equipment if it rolls over.

(d) Have a brush guard from the front of the mobile equipment to the top of the canopy.

(e) Be of a height and width that will not impair the driver's visibility, movements or escape in an emergency.

(f) Have a screen of ¼-inch wire with 1-inch mesh or equivalent covering the opening at the rear of the canopy and an overhead covering of solid material extending the full width of the canopy.

(2) The lower portion of a cab of mobile equipment shall be enclosed with solid material, except at an entrance, to prevent objects entering the cab. The entrance shall be not less than 52 inches in vertical height.

(3) Open mesh shall extend forward from the rear corners of the cab sides to prevent branches entering the cab.

(4) Where glass is used on a cab, it shall be safety glass or an equivalent. An additional metal screen shall be used where there is exposure to falling or flying objects. Provision shall be made to clean glass to assure adequate visibility.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970; 1954 ACS 79, p. 81, Eff. May 16, 1974; 1954 ACS 89, p. 87, Eff. Nov. 13, 1976.

R 408.15145 Refueling and servicing.

Rule 5145. The engine of a gasoline powered machine shall be shut off while being refueled, serviced or adjusted except where operation is required for adjustment.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970; 1954 ACS 79, p. 81, Eff. May 16, 1974.

R 408.15146 Equipment and operations.

Rule 5146. (1) If an operator leaves the seat of any logging equipment whose engine is running, he shall place the transmission in neutral and set the brakes. If equipment is to be left unattended, the operator shall apply the brake locks, ground moving elements and turn power off.

(2) Equipment shall be operated only from the position or seat intended for that purpose. A seat belt shall be provided on mobile equipment, and shall be worn by the employee as prescribed by the employer.

(3) No person, except the operator, shall ride on mobile equipment unless the equipment is provided with a passenger seat located under a canopy meeting the requirements of R 408.15144.

(4) An equipment operator shall:

(a) Operate the equipment within the rated capacity and stability limitations.

(b) Insure, before start up and during operation of equipment, that employees and other objects are not in danger of being struck. Movable objects, such as a boom, grapple or load, shall not be moved close to or over an employee.

(c) Check all controls for function and response before starting a work shift.

(d) When a signalman is used, operate the equipment only on a clearly understood signal by the designated signalman.

(e) When operating near other employees, signal his intent before moving.

(f) Dismount from operating his unit, stand clear and be visible when forest products or equipment are being loaded or unloaded on or from his unit by other equipment.

(g) Not place undue shock loads on wire rope.

(h) Position or secure all movable elements not in use for safe operation.

(5) When transporting equipment from 1 job location to another, the carrying vehicle shall be capable of sustaining the load and the load shall be secured against movement.

(6) Equipment originally equipped with a muffler shall have the muffler maintained when the equipment is in operation.

(7) Guy lines shall be arranged so that not less than 2 will receive the imposed stress. A stump used for anchoring guy lines shall be chosen for strength and

position. Guy lines shall be tied back, if necessary. A standing tree shall not be used for this purpose.

(8) Any overhead electrical distribution or transmission line shall be considered energized until the owner or utility indicates otherwise and the line has been visibly grounded. Where such a line cannot be deenergized, the following clearances shall be observed:

	Clearance	
Voltage	Boom Raised	Boom Lowered and No Load
to 50 kv	10 feet	4 feet
50 to 345 kv	10 feet plus .4 inch per kv over 50 kv	10 feet
346 to 750 kv	10 feet plus .4 inch per kv over 50 kv	15 feet

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970; 1954 ACS 79, p. 81, Eff. May 16, 1974; 1954 ACS 89, p. 87, Eff. Nov. 13, 1976.

R 408.15147 Hand tools.

Rule 5147. (1) Hand tools and implements used by a logger shall be of quality material, used for the job they were designed for, and kept in a safe condition.

(2) A hand tool transported in the same compartment of a vehicle with an employee shall be secured to the vehicle.

(3) When a hand tool is not being used, it shall be stored in a storage facility at a designated location.

(4) All hand tools shall be visually inspected before each daily use for defects which would cause injury. Such defective tools shall be repaired or replaced.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970; 1954 ACS 79, p. 82, Eff. May 16, 1974.

FELLING, LIMBING, BUCKING, AND SKIDDING

R 408.15151 Felling.

Rule 5151. (1) An employee, except the faller, shall not be closer to a felling operation than twice the height of the tallest tree being cut.

(2) Before a cut is started, a faller shall check for the location of other employees, dead limbs, angle of tree, wind condition, location of other trees and other hazards, and plan and prepare his path of retreat.

(3) If a tree falls on a power line, the utility shall be notified immediately and all employees shall remain clear until the utility advises that conditions are safe.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970; 1954 ACS 79, p. 82, Eff. May 16, 1974.

R 408.15152 Working alone.

Rule 5152. A faller or bucker shall not work beyond hearing range of another employee unless a procedure has been established for periodically checking on the faller or bucker during the course of the work day.

History: 1954 ACS 61, p. 63, Eff. Feb. 16, 1970; 1954 ACS 79, p. 82, Eff. May 16, 1974.

R 408.15153 Lodged tree removal.

Rule 5153. A person shall not work under a lodged tree. A lodged tree shall be pulled down as soon as possible by mobile equipment or draft animal in a manner which keeps an employee from being struck by the tree.

History: 1954 ACS 61, p. 64, Eff. Feb. 16, 1970; 1954 ACS 79, p. 82, Eff. May 16, 1974.

R 408.15154 Dangerous trees and snags.

Rule 5154. A dead, rotten or broken limb or tree, that is a hazard to road traffic, woods operations, landings or camps, shall be felled. Where such a tree may fall on a public road, a flagman shall direct traffic during felling operations.

History: 1954 ACS 61, p. 64, Eff. Feb. 16, 1970; 1954 ACS 79, p. 82, Eff. May 16, 1974.

R 408.15155 Springpoles.

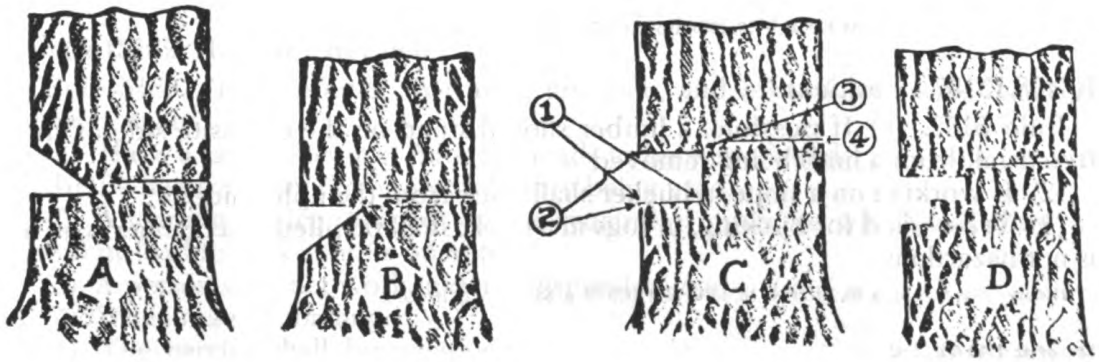
Rule 5155. (1) A person shall stand clear of a springpole being cut.

(2) An employee shall check for springpoles before making a bucking cut or limbing.

History: 1954 ACS 61, p. 64, Eff. Feb. 16, 1970; 1954 ACS 79, p. 83, Eff. May 16, 1974.

R 408.15156 Undercut; back cut; hinge wood.

Rule 5156. (1) An undercut shall be large enough, about ⅓ the diameter, to safely guide the tree and reduce the possibility of the tree splitting. (See figure 1.)



(2) A back cut shall leave sufficient hinge wood to guide the tree's fall in the desired direction and to hold the tree to the stump during most of its fall. A back cut shall be about 2 inches above the undercut and as level as possible. (See figure 1.)

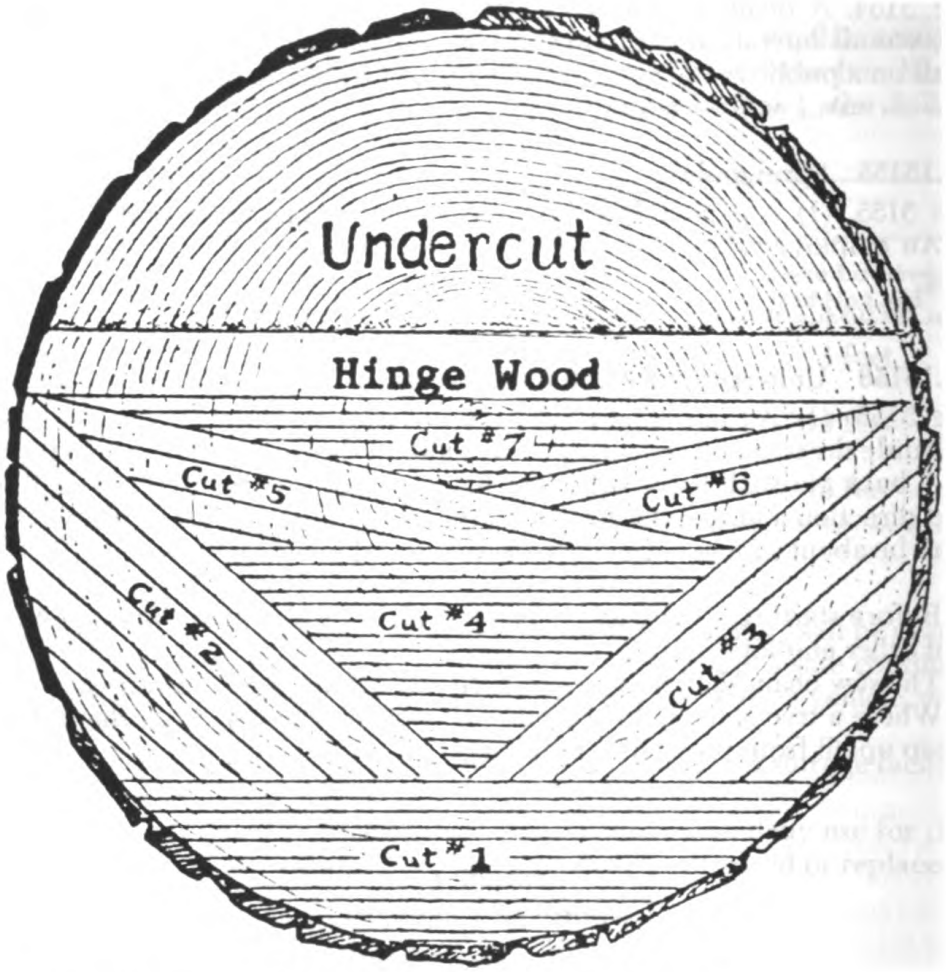
(3) Before starting a back cut, a faller shall determine that the impact area is clear of other employees.

(4) The saw chain shall be stopped before the faller starts his retreat.

(5) Where a tree is likely to slide or roll, a faller shall cut from the uphill side and keep uphill from previously felled trees.

FIGURE 1
Approved Undercuts

A. Conventional undercut. Can be made with parallel saw cut and axe diagonal cut or both cuts with the saw. Generally used on trees of small diameter.



B. Both cuts made with the saw. Leaves square-end log. Same as "A," except that waste is put on the stump.

C. Two parallel cuts with the saw. The material between the cuts is chipped out with an axe-adze (pulaski) combination. Used on trees over 30 inches in diameter.

D. Three parallel cuts with the saw, leaving a step. Same in principle as above. Used on trees of very large diameters.

Corner Cutting

Note: The number of cuts to be made is dependent upon tree diameter.

History: 1954 ACS 61, p. 64, Eff. Feb. 16, 1970; 1954 ACS 79, p. 83, Eff. May 16, 1974.

R 408.15157 Positions.

Rule 5157. (1) If possible, a limber should stand on the opposite side of the tree trunk from a limb being removed.

(2) If working on a slope, a bucker shall buck from the uphill side.

(3) Trees piled for bucking, or logs in a deck, shall be piled in a manner which is not hazardous.

History: 1954 ACS 61, p. 65, Eff. Feb. 16, 1970; 1954 ACS 79, p. 83, Eff. May 16, 1974.

R 408.15158 Skidding.

Rule 5158. (1) A person shall not ride on a log being skidded.

(2) A skidder operator shall use caution if operating near another person.

(3) If on a hill, a skidder shall not be operated parallel to the contour of the slope.

(4) Skidding equipment equipped with blades shall carry the blades high enough to avoid objects when moving. If parked, blades on skidding equipment shall be lowered to the ground.

(5) A person shall not hook, adjust or cross winch lines which are under tension.

(6) A choker setter shall:

Digitized by Google

(a) Work on the uphill side of a log.

(b) Position the choker near the end of the log or tree length to allow turning of the prehaul or skidding vehicle, to prevent the penetration of the operator station, and to reduce the possibility of striking the wheel or track.

(7) When winching, the equipment shall be positioned so that the winch line is near alignment with the long axis of the equipment.

(8) A loaded pallet shall not be pushed. Stakes shall not be added to allow loading beyond the rated capacity of a pallet.

History: 1954 ACS 61, p. 65, Eff. Feb. 16, 1970; 1954 ACS 79, p. 83, Eff. May 16, 1974; 1954 ACS 89, p. 88, Eff. Nov. 13, 1976.

R 408.15159 Skidding and prehauling equipment.

Rule 5159. (1) Skidding and prehauling equipment shall be designed and constructed to allow a minimum radius vehicle turn without the load contacting the rear wheel or the rear track assembly.

(2) Towed equipment such as pallets and trailers shall be attached in a manner which will allow a full 90 degree turn, prevent overrunning and assure control of the towed equipment.

(3) Animal towed equipment shall be equipped with a hand brake within reach of the driver.

(4) A prehauler shall have:

(a) A means for retaining pallets and logs.

(b) A means for securing the loader during transport.

(5) Only a designated, trained operator shall operate a skid or prehaul machine.

History: 1954 ACS 79, p. 83, Eff. May 16, 1974; 1954 ACS 89, p. 88, Eff. Nov. 13, 1976.

LOADING AND DECKING

R 408.15161 Area lighting.

Rule 5161. If natural light is inadequate during a decking or loading operation, the loader or loading areas shall be artificially lighted.

History: 1954 ACS 61, p. 65, Eff. Feb. 16, 1970.

R 408.15162 Loading devices.

Rule 5162. (1) A jammer, A-frame, gin pole, and other homemade loading devices shall:

(a) Have a safety factor of 5 for the loads to be moved, and

(b) Be inspected by the operator before being used.

(2) A loading device shall not be constructed or operated which will allow a boom or load to pass over its operator.

(3) A person shall not work under a suspended load.

(4) When manual loading:

(a) The carrier shall be positioned to provide an area free of recognized hazards between the carrier and the pile.

(b) The log or pole shall be placed in a manner so that it will not roll or slip.

(c) Manual handling shall be limited to a weight consistent with the physical qualifications of the employee. Proper lifting techniques shall be used.

(5) When machine loading:

(a) The piles shall be located in an area free of recognized hazards.

(b) Only the operator and slingman, when used, shall be in the work area.

(c) The load shall be balanced and secured to prevent slippage and loss.

History: 1954 ACS 61, p. 65, Eff. Feb. 16, 1970; 1954 ACS 79, p. 84, Eff. May 16, 1974; 1954 ACS 89, p. 88, Eff. Nov. 13, 1976.

R 408.15163 Cranes and clams.

Rule 5163. A crane or clam with a turning house shall have not less than 2 feet of clearance between the turning radius of the house and a fixed object.

History: 1954 ACS 61, p. 65, Eff. Feb. 16, 1970.

R 408.15164 Riding.

Rule 5164. A person shall not ride a crane load, grapple or hook.

History: 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.15165 Water.

Rule 5165. A person working in or around water shall wear a life jacket and shall not work alone.

History: 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.15166 Storage.

Rule 5166. (1) Logs and poles shall be piled in a stable manner.

(2) When steel banding is used, it shall be capable of containing the imposed load and shall be placed when the bundle is close to the ground.

(3) An employee shall not place his body underneath a bundle of logs or poles.

History: 1954 ACS 79, p. 84, Eff. May 16, 1974.

R 408.15167 Chipping.

Rule 5167. Chipping shall be accomplished as prescribed in R 408.15231(1), (3), and (5) of the occupational safety standards commission standard, Part 52. Sawmills.

History: 1954 ACS 79, p. 84, Eff. May 16, 1974.

TRUCK EQUIPMENT AND OPERATION

R 408.15171 Cab guards.

Rule 5171. A truck shall have a guard that protects the operator in the cab from a load shift.

History: 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.15172 Side, end, and trip stakes.

Rule 5172. (1) A side or end stake used in hauling logs shall be made of steel or dense hardwood of sufficient strength to remain at a 90 degree angle from the bed of a loaded truck.

(2) A trip stake shall be released from the side of the truck or trailer opposite the location of the trip stake.

History: 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.15173 Equipment.

Rule 5173. A truck shall have:

(a) An approved multi-purpose fire extinguisher of not less than a 1A-4BC rating in its cab.

(b) Flares and flags.

(c) A licensed driver.

History: 1954 ACS 61, p. 66, Eff. Feb. 16, 1970; 1954 ACS 79, p. 84, Eff. May 16, 1974.

R 408.15174 Load checks.

Rule 5174. (1) Truck mounted loading equipment shall be secured before leaving a loading area. A protruding object on a load shall be removed or caution flags shall be installed.

(2) A truck driver shall stop the vehicle, dismount, check and tighten loose load binders, either just before or immediately after leaving a woods road to enter a public road.

(3) An operator shall use care in driving under limbs, trees and other overhanging obstructions.

History: 1954 ACS 61, p. 66, Eff. Feb. 16, 1970; 1954 ACS 79, p. 84, Eff. May 16, 1974.

PART 52. SAWMILLS
GENERAL PROVISIONS

R 408.15201 Scope.

Rule 5201. This part provides for the safe maintenance and operation of machinery and equipment by the employer and their safe use by the employees for sawmills, including wood pallet and wood box making plants, in or about places of employment in this state.

History: 1954 ACS 72, p. 59, Eff. June 22, 1972.

R 408.15202 Definitions; A, B.

Rule 5202. (1) "A-frame" means a structure made of 2 independent columns fastened together at the top and separated at the bottom for stability.

(2) "Annealing" means heating, then cooling, to soften and render less brittle.

(3) "Binder" means a chain, cable, or rope used to bind loads.

(4) "Blocksetter" means the operator of a rider type carriage.

(5) "Bolt" means a small log which is cut to a predetermined length and is ready for sawing into boards.

(6) "Boom" means logs or timbers fastened together end to end and used to contain floating logs.

(7) "Boom sticks" means logs or timbers used in making up a boom.

(8) "Brow log" means a log placed parallel to a roadway at a landing or dump to protect vehicles while loading or unloading.

(9) "Bunk or dunnage" means a cross support for a load.

History: 1954 ACS 79, p. 84, Eff. May 16, 1974; 1954 ACS 89, p. 89, Eff. Nov. 13, 1976.

R 408.15203 Definitions; C.

Rule 5203. (1) "Cant" means a log slabbed on 1 or more sides.

(2) "Carriage" means a framework mounted on wheels which runs on tracks or in grooves in a direction parallel to the face of a saw and which contains apparatus to hold a log and advance it towards a saw.

(3) "Carrier" means an industrial truck so designed and constructed that it straddles the load to be transported, with mechanisms to pick up the load and support it during transportation.

(4) "Chipper" means a machine which cuts material into chips of predetermined size.

(5) "Chock or bunk block" means a wedge that prevents logs or loads from moving.

(6) "Crotch lines" means 2 short lines attached to a hoisting line by a ring or shackle, the lower ends being attached to loading hooks.

History: 1954 ACS 72, p. 59, Eff. June 22, 1972; 1954 ACS 79, p. 85, Eff. May 16, 1974; 1954 ACS 89, p. 89, Eff. Nov. 13, 1976.

R 408.15204 Definitions; D to G.

Rule 5204. (1) "Debarker or barker" means a machine which removes the bark from a log.

(2) "Dog" means a steel tooth, 1 or more of which are attached to each carriage knee to hold a log in place on a carriage.

(3) "Drag saw" means a power-driven, reciprocating crosscut saw mounted on a frame and used for bucking logs.

(4) "Edger" means a machine consisting of 2 or more circular saws used to cut boards to width.

(5) "Gang saw" means a machine consisting of 2 or more saw blades used to break down sawmill materials into multiple widths.

(6) "Green chain" means 2 or more endless runs of chain used to carry boards from the final saw.

History: 1954 ACS 72, p. 59, Eff. June 22, 1972.

R 408.15205 Definitions; H.

Rule 5205. (1) "Head block" means a part of a carriage which holds a log and upon which the log rests.

(2) "Head rig" means a combination of head saw and carriage used for the initial breakdown of a log into timbers, cants and boards.

(3) "Head saw" means a saw, either circular or band type, used for the initial breakdown of a log into timber, cant or board.

(4) "Head sawyer" means an operator of a head saw.

(5) "Hog" means a machine used for cutting or grinding slabs, bark and other coarse residue.

(6) "Husk" means the framework of a circular head saw.

History: 1954 ACS 72, p. 60, Eff. June 22, 1972.

R 408.15206 Definitions; L to R.

Rule 5206. (1) "Live rolls" means cylinders of wood or metal mounted on horizontal axes or shafts and rotated by power, which are used to convey slabs, lumber and other wood products.

(2) "Log deck" means a platform on which logs lay awaiting debarking or sawing.

(3) "Log haul" means a conveyor for transferring logs to the mill.

(4) "Log turner" means a device used to turn logs for head sawing.

(5) "Package" means a unit of lumber.

(6) "Personal protective equipment" means the apparel worn by the employee to protect his person from injury.

(7) "Pike pole" means a long pole whose end is shod with a sharp pointed spike.

(8) "Point of operation" means the area of a machine where material is actually worked.

(9) "Reeving" means to pass or thread a rope through a hole or block.

(10) "Resaw" means circular, band, or gang saw used to break down slabs or cants to boards.

(11) "Roll case" means a horizontal or inclined conveyor comprised of cylindrical rolls, which are sometimes powered, and which are used for the transfer of logs or lumber from 1 work station to another.

History: 1954 ACS 72, p. 60, Eff. June 22, 1972; 1954 ACS 79, p. 85, Eff. May 16, 1974; 1954 ACS 89, p. 89, Eff. Nov. 13, 1976.

R 408.15207 Definitions; S.

Rule 5207. (1) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the actual safe load when in use.

(2) "Safety hook" means a hoisting hook with means to retain a hoisted object on the hook.

(3) "Saw guide" means a device for steadying a circular or band saw.

(4) "Setworks" means a mechanism on a carriage used to move a log into position for another cut.

(5) "Sorting gap" means an area on a log pond enclosed by boom sticks into which logs are sorted.

(6) "Splitter" means a knife type, nonrotating spreader.

(7) "Spreader" means a wheel that separates a board from a log in back of a circular saw to prevent binding.

(8) "Sticker" means a strip of material used in stacking to separate courses of boards.

(9) "Stiff boom" means the anchored stationary boom sticks which are tied together on which boom men work.

(10) "Swifter" means a means of tying boom sticks together to prevent them from spreading while being towed.

History: 1954 ACS 72, p. 60, Eff. June 22, 1972; 1954 ACS 79, p. 85, Eff. May 16, 1974; 1954 ACS 89, p. 90, Eff. Nov. 13, 1976.

R 408.15208 Definitions; T.

Rule 5208. (1) "Tailer" means an employee who stands opposite the feed end of a machine and removes the processed stock.

(2) "Telltales" means a device such as pieces of rope used to serve as a warning for overhead objects.

(3) "Top saw" means the upper of 2 circular saws on a head rig, both being on the same husk.

(4) "Transfer deck" means an area where boards are transferred from head saw or edger to the trim saw.

(5) "Trimmer saw" means a machine consisting of 2 or more circular saws used to cut boards to length.

History: 1954 ACS 72, p. 60, Eff. June 22, 1972.

R 408.15211 Employer responsibility.

Rule 5211. An employer shall:

(a) Provide training to each employee as to the hazards and safe operation of his assigned job.

(b) Maintain machinery, equipment, buildings, ramps, platforms, and aisles in a hazard-free condition. When a hazardous condition develops concerning floors, docks, and passageways that cannot be immediately repaired, the area shall be guarded until adequate repairs are made.

(c) Provide head protection which shall be worn by all employees outside the office, including those in the dry storage area, as prescribed by the occupational safety standards commission standard, Part 32. Head Protection, being R 408.13201 to R 408.13241 of the Michigan Administrative Code.

(d) An employer shall provide, and an employee shall wear, eye protection as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(e) Mark physical hazards as specified in the federal standard 1910.144, safety color code for marking physical hazards, which was adopted by reference by Act No. 154 of the Public Acts of 1974, being §408.1001 et seq. of the Michigan Compiled Laws.

(f) Install all gas piping and appliances as prescribed in ANSI standard Z21.30-1964, national fuel gas code, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.00 from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

History: 1954 ACS 72, p. 60, Eff. June 22, 1972; 1954 ACS 89, p. 90, Eff. Nov. 13, 1976.

R 408.15212 Employees' responsibility.

Rule 5212. An employee shall:

(a) Use personal protective equipment when furnished by the employer.

(b) Not use machinery or equipment unless authorized and trained in its use.

(c) Not remove guards from machinery and equipment except when needed for servicing. The guard shall be replaced before restarting the machine.

(d) Report defective machinery and equipment and hazardous conditions, when detected, to the employer.

(e) Conduct himself in a manner which will not endanger himself or other employees.

History: 1954 ACS 72, p. 61, Eff. June 22, 1972.

R 408.15213 Burners.

Rule 5213. (1) If the burner stack is not self-supporting, it shall be guyed or otherwise supported.

(2) The conveyor runway to the burner shall be equipped with a standard handrail. If the runway crosses a roadway or thoroughfare, standard toeboards shall be provided in addition.

History: 1954 ACS 89, p. 90, Eff. Nov. 13, 1976.

R 408.15221 Illumination.

Rule 5221. Illumination shall be provided at the operator's work station to maintain a minimum of 30 footcandle intensity, except at a debarker, head saw or trim saw. A minimum of 30 footcandle intensity shall be provided at the point of operation of a debarker, head saw or trim saw.

History: 1954 ACS 72, p. 61, Eff. June 22, 1972; 1954 ACS 79, p. 85, Eff. May 16, 1974.

R 408.15222 Floors, aisles, roadways, and docks.

Rule 5222. (1) An aisle or floor work area shall be kept free of protruding objects, holes, and loose boards.

(2) A floor at the operator's station of a machine shall be maintained free of any slip or trip hazard.

(3) A floor shall be capable of sustaining the imposed load.

(4) An aisle, passageway, roadway, or dock shall be of such width as to provide safe passage of employees or vehicles, or both. A dock where powered industrial trucks are used shall be provided with a guard or bumper along its perimeter, except at loading or unloading points, to prevent overrun.

(5) A swinging door shall be provided with a window in each section. The window shall be of clear safety glass or equivalent material or protected against breakage.

(6) Where a doorway opens upon a railroad track or upon a tramway or dock over which vehicles travel, a barrier or other warning device shall be placed to prevent workmen from stepping into moving traffic.

History: 1954 ACS 72, p. 61, Eff. June 22, 1972; 1954 ACS 79, p. 86, Eff. May 16, 1974; 1954 ACS 89, p. 91, Eff. Nov. 13, 1976.

R 408.15223 Power control.

Rule 5223. (1) A machine shall be equipped with an emergency stop device, red in color, which can be activated from the operator's work station.

(2) A machine attended by more than 1 operator shall be equipped with a control for each operator exposed to a point of operation hazard. These controls shall be interlocked to prevent operation until each operator activates his control.

(3) A machine control shall be designed and installed to prevent unintentional activation by contact with objects or part of the body.

(4) A written lockout procedure shall be established by an employer and used by an employee. A power source of any equipment to be repaired, serviced or set up shall be locked out by each employee while doing such work. Any residual pressure shall be relieved prior to and during such work.

(5) Upon power failures, provision shall be made to prevent machines from automatically restarting upon restoration of power.

(6) An electrical repair shall be made only by authorized and qualified personnel.

(7) An overload relay shall be reset by authorized and qualified personnel only.

(8) A passageway to a switch center or panel shall at all times be kept free from obstruction. Not less than 3 feet of clear space shall be maintained in front of switch centers or panels at all times.

History: 1954 ACS 72, p. 61, Eff. June 22, 1972; 1954 ACS 89, p. 91, Eff. Nov. 13, 1976.

R 408.15224 Hydraulic safety.

Rule 5224. (1) A hydraulic system shall have a designed safety factor of not less than 4.

(2) A hydraulic, air or steam line shall be bled before opening it for maintenance work.

(3) Equipment supported by hydraulic, air or steam pressure shall be blocked or otherwise secured before maintenance work is begun.

History: 1954 ACS 72, p. 61, Eff. June 22, 1972.

R 408.15225 Chain, chain slings, and chain fittings.

Rule 5225. (1) A chain and its component parts, other than alloy steel chain having a minimum tensile strength of 125,000 pounds per square inch, shall have a safety factor of not less than 5. Alloy chain shall not be used in excess of the working load in straight tension for its size as prescribed in table 1.

(2) A chain used in load carrying service shall be inspected prior to initial use and weekly thereafter. Chain with bent, twisted or elongated links or a hook which has been opened more than 15% at the throat from the original set or twisted more than 10% from the plane of the unbent hook shall not be used until the defective part is replaced.

(3) A bolt or nail shall not be used to shorten or join links together.

(4) Installation, inspection, maintenance, repair, and testing of chains shall be done only by an employee qualified to do such work.

(5) Proper storage shall be provided for slings while not in use.

(6) Chain shall be normalized or annealed periodically as recommended by the manufacturer.

(7) If, at any time, any 3-foot length of chain is found to have stretched ⅛ the length of a link, it shall be discarded.

TABLE 1
Working Load—Single Chain

Nominal Size, Chain Bar, in.	Work Load, lb., max.
¼	3,250
⅜	6,600
½	11,250
⅝	16,500
¾	23,000
⅞	28,500
1	38,750
1⅛	44,500
1¼	57,500
1⅜	67,000
1½	80,000
1¾	100,000

History: 1954 ACS 72, p. 61, Eff. June 22, 1972; 1954 ACS 79, p. 86, Eff. May 16, 1974; 1954 ACS 89, p. 91, Eff. Nov. 13, 1976.

R 408.15226 Cable, wire rope, and wire rope slings.

Rule 5226. (1) Cable, wire rope, and wire rope slings shall have a designed safety factor of not less than 5.

(2) Wire rope and cable in load carrying or hoist-service and their fittings shall be visually inspected when installed and once each day thereafter when in use.

(3) Wire rope shall not be used if, within a segment of 8 diameters in length, the total number of visible broken wires exceeds 10% of the total number of wires or if the rope shows other signs of excessive wear, corrosion or defects.

(4) Wire rope and cable removed from service due to defects shall be plainly marked or identified as being unfit for further use on a crane, hoist or other load carrying device.

(5) When "U" type cable clips are applied, they shall comply with figure 1.

(6) Cable clips shall be spaced approximately 6 rope diameters apart.

(7) Wire rope and cable shall be protected at sharp or tight bends by use of corner irons or blocks.

(8) A safety hook shall be used where there is a hazard created if the tension on the hook could be relieved by fouling or catching.

(9) Installation, inspection, maintenance, repair, and testing of ropes, cables, and slings shall be done only by persons qualified to do such work.

(10) Proper storage shall be provided for a sling while not in use.

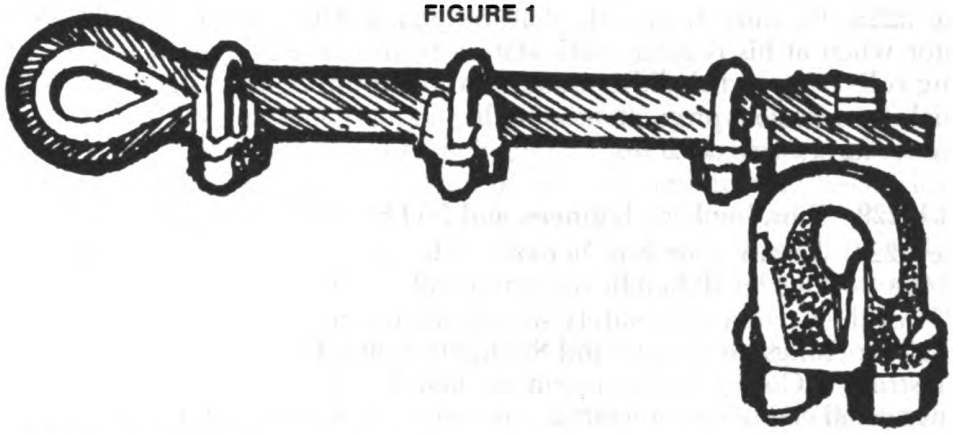
(11) Connections, fittings, fastenings, and other parts used in connection with ropes and cables shall be of good quality and of proper size and strength, and shall be installed in accordance with the manufacturer's recommendations.

(12) Hooks, shackles, rings, pad eyes, and other fittings that show excessive wear, or that have been bent, twisted, or otherwise damaged, shall be removed from service.

(13) Running lines of hoisting equipment, located within 6 feet 6 inches of the ground or working level, shall be boxed off or otherwise guarded, or the operating area shall be restricted.

(14) There shall be not less than 2 full wraps of hoisting cable on the drum of cranes and hoists at all times of operation.

(15) A drum shall have a flange at each end to prevent the cable from slipping off.



(16) A bottom sheave shall be protected by a close fitting guard to prevent the cable from jumping the sheave.

(17) The reeving of a rope shall be so arranged as to minimize chafing or abrading while in use.

(18) Multiple-part lines shall not be twisted around each other. If there is a slack rope condition, the rope shall be properly seated on the drum and in the sheaves.

FIGURE 1

Note: There is only one correct method of installing wire rope clips. They should be attached to rope ends as shown in photograph above. The base of each clip should bear against the live, or long rope end, and the U-bolt should bear against the dead or short rope end.

Number and Spacing of Clips for Ropes of Various Sizes

Diameter of rope (in.)	Number of clips	Center-to-center space between clips (in.)	Length of rope turned back exclusive of eye (in.)
¼	2	1½	3
5/16	2	1⅞	4
⅜	2	2¼	5
7/16	2	2⅝	6
½	3	3	9
⅝	3	3¾	12
¾	4	4½	18
⅞	4	5¼	21
1	4	6	24
1⅛	5	6¾	34
1¼	5	7½	38
1⅜	6	8¼	50
1½	6	9	54
1⅝	6	9¾	60
1¾	7	10½	74
1⅞	8	11¼	90
2	8	12	96
2⅛	8	13	104
2¼	8	14	112

History: 1954 ACS 72, p. 62, Eff. June 22, 1972; 1954 ACS 79, p. 86, Eff. May 16, 1974; 1954 ACS 89, p. 92, Eff. Nov. 13, 1976.

R 408.15227 Housekeeping.

Rule 5227. (1) Chips, sawdust and other debris shall be removed from working areas to prevent an accumulation which would constitute a hazard.

(2) Pipes, beams and other overhead objects in the operating area of a sawmill shall be cleaned off a minimum of once a month to remove dust accumulations.

History: 1954 ACS 72, p. 63, Eff. June 22, 1972.

R 408.15228 Pressure feed rolls.

Rule 5228. Pressure feed rolls shall be guarded to prevent the hands of an operator when at his regular work station from coming in contact with the in-running rolls. A guard shall be made of a minimum of 14 gauge sheet metal or material of equivalent or greater strength.

History: 1954 ACS 72, p. 63, Eff. June 22, 1972.

R 408.15229 Bins, bunkers, hoppers, and fuel houses.

Rule 5229. (1) An open bin, bunker, or hopper extending less than 36 inches above the working level shall be provided with a standard barrier as prescribed in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10231 of the Michigan Administrative Code, or the opening shall be covered with a grating with openings small enough to prevent an employee from falling through.

(2) Where wheeled equipment is used to move materials to a bin, bunker or hopper, a bumper stop shall be provided where the bin, bunker or hopper is at floor level. An employee shall be protected from the open side by a standard barrier installed along each side of the wheeled equipment runway.

History: 1954 ACS 79, p. 87, Eff. May 16, 1974.

R 408.15230 Fiber rope.

Rule 5230. (1) Frozen fiber rope shall not be used in load carrying service.

(2) Fiber rope that has been subjected to acid or excessive heat shall not be used for load carrying purposes.

(3) Fiber rope shall be protected from abrasion by padding where it is fastened or drawn over square corners or sharp or rough surfaces.

History: 1954 ACS 89, p. 93, Eff. Nov. 13, 1976.

SPECIFIC EQUIPMENT

R 408.15231 Chippers and hogs.

Rule 5231. (1) A whole-log chipper or a hog shall have the feed system arranged so that the operator does not stand in direct line with the chipper hopper.

(2) To prevent an employee from falling onto a chipper or hog in-feed conveyor, the conveyor shall be guarded for the entire length of the conveyor by an enclosure or standard barrier as prescribed in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings and Stairways, being R 408.10231 of the Michigan Administrative Code.

(3) A safety belt and lanyard shall be worn by an employee when feeding at or near the hopper of a chipper or hog. The lanyard shall be adjusted to prevent an employee from falling into the chipper or hog.

(4) A board chipper or hog shall have the feed hopper enclosed not less than 40 inches from the blade to the opening or the operator shall wear a safety belt and line. The line shall be short enough to prevent the operator's hands from touching the blade.

(5) Where jamups cannot be cleared with a stick, the in-feed equipment shall be stopped and locked out and the employee clearing the jam shall wear a safety

belt and lanyard adjusted to prevent contact with the chipper blade before additional clearing is done.

(6) A feed hopper of a chipper or hog shall be baffled or enclosed to prevent wood from being thrown from the hopper.

(7) A chipper on a head rig or edger shall be enclosed to protect the employee.

History: 1954 ACS 72, p. 63, Eff. June 22, 1972.

R 408.15232 Log deck.

Rule 5232. (1) A log deck shall be provided with a stop or other safeguard to prevent logs from inadvertently advancing onto the carriage or its runway.

(2) A barricade or other positive stop of such strength to hold back a log shall be erected between a log deck and a head sawyer.

(3) Drag, swing and circular cut-off saws and spiked rolls shall be so located and guarded to allow access to and from the building without endangering passing employees.

(4) Loose chain from overhead equipment shall not hang over the log deck so as to be struck by an employee.

(5) Logs shall be arranged in a manner to prevent their accidental falling or rolling from the deck.

(6) Overhead protection shall be provided for an employee working below logs being moved to the log deck.

(7) A log well shall be provided with a means to prevent a log from rolling back into the well from the log deck.

History: 1954 ACS 72, p. 64, Eff. June 22, 1972; 1954 ACS 79, p. 87, Eff. May 16, 1974.

R 408.15233 Debarkers.

Rule 5233. (1) A debarker shall be guarded by an enclosure or by location so as to protect an employee from flying bark and other debris. The enclosure shall have a window between the operator and debarker of ⅜-inch Plexiglas or material of equivalent or greater strength.

(2) Hold down rolls shall be used at the in-feed and out-feed sections of mechanical ring debarkers to control the movement of a log.

(3) Where an elevating ramp or gate is used, a means such as a chain or blocking shall be used to insure its suspension when an employee is required to work under it.

History: 1954 ACS 72, p. 64, Eff. June 22, 1972; 1954 ACS 79, p. 87, Eff. May 16, 1974; 1954 ACS 89, p. 93, Eff. Nov. 13, 1976.

R 408.15234 Carriages.

Rule 5234. (1) A stop or bumper with shock absorptive qualities shall be installed at the ends of carriage runways to prevent its leaving the track limits.

(2) Dogs shall hold a log, cant or board in such manner that the log, cant or board cannot escape from the carriage. Safeguards shall be installed to insure that if the electrical power fails, the pressure of the dog on the log will not release a log until the head saw has stopped.

(3) A carriage track sweeping device shall be used to keep track rails clear of debris.

(4) A barrier shall be provided to prevent entry of employees in the carriage travel area during sawing operations.

(5) A rider type carriage shall be provided with a platform, floor and barriers that will protect the rider at all times. At least 7 feet of clear space measured from the platform shall be provided overhead along the full carriage runway length.

(6) When a sawyer leaves his operating station, the carriage controls shall be locked out.

(7) When a powered carriage is returned to the end of the runway for maintenance work, a device shall be provided to prevent movement of the carriage.

(8) A means of egress shall be provided from the operator's station.

History: 1954 ACS 72, p. 64, Eff. June 22, 1972; 1954 ACS 79, p. 87, Eff. May 16, 1974.

R 408.15241 Head band saws and band resaws.

Rule 5241. (1) A head band saw and band resaw shall not be operated at a speed in excess of the manufacturer's rating. The rating shall be permanently marked on the wheel.

(2) A band saw blade shall not be used if it has a crack greater than $\frac{1}{10}$ of the blade width.

(3) A head band saw and band resaw shall be inspected monthly for defects which would affect its safe operation. A head band saw and band resaw shall not be used if a wheel has a loose hub, loose spokes or a cracked rim. A head band saw and band resaw shall have both wheels enclosed, except for that portion where the blade leaves and returns to the wheel. Materials used to enclose the wheels shall be at least 14 gauge sheet metal or material of equivalent or greater strength.

(4) A head band saw shall be provided with a saw catcher contructed to catch a runaway blade.

(5) An operator's work station for a head band saw shall have an enclosure to protect him from flying debris. The enclosure shall have a window between the operator and the saw of $\frac{3}{8}$-inch Plexiglas or material of equivalent or greater strength.

(6) If an elevating ramp or gate is used, it shall be provided with a safety chain, hook, or other means of suspension while an employee is underneath.

History: 1954 ACS 72, p. 64, Eff. June 22, 1972; 1954 ACS 79, p. 88, Eff. May 16, 1974; 1954 ACS 89, p. 94, Eff. Nov. 13, 1976.

R 408.15242 Circular head saws.

Rule 5242. (1) A circular head saw shall not be operated at a speed in excess of the manufacturer's rating which shall be etched on the blade. A circular head saw shall be equipped with guides to prevent blade wobble.

(2) Horizontal distance from a circular head saw blade to the nearest vertical husk part shall be at least 1 inch greater than the distance from the blade collar to the tip of the blade.

(3) Where live rolls are not used behind a circular head saw blade, the saw shall be equipped with a spreader wheel or a splitter.

(4) Where a splitter is used, it shall be constructed of tempered steel or its equivalent, and shall be thinner than the saw kerf and slightly thicker than the saw disk.

(5) The work station of an off-bearer shall not be within reach of the saw blade. The work station of an operator shall be enclosed as prescribed in R 408.15241(5).

(6) A portable circular saw mill shall have an enclosure on 3 sides of a sawyer to a height of at least 36 inches with the open side away from the carriage. Above this enclosure there shall be a piece of $\frac{3}{8}$-inch Plexiglas or material of equivalent or greater strength and of such height between the sawyer and the saw blade to protect the sawyer from flying objects.

History: 1954 ACS 72, p. 64, Eff. June 22, 1972.

R 408.15243 Double circular head saws.

Rule 5243. A double circular head saw shall comply with R 408.15242 and in addition have a movable guard or hood made of a minimum of 14 gauge sheet metal or material of equivalent or greater strength over the upper blade.

History: 1954 ACS 72, p. 65, Eff. June 22, 1972.

R 408.15244 Self-feed circular gang saws.

Rule 5244. (1) A bank of circular gang saws and their feed rolls, if so equipped, shall be enclosed by a cover over the top, front, and open ends, except where guarded by location. A drive mechanism to feed rolls shall be enclosed. The cover shall be made of a minimum of 14 gauge sheet metal, or material of equivalent or greater strength, and the bottom of the cover shall come within ⅜ inch of the plane formed by the bottom of the working surfaces of the feed rolls.

(2) A circular gang saw shall be equipped with an anti-kickback device. A circular gang saw shall be equipped with a live roll or other tailing device on the offside or shall be provided with a splitter as prescribed in R 408.15242(4).

(3) The carriage cradle of a whole log sash gang saw shall be of such height as to prevent a log from kicking out while being loaded.

History: 1954 ACS 72, p. 65, Eff. June 22, 1972; 1954 ACS 79, p. 88, Eff. May 16, 1974; 1954 ACS 89, p. 94, Eff. Nov. 13, 1976.

R 408.15245 Trimmer saw.

Rule 5245. (1) A trimmer saw shall be guarded by a barrier made of 11 gauge metal, or material of equivalent or greater strength, to contain the trimmings flying from the point of operation and to prevent an employee from coming in contact with any saw blade on the trimmer. The barrier shall be securely bolted to a substantial frame. This guard for a series of saws shall be set as close to the top of the trimmer table as practical.

(2) An automatic trimmer saw shall be provided with a safety stop or hanger to prevent saws from dropping on the table.

(3) The rear of a trimmer saw shall have a guard the full width of the saws and as much wider as practical.

(4) A trimmer saw shall not be run at peripheral speeds in excess of those recommended by the manufacturer.

History: 1954 ACS 72, p. 65, Eff. June 22, 1972; 1954 ACS 79, p. 88, Eff. May 16, 1974; 1954 ACS 89, p. 94, Eff. Nov. 13, 1976.

R 408.15246 Edger saws.

Rule 5246. (1) An edger shall not be located in the main roll case behind the head saw. Edger saw blades shall be guarded against unintentional contact.

(2) A control device shall be installed and located so that the operator can stop the pressure feed rolls without releasing their tension.

(3) An edger shall be equipped with:

(a) Pressure feed rolls. The rolls shall be guarded as prescribed in R 408.15228.

(b) An anti-kickback device.

(c) Live rolls or other tailing device on the offside which shall operate at a speed not less than the pressure feed rolls.

(4) Where a vertical arbor edger saw is located ahead of the head saw, it shall be so guarded that an employee cannot contact any part of the edger saw from his work station.

History: 1954 ACS 72, p. 65, Eff. June 22, 1972; 1954 ACS 79, p. 88, Eff. May 16, 1974.

R 408.15247 Bolt and cant saws.

Rule 5247. A bolt or cant saw shall have the point of operation guarded to prevent injury to the operator. A feeding mechanism such as powered live rolls or carriage shall be used. A tailing mechanism or splitter shall be equipped on the offside to remove the cut boards.

History: 1954 ACS 72, p. 65, Eff. June 22, 1972.

R 408.15251 Woodworking machines.

Rule 5251. An employer using machines and equipment more commonly found in a woodworking shop, including but not limited to, jointers, planers, mitre saws and swing cutoff saws, shall follow the occupational safety standards commission standard, Part 27. Woodworking Machinery, being R 408.12701 to R 408.12799 of the Michigan Administrative Code.

History: 1954 ACS 72, p. 65, Eff. June 22, 1972.

R 408.15252 Kilns.

Rule 5252. (1) A kiln door shall have a device to hold it open during a loading or unloading cycle. A counterweight for the kiln door shall be guarded as prescribed in rule 730 of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10730 of the Michigan Administrative Code. Installation of a kiln door shall be such that it will not topple if it becomes disengaged from the carriers or hangers.

(2) If procedures require access to a kiln:

(a) The kiln shall be provided with an escape hatch that opens from the inside, swings with the direction of travel and is located in or near the main kiln door.

(b) A passageway shall be provided on not less than 1 side or in the center of an end piled kiln, or on 2 sides of a cross piled kiln.

(3) A steam line less than 7 feet from the floor and in or by a walkway shall be covered with an insulating material or protected by a barrier.

(4) A kiln car shall be blocked by chocks to prevent unintentional movement.

(5) A kiln shall be constructed on a foundation capable of preventing the sagging of the tracks.

(6) Where a pit is provided, it shall be ventilated, drained and lighted and large enough to give the operator safe working space.

History: 1954 ACS 72, p. 65, Eff. June 22, 1972; 1954 ACS 79, p. 88, Eff. May 16, 1974.

R 408.15253 Storage and transfer of lumber.

Rule 5253. (1) Lumber shall be stacked on foundations constructed to support the maximum load without sinking, sagging or permitting the pile to topple. A pile of lumber which is not stable shall be restacked at once or the area guarded by a barrier.

(2) Long packages of lumber shall not be placed on short packages except where a stable pile can be made by use of package separators.

(3) Where necessary to insure stability, a package of lumber shall be provided stickers. A sticker shall extend to within 2 inches, plus or minus, of the full width of the package. Stickers shall be aligned 1 above the other.

(4) A load of lumber shall be built and secured to insure stability during transit.

History: 1954 ACS 72, p. 66, Eff. June 22, 1972; 1954 ACS 79, p. 89, Eff. May 16, 1974.

R 408.15254 Stackers and unstackers.

Rule 5254. (1) A stacker or unstacker shall be blocked whenever an employee goes beneath the hoisting platform.

Digitized by Google

(2) The lifting device on a stacker or unstacker shall be constructed or equipped with safety devices to minimize the potential of lumber falling.

(3) Guarding of stacker hoistway openings and lower landing shall be pursuant to R 408.10231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights.

(4) Where an operator has no clear view of the discharge path from a stacker, or in case of a discharge path of an automatic stacker, a barrier guard shall be provided to prevent an employee from entering the discharge path. In either case, a warning device shall be installed to alert an employee of the hazard.

History: 1954 ACS 72, p. 66, Eff. June 22, 1972.

PALLET EQUIPMENT

R 408.15261 Nailers.

Rule 5261. (1) A hand held, power operated nailer or stapler shall be equipped and maintained with a safety switch at the point of operation as well as a finger control switch.

(2) An automatic nailer or stapler shall have the point of operation guarded or enclosed to within ¼ inch of the material.

(3) Where a nailer or stapler has more than 1 operator, each operator shall be supplied with a control which shall be activated concurrently or the machine will not operate.

(4) A foot control shall be provided with a cover or guard to prevent accidental activation. The construction of the cover or guard shall be as prescribed in rule 2351 of the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12351 of the Michigan Administrative Code.

History: 1954 ACS 72, p. 66, Eff. June 22, 1972.

R 408.15262 Pallet notchers.

Rule 5262. A pallet notcher shall be equipped with a hood of such design to contain flying pieces and chips and prevent the hands of the operator from entering the point of operation. A method of feeding shall be provided to prevent kickbacks.

History: 1954 ACS 72, p. 66, Eff. June 22, 1972.

LOG AND MATERIAL HANDLING AND STORAGE

R 408.15271 Hauling trucks, egress, and pickup points.

Rule 5271. (1) A truck used to haul lumber or logs shall have a bulkhead extending to the top of the operator's compartment and capable of containing the movement of the load caused by a sudden stop.

(2) Stakes, stake pockets, binders and tighteners shall be provided on the truck to secure the load against movement. Where rollers are provided, not less than 2 shall be equipped with locks which shall be locked during transit.

(3) An area of restricted width or height shall be posted with a warning sign.

(4) Where accurate spotting is required to load and unload packages of lumber, those points shall be marked and wheel stop provided.

History: 1954 ACS 79, p. 89, Eff. May 16, 1974.

R 408.15272 Securing of truck loads.

Rule 5272. (1) A trip stake shall be released from the side of the truck or trailer opposite the location of the trip stake.

Digitized by Google

(2) When the entire load of logs are unloaded by a device or sling from a truck or trailer, in a single operation, the following shall apply:

(a) A binder shall not be released until the unloading lines or other unloading device secures the load.

(b) Binders shall be released only from the side on which the unloader operates, except when released by remote control devices or except when the person making the release is protected by racks or stanchions or other equivalent means.

(c) When a binder is fouled by the unloader, the load shall be secured by an extra binder of equivalent strength or otherwise secured until the fouled binder is removed.

History: 1954 ACS 79, p. 89, Eff. May 16, 1974.

R 408.15273 Log and material handling equipment.

Rule 5273. (1) Equipment used for handling logs and material shall be equipped with a braking system capable of holding the imposed load of equipment and material.

(2) A hydraulic system of log and material handling equipment shall be equipped with a valve capable of preventing uncontrolled descent of the load in case of failure of the system.

(3) Log and material handling equipment shall be equipped with a limit switch to prevent over-travel of the lift arms if the control device is not released in time.

(4) When a fork lift type handling machine is used, a means shall be used to secure a loading attachment to the forks.

(5) Where log and material handling mobile equipment lifts the load higher than an operator's head, overhead protection shall be provided not less than equivalent to that prescribed in R 408.12143 of the occupational safety standards commission standard, Part 21. Powered Industrial Trucks.

(6) An "A" frame and similar log handling devices shall be of such height to enable the load to be swung and provide clearance for crotch lines and spreader bars.

(7) Mobile log and material handling equipment shall be equipped with head and rear running lights when used during periods of darkness.

(8) Unloading devices shall have their movements coordinated by audible or hand signals when the operator's vision is obstructed or when operating near another employee.

(9) Wood pike poles shall be straight grained select material. Defective or blunt poles shall not be used. A handle for a pike pole used near conductors shall be of an insulating type of material.

(10) An ungrounded electrically powered hoist operated by a handheld remote control at grounded locations, such as a log dump or a mill log lift, shall be actuated by not more than 50 volts to ground.

(11) Where the operator is exposed to a hazard from backing the vehicle into objects, an approved platform guard shall be provided and so arranged as to not impede exit of driver from vehicle.

(12) All vehicles shall be equipped with audible warning signals and, where practicable, shall have spark arrestors.

(13) Carriers shall be so designed and constructed that the operator's field of vision shall not be unnecessarily restricted. Carriers shall be provided with an access ladder or equivalent.

(14) Railroad tracks and other hazardous crossings shall be plainly posted, and appropriate traffic control devices (see American national standard D8.1-1974 for

railroad-highway grade crossing protection) should be utilized. This standard may be inspected at the Lansing office of the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, and may be purchased at a cost of $2.50 from the American National Standards Institute, 1430 Broadway, New York, New York 10018.

(15) Periodic inspection of cable or dogging lines shall be made to determine when repair or removal from service is necessary.

(16) A vehicle shall not be operated with a load exceeding its safe load capacity.

(17) A vehicle without good operator rearward vision shall be equipped with a backup alarm.

History: 1954 ACS 79, p. 89, Eff. May 16, 1974; 1954 ACS 89, p. 94, Eff. Nov. 13, 1976.

R 408.15274 Log unloading and storage; general.

Rule 5274. (1) A log unloading area and road beds shall be arranged and maintained to allow a safe operation.

(2) Signs prohibiting unauthorized foot traffic shall be posted in the log unloading and storage area.

(3) A brow log or equivalent shall be provided at a water log dump to prevent overrun of mobile equipment.

(4) Except when entire loads are lifted from a transport vehicle, unloading lines shall be arranged so that the employee may attach the lines from the side opposite the dump or pond. Unloading or crotch lines shall be used in a manner to prevent a log from swinging or rolling back.

(5) An employee unloading a log by manual methods shall be provided a means to minimize the hazard of rolling and swinging logs.

(6) An approved life ring with a line shall be provided and maintained in a manner to retain buoyancy where employees work from a boat, floating log, boom stick or walkway along or on water.

(7) Where skids are used, space adequate to clear an employee's body shall be maintained between the top of the skids and the ground.

History: 1954 ACS 79, p. 90, Eff. May 16, 1974; 1954 ACS 89, p. 95, Eff. Nov. 13, 1976.

R 408.15275 Log booms and ponds.

Rule 5275. (1) Walkways and floats shall be installed and anchored to provide a passageway for an employee working on a log boom or at a pond.

(2) A boom stick and foot log shall be straight with no protruding knots or bark; shall be capable of supporting, above the waterline at either end, the employee and equipment and shall be fastened to other boom sticks by crossties or couplings.

(3) Permanent cable swifters shall be so arranged that it will not be necessary to roll the boom stick in order to attach or detach them.

(4) The bank of a log pond around the log haul shall be reinforced, if necessary, to prevent caving in.

(5) An artificial log pond shall be drained, cleaned and refilled when stagnation and pollution occur.

(6) A stiff boom shall be 2 float logs wide, secured by boom chains or other connecting devices, and of adequate width for working needs. The walking surface shall be free of loose material and maintained in good repair.

(7) A raft or float used to support a power donkey or other power driven equipment shall be capable of keeping the deck above water.

(8) A sorting gap shall have a stiff boom on each side.

(9) The deck of a pond boat shall have a slip-resistant surface. A powered pond boat shall have not less than 1 fire extinguisher as prescribed in the occupational safety standards commission standard, Part 8. Portable Fire Extinguishers, being R 408.10801 to R 408.10839 of the Michigan Administrative Code, and an approved life ring with line attached.

(10) Boat gasoline shall be transported and stored in an approved safety can.

(11) Inspection, maintenance and ventilation shall be provided to prevent accumulation of hazardous fumes in the bilge and cabin areas.

(12) An employee working over water shall wear an approved life jacket.

History: 1954 ACS 79, p. 90, Eff. May 16, 1974; 1954 ACS 89, p. 95, Eff. Nov. 13, 1976.

R 408.15276 Dry deck storage.

Rule 5276. (1) A dry deck storage area shall be maintained in a condition to allow safe operation of mobile equipment.

(2) Logs shall be stored in a safe and orderly manner. Logs shall be piled in the yard and arranged on the deck in a manner to prevent rolling.

(3) Roadways shall be maintained at such width that log and material handling equipment can move without creating a hazard to employees.

History: 1954 ACS 79, p. 91, Eff. May 16, 1974; 1954 ACS 89, p. 96, Eff. Nov. 13, 1976.

R 408.15277 Log hauls and slips.

Rule 5277. (1) A walkway along a log haul shall be provided a standard railing on the outer edge as prescribed in R 408.1233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights. Cleats or other means to insure good footing shall be provided to enable an employee to walk clear of the log chute.

(2) A log haul shall be designed, installed and maintained to allow the handling of logs in a safe manner.

(3) Log haul gear and bull chain drive shall be guarded as prescribed in the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10701 to R 408.10763 of the Michigan Administrative Code.

(4) A trough for the return strand of log haul chains shall be provided if it travels over a passageway.

(5) Log haul controls shall be located and identified at a position where the operator will be clear of logs, machinery, lines and rigging. Where the control is by lever exposed to incoming logs, the lever shall be arranged to operate the log haul only when moved toward the log slip or toward the log pond.

(6) A log well shall be provided with a means to prevent a log rolling back into the well from a log deck.

History: 1954 ACS 79, p. 91, Eff. May 16, 1974.

PART 53. TREE TRIMMING AND REMOVAL GENERAL PROVISIONS

R 408.15301 Scope.

Rule 5301. This part covers safety requirements for tools and equipment, their maintenance and repair, and the work practices used in spraying, trimming, pruning, repair and removal of trees by an employer and their use by an employee in, around and about a place of employment, except those operations considered to be logging or the harvesting of logs.

History: 1954 ACS 82, p. 118, Eff. Dec. 31, 1974.

R 408.15303 Definitions; B to I.

Rule 5303. (1) "Bucking" means to cut a felled tree into lengths.

(2) "Cabling" means to secure a limb into a position by means of a cable from the limb to another limb.

(3) "Chipper" means a mechanical device that reduces limbs and branches to small chips.

(4) "Direct contact" means to touch a conductor with a part of the body.

(5) "Felling" means to cut a tree from its stump.

(6) "Flammable liquid" means a liquid having a flash point below 100 degrees Fahrenheit.

(7) "Indirect contact" means to touch a conductor with a branch, limb, tool or equipment in contact with a body part.

History: 1954 ACS 82, p. 118, Eff. Dec. 31, 1974.

R 408.15304 Definitions; L to T.

Rule 5304. (1) "Limbing" means to cut limbs from a felled tree.

(2) "Qualified line clearance tree trimmer" means an employee trained to work in the proximity of energized conductors such as, but not limited to, an employee for an electric power or communications company.

(3) "Saddle belt or rope saddle" means a personal protective device used to support an employee when connected to a climbing rope or safety strap. The saddle belt or rope saddle encloses the waist and legs or hips of the wearer.

(4) "Safety strap" means a restraining line secured at both ends to a safety belt or saddle to hold an employee to a fixed object.

(5) "Scare line" means a rope used to attach tools or equipment to a safety belt or saddle.

(6) "System operator/owner" means the person or organization that operates or controls the electrical conductors involved.

(7) "Tree worker" means an employee who does tree pruning, trimming, repairing or removal and works with the equipment used in such operations.

(8) "Topping" means to cut off the uppermost parts of a tree.

History: 1954 ACS 82, p. 118, Eff. Dec. 31, 1974.

R 408.15311 Employer responsibility.

Rule 5311. An employer shall:

(a) Provide training to each new employee regarding the requirements of this standard, the job hazards and safeguards before starting his assigned job. A job briefing shall be conducted before any tree job involving unusual hazards is begun.

(b) Not allow a tool or equipment to be used which is not guarded according to state standards, has a defective guard or is otherwise unsafe.

(c) Develop rescue procedures such as, but not limited to, removal of injured, stricken or electrically shocked employees from work positions aloft.

History: 1954 ACS 82, p. 118, Eff. Dec. 31, 1974.

R 408.15312 Employee responsibility.

Rule 5312. An employee shall:

(a) Report to his leader or supervisor any tool, equipment or safeguard which is defective.

(b) Use personal protective equipment prescribed by the state safety standards.

(c) Not remove a guard except for authorized operational or maintenance purposes. The guard shall be replaced or equivalent guarding provided before the equipment is returned for normal use.

(d) Not operate any equipment unless trained in the operating procedures, hazards and safeguards and authorized to do so.

History: 1954 ACS 82, p. 118, Eff. Dec. 31, 1974.

R 408.15313 Personal protective equipment.

Rule 5313. (1) Eye protection, as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code, shall be worn by an employee working on any operation covered by this part.

(2) Head protection, as prescribed in the occupational safety standards commission standard, Part 32. Head Protection Equipment, being R 408.13201 to R 408.13241 of the Michigan Administrative Code, shall be worn by an employee working on any operation covered by this part.

(3) An approved safety belt, tree trimming saddle belt or rope saddle shall be provided by an employer and used by an employee when working aloft in a tree. A safety strap shall be worn and attached when aloft in the bucket of an aerial device. A saddle or safety belt made unsafe by damage, defect or alteration shall not be used.

(4) The hardware for such a belt shall be forged steel or metal of equivalent strength. The snap shall be the self-closing type and the support ring so designed as to prevent accidental disengagement.

(5) A climbing rope shall be not less than ½ inch (12.7 mm), 3 or 4 strand first grade manila with a nominal breaking strength of 2650 pounds (1202 kg, approx.) or its equivalent in strength and durability. A climbing rope shall not be used to lower tree parts or handle equipment. A climbing rope shall be inspected for defects before each day's use.

(6) When an employee is exposed to vehicular traffic, an orange colored jacket or vest shall be provided by the employer and worn by the employee. At nighttime the vest or jacket shall be reflectorized.

(7) Protective clothing and an approved respiratory device shall be provided by the employer and worn by the employee during tree spraying where necessary to prevent absorption and inhalation of toxic substances which exceed the maximum allowable limits set by the department of public health.

History: 1954 ACS 82, p. 119, Eff. Dec. 31, 1974.

R 408.15314 Fire prevention.

Rule 5314. (1) Flammable liquids shall be stored in an approved safety container equipped with an automatic closing cap and flame arrester.

(2) Equipment shall be stopped while being refueled, serviced or maintained. Restarting of portable equipment such as a chain saw shall be accomplished not less than 10 feet (3.05 M) from the refueling point.

(3) Smoking shall be prohibited while refueling.

History: 1954 ACS 82, p. 119, Eff. Dec. 31, 1974.

R 408.15315 Traffic control.

Rule 5315. Where the fall of a limb or tree would create a hazard for an employee, pedestrian or vehicular traffic, a means such as, but not limited to, a barrier or traffic control director shall be used to prevent injury.

History: 1954 ACS 82, p. 119, Eff. Dec. 31, 1974.

R 408.15321 Electrical hazards.

Rule 5321. (1) An electric conductor or communication line shall be considered energized unless the systems utility or owner indicates otherwise and they have visibly grounded the conductor or line.

(2) The location of underground utilities shall be determined before any digging or ditching operations are started.

(3) A tree worker or qualified line clearance tree trimmer shall not make a direct contact with an energized conductor.

(4) A tree worker shall maintain his body and tools not less than the distance prescribed in table 1 from an energized conductor. If these clearances cannot be maintained, the systems operator or owner shall be contacted to deenergize the conductor or provide protective measures or devices before the work is started.

(5) A qualified line clearance tree trimmer shall maintain his body and tools not less than the distance prescribed in table 2 from an energized conductor, except the trimmer may remove branches hanging on a conductor using approved insulated tools and equipment when the voltage is below 10 kv.

(6) A branch hanging on a conductor energized at more than 10 kv shall be removed after the line is deenergized or removed by an authorized and trained systems operator employee or owner employee using approved protective tools and equipment.

TABLE 1
Minimum Working Distances for Tree Workers

Voltage	Minimum Distance
0 to 300 volts	1 foot (.305 M)
301 to 750 volts	2 feet (.610 M)
751 to 50 kv	10 feet (3.05 M)
50 kv or more	10 feet (3.05 M) plus .4 inch per 100 volts

TABLE 2
Minimum Working Distances for Qualified Line Clearance Tree Trimmers

Voltage Range (phase to phase)	Minimum Working Distance
0 to 750 v	1 ft. (.305 M)
751 v to 35 kv	2 ft. 4 in. (.711 M)
35.1 kv to 46.0 kv	2 ft. 6 in. (.762 M)
46.1 kv to 72.5 kv	3 ft. 0 in. (.914 M)
72.6 kv to 121.0 kv	3 ft. 4 in. (1.016 M)
138.0 kv to 145.0 kv	3 ft. 6 in. (1.067 M)
161.0 kv to 169.0 kv	3 ft. 8 in. (1.118 M)

WORK PRACTICES

R 408.15331 Climbing.

Rule 5331. (1) An approved safety belt, tree trimming saddle belt or rope saddle shall be used by an employee when aloft.

(2) A climbing rope shall be crotched as soon as possible after the employee is aloft and located in a crotch, when possible, at a height over the work area as to swing the employee away from any conductor or line in case of a fall.

(3) The climbing employee shall remain tied in until the work is completed and he has returned to the ground.

(4) If it becomes necessary to recrotch, the employee aloft shall retie in or use a safety strap before releasing the previous tie.

(5) An employee shall not climb a tree during a storm or high wind or when covered with ice or snow, except when performing emergency service.

History: 1954 ACS 82, p. 120, Eff. Dec. 31, 1974.

R 408.15332 Pruning and trimming.

Rule 5332. (1) If another employee is present, a verbal warning shall be given by the employee aloft before dropping a limb.

(2) A separate work rope, controlled by an employee on the ground, shall be used to lower limbs which cannot be dropped. The work rope shall not use the same crotch over which the climbing rope is run.

(3) A cut branch or limb shall not be left aloft overnight or for an extended period unless the limb is secured to the tree or the area under the tree is roped off or barricaded.

(4) Whenever an employee is aloft in excess of 15 feet (4.572 M), a second employee or supervisor shall be within vocal hearing distance of the treed employee.

History: 1954 ACS 82, p. 120, Eff. Dec. 31, 1974.

R 408.15333 Limbing.

Rule 5333. (1) When possible, an employee cutting a limb shall work from the side opposite and uphill of the cut.

(2) Branches bent under tension shall be considered hazardous and the situation corrected.

History: 1954 ACS 82, p. 120, Eff. Dec. 31, 1974.

R 408.15334 Topping.

Rule 5334. (1) When topping, equipment such as a crane shall be used to lower branches and limbs if the tree cannot stand the strain.

(2) When lowering large limb sections, the employee aloft shall position himself, whenever possible, above the limb being lowered.

History: 1954 ACS 82, p. 121, Eff. Dec. 31, 1974.

R 408.15335 Cabling.

Rule 5335. When cabling:

(a) The limbs or branches to be connected shall be brought to position by a block and tackle, hand winch or come-along.

(b) Not more than 2 employees shall be aloft working at opposite ends.

(c) An employee on the ground shall not be directly under the work area.

(d) An employee shall be off to 1 side when releasing a block and tackle, hand winch or come-along in case the fasteners let loose.

History: 1954 ACS 82, p. 121, Eff. Dec. 31, 1974.

R 408.15336 Felling.

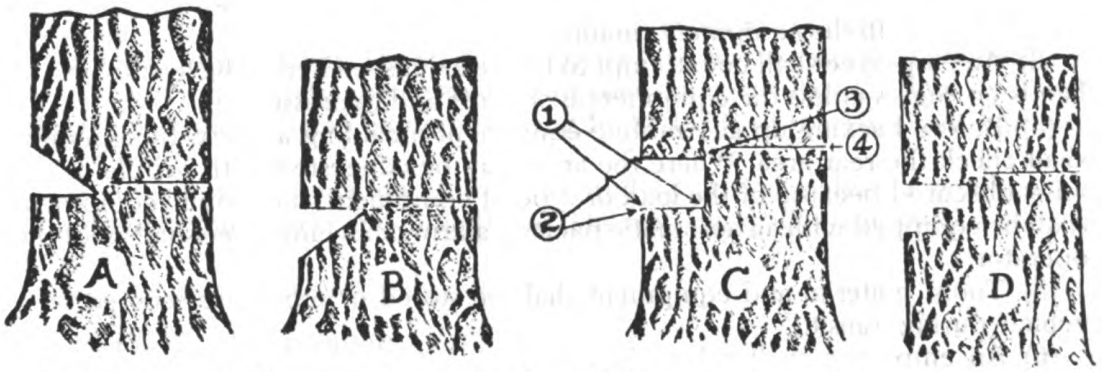
Rule 5336. (1) Before a cut is started, a feller shall check for other employees and dead limbs, angle of tree, wind condition, location of other trees and other hazards, and plan his path of retreat.

(2) Each assisting employee on the ground shall be instructed exactly what he is to do. Other employees shall be cleared to a distance of twice the height of the tree being cut.

(3) An undercut shall be large enough, about ⅓ the diameter, to safely guide the tree and reduce the possibility of the tree splitting. (See figure 1.)

(4) A back cut shall leave sufficient hinge wood (the distance between notch and back cut) to guide the tree's fall in the desired direction and to hold the tree to the stump during most of its fall. A back cut shall be about 2 inches (50.8 mm) above the undercut and as level as possible. (See figure 1.)

(5) Before starting a back cut, a feller shall clear the area of other persons or equipment.



(6) The saw shall be shut off before the feller starts his retreat.

(7) Where a tree is likely to slide or roll, a feller shall cut from the uphill side.

(8) Just before the tree is ready to fall, an audible warning shall be given.

(9) If there is danger of a tree falling the wrong way, such means as wedges, block and tackle or rope shall be used to control the fall.

FIGURE 1
Approved Undercuts

A. Conventional undercut. Can be made with parallel saw cut and axe diagonal cut or both cuts with the saw. Generally used on trees of small diameter.

B. Both cuts made with the saw. Leaves square-end log. Same as "A," except that waste is put on the stump.

C. Two parallel cuts with the saw. The material between the cuts is chipped out with an axe-adze (pulaski) combination. Used on trees over 30" in diameter.

D. Three parallel cuts with the saw, leaving a step. Same in principle as above. Used on trees of very large diameters.

History: 1954 ACS 82, p. 121, Eff. Dec. 31, 1974.

R 408.15337 Bucking.

Rule 5337. When bucking:

(a) An employee shall work from the uphill side.

(b) The log or limb shall be blocked to prevent rolling.

(c) Wedges shall be used on trunks and limbs of large trees to prevent binding the saw guide bar or chain.

History: 1954 ACS 82, p. 122, Eff. Dec. 31, 1974.

R 408.15338 Brush removal and chipping.

Rule 5338. (1) Cut brush and logs shall not be allowed to create a hazard in the work area.

(2) A chipper shall be fed from the side of the center line of the opening and the employee feeding the chipper shall immediately turn away when brush is taken into the rotor chamber. Where applicable, the chipper shall be fed from the curb side.

(3) An employee shall not place any part of the body on the chipper table nor shall the discharge chute be raised while the rotor is turning.

(4) Foreign material, such as stones, bottles, nails or sweepings, shall not be fed into the chipper.

(5) An employee feeding a chipper shall not wear attire such as clothing with loose sleeves, gauntlet gloves, watches or rings. Rings covered by gloves or tape will be considered to be in compliance.

History: 1954 ACS 82, p. 122, Eff. Dec. 31, 1974.

TOOLS AND EQUIPMENT

R 408.15341 Mobile equipment; general.

Rule 5341. (1) The muffler and exhaust pipe of mobile equipment used in tree trimming and removal operations shall be guarded or so located as to prevent contact by an employee during normal use.

(2) Defects or malfunctions of mobile equipment which affect its safe operation shall be corrected before being placed into use. During maintenance, the equipment shall be shut off and at rest, except when necessary to make adjustments with the equipment running.

(3) An employee shall not attempt to locate an unseen hydraulic leak by use of hands or fingers unless the equipment is shut off and depressurized.

(4) Before backing up any mobile equipment including a truck, the operator shall check the rear area. Where the area may be congested with people or the view obscured because of the load or type of equipment, the mobile equipment shall be equipped with an automatic back up alarm or an employee shall assist the operator.

(5) Tools, material and equipment shall be stored or otherwise secured on a vehicle during transit.

(6) An employee shall ride only in a designated seat of mobile equipment which is secured to the equipment, except as prescribed in R 408.15344(1).

(7) Mobile equipment shall not be operated at more than its rated capacity.

(8) Work platforms and steps on mobile equipment shall have a slip-resistant surface.

(9) A pad shall be set under an outrigger foot when it is put on a soft surface. Traction for outrigger feet shall be assured where ice and snow are present.

(10) When outriggers are provided on mobile equipment which is being used to lift or dig, the outriggers shall be extended. An audible warning such as a horn, bell or voice, shall be used when lowering outriggers.

History: 1954 ACS 82, p. 122, Eff. Dec. 31, 1974.

R 408.15342 Aerial lifts.

Rule 5342. (1) An aerial lift used for tree trimming, pruning or removal of a tree shall be used and maintained as prescribed in the occupational safety standards commission standard, Part 58. Vehicle Mounted and Rotating Work Platforms, being R 408.15801 to R 408.15832 of the Michigan Administrative Code.

(2) A bucket of an aerial lift shall not be depended on to be electrically insulated.

(3) An aerial lift shall not be used to lift or lower materials unless specifically designed to perform such operations.

(4) An employee shall not ride a bucket when the vehicle is moving.

History: 1954 ACS 82, p. 122, Eff. Dec. 31, 1974.

R 408.15343 Brush chippers.

Rule 5343. (1) A brush chipper shall be equipped with a locking device on the ignition system which shall be kept locked with the key removed when the chipper is unattended.

(2) Access panels for maintenance and adjustment shall be closed and secured before the equipment is operated.

(3) The infeed hopper or table of a chipper shall be of such design as to prevent an employee reaching the rotor blades or knives during normal operation.

(4) A trailer type chipper, when detached from a vehicle shall be chocked or otherwise secured.

(5) Flap type guards, designed to prevent kickback of chips, shall be installed at the feed opening of a chipper.

(6) A chipper rotor shall be blocked from turning when performing maintenance on the rotor.

History: 1954 ACS 82, p. 122, Eff. Dec. 31, 1974.

R 408.15344 Sprayers and related equipment.

Rule 5344. (1) An employee required to operate spray equipment from a moving vehicle shall wear a seat belt or be protected by a guardrail if operating from a standing position. The standard barrier shall be as prescribed in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10231 of the Michigan Administrative Code.

(2) An employee wearing clothing wetted by a flammable or combustible liquid shall avoid sparks and open flame. The clothing shall be removed as soon as possible.

History: 1954 ACS 82, p. 123, Eff. Dec. 31, 1974.

R 408.15345 Stump cutters.

Rule 5345. A stump cutter shall be equipped with enclosure guards to protect an employee from the rotating cutter and flying chips.

History: 1954 ACS 82, p. 123, Eff. Dec. 31, 1974.

R 408.15346 Trucks.

Rule 5346. (1) A truck used to haul brush, limbs and logs shall be equipped with a bulkhead that will contain any load shift stress to protect the occupants of the truck cab from load movement due to emergency stops.

(2) Trucks used to pull chippers or to transport logs and limbs shall comply with R 408.15341(4).

History: 1954 ACS 82, p. 123, Eff. Dec. 31, 1974.

R 408.15347 Log loaders, cranes and related hoists.

Rule 5347. (1) The operator of a log loader, crane and related hoists, when in use shall perform a daily visual inspection of ropes, wire ropes, gears, chain drives and other parts subject to wear or strain. When a part is found defective, it shall not be used until replaced or repaired.

(2) The operator shall not leave the controls while a load is suspended.

(3) Riding of a hoisted load shall be prohibited.

(4) The equipment shall have a conspicuously placed sign containing the following or equivalent wording: "Warning—Keep Clear of this Equipment When in Operation."

(5) A crane shall be operated and maintained as prescribed in the occupational safety standards commission standard, Part 19. Locomotive, Crawler and Truck Cranes, being R 408.11901 to R 408.11972 of the Michigan Administrative Code.

History: 1954 ACS 82, p. 123, Eff. Dec. 31, 1974.

R 408.15348 Off highway equipment and tracked vehicles.

Rule 5348. (1) An operator of off the highway equipment and tracked vehicles shall be protected by guarding from shifting trees and branches, including roll over protection and seat belts as prescribed in rules 1306 and 1317 of the construction safety standards commission standard, Part 13. Mobile Equipment, being R 408.41306 and R 408.41317 of the Michigan Administrative Code.

(2) The equipment shall be operated in a manner to protect the operator and other employees. The equipment shall be kept in gear when descending grades.

History: 1954 ACS 82, p. 123, Eff. Dec. 31, 1974.

HAND AND PORTABLE TOOLS

R 408.15351 Portable electric powered tools.

Rule 5351. (1) A portable electric powered tool shall not be used in a tree near an energized conductor where the tool or cord could possibly come in contact with the conductor.

(2) Unless a tool is powered by a nonelectric power source or is double insulated and so labeled, it shall be grounded.

(3) An extension cord shall have a connected ground wire, be free of defects and have no metal sockets.

(4) A portable electric powered tool operator shall:

(a) Use such a tool as prescribed in the occupational safety standards commission standard, Part 38. Hand and Portable Powered Tools, being R 408.13801 to R 408.13882 of the Michigan Administrative Code.

(b) Prevent the cords from being entangled, damaged or cut by blades and bits.

(c) Not lay an extension cord in water, unless it is not spliced and is waterproof with waterproof connections.

History: 1954 ACS 82, p. 123, Eff. Dec. 31, 1974.

R 408.15352 Power saws and pruners.

Rule 5352. (1) A power saw weighing more than 15 pounds (6.803 kg) that is used in a tree shall be supported by a separate work rope, except when working from an aerial lift.

(2) A scare line used to support a saw weighing less than 15 pounds (6.803 kg) shall be of such such length to allow the saw to swing clear of the operator.

(3) When starting a power saw, the operator shall have secure footing and the saw shall be firmly supported. The saw shall be started and operated when all other employees are in the clear.

(4) A power saw shall be operated and maintained as prescribed in the occupational safety standards commission standard, Part 38. Hand and Portable Powered Tools.

(5) A power saw shall not be raised to or lowered from a tree with the motor running.

(6) A saw motor shall not be left running when the saw is not use.

(7) Pneumatic or hydraulic tools powered from a bucket of a vehicle mounted and rotating work platform shall:

(a) Be inspected daily before use.

(b) Be secured on or from the bucket when aloft and not in use.

(c) Be disconnected from the power source for sharpening or adjustment.

(d) Have hoses of nonconductive material.

History: 1954 ACS 82, p. 124, Eff. Dec. 31, 1974.

R 408.15353 Back pack units.

Rule 5353. (1) Other employees shall maintain a distance of not less than 10 feet (3.05 M) from an operator of the cutting head of a back pack brush saw.

(2) The operator shall observe the location of all employees while the unit is running.

(3) The power unit shall be equipped with a shutoff switch readily accessible to the operator.

(4) The unit shall be stopped for all cleaning, refueling and repairs.

History: 1954 ACS 82, p. 124, Eff. Dec. 31, 1974.

R 408.15354 Hand tool safety; general.

Rule 5354. (1) An employee climbing aloft shall not carry a tool in his hand. A pole saw or pruner may be raised and hooked ahead of the climber. Other tools shall be raised and lowered by a hand line, carried on a tool belt or in a tool bag.

(2) A hand tool shall not be dropped from aloft.

(3) A hand tool shall be used and maintained as prescribed in the occupational safety standards commission standard, Part 38. Hand and Portable Powered Tools.

History: 1954 ACS 82, p. 124, Eff. Dec. 31, 1974.

R 408.15355 Pruners and saws.

Rule 5355. (1) A pole pruner, pole saw and other similar tool shall be equipped with a nonmetallic handle. The actuating cord shall be of nonmetallic material.

(2) A pole pruner or pole saw shall be hung securely in a vertical position to prevent dislodgement. A pole pruner or pole saw shall not be hung on a utility line or left in a tree overnight. A pole saw shall be hung so that the sharp edge is away from the employee.

(3) An aerial lift shall not be used to lift or lower materials unless specifically designed to perform such operations.

History: 1954 ACS 82, p. 124, Eff. Dec. 31, 1974.

R 408.15356 Herbicide injector tools.

Rule 5356. (1) The bit of a herbicide injector tool shall be covered with a shield and laid flat on the ground when not in use.

(2) The injector shall be carried by the loop handle on the downhill side with the bit shielded and facing the rear.

(3) An employee using a tool shall have firm footing and shall have cleared away all interfering brush.

History: 1954 ACS 82, p. 124, Eff. Dec. 31, 1974.

R 408.15357 Grub hose, mattocks, and picks.

Rule 5357. (1) The blade eye of a grub hoe, mattock, or pick shall be tight fitting and wedged so that it cannot slide down the handle.

(2) When swinging a tool, the employee shall have a secure grip and firm footing.

History: 1954 ACS 82, p. 125, Eff. Dec. 31, 1974.

R 408.15358 Cant hooks, cant dogs, tongs, and carrying bars.

Rule 5358. (1) The hooks of a cant hook, cant dog, tongs, or carrying bar shall be firmly set before applying pressure.

(2) The point of a hook shall be not less than 2 inches (50.8 mm) long and maintained sharp.

(3) Other employees shall be warned and in the clear before a log is moved.

(4) When rolling a log, the employee shall stand to the rear and uphill.

History: 1954 ACS 82, p. 125, Eff. Dec. 31, 1974.

R 408.15359 Tackle blocks and pulleys.

Rule 5359. A tackle block and pulley shall be inspected before each use and, if found defective, shall not be used.

History: 1954 ACS 82, p. 125, Eff. Dec. 31, 1974.

R 408.15360 Chopping tools.

Rule 5360. A chopping tool shall:

(a) Not be used while aloft.

(b) Not be used as a wedge or to drive a wedge.

(c) Be swung away from the feet, legs and body.

History: 1954 ACS 82, p. 125, Eff. Dec. 31, 1974.

R 408.15361 Ropes.

Rule 5361. (1) A rope shall be inspected before each day's use for the following conditions:

(a) Externally for abrasions, cut or broken fibers, decay, burns, lack of strength, softness, variation in size or roundness of the strands.

(b) Internally, by separating the strands at 3 foot (.914 M) intervals, for broken fibers, presence of grit, mildew or mold, color change of the fibers, or powdering, and short loose fibers.

(c) Wear or damage of a work rope where the tautline hitch is used. That section showing wear or damage shall be cut off.

(2) A rope showing any of the defects listed in subrule (1), which would constitute a hazard, shall be replaced.

(3) A rope shall be stored in a dry location in coils or on a reel.

(4) A wet rope shall be dried by placing it in the sunshine or a warm room by hanging loosely over a rounded peg or hook.

(5) A rope shall not be:

(a) Kinked or run over sharp corners.

(b) Used when frozen or left in freezing temperatures when wet.

(6) A climbing rope shall not be spliced.

(7) A climbing rope shall not be left aloft overnight.

History: 1954 ACS 82, p. 125, Eff. Dec. 31, 1974.

R 408.15362 Ladders.

Rule 5362. (1) A ladder made of metal or other conductive material shall not be used next to electrical conductors or wires within a distance equal to twice the

extended length of the ladder. Such ladders shall be marked: "Restricted use; do not use near electrical conductors."

(2) A ladder shall be used and maintained as prescribed in the occupational safety standards commission standard, Part 4. Portable Ladders, being R 408.10401 to R 408.10456 of the Michigan Administrative Code.

History: 1954 ACS 82, p. 125, Eff. Dec. 31, 1974.

R 408.15363 Climbing spurs.

Rule 5363. (1) Where climbing spurs are used, they shall be the tree climbing type with gaffs of the type and length suitable for the tree being climbed.

(2) Climbing spurs shall be inspected prior to each day's use for sharpness, length of gaff and proper type for the job. The climbing spurs shall be maintained sharp.

History: 1954 ACS 82, p. 125, Eff. Dec. 31, 1974.

PART 54. POWERED GROUNDSKEEPING EQUIPMENT GENERAL PROVISIONS

R 408.15401 Scope.

Rule 5401. This part provides rules for the construction, the maintenance and the safe operation of powered groundskeeping and related equipment and attachments by the employer and their safe use by the employee in, around or about a place of employment.

History: 1954 ACS 81, p. 85, Eff. Nov. 19, 1974.

R 408.15403 Definitions; A to E.

Rule 5403. (1) "Attachment" means detachable equipment, such as, but not limited to, a mower, snow thrower, tiller or sweeper designed for use with a propulsion vehicle.

(2) "Blade enclosure" means the guard around the periphery of the rotary mower blade.

(3) "Braking distance" means the distance traveled between the point of first application of the brake to the point at which the vehicle comes to rest.

(4) "Discharge guide" means the device which directs the snow from the impeller to the deposit area, and which is rotatable to deliver the snow in the desired direction.

(5) "Edger-trimmer" means a walk behind powered machine with a rotary blade designed to edge grass in a vertical position and trim grass when adjusted to a horizontal position.

History: 1954 ACS 81, p. 85, Eff. Nov. 19, 1974.

R 408.15404 Definitions; F to P.

Rule 5404. (1) "Foot protection" means footwear such as, but not limited to, safety shoes or strap on foot guards.

(2) "Grass catcher" means a part or a combination of parts which provides a means for collecting grass clippings and other debris.

(3) "Groundskeeping equipment" means that equipment such as, but not limited to, lawn mowers, lawn and garden tractors, leaf blowers, snow throwers, shredders, compost mills and tillers used to maintain lawns, gardens, walks and drives.

(4) "Impeller" means a final power driven device which imparts energy to discharge the snow.

(5) "Power reel mower" means a grass cutting machine which uses a power source to rotate 1 or more helically formed blades about a horizontal axis to provide a shearing action with a stationary cutter bar.

(6) "Power rotary mower" means a grass cutting machine which uses a power source to rotate 1 or more blades about a vertical axis.

History: 1954 ACS 81, p. 85, Eff. Nov. 19, 1974.

R 408.15405 Definitions; R, S.

Rule 5405. (1) "Riding garden tractor" means a self-propelled riding vehicle designed for general purpose lawn and garden work by use of attachments and which produces less than 1,500 pounds but more than 500 pounds of draw bar pull.

(2) "Riding lawn tractor" means a self-propelled riding vehicle designed for general purpose lawn work by use of separate attachments.

(3) "Riding mower" means a self-propelled riding vehicle designed specifically for cutting grass.

(4) "Rotary tiller" means a powered machine with steel tines attached to a horizontal shaft which revolves to till soil.

(5) "Shredder bagger" means a machine with a rotating device which breaks up debris such as leaves, twigs and small branches and packs it into a catcher or bag.

(6) "Single stage snow thrower" means a snow thrower which incorporates the impeller into the collector either at the end of the collector or in the middle.

(7) "Snow thrower" means a machine designed to move snow from 1 area to another.

(8) "Snow thrower collector" means an auger or similar device used to collect snow.

History: 1954 ACS 81, p. 85, Eff. Nov. 19, 1974.

R 408.15406 Definitions; T to W.

Rule 5406. (1) "Tip speed" means the distance a rotary blade tip covers in 1 minute, or circumference in feet times revolution during a 1 minute interval.

(2) "Two stage snow thrower" means a snow thrower with the impeller as a separate unit from the collector.

(3) "Walk-behind mower" means a grass cutting machine either pushed or self-propelled, controlled by an operator walking behind the unit.

(4) "Walk-behind snow thrower" means a snow thrower either pushed or self-propelled, controlled by an operator walking behind the unit.

History: 1954 ACS 81, p. 86, Eff. Nov. 19, 1974.

R 408.15411 Employer responsibility.

Rule 5411. An employer shall:

(a) Provide training to an operator of powered groundskeeping and related equipment regarding the operating procedures, hazards and safeguards of his assigned job.

(b) Require that personal protective equipment necessary to protect the employee from the recognized hazards of the equipment be worn.

(c) Not allow powered groundskeeping and related equipment to be operated which is not guarded as prescribed by this part, or which has a known defect that could affect the safety of the operator.

(d) Not allow powered groundskeeping equipment and attachments to be used for operations other than those for which the equipment was designed.

History: 1954 ACS 81, p. 86, Eff. Nov. 19, 1974.

R 408.15412 Employee responsibilities.

Rule 5412. An employee shall:

(a) Use personal protective equipment required by this part.

(b) Report to his supervisor any equipment or safeguard which is found defective.

(c) Not operate, lubricate or provide maintenance of any equipment until he is trained in the operation, lubrication, maintenance procedures, hazards and safeguards and has been authorized to do so.

(d) Not remove a guard except for authorized maintenance purposes. The guard shall be replaced before the machine is returned to operation.

History: 1954 ACS 81, p. 86, Eff. Nov. 19, 1974.

R 408.15413 Personal protective equipment.

Rule 5413. (1) An operator of powered groundskeeping equipment subjected to a noise level in excess of that established by the department of public health, shall be provided with hearing protection prescribed by the department of public health.

(2) When operating powered groundskeeping equipment an operator shall wear safety glasses in accordance with and as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(3) An operator of a walk-behind power rotary mower shall not wear open toed or canvas type shoes.

(4) An operator of a power rotary mower shall wear foot protection.

History: 1954 ACS 81, p. 86, Eff. Nov. 19, 1974.

R 408.15414 Lubrication and maintenance.

Rule 5414. Equipment covered by this part shall be shut off or disconnected during lubrication and maintenance, except when it is necessary to make adjustments with the power on.

History: 1954 ACS 81, p. 86, Eff. Nov. 19, 1974.

R 408.15415 Labeling.

Rule 5415. (1) All positions of an operating control shall be legibly identified by durable labels.

(2) Self-propelled groundskeeping equipment shall have a durable label at the engine starting control point with the wording, or similar wording, "Caution. Be sure the operating control is in neutral before starting engine."

(3) A walk-behind or riding rotary mower shall have labeled warning instructions at or near the discharge opening stating, "Caution. Mower shall not be used unless the opening guard or grass catcher is in place."

(4) A riding mower shall have a durable label installed in a place where the operator can readily see it stating, "Caution:

(a) Keep all guards and shields in place.

(b) Before leaving the operator's position, shift the transmission to neutral, set parking brake and disengage attachment clutch.

(c) Wait for all movement to stop before servicing machine."

(5) A snow thrower shall have a labeled warning instruction on the discharge guide stating, "Warning—Keep hands out of discharge guide while engine is running."

(6) A labeled warning instruction, "Caution—Keep hands and feet clear of collector while engine is running," shall be placed on the collector housing of a snow thrower.

History: 1954 ACS 81, p. 86, Eff. Nov. 19, 1974.

R 408.15416 Operating rules; general.

Rule 5416. (1) A gas tank shall not be filled:

(a) Indoors, except in an area conforming to the requirements of the state fire marshal, flammable liquids regulations, being R 28.601 to R 28.739 of the Michigan Administrative Code.

(b) While the engine is running.

(c) While a source of ignition is present in the immediate area.

(2) A portable container used for refueling shall be an approved safety can with an automatic closing cap and flame arrester.

(3) Spills of gasoline shall be cleaned up immediately.

(4) The drive mechanism shall be disengaged before starting the motor or engine.

(5) An engine or motor governor adjustment shall not be made or changed to create an overspeed condition.

(6) A rotary mower blade shall be stopped while traveling over loose gravel drives or walks.

(7) An engine or motor shall be stopped and an inspection made after striking a foreign object with a machine or if a vibration develops.

(8) An engine or motor shall be stopped when clearing a clog or a jam or when removing an attachment.

(9) An area to be mowed shall be checked and cleared of any object which might be picked up and thrown by the blade.

(10) The discharge of material shall not be directed at another employee.

(11) Groundskeeping equipment shall not be left running, unattended, if the operator is beyond vision or more than 25 feet away from the equipment.

(12) Groundskeeping equipment, without approved double insulation and powered by 110 volts or more, shall be connected to a grounded service outlet. Extension cords used with such equipment shall be the 3-wire grounded type and shall be of a contrasting color to the foliage such as, but not limited to, orange or yellow.

History: 1954 ACS 81, p. 87, Eff. Nov. 19, 1974.

SPECIFIC PROVISIONS

R 408.15421 Construction; general.

Rule 5421. (1) A foot pedal of groundskeeping and related equipment shall have a slip resistant surface or other means to reduce the likelihood of the foot from slipping off the pedal.

(2) All means of power transmission, such as, but not limited to, rotating shafts, chains, belts, pulleys and sprockets, shall be located or guarded to prevent accidental contact.

(3) Groundskeeping equipment, powered by 110 volts or more, shall be equipped with 3-wire ground cords or have approved double insulation.

(4) A splash shield shall be provided where splash or overflow of gasoline could strike a muffler or other hot surface.

(5) Hot surfaces which could cause burns and are exposed to contact shall be insulated or guarded.

(6) All guards or shields shall be permanently mounted or detachable only by use of tools.

(7) A shut off device shall be provided on the power unit to stop the operation of the motor or engine. This device shall require manual and intentional reactivation to restart the motor or engine.

History: 1954 ACS 81, p. 87, Eff. Nov. 19, 1974.

R 408.15422 Construction; powered mowers; lawn and garden tractors.

Rule 5422. (1) A new powered lawn mower, lawn or garden tractor and its attachments, purchased after the effective date of this part, shall bear a permanently attached tag or label to show certification with the requirements of ANSI B71.1-1972 standard, safety specifications for power lawn mowers, lawn and garden tractors and lawn tractors, which is incorporated herein by reference. This standard is available for inspection at the Lansing office of the department of labor and may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, 300 East Michigan Avenue, Lansing, Michigan 48926, at a cost of $4.50 each.

(2) The maximum tip speed of a rotary lawn mower blade shall be not more than the rated speed, but never more than 19,000 surface feet per minute.

(3) A rotary mower shall be equipped with a blade enclosure except the discharge opening around the tip travel path of the blade and the enclosure shall extend not less than ⅛ inch below the lowest cutting edge of the blade when set at the lowest blade position.

(4) A rotary mower shall be equipped with a guard at the discharge opening which may be removed or folded back only to install a grass catcher assembly. The following shall be accomplished when a grass catcher is installed:

(a) A warning label prescribed in R 408.15415(3) shall be installed.

(b) The grass catcher assembly shall not create a condition which violates the limits prescribed in subrule (3) for the guarded opening.

History: 1954 ACS 81, p. 88, Eff. Nov. 19, 1974.

R 408.15423 Construction; walk-behind mowers.

Rule 5423. (1) A handle for a walk-behind mower shall be secured to the mower to prevent unintentional uncoupling.

(2) A positive upper limit stop or latch shall be provided for the handle of a walk-behind mower at the upper normal position. It shall take a positive action by the operator to release a swing over handle for moving to the opposite side.

(3) A walk-behind rotary mower shall have 1 of the following at the discharge opening:

(a) A minimum unobstructed distance of 3 inches from the end of the discharge chute to the blade tip.

(b) A rigid bar fastened across the discharge opening and secured to prevent removal without tools. The bottom of the bar shall be no higher than the bottom of the blade enclosure.

History: 1954 ACS 81, p. 88, Eff. Nov. 19, 1974.

R 408.15424 Construction; towed rotary mowers.

Rule 5424. A towed rotary mower attachment shall not have a front opening in the blade enclosure.

History: 1954 ACS 81, p. 88, Eff. Nov. 19, 1974.

R 408.15425 Construction; riding rotary mowers.

Rule 5425. (1) A riding rotary mower shall have 1 of the following at the discharge opening:

(a) A minimum unobstructed distance of 6 inches from the end of the discharge chute to the blade tip.

(b) A rigid bar as prescribed in R 408.15423(3)(b).

(2) A riding rotary mower shall be provided with stops to prevent locking of the steering mechanism.

History: 1954 ACS 81, p. 88, Eff. Nov. 19, 1974.

R 408.15426 Construction; snow throwers; general.

Rule 5426. (1) The speed of the collector shall not be more than the manufacturer's rated speed.

(2) The impeller of a 2-stage snow thrower shall not be more than the manufacturer's rated speed.

(3) A snow thrower collector housing shall extend to the front of the auger travel path on both sides.

(4) The collector shall incorporate a shear bolt or slip clutch protection against a blockage of the collector.

(5) The discharge guide rotating mechanism shall not be capable of delivering snow into the operator's area.

History: 1954 ACS 81, p. 88, Eff. Nov. 19, 1974.

R 408.15427 Construction; walk-behind snow throwers.

Rule 5427. (1) A handle for a walk-behind snow thrower shall be secured to the snow thrower to prevent unintentional uncoupling.

(2) A positive upper limit stop or latch shall be provided for the handle of a walk-behind snow thrower at the upper normal position.

History: 1954 ACS 81, p. 89, Eff. Nov. 19, 1974.

R 408.15428 Construction; riding snow throwers.

Rule 5428. (1) A riding snow thrower shall be provided with stops to prevent locking of the steering mechanism.

(2) The snow thrower controls shall be accessible to the operator from the operator's control position.

(3) A snow thrower shall have adjustable skid shoes or gauge wheels to control operating height.

History: 1954 ACS 81, p. 89, Eff. Nov. 19, 1974.

R 408.15429 Controls; self-propelled walk-behind mowers and snow throwers.

Rule 5429. (1) The traction drive directional control lever, when provided on a self-propelled walk-behind mower or snow thrower, shall be moved forward to cause the machine to move forward and rearward to move in reverse.

(2) The throttle control of a self-propelled mower or snow thrower, if separate from the directional control, shall be moved forward or upward to increase speed and rearward or downward to decrease speed.

History: 1954 ACS 81, p. 89, Eff. Nov. 19, 1974.

R 408.15431 Braking; riding vehicles.

Rule 5431. (1) A riding vehicle and attachment combination shall have a service brake capable of stopping the vehicle in a distance of 2 feet for each mile

Digitized by Google

per hour of vehicle velocity. The test shall include an operator weighing not less than 200 pounds and be conducted on a dry, smooth, hard surface.

(2) A parking brake of a riding vehicle shall be capable of holding the vehicle with its heaviest attachment and an operator weighing not less than 200 pounds on a 30%, 16.7 degree slope with the surface smooth, the transmission in neutral, and the motor shut off.

History: 1954 ACS 81, p. 89, Eff. Nov. 19, 1974.

R 408.15442 Operating rules; walk-behind mowers.

Rule 5442. (1) A walk-behind mower shall be moved across the face of a slope of more than 17 degrees, never up and down, except by use of a rope to raise and lower the mower while standing at the top of the slope.

(2) An electric powered walk-behind mower shall be shut off and disconnected from the electrical source when cleaning, repairing or adjusting.

(3) The operator shall maintain direct control of a self-propelled, walk-behind mower. The operator shall adjust the ground speed to his gait for proper control.

History: 1954 ACS 81, p. 89, Eff. Nov. 19, 1974.

R 408.15443 Operating rules; riding vehicles.

Rule 5443. (1) A riding vehicle shall not carry a passenger other than the operator.

(2) The source of power to an attachment of a riding vehicle shall be disengaged when the attachment is not in use or is being transported.

(3) When a riding vehicle is left unattended, the steps listed in R 408.15415(4)(b) shall be followed.

(4) Riding groundskeeping equipment shall not be operated up or down a slope of more than 26 degrees or move across the face of a slope of more than 17 degrees.

(5) A deviation from the requirement of subrule (4) may be obtained from the department of labor by presenting special design or modification criteria which shows an ability to perform safely on a specific slope of a greater degree without slipping or tipping.

History: 1954 ACS 81, p. 89, Eff. Nov. 19, 1974.

R 408.15444 Operating rules; snow throwers.

Rule 5444. (1) When necessary to operate a snow thrower over graveled areas, the snow thrower shall be placed in its highest operating position.

(2) An area to be cleared of snow shall be checked and cleared of any visible object that might stop the collector or be picked up and then thrown by the impeller.

(3) The collector clutch shall be disengaged when adjusting the deflector guide upward and downward.

(4) An employee shall not attempt to clear the discharge guide with the engine running.

(5) An operator shall maintain direct control of a self-propelled, walk-behind snow thrower. The operator shall adjust ground speed to his gait for control.

History: 1954 ACS 81, p. 90, Eff. Nov. 19, 1974.

R 408.15451 Shredder baggers and compost mills.

Rule 5451. (1) The power of a shredder bagger or compost mill shall be shut off and all motion stopped before moving it.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA

(2) A clog or jam in a shredder bagger or compost mill shall not be cleared until the power has been shut off and all motion stopped.

(3) The hopper feed opening of a shredder bagger or compost mill shall be of such distance from the cutting knives or impeller so that an operator cannot make contact or a guarding means shall be employed. A baffle gate shall be installed at the feed opening of a hopper to reduce hazard of kickbacks.

(4) The discharge opening shall be covered by a guard, container or catcher whenever the shredder bagger or compost mill is under power.

History: 1954 ACS 81, p. 90, Eff. Nov. 19, 1974.

R 408.15452 Edger-trimmer.

Rule 5452. (1) The cutting blade of an edger-trimmer shall be covered with a guard to prevent foreign objects from being discharged into the operator's area or at an angle above 15 degrees from the ground.

(2) The power shall be shut off when:

(a) Converting from edging to trimming operation or from trimming to edging.

(b) Moving from 1 location to another or when traveling over loose gravel drives and walks.

History: 1954 ACS 81, p. 90, Eff. Nov. 19, 1974.

R 408.15461 Rotary tillers.

Rule 5461. (1) The power to the tines of a rotary tiller shall not be used as a means to transport the tiller from 1 location to another location.

(2) Rocks or other entanglements shall not be removed from the tines until the power has been shut off and all motion stopped.

(3) The tine area shall be operated or shielded in such a manner as to prevent debris or other missiles from being thrown.

(4) An operator shall maintain direct control of the rotary tiller. The operator shall adjust the ground speed to his gait for control.

History: 1954 ACS 81, p. 90, Eff. Nov. 19, 1974.

PART 57. OIL AND GAS DRILLING AND SERVICING OPERATIONS

R 408.15701 Scope.

Rule 5701. This part pertains to the construction, operation, and maintenance of equipment and related practices for the safety of employees as they pertain to the drilling and servicing of oil and gas well operations.

History: 1954 ACS 101, p. 59, Eff. Nov. 23, 1979.

R 408.15703 Definitions; A to C.

Rule 5703. (1) "Acidizing" means the act of pumping an acidic solution into a wellbore to remove any materials from the perforations, pipe, and walls of the producing formation and includes the act of pumping the substance into formations to improve permeability.

(2) "Blocks, crown and traveling" mean the fixed upper and movable lower blocks, respectively, of the block and tackle assembly on a rig that raises and lowers the drill string or tubing.

(3) "Blowout" means an uncontrolled flow of well fluids or formation fluids, or both, from the wellbore into the atmosphere or lower pressured subsurface zones (underground blowout).

(4) "Blowout preventer" means a device attached to the wellhead that allows the well to be sealed to confine the well fluids in the wellbore.

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(5) "Casing" means pipe installed in the wellbore and cemented in place to retain the borehole dimension and seal off hydrocarbon and water-bearing formations. The following are types of casing:

(a) Surface casing. Outside and first casing string installed in the wellbore, except for drive pipe or conductor pipe, to seal off surface formations and provide blowout protection, and prevent loss of circulation while drilling deeper.

(b) Protective (intermediate) casing. Pipe string installed inside surface casing in wells of such depth that drilling fluid cannot be balanced because of simultaneous lost circulation and high pressure entry of another zone or in regions where abnormal pressure gradients are encountered.

(c) Production casing. Full length pipe string extending between the wellhead and elevation, at, above, or below pay formation, inside protective surface casing and cemented in place to seal off productive zones and water-bearing formations.

(d) Liner. A string of casing whose top is located below the surface of the ground.

(e) Tubing. Pipe installed in the wellbore inside all casing strings and extending between the wellhead to an elevation below or above the formation through which formation fluids normally are transported to the surface.

(6) "Cathead" means a concave, rotating, pulley-type device mounted on the end of a shaft of the draw works. Catlines are used with a cathead to lift equipment around a rig.

(7) "Catwalk" means an elongated platform to the side of a rig where pipe is laid out and lifted into the derrick. A catwalk is connected to the rig floor by a pipe ramp.

(8) "Cellar" means an excavation around the wellhead to provide space for items of equipment at the top of the wellbore. A cellar serves as a pit to collect drainage of water and other fluids.

(9) "Cementing" means the act of pumping a slurry into a wellbore to perform functions such as supporting and sealing casing, isolating formations behind casing, protecting freshwater formations, and sealing perforations in casing.

(10) "Christmas tree" means the term applied to the valves and fittings assembled at the top of a completed well to control the flow of hydrocarbons and other fluids.

History: 1954 ACS 101, p. 59, Eff. Nov. 23, 1979.

R 408.15704 Definitions; D to F.

Rule 5704. (1) "Derrick," sometimes called a mast, means the steel tower component of a drilling or well servicing rig when used to support the crown block, traveling block, and hoisting lines. Derricks and masts may be stationary structures normally requiring dismantling and disassembly when moved from location to location, or may be portable with the capability of being laid down and raised to and from ground level fully assembled.

(2) "Drill pipe" means a length of steel tube to which special threaded connections called tool joints are attached. Several lengths jointed together are called a drill string.

(3) "Drill stem" means the entire drilling assembly from the swivel to the bit composed of the kelly, drill string, subs, drill collars, and other downhole tools such as stabilizers and reamers. This assembly is used to rotate the bit and carry the drilling fluid into the bit.

(4) "Drilling line," sometimes called a hoisting line, means the wire line used in the main rig hoisting system, 1 end of which is attached to the hoisting drum. This line does not include a tugger line.

Digitized by Google

(5) "Drilling rig" means the equipment and machinery assembled primarily for the purpose of drilling or boring a hole in the ground.

(6) "Elevator" means a mechanical device attached to the traveling block that latches around and supports the pipe during hoisting.

(7) "External guylines" means lines that run from some point in the derrick, mast, or pole to ground anchors (deadmen) or to a special substructure or derrick base which provides a substitute for ground anchors to provide stability.

(8) "Freezing operation" means the creation of a plug by freezing a liquid slug in a pipe or fitting to confine the pressure while removing defective or inadequate equipment downstream of the plug.

History: 1954 ACS 101, p. 59, Eff. Nov. 23, 1979.

R 408.15705 Definitions; H to O.

Rule 5705. (1) "Hole" is a term that usually refers to the wellbore.

(2) "Hydraulic fracturing" means the act of pumping fluids into a wellbore and into a specific formation to induce fractures.

(3) "Kelly" means the square or hexagonal shaped steel pipe connecting the swivel to the drill pipe. The kelly moves through the kelly bushing and the rotary table and transmits torque to the drill string.

(4) "Making a connection" means the act of screwing a joint of pipe or rods onto the string suspended in the wellbore.

(5) "Mud box" means a device used to wrap around pipe connections to deflect fluid released when a joint or stand of pipe containing liquid is unscrewed.

(6) "Nip point" means the point where the wire line becomes tangent to a sheave.

(7) "Oil saver" means a pressure sealing gland arrangement used to prevent leakage and waste of gas, oil, or water around a wire line when servicing a well. It may be operated by mechanical or hydraulic means.

(8) "Open hole" means the uncased part of the wellbore.

(9) "Outriggers" means structural extensions of the mast or pole base protruding at approximately 90 degrees from the longitudinal axis of the rig to provide overturn stability.

History: 1954 ACS 101, p. 60, Eff. Nov. 23, 1979.

R 408.15706 Definitions; P to R.

Rule 5706. (1) "Perforating" means the act of making holes in pipe, cement, or formation at desired depths. Perforations are usually formed with an explosive device utilizing bullets or shaped charges.

(2) "Pipe racking board guylines," sometimes called tubing board guylines, means lines that run from racking board to ground anchors or special substructure or base which provides a substitute for ground anchors.

(3) "Pipe tapping," sometimes called hot tapping, means the act of drilling a hole in the side of pipe that is under pressure. A special saddle is used to attach a valve and lubricator to the pipe. The saddle and valve remain on the pipe after the tapping operation is completed.

(4) "Pole mast" means a structure consisting of 1 or more tubular sections, telescoping or not telescoping, which are the load-bearing members. The structure, when erected to working position, usually requires guylines. It may be attached to a carrier, skid base, or substructure. It is used in place of a derrick.

(5) "Pumping unit" means surface equipment assembled for the purpose of mechanically lifting fluids from a well.

(6) "Qualified employee" means a person who, by possession of a recognized degree, certificate, or professional standing, or who by knowledge, training, or experience, has successfully demonstrated the ability to perform work relating to the subject matter or the subject.

(7) "Rigging up" means the onsite erection and connection of the rig components in preparation for drilling or well servicing operations.

(8) "Rod," sometimes called a sucker rod, means a special steel rod, a number of which are screwed together to make up the mechanical link from the surface pumping unit to the pump in the well.

History: 1954 ACS 101, p. 60, Eff. Nov. 23, 1979.

R 408.15707 Definitions; S.

Rule 5707. (1) "Safety valve" means a valve available for quick installation in the pipe string to prevent flow.

(2) "Snubbing" means pulling or running pipe under pressure through a resilient sealing element where special equipment is used to apply external force to push the pipe into the well or to control the pipe movement out of the well.

(3) "Special services" means those operations requiring specialized equipment and personnel to perform work processes to support well drilling and servicing operations.

(4) "Stabbing a valve" means aligning and screwing a valve onto the end of a pipe.

(5) "Stripping" means pulling or running pipe under pressure through a resilient sealing element.

(6) "Substructure" means a structure that surrounds the wellbore at the surface and provides the working area for certain employees. It may contain the rotary table.

(7) "Swabbing" means the planned lifting of well fluids to the surface using a piston-like device installed on a wireline. Swabbing may inadvertently occur due to piston action as pipe or assemblies are pulled from the well.

(8) "Swivel" means a device at top of the drill stem that permits circulation of fluids and rotation of the drill string.

History: 1954 ACS 101, p. 61, Eff. Nov. 23, 1979.

R 408.15708 Definitions; T to W.

Rule 5708. (1) "Tour" means the work period of a rig crew and is usually pronounced as if it were spelled "t-o-w-e-r."

(2) "Tugger line" means a wire rope line powered by a motor, pneumatic, hydraulic, or other, and used for the controlled lifting and lowering of light loads around a rig.

(3) "Valve drilling operation" means the drilling of a hole through the blocking element of a valve that is stuck in the closed position with pressure on the well side of the valve. The drilling is accomplished through a lubricator that confines the pressure after the valve is penetrated.

(4) "Well servicing rig" means equipment and machinery assembled primarily for the purpose of any well work process, to include, but not limited to, redrilling, completing, recompleting, workover, sucker rod or tubing pulling, and abandoning operations.

(5) "Wireline wiper" means a device used to wipe off oil, mud, or liquid from a wireline as it is pulled out of the well.

History: 1954 ACS 101, p. 61, Eff. Nov. 23, 1979.

R 408.15711 Employer and employee responsibility.

Rule 5711. (1) The employer shall do all of the following:

(a) Provide training to an employee regarding the operating procedures, hazards, and safeguards of the assigned task, including the safe handling and use of hazardous substances and the personal protective equipment required.

(b) Assure that the employee uses the personal protective equipment as prescribed in this part.

(c) Not permit equipment to be operated that is not guarded according to state standards, has a defective guard, or is otherwise unsafe. A rotary table, cathead, kelly, and kelly bushing need not be guarded.

(d) Assure that vehicles not involved in the immediate rig operation are parked a minimum distance of 100 feet upwind from the wellbore or a distance equal to the height of the derrick or mast, whichever is greater. Equivalent safety measures shall be taken where terrain, location, or other conditions do not permit this spacing.

(e) Telephone numbers, location, and other relevant information pertaining to the availability of medical personnel and facilities shall be posted at all drilling and well servicing sites by the well drilling contractor or the well service contractor.

(2) An employee shall do all of the following:

(a) Not use equipment until trained in its operating procedures, hazards, and safeguards and until authorized to do so.

(b) Report to the supervisor any equipment or safeguard that is defective.

(c) Use personal protective equipment prescribed by this part.

(d) Replace any guard or safeguard removed for inspection, maintenance, or set up before operating the equipment.

History: 1954 ACS 101, p. 61, Eff. Nov. 23, 1979.

R 408.15712 Personal protective equipment and methods.

Rule 5712. (1) An employee shall wear personal protective clothing and shall use personal protective equipment when working under conditions where there is reasonable potential for injury, illness, or death that can be prevented by their use.

(2) Personal protective equipment prescribed in Part 31. Personal Protective Equipment; Part 32. Head Protection; and Part 35. Face and Eye Protection, being R 408.13101 et seq., R 408.13201 et seq., and R 408.13501 et seq. of the Michigan Administrative Code, shall be worn on the worksite.

(3) Loose or poorly fitted clothing shall not be worn.

(4) An employee shall not work in clothing that is saturated with any flammable, hazardous, or irritating substance. This clothing shall be immediately removed and replaced with suitable clothing after the affected skin area has been thoroughly washed and treated, if necessary.

(5) An employee shall not wear jewelry or other adornments subject to snagging or hanging and causing injury while in the worksite.

(6) An employee with hair of a length as to be a hazard on the worksite shall keep it contained in a suitable manner while working. Hair and beard styles shall not interfere with the wearing of head, eye, face, or respiratory protective equipment.

(7) If chemicals harmful to the skin or eyes are being used, appropriate personal protective equipment shall be provided and worn, and readily accessible facilities shall be available to employees for rapid flushing of eyes and skin areas.

(8) If it is necessary to provide a respirator, it shall be as prescribed by the department of public health in rule OH 3502.

History: 1954 ACS 101, p. 62, Eff. Nov. 23, 1979.

R 408.15713 Safety belt, lifeline, and lanyard use.

Rule 5713. (1) An employee, when engaged in work 10 feet or more above the rig floor or other working surfaces, shall wear a safety belt with an attached lanyard, except during rig up and rig down.

(2) The safety belt and harness and any lifeline and lanyard shall be used only for safeguarding the employee.

(3) A safety belt, safety harness, lifeline, or lanyard subjected to inservice shock loading, rather than static loading, shall be removed from service and shall not be used again for employee protection.

(4) The safety belt, lifeline, and lanyard shall be constructed, inspected, and maintained as prescribed in rule 3133(2) to (8) of Part 31. Personal Protective Equipment, being R 408.13133 of the Michigan Administrative Code.

History: 1954 ACS 101, p. 62, Eff. Nov. 23, 1979.

R 408.15714 Fire prevention.

Rule 5714. (1) Smoking, open fires, or other potential sources of ignition shall be permitted only in designated areas located at a safe distance from the wellhead or flammable liquid storage areas. Operations or areas which constitute a fire hazard shall be conspicuously posted with a sign, "NO SMOKING OR OPEN FLAME."

(2) Hazardous substances shall be stored in approved containers and properly labeled.

(3) Equipment, cellars, rig floors, and ground areas adjacent to the well shall be kept free from oil or gas accumulations which might create or aggravate fire hazards.

(4) Oxygen, natural gas, or liquefied petroleum gas shall not be used to operate spray guns or pneumatic tools.

(5) Combustible materials, such as oily rags and waste, shall be stored in covered metal containers. The contents shall be disposed of daily.

(6) Gasoline-fueled engines shall be shut down before refueling operations, unless the engine is needed for the control of the operation.

History: 1954 ACS 101, p. 62, Eff. Nov. 23, 1979.

R 408.15715 Fire protection.

Rule 5715. (1) Fire extinguishers shall be located, tagged, inspected, and maintained as prescribed in Part 8. Portable Fire Extinguishers, being R 408.10801 et seq. of the Michigan Administrative Code. In addition to the quantities and locations specified in part 8, the following minimum quantities shall be provided:

(a) Four 20 class B-C rated extinguishers accessible at the drilling rig.

(b) Two 20 class B-C rated extinguishers accessible at the well servicing rig.

(c) One 20 class B-C rated extinguisher at each welding operation.

(2) More or larger extinguishers shall be provided where the type of operation produces greater hazardous conditions.

(3) Fire fighting equipment shall not be tampered with and shall not be removed for other than fire protection and fire fighting purposes.

History: 1954 ACS 101, p. 63, Eff. Nov. 23, 1979.

R 408.15716 Housekeeping.

Rule 5716. (1) Work areas shall be kept reasonably clean and free of debris in order to minimize slip and trip hazards. Hazardous leaks or spills shall be promptly cleaned up to minimize slipping and fire hazards.

(2) Material used for cleaning shall have a flash point of not less than 100 degrees Fahrenheit.

(3) Means shall be provided to convey any hazardous substances away from the rig floor while pulling wet strings of pipe.

History: 1954 ACS 101, p. 63, Eff. Nov. 23, 1979.

R 408.15717 Wells containing hydrogen sulfide.

Rule 5717. (1) Drilling and servicing of wells shall be as prescribed in the American petroleum institute document, RP49, reissued 1975, recommended practices for safe drilling of wells containing hydrogen sulfide. This document is incorporated herein by reference. The API document may be inspected at the Lansing office of the department of labor. This information may be purchased at a cost of $1.00 from the American Petroleum Institute, 2101 L St., N.W., Washington, D.C. 20037, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(2) Where hydrogen sulfide or any other unusually hazardous gas is known or suspected to exist, the employer shall advise the employees of the possible exposure involved and shall provide training and personal protective equipment as required in R 408.15711 of this part.

(3) Where it is not necessary to maintain a cellar on wells producing hydrogen sulfide, the cellar shall be filled to eliminate the hazard of accumulation of hydrogen sulfide gas.

History: 1954 ACS 101, p. 63, Eff. Nov. 23, 1979.

R 408.15718 Rig access; ladders, stairways, ramps, platforms, and elevators.

Rule 5718. (1) A rig shall be equipped with stairs, ladders, or ramps. An employee shall not jump from one level to another.

(2) A fixed ladder, stair, ramp, or platform shall be constructed and maintained as prescribed in Part 3. Fixed Ladders and Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10301 et seq. and R 408.10201 et seq. of the Michigan Administrative Code. Where a structural crosspiece of a rig does not allow the required horizontal clearance prescribed in part 3, the clearance may be reduced to not less than 4 inches.

(3) A derrick and mast shall be equipped with a fixed ladder providing access from the rig floor to the crown block platform and to each intermediate platform on the structure.

(4) A minimum of 2 stairways shall be installed to provide alternate exits from the rig floor to ground level when the rig floor height is 6 feet or more.

(5) When a working platform is in the folded (storage) position, the platform shall be secured with not less than 2 fasteners of a safety type that will not vibrate loose or come loose accidentally. Clevis hooks, safety hooks, or other equivalent devices shall be used for this purpose.

(6) When an employee cannot perform necessary duties on a well servicing rig from ground level, a working platform shall be used around the wellhead. The platform shall be of sufficient size and so constructed to allow 2 men to work from it.

(7) Each finger of a finger board shall be bolted, welded, hinged-and-pinned, or attached by other equivalent means to its support beam.

(8) When climbing a rig ladder, tools or other materials shall be properly secured to the employee so that the hands of the employee are free for climbing.

(9) An employee engaged in a well servicing operation may ride an elevator, sometimes called a traveling block, if the employee complies with the following:

(a) The employee riding the elevator shall wear a safety belt with a lanyard that shall be attached and adjusted to prevent a fall of not more than 5 feet.

(b) The employee shall not ride the elevator when it is under load.

History: 1954 ACS 101, p. 63, Eff. Nov. 23, 1979.

R 408.15719 Auxiliary escape.

Rule 5719. (1) A derrick or mast shall have an auxiliary means of escape for each employee on the platform. The auxiliary means of escape shall be installed as soon as the derrick or mast erection is completed. The auxiliary escape route shall use a specially rigged and securely anchored escape line attached to the derrick or mast so as to provide a ready and convenient means of escape from the derrickman's working platform.

(2) Tension on the escape line shall be periodically checked and adjusted to assure safe landing of the user. Tension shall be such that a person descending on the escape line may stop 20 to 25 feet from the anchor point. The ground anchor point of the escape line shall be located a minimum lateral distance from the derrick or mast equal to the height above the ground where the connecting point of the escape line is secured to the derrick or mast.

(3) To facilitate escape, the ground level area of not less than 10 feet from the derrick floor shall be maintained clear of equipment and supplies not in use or not a part of the drilling or servicing operations.

History: 1954 ACS 101, p. 64, Eff. Nov. 23, 1979.

CONSTRUCTION

R 408.15721 Construction of derricks and masts.

Rule 5721. (1) A derrick, mast, and auxiliary parts shall be substantially constructed to conform to good engineering practice and shall be maintained in safe condition.

(2) A derrick and mast manufactured subsequent to the effective date of this part shall have a permanent nameplate attached to the structure indicating the following:

(a) Name of manufacturer.

(b) Model number and serial number.

(c) Rating including maximum static hook load capacity with number of lines.

(d) Whether guying is applicable and the recommended guying pattern. If guying requirements do not appear on the nameplate, the derrick or mast shall be guyed as prescribed by API SPEC 4E-1974, specification for drilling and well servicing structures, which is herein incorporated by reference and may be inspected at the Lansing office of the department of labor. The specification may be purchased at a cost of $1.50 from the American Petroleum Institute, 2101 L St., N.W., Washington, D.C. 20037, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(3) An employee qualified in procedures for raising and lowering the mast shall be in charge of raising or lowering operations and shall do both of the following:

(a) Visually inspect the raising or lowering mechanism.

(b) Assure that all tools and materials not secured are removed from the mast.

(4) Only an employee required to carry out the operation shall be allowed in or under the mast, unless it is in the fully raised or lowered position.

(5) The mast shall be level and properly positioned before raising, lowering, scoping the structure, or tightening guylines.

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(6) Before imposing any load on a derrick or mast, all required load guys shall be properly tightened.

(7) Mast crown sheaves shall be guarded to prevent the hoisting line from being displaced from the grooves during all operations.

(8) A derrick and mast platform shall be constructed, maintained, and adequately secured to the structure to withstand the weight of employees and other stresses placed upon the platform.

(9) An unguarded opening large enough to permit a person to fall through shall not exist between the beams or main supports of the crown block.

(10) If bumper blocks are used under the crown block beam, a safety cable or strap shall be fastened along their full length with both ends secured to the derrick.

(11) All counterweights above the rig floor, when not fully encased or running in permanent guides, shall have a safety chain or wire rope safety line anchored to the derrick or mast to secure them. The chain and wire rope shall be capable of sustaining the drop load and shall limit the drop of the counterweight to not less than 7 feet from the floor.

(12) Load-bearing hydraulic leveling jacks shall have a safety lock device, double valves, or equivalent.

History: 1954 ACS 101, p. 64, Eff. Nov. 23, 1979.

R 408.15722 Derrick and mast foundations and guying.

Rule 5722. (1) Where necessary to avoid exceeding the safe bearing capacity of soils on the location, supplemental footing capable of distributing the gross weight under maximum anticipated hook load and loads imposed during raising and lowering of the structure shall be provided to distribute to the ground concentrated loads from the derrick or mast and mast mount.

(2) Foundation pads for drilling and well servicing rigs shall be graded and adequately drained. Location sites shall be constructed and maintained so that oil, water, drilling fluid, and other fluids are kept away from the working area but retained at the location site.

(3) Guyline ground anchors shall be the expanding-type anchor, concrete deadmen, or any other type that satisfies the requirements of subdivision (a). Soil conditions, terrain, and use of surrounding land determines the most applicable type of anchor. All anchors shall satisfy the following requirements:

(a) An installed ground anchor, permanent or temporary, shall meet the pullout requirements for the conditions of service. The anticipated climatic conditions, including wind forces, for the geographic area shall be a prime consideration in determining the anchor pullout requirements and pattern spacing. Anchor breaking strength and pullout safety factors shall be in accordance with API SPEC 4E-1974, specification for drilling and well servicing structures, which is incorporated herein by reference in R 408.15721(2) of this part.

(b) Where soil is corrosive, metal components of permanent ground anchors shall be galvanized or otherwise protected against corrosion.

(4) For permanent-type ground anchors, the well operator shall make representative pull tests for the geographical area and size and type anchor involved. Representative pull tests shall be conducted along the anchor working plane. Records of representative anchor pull tests for the area shall be maintained.

(5) Permanent anchors shall be inspected before each use by visually checking. If damage or deterioration is apparent upon inspection, anchors shall be pull tested.

(6) Temporary ground anchors shall be of such type and so installed to provide pullout strengths which exceed the maximum anticipated guyline pull for the equipment to be used and the conditions of service. Records of representative anchor pull tests for the area and size and type of anchor shall be maintained.

(7) A portable mast, either structural or pole type, that requires use of external guylines to assure stability shall have the external guylines in place immediately following raising and telescoping of the mast.

History: 1954 ACS 101, p. 65, Eff. Nov. 23, 1979.

R 408.15723 Traveling blocks and crown blocks.

Rule 5723. (1) A traveling block and its component parts shall be designed, constructed, and maintained as prescribed in API SPEC 8A-1976, specifications for drilling and production hoisting equipment, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. The specifications may be purchased at a cost of $1.50 from the American Petroleum Institute, 2101 L St., N.W., Washington, D.C. 20037, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(2) A traveling block, crown block, or related equipment shall not be subjected to any load in excess of their designed rating.

(3) A hook for use with a traveling block to which equipment is either directly or indirectly attached shall be equipped with a safety latch to prevent accidental release of the load.

(4) A traveling block exposed to contact shall be guarded at the running nip point of the sheave and shall not be operated unless the guard is in place.

History: 1954 ACS 101, p. 65, Eff. Nov. 23, 1979.

R 408.15725 Electrical installations.

Rule 5725. (1) Except as required in this rule, electrical installations and equipment shall be as prescribed in the national electrical code, NFPA 70-1978, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This code may be purchased at a cost of $5.50 from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(2) Electrical equipment such as, but not limited to, lighting, power tools, and other electrical motors used in hazardous locations shall be designed for such locations and, where practicable, listed by a nationally recognized testing laboratory. All wiring components and electrical equipment shall be maintained in accordance with the original design. Because of exposure to vibration and frequent rig moves, maximum use shall be made of flexible electrical cord intended for hard usage and with inherent resistance to dampness and petroleum products.

(3) Except when used on a well servicing rig, a portable lighting plant not rated for use in class I locations shall be located not less than 100 feet from the wellhead.

(4) A light plant generator shall have an overload safety device to provide protection from arcing in a hazardous area or from a burnout of the generator.

(5) Rig lighting equipment, except that used in a cellar, shall be classified as class I, division 2.

(6) Cellar lighting equipment shall be classified class I, division 1.

(7) The following area classifications shall determine the type of maintenance requirements for electrical equipment on a rig under normal operating conditions.

Digitized by Google
Original from UNIVERSITY OF MINNESOTA

When special service operations are being performed, the requirements for electrical installations under the conditions of service listed below shall be followed:

(a) When the derrick or mast is not enclosed or is equipped with a windbreak (open top and V-door) and the substructure is open to ventilation, the areas shall be classified as shown in figure 1 and shall provide not less than 12 complete air changes per hour.

(b) If the rig floor and substructure are enclosed and, as such, provide not less than 12 complete air changes per hour, the areas shall be classified as shown in figure 2.

(c) Where appropriate, the area surrounding a drilling fluid tank located outdoors shall be provided with ventilation of not less than 12 complete air changes per hour and shall be classified as shown in figure 3.

(d) If the drilling fluid tank is enclosed or located so as to provide not less than 12 complete air changes per hour, the areas shall be classified as shown in figure 4.

(e) The areas surrounding a shale shaker with ventilation of not less than 12 complete air changes per hour shall be classified as shown in figure 5.

(f) When the shale shaker is enclosed, the area within the enclosure shall be classified as class I, division 1.

(g) If an open fluid ditch or trench is used to connect between drilling fluid tanks, or between the drilling fluid tank and shale shaker, or open drilling fluid pits, and if ventilation of not less than 12 complete air changes per hour is provided, the areas shall be classified as shown in figure 3 for tanks.

(h) The area surrounding the drilling fluid pump shall not be considered hazardous unless it is so classified due to proximity of another hazardous component or facility.

(8) Motors and other electrical equipment shall be classified as prescribed in figures 1 to 5 in subrule (7).

(9) Direct current (DC) rotary, draw works, cathead, and pump motors in a classified area shall have an enclosed cooling system or shall be purged with air from a safe source. Air units supplying purged air shall be located at the input end of the system to provide positive pressure on the ducting and motors.

(10) All electrical extension cords shall be properly insulated with both male and female plugs, and the cord shall be in good condition.

(11) Lamps and reflectors shall be kept clean to provide illumination.

R 408.15726 Blowout prevention equipment.

Rule 5726. (1) Before drilling out under surface casing, blowout prevention equipment shall be installed and maintained throughout the drilling operation.

(2) The blowout prevention equipment shall be as prescribed in the API RP53-1976 document, recommended practices for blowout prevention equipment systems, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This information may be purchased at a cost of $2.50 from the American Petroleum Institute, 2101 L St., N.W., Washington, D.C. 20037, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(3) Where a ram-type preventer is used, it shall contain pipe rams to enable closure on the pipe being used.

(4) The choke line and kill line shall be anchored, tied, or otherwise secured to prevent whipping under pressure surges.

(5) While in service, blowout prevention equipment shall be inspected daily and a preventer mechanical test shall be performed on each tour to insure that the preventers will properly function. Notation of mechanical tests and the anticipated well surface pressure shall be made in the daily log book.

(6) A pipe fitting, valve, or union placed on or connected with blowout prevention equipment, well casing, casinghead, drill pipe, or tubing shall have a working pressure rating suitable for the maximum anticipated well surface pressure.

(7) Pressure testing of each component of the blowout preventer equipment shall be conducted before drilling out any string of casing, except conductor pipe. Drilling shall not proceed until blowout prevention equipment is found upon testing to be serviceable.

(8) If a blind ram is closed for any purpose, the valve on the choke line or relief line below the blind ram shall be opened before opening the ram to bleed off any pressure.

(9) Each rig employee shall have adequate training and understanding of, and be able to operate, the blowout preventer system.

EQUIPMENT

R 408.15731 Machinery, tools, and equipment generally.

Rule 5731. (1) Well operations involving the rig shall not be commenced until the rig is rigged up in a safe manner and the safeguards are in place and operable.

(2) A lockout system shall be established for drilling rig equipment, except on draw works, slush pumps, and rotaries where a tag out system may be used. An employee shall be trained in the use of a lockout system to prevent unexpected energizing of any equipment from any energy source which might inflict injury to personnel. A lock or tag shall not be removed without the approval of the person who installed it or his authorized replacement.

(3) A maintenance employee shall report to the rig supervisor before beginning repairs and when repairs are completed.

(4) Rig power shutdown devices shall be checked at least once each week to determine that they are in proper working condition.

(5) Tools, parts, and other materials shall not be kept in the derrick or mast above the rig floor unless there is occasion for their immediate use and precautions are taken to prevent them from falling.

(6) Every rig shall be equipped with a safety valve with connection suitable for use with each size and type of tool joint or pipe coupling being used on the job. A means shall be provided to circulate the well.

(7) Any overhead wire shall be considered an energized line until a representative of the owner or utility has checked and indicated otherwise. Before any equipment is erected or moved near a power line, the owner or utility representative shall be notified. Except where electrical power lines and equipment have been de-energized and visibly grounded at the point of work, or where an insulating barrier, not a part of the equipment, has been erected, or where the employee is insulated or isolated from the equipment, clearances shall be maintained pursuant to the following:

Voltage	Clearance boom raised	Clearance in transit with boom lowered and no load
To 49 KV	10 feet	4 feet
Over 50 KV	10 feet + .4 inch per KV	
50 to 345 KV		10 feet
346 to 750 KV		16 feet

(8) A gin pole truck used in preparing and during a drilling operation shall be as prescribed in R 408.15745.

History: 1954 ACS 101, p. 68, Eff. Nov. 23, 1979.

R 408.15732 Guylines and hoisting lines.

Rule 5732. (1) A guyline shall be maintained in good condition and shall be of a strength, including auxiliary devices such as chains, boomers, and clamps, capable of withstanding loads for the anticipated service conditions. A guyline shall have a safety factor of 3.

(2) Each guyline shall be visually inspected before each rig up. A guyline shall be removed from service and replaced if in any length of 10 diameters the total number of visible broken wires exceeds 10% of the total number of wires in the line or if the guyline shows other signs of excessive wear, corrosion, or defect.

(3) Wire rope used for hoisting purposes shall be of a strength to safely lift and otherwise handle anticipated loads under the conditions of service. The maximum

allowable hoisting line working load shall be based on a minimum safety factor of 3 for normal operations. A minimum safety factor of 2 is allowed when setting casing, pulling on stuck pipe, or while engaging in similar infrequent operations.

(4) A damaged portion of a hoisting line shall be removed from service when any of the following conditions exist:

(a) Three broken wires are found in 1 lay of 6 by 6 wire rope.

(b) Six broken wires are found in 1 lay of 6 by 19 wire rope.

(c) Eight broken wires are found in 1 lay of 8 by 19 wire rope.

(d) Nine broken wires are found in 1 lay of 6 by 37 wire rope.

(e) Wire ropes not covered herein are found to have 4% or more of the total number of wires composing such rope broken in 1 lay.

(f) Marked corrosion appears.

(g) Corroded or broken wires are noted at end connections.

(h) End connections are corroded, cracked, bent, worn, or improperly applied.

(i) Evidence is noted or kinking, crushing, cutting, or unstranding.

(5) When the hoisting line is placed on the hoisting drum, the end shall be securely fastened and there shall be not less than 7 line wraps remaining on the drum at the lowest operating position of the traveling block.

(6) A deadline anchor for a hoisting line shall be so constructed, installed, and maintained that its strength equals or exceeds the working strength of the hoisting line.

(7) When a ton-mile calculation indicates or an inspection reveals that the hoisting line safety factor has been materially reduced, the line shall be slipped, cut, or replaced.

(8) A hoisting line under load shall not be allowed to come in contact with any part of the derrick or mast, stationary equipment, or material in the structure, except at the crown block sheaves, traveling block sheaves, a turnback roller, and a line stabilizer, when needed.

(9) The hoisting line shall not be removed from the hoisting drum until the traveling block is rested on the rig floor or held suspended by a separate wire rope or chain.

History: 1954 ACS 101, p. 69, Eff. Nov. 23, 1979.

R 408.15733 Draw works.

Rule 5733. (1) A visual inspection of the draw works and its working parts shall be made at least once each day.

(2) The equipment operator shall not leave the draw works brake without tying the brake down or securing it with a catch lock, unless the draw works is equipped with an automatic feed control.

(3) An emergency shutdown switch for a draw works engine or motor shall be located at the draw works drum control console.

(4) A draw works used for well drilling shall be equipped with a device which actuates an emergency stop of the drum and engages the brake when the maximum wraps on the drum have been reached or shall be equipped with a crown safety device which achieves equal or better protection. Either device shall be tested at rigup and at least once each week thereafter when in use or when the hoisting line system is changed.

(5) Tension shall be applied by a catline tugger or other means when running the initial wraps on the draw works.

History: 1954 ACS 101, p. 70, Eff. Nov. 23, 1979.

R 408.15734 Catheads.

Rule 5734. (1) A cathead on which a rope is manually operated shall have a rope guide to hold the onrunning rope in alignment with its normal running position against the inner flange. Clearance of the rope guide shall be a maximum of ⅜ inch from the cathead.

(2) The fasteners for the guides and housing shall be secured against loosening by safety wires or other equivalent means.

(3) Precautions shall be taken to prevent entanglement of other lines with a line in use on a cathead.

(4) When a cathead is unattended, a rope or line shall not remain wrapped on or in contact with the cathead.

(5) A qualified employee shall attend the draw works control when a manually operated cathead is in use.

(6) A cathead shall be checked for grooves and rebuilt and turned when necessary to prevent fouling. Cathead groove depth shall not exceed ¼ inch.

(7) A headache post or guard shall be provided for protection of the employee at the draw works controls when the line is in close proximity of the operator during operation of a catline, jerkline, or spinning line.

(8) An automatic cathead and its mechanism shall be maintained in safe working condition.

(9) A splice shall not be allowed to contact the cathead friction surface, with the exception of endless rope properly spliced.

History: 1954 ACS 101, p. 70, Eff. Nov. 23, 1979.

R 408.15735 Drill collars.

Rule 5735. Safety clamps used on a drill collar, flush-joint pipe, or similar equipment to prevent the collar, pipe, or equipment from falling in the well when not held by the elevators shall be removed from such equipment before hoisting continues.

History: 1954 ACS 101, p. 70, Eff. Nov. 23, 1979.

R 408.15736 Weight indicators.

Rule 5736. (1) A weight indicator shall be installed on the drilling line and used on all operating drilling and well servicing rigs. It shall be so constructed, installed, and maintained as to register an indication ± 5% at maximum hook loading of the suspended load.

(2) The weight indicator shall be checked monthly for calibration by comparing its reading with the calculated drill string or tubing string weight with adjustments made as necessary.

(3) The weight indicator shall be mounted so the gauge is easily visible to the operator standing at the brake position.

(4) When the weight indicator is installed at a position of 6 or more feet above the work floor, it shall be secured to the derrick or mast by a separate safety line.

History: 1954 ACS 101, p. 70, Eff. Nov. 23, 1979.

R 408.15737 Drilling fluid tanks.

Rule 5737. (1) A pit or tank used to circulate flammable materials shall be located not less than 100 feet from the well. Equivalent safety measures shall be taken where terrain and location conditions do not permit maintaining such distance.

(2) A fixed drilling fluid gun used for jetting shall be pinned or hobbled when in use and unattended.

(3) When necessary for an employee to enter a drilling fluid tank, the requirements of R 408.15725 of this part, if applicable, and rule 16 of Part 1. General Rules, being R 408.10016 of the Michigan Administrative Code, shall be followed.

(4) An electric motor-driven blower used for ventilation shall be of an appropriate electrical classification for the area in which the blower is located.

History: 1954 ACS 101, p. 71, Eff. Nov. 23, 1979.

R 408.15738 Pipe racks.

Rule 5738. (1) Pipe shall be handled at the ends during manual pipe loading and unloading operations and during transfer between pipe racks.

(2) An employee shall not go between the pipe rack and a pipe truck or trailer during loading, unloading, or transfer operations.

(3) Provision shall be made to prevent pipe from accidentally rolling off a pipe rack or truck.

(4) During transfer operations between the truck and the pipe rack, temporary supports for skidding or rolling the pipe shall be so constructed, placed, and anchored to support the load to be placed on them.

(5) Pipe and drill collars racked in the derrick or mast shall be secured to prevent them from falling across the derrick or mast.

History: 1954 ACS 101, p. 71, Eff. Nov. 23, 1979.

R 408.15739 Pressure equipment.

Rule 5739. (1) An air receiver shall be designed, installed, and used as prescribed in MIOSHA standard 1910.169, air receivers, which was adopted by reference by section 14 of Act No. 154 of the Public Acts of 1974, as amended, being §408.1014 of the Michigan Compiled Laws.

(2) A relief valve discharge shall be located and anchored so as to prevent a hazardous condition due to sudden discharge or piping movement.

(3) In normal operation, pumps, piping, hoses, valves, and other fittings shall not be operated at pressures greater than their rated working pressure and shall be maintained in good operating condition. Test pressures shall not exceed the design test pressure. Pumps, piping, hoses, and safety relief valves shall be of a design that meets the requirements of the operating conditions to be encountered.

(4) The shale shaker motor shall be of a type approved for class I, division 1 service and shall be properly maintained.

(5) Repairs to electrically driven pressure equipment shall not be performed unless the energy source has been interrupted at the switch box and the control has been locked.

History: 1954 ACS 101, p. 71, Eff. Nov. 23, 1979.

R 408.15740 Rotary tables and tongs.

Rule 5740. (1) The operator shall not engage the rotary clutch until the rotary table is clear of all employees and materials.

(2) Rotary table power shall not be used to accomplish initial breakout of tool joint, but may be used for spinning out once initial breakout is effected.

(3) A tong shall be:

(a) Securely attached and anchored with wire rope or stiff arm.

(b) Properly maintained and repaired when excessive wear occurs. All tongs and tong heads, including dies shall be inspected for size and condition, repaired, and greased before every trip.

(4) A fitting used to attach a back-up line to the derrick or back-up post shall have a minimum breaking strength equal to the breaking strength of the cable attached to the fitting.

(5) A power tong:

(a) Shall be backed up with a device able to withstand the maximum torque of the power tool.

(b) With front openings shall have the front doors in proper working order.

(6) When working on a power tong head, the power input pressure line shall be disconnected as prescribed in rule 32 of Part 1. General Rules, being R 408.10032 of the Michigan Administrative Code.

(7) A tong pressure line shall be equipped with a safety relief valve, and pressure shall never be set higher than the rated capacity of the tong.

History: 1954 ACS 101, p. 71, Eff. Nov. 23, 1979.

SPECIAL SERVICES

R 408.15741 Special services generally.

Rule 5741. (1) The supervisor of the special service shall hold a pre-job meeting with his crew to review responsibilities for the operation to be performed.

(2) Each tubing string of multiple-completion wellheads shall be identified by marking.

(3) Welding shall not be performed in the immediate wellhead area during wireline operations.

(4) Wherever possible, the service unit shall be located on the upwind side of the wellhead and spotted where the crew has optimum visibility and can work unobstructed.

(5) Any discharge of large quantities of oil or gas to the atmosphere shall be to a safe area, preferably on the downwind side of the well and a minimum of 100 feet from the wellhead, an open flame, and other sources of ignition.

(6) A frozen flow line shall not knowingly be flexed or hit.

(7) A gin pole truck used in special services for oil and gas wells shall be as prescribed in R 408.15745.

History: 1954 ACS 101, p. 72, Eff. Nov. 23, 1979.

R 408.15742 Special services equipment; tanks, pump units, and communications.

Rule 5742. (1) A service unit engine shall be equipped with an emergency shutdown device, the control of which shall be located at the operator's console.

(2) A tank for flammable material shall be set so that if tanks leak, fluid will drain away from the well and equipment, or provisions shall be made to contain any leaked fluid.

(3) Electric power to the pumping unit shall be de-energized and locked out such a distance from the wellhead as to eliminate potential electrical hazards during well servicing operations. In confined locations, overhead electric power to the pumping unit control panel shall be de-energized.

(4) When operations are to be conducted around a pumping unit, the brake shall be set; if the pumping unit is stopped with counterweights in other than the down position, additional means shall be effected to prevent any movement of the counterweights or beam.

(5) After well servicing operations are completed, precautions shall be taken before energizing the power source to determine that all personnel and equipment are clear of weight and beam movement.

(6) Brake systems on all pumping units shall be maintained in safe working order.

(7) All equipment shall be located so that equipment operators can see the employee in charge during operations so that alternate specific arrangements can be made to assure adequate communication.

(8) Signals between supervisors and employees shall be agreed upon and fully understood before initiation of operations. Where more than 1 employer is involved in a drilling or service operation, coordination of activities and communication shall be accomplished so that the employees are protected at all times.

(9) Communications equipment shall be in good working order before commencing operations.

(10) Employees shall be out of the derrick and cellar and stand clear when a subsurface pump is being unseated or when the initial pull on tubing is made.

History: 1954 ACS 101, p. 72, Eff. Nov. 23, 1979.

R 408.15743 Treating and cementing discharge lines.

Rule 5743. (1) Before initiating well servicing operations, the well shall be checked for pressure and proper steps shall be taken to remove the pressure or to ensure safe operation under pressure.

(2) A treating or cementing discharge line shall not be placed under any mobile equipment nor shall any mobile equipment be spotted over any such line.

(3) A discharge pressure line shall include sufficient flexible joints to avoid line rigidity and minimize vibration at the wellhead.

(4) When using an open-ended flow discharge line to flow or bleed off a well, the line shall be secured at the wellhead, at the end of the flowline, and at intermediate intervals along the line to secure each joint. The flow discharge line shall be anchored before opening the wellhead control valve.

(5) All pressure shall be bled from a discharge line before breaking out or rigging down the line.

(6) After a hazardous substance has been pumped, all discharge lines shall be properly flushed before breaking out.

History: 1954 ACS 101, p. 72, Eff. Nov. 23, 1979.

R 408.15744 Lubricator operations.

Rule 5744. (1) A lubricator, including the swages and unions, shall be visually inspected for defects before use. Any defects that may affect safe operations shall be corrected before installation.

(2) All valves and gauges shall be checked to be certain that there is no pressure on the lubricator before working on or removing it.

(3) When a lubricator is installed on a wellhead, an outlet below the lubricator shall be provided for well control operations.

(4) When downhole tools are being run on a wireline in wells where surface pressure is suspected, a lubricator or other equivalent control device shall be used to allow removal of the tools under pressure.

(5) Only employees essential to the conduct of ongoing operations shall be permitted near the pressurized lubricator, flow lines, and wellhead.

(6) Wellhead adapters, wireline valves, and lubricating equipment shall be operated within their working pressure rating.

(7) Hammering or otherwise striking on a lubricator or connection shall not be permitted while it is subjected to pressure.

(8) A threaded connection or union on lubricators shall not be loosened or tightened while it is subjected to pressure.

(9) A lubricator needle valve shall be operated after the pressure has been bled down to ensure that ice or other foreign matter is not plugging off the small needle valve opening.

(10) When handling the lubricator with a rig catline, air hoist, or other type of hoisting equipment, the line shall be snug against a union. The catline or hoist line shall not be tied in the middle of a section of lubricator.

(11) When breaking a quick-thread union that is secured with a single bolt, the bolt shall be left in place with at least 1 full nut of threads engaged until after the union has been knocked loose. After the union has been knocked loose, the connection shall be moved to make certain the ring seal is broken and pressure has been released.

(12) A lubricator, 26 feet or more in length, shall be properly guyed or held vertical when in use.

History: 1954 ACS 101, p. 73, Eff. Nov. 23, 1979.

R 408.15745 Gin pole trucks.

Rule 5745. (1) The hoisting of a gin pole truck used in special services to an oil and gas well shall comply with all of the following:

(a) Have a safety factor of not less than 4. Worn parts that could adversely affect the safety of the operation shall be replaced.

(b) Not be used to lift or pull more than the wire rope rated capacity.

(c) Have the wire rope and connecting pins inspected at least once a month.

(2) Wire rope used on a gin pole truck shall be replaced if the monthly inspection shows any of the following conditions:

(a) In any length of 8 diameters, the total number of visible broken wires exceeds 10% of the total number of wires.

(b) The wire rope has been kinked, crushed, birdcaged, or has sustained other damage which distorts the rope structure.

(c) The rope shows heat or corrosive damage.

(3) There shall be not less than 2 complete wraps on the hoist drum when any load being hoisted is at its lowest point.

(4) An employee shall not be permitted to ride a hoisted load.

(5) The hoist controls shall be located at a point where the operator cannot contact the rope or drive, or the pinch and nip points shall be guarded.

(6) If a wire rope is wrapped around a load, there shall be no undue stress on the rope at the connecting point.

(7) The hoist brake shall be capable of holding 1½ times the rated load.

History: 1954 ACS 101, p. 73, Eff. Nov. 23, 1979.

WIRELINE SERVICE

R 408.15751 Wireline service generally.

Rule 5751. (1) Wireline wipers shall be secured to prevent displacement.

(2) Oil savers shall be adjusted only by remote control while the wireline is in motion.

(3) Except for an employee of the wireline service company, an employee shall not be permitted closer than 6 feet to a moving wireline when working between the wireline unit and the well.

(4) The wireline valve, sometimes called a wireline blowout preventer, shall be visually inspected during opening and closing each time it is installed on a well. It shall be pressure tested monthly in full closed position to the rated working pressure of the valve.

History: 1954 ACS 101, p. 74, Eff. Nov. 23, 1979.

R 408.15752 Placement and handling of wireline service units.

Rule 5752. (1) If a fracturing or hot oil unit is on the location, the wireline unit shall be located as far away from either unit as is practicable. The unit shall be located so that a means of emergency egress is available facing away from the fracturing or hot oil unit.

(2) A mobile wireline service unit working on land locations shall be properly chocked or spaded. If not spaded, a minimum of 2 chocks shall be used, 1 behind each rear wheel toward the wellhead.

(3) A portable or skid-mounted wireline service unit shall be properly secured to prevent any uncontrolled movement of the unit when a load is taken on the line.

(4) A wireline service unit shall be located in a manner that will not interfere with the entrance or exit of an employee from that unit or other service unit.

History: 1954 ACS 101, p. 74, Eff. Nov. 23, 1979.

R 408.15753 Gin poles and rope falls.

Rule 5753. (1) A gin pole shall be properly attached to the wellhead or christmas tree with a chain and ratchet load binder in a manner that prevents movement when the load is being handled. A chain and ratchet binder used to attach the gin pole to the wellhead or christmas tree shall be of a proper size and strength to support the anticipated load to be handled.

(2) When the gin pole and rope falls are being used to lift the lubricator or any other heavy object, the load shall be pulled from as near a vertical position as practicable.

(3) A splice shall not be permitted in the entire length of rope of a rope fall, except where the dead end is tied off.

(4) The rope shall be inspected at the beginning of each job to assure that it has not been partially cut, frayed, or exposed to chemicals that may weaken it. A rope that has been weakened by being cut or frayed or that has been in contact with damaging chemicals shall be immediately replaced.

(5) The blocks of a rope fall shall be inspected at the beginning of each job for shaft wear, condition of bearings, or damaged or worn sheaves that may cause rope damage. A block showing excess wear or damage shall be immediately replaced.

(6) A wire sling or equivalent that has been inspected for defects before installation shall be used for the purpose of securing the lower wireline sheave. The sheave shall be attached to a primary rig beam, blowout preventer, or permanent stable fixture.

(7) A sheave wheel shall be painted yellow.

(8) A pin used in the makeup of a sheave wheel shall be secured with a cotter or safety type pin.

History: 1954 ACS 101, p. 74, Eff. Nov. 23, 1979.

R 408.15754 Wellheads, wellhead connections, and adapters.

Rule 5754. (1) Except under emergency conditions and with due regard for potential hazard, wireline operations equipment shall not be rigged up on any wellhead if the surface pressure exceeds or is expected to exceed the maximum rated working pressure of the wellhead and wellhead equipment.

(2) In wireline operations where the weight and pull of the tools is to be supported by the lubricator, the swage from the wellhead to the lubricator equipment shall be machined from AISI 4130 steel or better.

History: 1954 ACS 101, p. 74, Eff. Nov. 23, 1979.

R 408.15755 Lubricator operations for wireline service.

Rule 5755. (1) Lubricator equipment for wireline service, except a swabbing lubricator, shall be manufactured and fabricated pursuant to the applicable provisions of the power piping code for pressure piping, ANSI B31.1-1977, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased at a cost of $50.00 from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(2) A lubricator shall be equipped with a purging device.

(3) A visual pressure test check of all sections of the lubricator shall be made at intervals not to exceed 6 months. The pressure test using cold water shall be made to at least 1½ times the lubricator working pressure, but shall not exceed its rated test pressure. The wireline valve shall be tested in both the open and closed position.

(4) The maximum working pressure of all sections of the lubricator, including the stuffing box, wireline valve, connections, and adapters shall not be exceeded except for purposes of testing.

(5) Each high-pressure lubricator, wireline valve, oil saver, and stuffing box having a working pressure of 5,000 psi or greater shall conform to the following:

(a) A lubricator shall have a minimum of 2 bleeder valves located for convenience of operation. The 2 bleeder valves shall be opened when bleeding pressure from the lubricator.

(b) Radiographic sonic die penetrant or magnetic particle end area inspection for cracks shall be effected on high-pressure lubricators, stuffing boxes, valves, connections, and adapters at least once every 12 months. A record of the inspection shall be kept on file for future reference.

(c) Each section of a 10,000 psi or greater working pressure lubricator shall be marked for identification purposes with a permanent serial number and its maximum rated working pressure. The marking shall not reduce the working pressure.

(d) All pressure tests specified in R 408.15755(3) shall consist of the following 3 sequences:

(i) A primary pressure holding period.

(ii) Reduction of pressure to zero.

(iii) A second pressure holding period.

Both pressure holding periods shall be a minimum of 3 minutes, with the time being started when the test pressure has been reached and the external surfaces have been thoroughly dried. Each pressure test shall be documented.

(6) Equipment used on a well that produces hydrogen sulfide (H_2S) shall be as prescribed in the NACE standard, MR-01-75, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. The standard may be purchased at a cost of $5.00 from the National Association of Corrosion Engineers, P.O. Box 986, Katy, Texas 77450, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

History: 1954 ACS 101, p. 75, Eff. Nov. 23, 1979.

R 408.15756 Wireline operations.

Rule 5756. (1) When handling a wireline that recoils when extended, the loose end shall not be left unsecured.

(2) If slack line occurs while tools are in the hole, the wireline shall be clamped off at the wellhead before working with the loose line. Rope shall not be used to

tie off the wireline clamp. The clamp shall be tied off with a chain or soft-laid cable with sufficient strength to withstand any load to which it may be subjected.

(3) Hands, rags, and other objects shall be kept clear of sheave wheels while the line is in motion.

(4) A mast or gin pole truck used in wireline operations shall not be moved from 1 location to another nor driven on public roads with the mast or pole in a vertical or semivertical position.

(5) A gin pole mounted on a truck shall be securely fastened when the poles are in a vertical or semivertical position.

(6) If a top or side opening of a compartment door on a wireline service truck is opened, it shall be securely latched or fastened so that wind or vibration of the truck cannot cause the door to close or fall.

History: 1954 ACS 101, p. 75, Eff. Nov. 23, 1979.

R 408.15757 Perforating.

Rule 5757. (1) Devices containing an explosive, such as a perforating gun or sand line cutter, shall be handled only by a qualified employee.

(2) Electrical grounding between the wellhead, service unit, and rig structure shall be made before operating a tool using an explosive. A periodic check shall be made to ensure that all units are grounded.

(3) All unnecessary employees shall be kept away from a perforating gun while the gun is being armed, placed in the well, removed from the well, and disarmed.

(4) A radar or radio transmitting unit shall not be operated within 500 feet of any perforating operation. Warning signs shall be posted or other appropriate measures taken so that all radio transmitting units will be shut off within 500 feet of perforating operations.

(5) The perforating operation shall be suspended or the loaded gun safely isolated if an electrical storm or severe wind is imminent in the job area.

(6) Only a galvanometer or safety meter approved by the institute of makers of explosives shall be used for checking the continuity of blasting cap circuits.

(7) Shortcuts such as a circuit "jumper" or a wired around switch shall never be used on perforating equipment.

(8) A circuit alteration shall not be made while a perforating gun is attached to the cable head, unless the gun is 100 feet or more down the wellbore.

(9) When checking cable continuity using service unit electric current (AC or DC), the cable head or end of the cable shall be located in the vicinity of the unit where the employee applying the current can see the cable head.

(10) Before arming a bullet or shaped charge gun, the conductor wire and armor shall be temporarily shorted to eliminate any capacitance charge that may exist in the cable.

(11) Primacord shall be separated from a blasting cap before assembly on location. The cap and booster shall be crimped only with an approved crimper. Primacord shall be cut with primacord cutters or a sharp blade and shall never be cut with diagonal cutters.

(12) A blasting cap and unattached booster shall be transported in an approved cap box. Only the cap and booster for immediate use shall be removed from the cap box. The shunt on the cap leg wires shall remain in place until the cap is wired into the circuit.

(13) Upon completion of the perforating operation, the work area shall be inspected and all explosive materials and scraps shall be removed from the site by a qualified employee.

OTHER SPECIAL SERVICE OPERATIONS

R 408.15761 Stripping and snubbing.

Rule 5761. (1) Stripping a well shall be performed under close surveillance by a responsible supervisor. Reasonable methods of well control shall be employed.

(2) An individual escape line shall be rigged and available for each employee working atop hydraulic snubbing equipment.

(3) Gasoline engines shall not be used on snubbing operations.

(4) Before commencing snubbing operations, the snubbing tower shall be properly guyed if not otherwise supported.

(5) Pumps, power packs, tool boxes, and doghouses shall be located so as not to contact flow lines or bleed-off lines in the event 1 of these lines bursts.

(6) The pump unit shall be located where the pump operator can be seen by the snubbing operator. When this is impossible, 2-way voice communications shall be established.

(7) Well pressure shall be monitored by an employee at all times.

(8) Pipe snubbed into the wellbore shall have at least 1 landing nipple near the lower end of the pipe string to receive a back pressure valve or blanking plug.

(9) Snubbing operations shall not be performed while welding is being done in the immediate vicinity of the wellhead.

(10) The volume of all fluids pumped into or bled from the well during any snubbing or stripping operations shall be measured to assist in well control.

(11) All employees involved in stripping or snubbing operations shall be made aware of the established maximum pressure limit under which safe stripping or snubbing procedures are permissible.

History: 1954 ACS 101, p. 76, Eff. Nov. 23, 1979.

R 408.15762 Drill stem testing generally.

Rule 5762. (1) The supervisor in charge shall hold a crew meeting before going in the hole for a drill stem test.

(2) Measures shall be taken to exclude unauthorized employees from the area before and during drill stem testing operations.

(3) Drilling fluid density and viscosity shall be checked and maintained within specification limitations to minimize blowout possibilities.

(4) Fill up lines shall be installed above the blowout preventer to keep the casing full of drilling fluid and shall be used only for this purpose. Provisions for the kill line shall be made separately.

(5) A test line connection to the control head shall be securely fastened to the elevator bail.

(6) Every test plug used above the rig floor shall be attached to the elevator link by safety cable or chain.

(7) A reversing valve shall be incorporated in the test tool assembly to be able to reverse out in case of an emergency.

(8) The swivel and kelly hose shall not be used as part of the test line.

(9) A safety valve shall be readily available for emergency use on the rig floor while going in and coming out of the hole.

(10) A test line shall be laid to a reserve pit or test tank and securely anchored.

(11) If hydrogen sulfide is suspected or known to be present in the area, the provisions of R 408.15717 shall be followed.

History: 1954 ACS 101, p. 77, Eff. Nov. 23, 1979.

R 408.15763 Performing the drill stem test.

Rule 5763. (1) The fluid level in the casing shall be monitored at all times

while going in and coming out of the hole during a drill stem test to ensure that the hole is kept full and that swabbing does not occur.

(2) The mud box shall be hooked up and ready for use before the drill stem test tool is pulled out of the hole.

(3) The rig floor shall not be left unattended during the drill stem test.

History: 1954 ACS 101, p. 77, Eff. Nov. 23, 1979.

R 408.15764 Acidizing, fracturing, and hot oil operations.

Rule 5764. (1) During acidizing, fracturing, and hot oil operations, all lines connected from the pumping equipment to the christmas tree or wellhead shall have a check valve installed as near the well as possible. In addition, when a multipump manifold is used, a check valve shall be placed in each discharge line as near the other manifold as possible.

(2) When used, pressure recording equipment shall be located as far as practical from the wellhead and discharge line.

(3) When pumping flammable fluid:

(a) Blending equipment shall be grounded and equipment unloading sand into the hopper shall be bonded to the blending equipment.

(b) The lines containing the flammable fluid shall not be laid under any vehicle.

(4) A pretreatment pressure test on a pump discharge line shall be made at a pressure not less than the maximum expected treating pressure specified by the operator.

(5) An employee not directly involved in the operation shall remain outside a designated minimum distance during all pressure testing and pumping operations.

(6) A qualified employee shall do both of the following:

(a) Check to see that all valves in discharge lines are open before pumping.

(b) See that all flammable fluid spilled on location is cleaned up or covered before initiating pumping operations.

History: 1954 ACS 101, p. 77, Eff. Nov. 23, 1979.

R 408.15765 Pumping operations; acidizing, fracturing, and hot oil operations.

Rule 5765. (1) A pump operator shall remain at the designated position while the pump is in operation, unless relieved by an authorized employee as directed by the qualified employee on that job.

(2) A bleed-off line attached to the well or pump discharge shall be staked down or secured to prevent movement.

(3) While pumping a flammable fluid, all fires, electrical equipment, and internal combustion equipment not used in performance of the job shall be shut down.

(4) A flammable fluid shall not be bled back into open measuring tanks on equipment designed for pumping.

(5) Spilled oil or acid shall be covered or properly disposed of as soon as practicable.

History: 1954 ACS 101, p. 78, Eff. Nov. 23, 1979.

R 408.15766 Cementing operations.

Rule 5766. (1) Unauthorized employees shall remain outside a designated area during all pressure testing and pumping operations.

(2) A pump discharge line shall be tested to a pressure equal to the maximum cementing pressure specified by the qualified employee before commencing operations.

(3) A qualified employee shall check to see that each valve in the pump discharge line is open before pumping.

(4) The cement head and loops shall be secured to an elevator bail or traveling block.

(5) During operations, each pump operator shall remain at his designated position while the pump is in operation, unless relieved as directed by a qualified employee.

History: 1954 ACS 101, p. 78, Eff. Nov. 23, 1979.

R 408.15767 Training for gas, air, and mist drilling operations.

Rule 5767. (1) Each employee directly involved in gas, air, or mist drilling operations shall receive on-the-job training in the use of emergency shutoff equipment, blowout preventer, and fire fighting equipment.

(2) Each employee shall be familiar with the air or gas supply line system to the stand pipe.

History: 1954 ACS 101, p. 78, Eff. Nov. 23, 1979.

R 408.15768 Procedures for gas, air, and mist drilling operations.

Rule 5768. (1) The stripper rubber in the circulating head shall be inspected by a qualified employee at least once each tour. If any leaks are found, immediate action shall be taken to change out the stripper rubber.

(2) Pipe connections carrying gas or air to or from the wellbore shall be made up leak free. Lines and connections shall be frequently inspected by a qualified employee and maintained free of leaks.

(3) A blooey and bleed-off line shall not be less than 150 feet in length or equivalent safety measures shall be taken. The blooey and bleed-off line shall be located downwind of the rig for the prevailing wind direction. Equivalent safety measures shall be taken for other wind conditions. A blooey or bleed-off line shall be laid as straight and free of sags as practical from the wellbore and shall be securely anchored.

(4) In gas drilling operations, a shutoff valve shall be installed on the main feeder line not less than 150 feet from the wellhead. In air drilling operations, the shutoff valve shall be installed in the main feeder line near the compressors.

(5) An air compressor shall be located not less than 10 feet from the wellbore or equivalent safety measures shall be taken.

(6) The compressor shall be equipped with safety features, such as a pressure relief valve, pressure gauge, engine governor, and fuel shutoff valve.

(7) When making a connection, the standpipe valve shall be closed and the bleed-off line shall be opened before breaking out the tool joint.

(8) A pilot light shall be kept burning at the end of the flow line at all times, except when making trips. The pilot light shall be turned off while making trips.

(9) Upon returning to the bottom of the hole at the conclusion of a trip in gas drilling operations, gas shall be circulated to assure that all air is out of the circulating system before lighting the flare.

(10) Complete equipment and materials for killing the well with drilling fluid shall be on hand and operable before a drilling operation commences.

(11) One B-C fire extinguisher of not less than 150 pounds dry chemical capacity, or equivalent, shall be stationed on the job in addition to those required in R 408.15715.

History: 1954 ACS 101, p. 78, Eff. Nov. 23, 1979.

R 408.15769 Minimizing sources of ignition.

Rule 5769. (1) The rig substructure shall be ventilated either by dependable natural convection or by use of mechanical fans which provide not less than 12 complete air changes per hour.

Digitized by Google

(2) A rig engine shall have an adequate heat and spark arresting system for the exhaust.

(3) A gas or gasoline-fueled engine used in gas drilling operations shall be equipped with a shielded low-tension ignition system.

(4) A burning stove, open fire, or other possible source of ignition, such as an electric-powered tool or 2-way radio shall be permitted only in a designated area. Only a safety designed and approved heater shall be permitted on or near the rig floor.

(5) An emergency shutdown device shall be provided for each rig engine, excluding the power plant, and shall be located at the driller's console.

History: 1954 ACS 101, p. 79, Eff. Nov. 23, 1979.

R 408.15770 Procedures for freezing, valve drilling, and pipe hot tapping operations.

Rule 5770. (1) A freezing, valve drilling, or pipe tapping operation shall be under the direct supervision of a qualified person.

(2) The rated working pressure of all equipment used on valve drilling and pipe tapping operations shall be at least 1½ times the maximum wellhead pressure of the well on which work is being performed.

(3) After necessary equipment has been rigged up to perform valve drilling or pipe tapping operations, it shall be pressure tested for a minimum of 3 minutes to at least 1½ times the expected pressure but shall not exceed the rated maximum working pressure of either the equipment being tapped or the tapping equipment. The possibility of pipe collapse may dictate a reduction in test pressure.

(4) Pressure inside the lubricator shall equal the pressure inside the equipment being penetrated during the valve drilling and pipe tapping operations.

History: 1954 ACS 101, p. 79, Eff. Nov. 23, 1979.

R 408.15771 Freezing operations.

Rule 5771. (1) A frozen plug shall be allowed to set a minimum of 1 hour per inch of pipe diameter being frozen.

(2) When possible, a frozen plug shall be pressure tested from above for a minimum of 5 minutes to a pressure greater than the pressure under the plug.

(3) Following the pressure test, all pressure shall be bled off the pipe above the frozen plug and observed for a minimum of 15 minutes before breaking out the pipe and installing a new valve.

(4) After installing the new valve, void space between the frozen plug and valve shall be filled with fluid.

(5) A frozen plug shall be allowed to thaw at a normal rate. Steam or hot water shall not be used to thaw a frozen plug.

History: 1954 ACS 101, p. 79, Eff. Nov. 23, 1979.

PART 58. VEHICLE-MOUNTED ELEVATING AND ROTATING WORK PLATFORMS

GENERAL PROVISIONS

R 408.15801 Scope.

Rule 5801. This part provides for the safe operation and maintenance by the employer and the safe use by the employee of vehicle-mounted elevating and rotating work platforms in, around, and about a place of employment. Fire-fighting equipment and powered industrial trucks are not included in these rules.

History: 1954 ACS 82, p. 126, Eff. Dec. 31, 1974.

R 408.15803 Definitions; A to I.

Rule 5803. (1) "Aerial device" means any vehicle mounted device, telescoping, articulating or both, which is used to position an employee.

(2) "Aerial ladder" means an aerial device consisting of a single or multiple section extensible ladder.

(3) "Articulating boom platform" means an aerial device with 2 or more hinged boom sections.

(4) "Extensible boom platform" means an aerial device, except ladders, with a telescopic or extensible boom. A telescopic derrick with a personnel platform attachment shall be considered to be an extensible boom platform when used with a personnel platform.

(5) "Insulated aerial device" means an aerial device designed for work on or near energized lines and apparatus.

History: 1954 ACS 82, p. 126, Eff. Dec. 31, 1974.

R 408.15804 Definitions; M to Q.

Rule 5804. (1) "Mobile unit" means a combination of an aerial device, vehicle and related equipment.

(2) "Override" means to transfer or to take away platform control functions by another station.

(3) "Platform" means a personnel carrying device, such as a basket, bucket, stand, or equivalent which is a component of an aerial device.

(4) "Qualified line clearance tree trimmer" means an employee trained to work in proximity of energized power transmission and distribution lines. An employee in a training program is included in this definition.

(5) "Qualified lineman" means an employee trained and authorized to work on or near energized lines. An employee in a training program is included in this definition.

(6) "Qualified telecommunications employee" means an employee trained to work on communication lines in the proximity of energized power transmission and distribution lines.

History: 1954 ACS 82, p. 126, Eff. Dec. 31, 1974.

R 408.15805 Definitions; S to Y.

Rule 5805. (1) "Safety factor" means the ratio of the breaking strength of a piece of material or object to maximum designed load or stress applied when in use.

(2) "Vehicle" means any carrier that is not manually propelled.

(3) "Vehicle-mounted elevating and rotating work platform" means an aerial device.

(4) "Vertical tower" means an aerial device designed to elevate a platform in a substantially vertical axis.

(5) "Yield point" means the point where material begins to take a permanent deformation.

History: 1954 ACS 82, p. 126, Eff. Dec. 31, 1974.

R 408.15811 Employer responsibility.

Rule 5811. An employer shall:

(a) Provide training to an employee in the operations, hazards, and safeguards concerning an aerial device and R 408.15825 to R 408.15832 of this part before authorizing the employee to operate or ride on it.

(b) Maintain an aerial device in a condition free of known defects and hazards which could cause an injury.

History: 1954 ACS 82, p. 126, Eff. Dec. 31, 1974.

R 408.15812 Employee responsibilities.

Rule 5812. An employee shall:

(a) Operate an aerial device only after being trained and authorized by the employer.

(b) Report known defects and hazards concerning an aerial device to his supervisor.

History: 1954 ACS 82, p. 127, Eff. Dec. 31, 1974.

CONSTRUCTION, TESTING, AND USE PROVISIONS

R 408.15821 Construction, modification, and remounting.

Rule 5821. (1) An aerial device purchased, modified, or remounted after December 28, 1974, shall be as prescribed in ANSI A92.2-1969, standard for vehicle-mounted elevating and rotating work platforms, which is incorporated herein by reference and is available for inspection at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.75 each from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48909. An in-plant industrial type aerial lift designed for use on level surfaces is exempted from paragraph 3.1.6 of ANSI A92.2-1969 for requirements of stability on slopes.

(2) A permanent label or tag shall be affixed to an aerial device purchased, modified, or remounted after March 28, 1975, certifying compliance with subrule (1).

(3) An employer modifying the basic design of an aerial device shall secure approval of the modification in writing from the manufacturer of the aerial device, a firm offering an equivalent service, or a qualified engineer knowledgeable in the aerial device operations. The results of the modification shall be at least as safe as the original design.

(4) An aerial device shall bear a permanent plate stating the designed rated capacity.

(5) An aerial device shall be mounted on a vehicle capable of sustaining, or reinforced to sustain, the imposed load. The vehicle shall be a stable support for the aerial device.

(6) The lifting and outrigger system of an aerial device shall be equipped with a means such as, but not limited to, a pilot operated check valve to ensure that the system will not permit the work platform to drop in a free fall in event of a power or hydraulic line failure.

(7) An aerial device acquired before December 31, 1976, which does not meet the requirements of subrule (1), shall not be used unless it has been inspected and modified as required to conform to the essential stability, structural, electrical insulation, and operational requirements of ANSI A92.2-1969.

(8) In addition to the welding requirements prescribed in ANSI A92.2-1969, an aerial device shall conform to AWS D2.0-69, specifications for welding highway and railway bridges standard, which was adopted by reference by Act No. 154 of the Public Acts of 1974, as amended, being §408.1001 et seq. of the Michigan Compiled Laws, and is available for inspection at the Lansing office of the department of labor. This standard may be purchased at a cost of $5.00 from the

American Welding Society, 2501 N.W. 7th Street, Miami, Florida 33125, or the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48909.

History: 1954 ACS 82, p. 127, Eff. Dec. 31, 1974; 1954 ACS 89, p. 96, Eff. Nov. 13, 1976.

R 408.15823 Electrical ratings.

Rule 5823. (1) The rating plate required in R 408.15821 shall include a statement as to whether the aerial device is insulated or noninsulated and, if insulated, the rated line voltage for which the aerial device was designed and tested.

(2) The insulating portion of an aerial device shall not be altered in any manner that might reduce its insulating value.

History: 1954 ACS 82, p. 127, Eff. Dec. 31, 1974; 1954 ACS 89, p. 97, Eff. Nov. 13, 1976.

R 408.15824 Safety factors and yield points.

Rule 5824. (1) The design of the basic structural elements of the aerial device including the platform and its component parts shall have a yield point of not less than 3 times the rated load. Structural materials not having a clearly defined yield or break point shall have a designed safety factor of not less than 5.

(2) The designed safety factor of not less than 4 shall apply to those hydraulic and pneumatic components which would, on failure, permit a free fall, free rotation of the boom or loss of stability.

(3) Noncritical components shall have a bursting safety factor of not less than 2.

History: 1954 ACS 82, p. 127, Eff. Dec. 31, 1974.

R 408.15825 Controls.

Rule 5825. (1) The controls for the operation of an aerial device shall be permanently labeled as to their functions.

(2) Controls for an aerial device shall be designed or guarded to prevent inadvertent actuation.

(3) Articulating, extensible boom platforms, or both, primarily designed as personnel carriers, shall be equipped with both upper and lower controls.

(4) Upper controls shall be located within reach of the operator.

(5) Lower controls shall be capable of overriding the upper controls. Except in case of an emergency, the lower controls shall not be operated unless permission has been obtained by the employee in the basket or on the work platform.

History: 1954 ACS 82, p. 127, Eff. Dec. 31, 1974; 1954 ACS 89, p. 97, Eff. Nov. 13, 1976.

R 408.15831 Inspection and tests.

Rule 5831. (1) An aerial device shall be inspected and tested not less than annually for:

(a) Stability, when used with a manufacturer's specific configuration, shall be capable of sustaining a static load of 1½ times its rated capacity for that specific configuration in every position the load can be placed within the configuration on level ground and 1⅓ times its rated load when the vehicle is on a slope of 5 degrees downward in the direction most likely to cause an overturn. Where the use of outriggers and turntable leveling is a part of the figured specific configuration, then they shall be used in the determination. An in-plant aerial lift, designed for use on level surfaces, is excepted from this subdivision.

(b) Permanent deformation and cracks by using 1½ times the rated load.

(c) Defects by visual inspection during and following the load test.

(2) An electrical test of insulated aerial devices shall be made annually, as prescribed in paragraph A1.6, periodic inspections and tests, of ANSI A92.2-1969,

standard for vehicle-mounted elevating and rotating work platforms. An equivalent DC voltage test may be used in lieu of the prescribed AC voltage.

(3) Field inspection and tests shall be performed only by an authorized and trained employee or outside service.

(4) Lift controls shall be tested each day before use to determine that the controls are in safe working condition. An aerial device with defective controls shall not be used until repaired.

History: 1954 ACS 82, p. 127, Eff. Dec. 31, 1974; 1954 ACS 89, p. 97, Eff. Nov. 13, 1976.

R 408.15832 Use.

Rule 5832. (1) Any overhead line shall be considered energized until the owner, owner representative, or utility indicates otherwise and the line has been visibly grounded, and they shall be notified and provided with all pertinent information of the job before the commencement of operations near electrical lines.

(2) Except as prescribed in subrules (3) and (4), or where insulating barriers not a part of or an attachment to the aerial device have been erected to prevent physical contact with the lines, an aerial device shall maintain the distances from energized distribution and transmission power lines and equipment prescribed in table 1.

(3) A qualified lineman or qualified line clearance tree trimmer performing work on or near an exposed power transmission or distribution line from an aerial lift, shall maintain distances prescribed in table 2, unless the employee is insulated or guarded from the energized part by gloves or gloves and sleeves or insulated, isolated or guarded from any other conductive part or the energized part is insulated from the employee.

(4) A qualified telecommunications employee shall maintain the distances prescribed in table 3 when working from an aerial lift, unless the employee is insulated, isolated, or guarded from any other conductive part or the energized part is insulated from the employee.

(5) The insulated bucket, gloves, and sleeves used to comply with subrules (3) and (4) shall be rated at more than the voltage to be worked on or that with which they might come into contact.

(6) An in-plant industrial type aerial lift, designed to be used on level surfaces shall not be used on slopes, unless the aerial lift is adjusted to a firm level plane.

(7) A safety belt or harness shall be worn with a lanyard attached to the boom or basket when working from an aerial lift. An in-plant industrial type aerial device used on a level surface and equipped with a platform with approved railings is exempt from this subrule.

(8) A boom platform shall be provided with a rail or other structure around its upper periphery that shall be not less than 38 inches above the floor of the platform and with a toeboard not less than 4 inches high. A basket of a "cherry picker" shall be considered to meet this requirement, or a platform may have the guard rail removed from the working side providing a safety belt and lanyard is worn by the employee on the platform.

(9) The designed rated capacity for a given attitude shall not be exceeded.

(10) A proximity warning device may be used, but not in lieu of meeting the requirements of this rule.

(11) Belting off to an adjacent pole, structure, or equipment while working from an aerial device shall not be permitted.

(12) An employee shall stand firmly on the floor of the basket, and shall not sit or climb on the edge of the basket, except that an employee may sit in the basket

manually operated device at the base of the ladder, or other effective means, shall be used to prevent elevation or rotation of the ladder.

(2) Before a vehicle supporting an aerial lift is moved for travel, the boom shall be inspected to insure that it is properly cradled and the outriggers are in the stowed position, except as provided in subrule (3).

(3) A vehicle supporting an aerial device shall not be moved when the boom is elevated with employees in working position, unless the equipment is specifically designed for this type of operation and meets the requirements of R 408.15821.

(4) Brakes shall be set and outriggers, when used, shall be positioned on pads or a solid surface.

(5) Wheel chocks shall be installed before using an aerial device on an incline.

History: 1954 ACS 89, p. 99, Eff. Nov. 13, 1976.

PART 59. HELICOPTERS

R 408.15901 Scope.

Rule 5901. This part provides for the safe use and maintenance of helicopters in general industry, such as in aerial photography, aerial survey, fire fighting, rescue operations, transportation of personnel to elevated job sites, and delivery of injured persons and emergency supplies.

History: 1954 ACS 88, p. 99, Eff. July 16, 1976.

R 408.15911 External lift operations; qualifications for operator and helicopter.

Rule 5911. (1) An operator of a helicopter or a rotorcraft conducting external lifting operations shall have an operator's certificate for rotorcraft operation covering the type of operation being conducted, issued by the federal aviation administration, which shall be displayed within the craft being operated.

(2) Where required by the federal aviation administration or another governmental agency, the appropriate authority shall be notified that an external lift operation has been planned.

(3) A helicopter shall comply with applicable regulations of the federal aviation administration code, 14 C.F.R. Part 27-1974 and Parts 60 to 199-1975, which are incorporated herein by reference and are available for inspection at the Lansing office of the department of labor. This code may be purchased at a cost of $7.50 from the Government Printing Office, North Capital and H Streets, Washington, D.C. 20401, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48909.

History: 1954 ACS 88, p. 99, Eff. July 16, 1976.

R 408.15914 Briefings; visibility; fires; energized lines or equipment.

Rule 5914. (1) Briefing shall be conducted prior to each day's operation and shall set forth the plan of operation for the pilot in command and ground employees.

(2) The employer shall insure that, when visibility is reduced by dust or other conditions, ground employees are instructed to exercise special caution to keep clear of the main and stabilizing rotors. The employer shall also eliminate, as far as practical, the dust or other conditions reducing the visibility.

(3) Open fires shall not be permitted in areas where they may be spread by the rotor downwash.

(4) A helicopter, or any part of a helicopter, shall maintain the clearances prescribed in table 1 from any energized line or equipment, unless the owner or operator of the line assures that the line is deenergized and visibly grounded.

TABLE 1

Voltage	Clearance
50 kilovolts or less	15 feet
More than 50 kilovolts	15 feet plus .4 inch per each kilovolt over 50 kilovolts

History: 1954 ACS 88, p. 99, Eff. July 16, 1976.

R 408.15915 Personal protective equipment; loose clothing.

Rule 5915. (1) Except during an emergency operation, eye protection, as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code, shall be worn by a ground crew employee while working on an operation covered by this part when there is exposure to rotor wash.

(2) Except during an emergency operation, head protection, as prescribed in the occupational safety standards commission standard, Part 32. Head Protection Equipment, being R 408.13201 to R 408.13241 of the Michigan Administrative Code, shall be worn and secured by a chin strap by a ground crew employee working on an operation covered by this part when lifting or landing a load.

(3) Loose fitting clothing likely to flap in rotor downwash, and thus be snagged on the hoist line, shall not be worn.

History: 1954 ACS 88, p. 99, Eff. July 16, 1976.

R 408.15916 Housekeeping; loose gear.

Rule 5916. (1) Good housekeeping shall be maintained in the helicopter loading and unloading area. The area shall be kept free of recognized hazards.

(2) The employer shall take all necessary precautions to protect employees from flying objects in the rotor downwash. All loose gear within 100 feet of the place of lifting or depositing the load, or within an area susceptible to rotor downwash, shall be secured or removed.

History: 1954 ACS 88, p. 99, Eff. July 16, 1976.

R 408.15921 Approaching craft by employees.

Rule 5921. (1) An employee shall not be permitted to approach within 50 feet of the helicopter when the rotor blades are turning, unless the work duties of the employee require the presence of the employee within that area.

(2) The employer shall instruct employees and shall ensure that, whenever approaching or leaving a helicopter which has its blades rotating, all employees shall remain in full view of the pilot and keep in a crouched position. An employee shall not be permitted to work in the area from the cockpit or cabin rearward while blades are rotating, unless authorized by the helicopter operator.

(3) An employee shall not be permitted to perform work under hovering craft except when necessary to hook or unhook a load. A safe means of access shall be provided for an employee to reach the hoist line hook and engage or disengage a cargo sling while under the hovering craft.

History: 1954 ACS 88, p. 100, Eff. July 16, 1976.

R 408.15922 Providing and training ground employees; weight limitation; checking size, weight, and connection of load; tag line, pressed sleeve, hoist wire, or other gear; static charge; rated capacity of load line.

Rule 5922. (1) Ground employees shall be provided, and they shall be properly trained to ensure that helicopter loading and unloading operations can be performed safely.

(2) The weight of an external load shall not exceed the federal aviation administration rated capacity of the helicopter.

(3) The size and weight of loads, and the manner in which loads are connected to the helicopter, shall be checked by the pilot in command. A lift shall not be made if the helicopter pilot in command determines that the lift cannot be made safely.

(4) A load shall be properly slung. A tag line shall be of a length that does not permit it being drawn up into the rotors. A pressed sleeve, swaged eye, or equivalent means shall be used for a freely suspended load to prevent a hand splice from spinning open or a cable clamp from loosening.

(5) A hoist wire or other gear, except for a pulling line or conductor that is allowed to "play out" from a container or roll off a reel, shall not be attached to any fixed ground structure or allowed to foul on any fixed structure.

(6) The static charge on the suspended load shall be dissipated with a grounding device before ground personnel touch the suspended load, unless protective rubber gloves are being worn when touching the load.

(7) A load line shall have a working load rating of not less than the rated capacity of the helicopter.

History: 1954 ACS 88, p. 100, Eff. July 16, 1976.

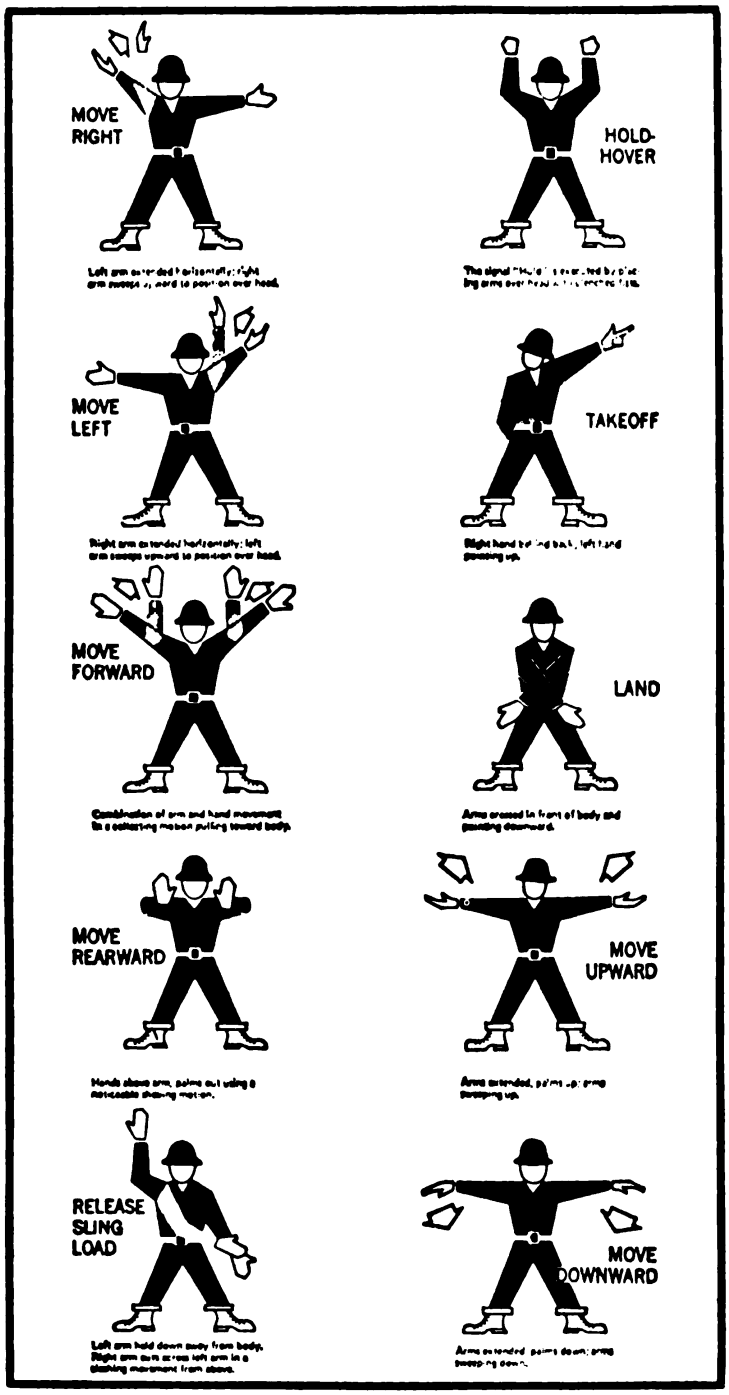
R 408.15923 Cargo hooks.

Rule 5923. (1) An electrically operated cargo hook shall have the electrical activating device so designed and installed as to prevent inadvertent operation.

(2) A cargo hook shall be equipped with an emergency mechanical control for releasing the load.

(3) A hook shall be tested prior to operation each day by a competent person to determine that the electrical and mechanical releases function properly.

History: 1954 ACS 88, p. 100, Eff. July 16, 1976.



R 408.15931 Communication between pilot and signalman; signal systems.

Rule 5931. (1) There shall be constant, reliable communication between the pilot and a designated employee of the ground crew who acts as a signalman during the period of loading and unloading. The signalman shall be clearly distinguishable from other ground employees.

(2) The employer shall instruct the aircrew and ground employees on the signal systems to be used, and shall review the system with the employees in advance of hoisting the load. This applies to both radio and hand signal systems. Hand signals, where used, shall be as shown in figure 1.

and transfer molding, injection molding, extrusion, expansion molding, rotational molding, vacuum molding, sealing, heating, granulating, welding and processing of plastics.

History: 1954 ACS 76, p. 71, Eff. Aug. 29, 1973.

R 408.16204 Definitions; B to E.

Rule 6204. (1) "Blow molding machine" means a plasticizer and a clamping unit working in conjunction with each other so that the plasticizer produces molten plastic which is blown by air, gas or liquid, and a clamping unit performs the manufacture of hollow products.

(2) "Compression molding machine" means a machine using temperature controlled molds for pressing plastic material into the shape of a mold cavity.

(3) "Dielectric sealing" means a process for bonding plastic films by use of high frequency energy.

(4) "Expansion molding" means to make plastic shapes by expanding polystyrene beads with a heating medium within a mold.

(5) "Extrusion machine" means a plasticizer mounted on a base which takes raw plastic material, changes it into a molten state and extrudes it through a die into a predetermined shape.

History: 1954 ACS 76, p. 71, Eff. Aug. 29, 1973.

R 408.16205 Definitions; H, I.

Rule 6205. (1) "Heat sealing" means the joining of plastic by simultaneous application of heat and pressure to the area of contact.

(2) "Hot plate welding" means the joining of plastic by preheating followed by application of pressure to the plastic pieces.

(3) "Hot-wire cutter" means a machine using electrically resistant wire for heating, spaced at intervals to cut expanded plastic blocks into predetermined sizes.

(4) "Injection molding machine" means a machine using a plasticizer to force a charge of processed plastic material into a closed mold, which produces a molded part.

History: 1954 ACS 76, p. 72, Eff. Aug. 29, 1973.

R 408.16206 Definitions; M to P.

Rule 6206. (1) "Matched metal molding" means a method of molding reinforced plastics between 2 close fitting metal molds mounted in a power press.

(2) "Nip point" means a point at which it is possible to be caught between 2 or more shafts or rolls rotating parallel to each other in opposite directions.

(3) "Pinch point" means a point at which it is possible for an employee to be caught between moving parts of a machine or between moving and stationary parts of a machine.

(4) "Plastic scrap granulator" means a machine with rotating knives which cut plastic articles into particles.

(5) "Point of operation" means the area of a machine where material is actually worked.

History: 1954 ACS 76, p. 72, Eff. Aug. 29, 1973.

R 408.16207 Definitions; R, S.

Rule 6207. (1) "Rotational molding" means a method of making hollow articles by charging a hollow rotating mold with a plastic material. After the heated material covers all surfaces of the mold it is cooled and stripped out.

(2) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(3) "Ship-lap machine" means a powered machine equipped with feed rolls and milling cutters for the purpose of cutting grooves in the edge of expanded sheet material.

(4) "Spin welding" means a method of fusing 2 objects together by spinning 1 or both until frictional heat melts the interface. The spinning is then stopped and pressure applied to both objects.

History: 1954 ACS 76, p. 72, Eff. Aug. 29, 1973.

R 408.16208 Definitions; T to V.

Rule 6208. (1) "Transfer molding machine," also known as a plunger molding machine, means an auxiliary chamber used to heat plastic to a hot state before transferring it into a closed mold of a compression molding machine.

(2) "Transfer printer" means a machine with rolls which imprints a pattern on material run between the rolls.

(3) "Two-hand controls" means an actuating device with an anti-tie down, anti-repeat feature that requires the concurrent use of both hands of an operator to actuate a machine.

(4) "Ultrasonic welding" means to seal plastic by application of vibratory mechanical pressure which creates localized heat to melt the plastic surfaces which effects the seal.

(5) "Vacuum forming," also known as thermo forming, means forming of pliable sheet plastic into shapes by use of molds and atmospheric or mechanical pressure.

History: 1954 ACS 76, p. 72, Eff. Aug. 29, 1973.

R 408.16211 Employer responsibilities.

Rule 6211. (1) An employer shall provide training to an employee regarding the operating procedures, hazards and safeguards of his assigned job.

(2) An employer shall not allow a machine to be operated which is not guarded as prescribed by this part or where the machine has a known defect which could affect the safety of the employee.

(3) An employer shall establish and maintain a lockout system as prescribed in R 408.16227(3).

History: 1954 ACS 76, p. 72, Eff. Aug. 29, 1973.

R 408.16212 Employee responsibilities.

Rule 6212. (1) An employee shall not operate a machine until he has been trained in its operating procedures, hazards and safeguards and has been authorized to do so.

(2) An employee shall report to his supervisor a machine or safeguard which is defective.

(3) A guard removed for inspection, maintenance, die setting or mold setting shall be replaced before a machine is released for production.

History: 1954 ACS 76, p. 73, Eff. Aug. 29, 1973.

R 408.16215 Illumination.

Rule 6215. Illumination of not less than 25 footcandles shall be provided at an operator's work station.

History: 1954 ACS 76, p. 73, Eff. Aug. 29, 1973.

R 408.16216 Aisles and work areas.

Rule 6216. An aisle or work area shall be kept free of protruding objects, holes, loose boards, oil and water spillage which create a tripping and slipping hazard.

History: 1954 ACS 76, p. 73, Eff. Aug. 29, 1973.

R 408.16217 Housekeeping.

Rule 6217. Dust, scrap, and spills of plastic materials shall be cleaned up and disposed of daily, or more often if it constitutes an employee hazard.

History: 1954 ACS 76, p. 73, Eff. Aug. 29, 1973.

EQUIPMENT INSTALLATION AND MAINTENANCE

R 408.16221 Machine installation.

Rule 6221. (1) An electrically powered machine shall be grounded.

(2) A machine installed on a bench, table or stand shall be designed or secured to prevent unintentional movement or tipping.

(3) A machine shall be so located that there will be space for the employee to handle the material and operate the machine with no interference to or from another employee or machine.

(4) A machine shall be so located that it will not be necessary for an operator to stand in an aisle.

(5) A powered gate shall have the leading edge equipped with a return switch and circuit so designed that the gate will retract and not cause an injury if an employee is struck by it.

History: 1954 ACS 76, p. 73, Eff. Aug. 29, 1973.

R 408.16222 Guards and protective equipment.

Rule 6222. (1) An electrical connection to a heated portion of a ram or screw cylinder shall be covered with a nonconductive guard or a grounded metal barrier to prevent contact with live terminals during normal operation of the machine.

(2) An exposed heated surface which could cause an injury shall be covered or guarded to prevent contact by an employee; this subrule shall apply except in respect to an area requiring accessibility, such as the adapter or gate on an extrusion machine.

(3) A machine using a blade or knife to cut plastic materials shall be guarded by a barrier, by position or by controls to prevent contact by the operator.

(4) An employee, when subject to burns from a heated surface which cannot be covered or guarded, shall be provided and wear heat resistant personal protective equipment.

History: 1954 ACS 76, p. 73, Eff. Aug. 29, 1973.

R 408.16223 Platforms and ladders.

Rule 6223. Where it is necessary for a production employee to mount a machine to perform his assigned production duties, a platform, ladder or both shall be provided and used. The floor of the platform shall have an open design or slip-resistant surface. A platform shall be as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10201 to R 408.10241 of the Michigan Administrative Code. A fixed ladder shall be as prescribed in the occupational safety standards commission standard, Part 3. Fixed Ladders, being R 408.10301 to R 408.10365 of the Michigan Administrative Code. A portable ladder shall be as prescribed in the occupational safety standards commission standard, Part 4. Portable Ladders, being R 408.10401 to R 408.10456 of the Michigan Administrative Code.

History: 1954 ACS 76, p. 73, Eff. Aug. 29, 1973.

R 408.16224 Hydraulic and pneumatic systems; safety factors.

Rule 6224. Flexible and rigid hydraulic and pneumatic piping and its component parts shall be designed and constructed with a safety factor of not less than 4.

History: 1954 ACS 76, p. 74, Eff. Aug. 29, 1973.

R 408.16226 Controls.

Rule 6226. (1) An operating control shall be guarded against accidental contact. A control button or lever shall be identified as to its function.

(2) A machine requiring more than 1 operator, exposed to a point of operation, shall have controls for each operator which shall be activated concurrently before the machine will operate.

(3) A machine shall be provided at each operator station with an emergency stop device, red in color and readily accessible. A button, if used, shall have a mushroom shape.

(4) A machine shall be provided with a device which, upon power failure, will prevent automatic restarting upon restoration of power. Fire, coolant and sump pumps are excepted.

(5) When used, interlocking devices shall be installed to minimize the possibility of accidental operation or tampering.

(6) Where more than 1 operator is assigned to a plastic molding machine not equipped with interlocked gates and is exposed to a point of operation, each operator shall be provided with a 2-hand control device requiring concurrent action of all controls and located so that an operator cannot reach into the point of operation during the closing cycle.

(7) Two-hand control devices shall be located in a manner to prevent bridging and shall require manual operation of both controls until a point is reached in the cycle where the operator cannot remove his hands and place them within a pinch point or point of operation.

History: 1954 ACS 76, p. 74, Eff. Aug. 29, 1973.

R 408.16227 Lubrication and maintenance.

Rule 6227. (1) Lubrication of a machine shall be accomplished by 1 of the following:

(a) Manually when the machine can be shut off and locked out.

(b) An automatic pressure or gravity feed system.

(c) An extension pipe leading to an area outside of the guards or away from any hazard.

(d) Other means which offer equivalent or better safety than (a), (b), or (c).

(2) In any case rule 732, on lubrication, of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10732 of the Michigan Administrative Code, shall be followed.

(3) A machine or equipment to be repaired or serviced shall have the power source locked out by each employee doing the work if unexpected motion would cause injury. Any residual pressure which would be hazardous shall be relieved before and remain relieved during such work by an employee doing the work.

History: 1954 ACS 76, p. 74, Eff. Aug. 29, 1973.

SPECIFIC EQUIPMENT

R 408.16231 Blow molding.

Rule 6231. (1) A blow molding machine shall be equipped with a safety gate

Digitized by Google

designed and so constructed to prevent an employee from reaching into the point of operation when the gate is in a closed position.

(2) The gate shall activate at its final closing at least 1 electrical device which shall be interlocked with an electrical mold closing control. Opening or removal of the gate shall prevent further closing of the mold.

(3) The gate shall also be interlocked with the hydraulic valve governing mold closing or have a mechanical device which will prevent movement of the machine with the gate open or removed.

History: 1954 ACS 76, p. 74, Eff. Aug. 29, 1973.

R 408.16232 Compression, transfer, and matched metal molding machinery.

Rule 6232. (1) A compression, transfer or matched metal molding machine shall be equipped with 1 of the following:

(a) A moving gate guard covering the front opening to the point of operation. An electric interlock on the moving gate guard shall be so arranged to prevent the press from closing until the moving gate guard has covered the opening. When the moving gate guard is opened the press shall stop or reverse.

(b) A 2-hand control device located so that the operator cannot reach into the point of operation during the closing cycle.

(2) The point of operation for a machine which does not require access for an operator shall be guarded by an interlocked removable barrier or a fixed barrier. The toggles on such a machine shall also be enclosed by an interlocked removable or fixed barrier to prevent inadvertent contact by an employee.

(3) Two 2-hand control devices shall be provided and used when operating a transfer molding machine. One set shall close the mold and then the other set shall actuate the transfer plunger. Where the entrance to the plunger is guarded by an interlocked gate, 1 such control device will be acceptable.

History: 1954 ACS 76, p. 74, Eff. Aug. 29, 1973.

R 408.16233 Extrusion machinery and equipment.

Rule 6233. (1) An extrusion machine and floor model controller panel shall be secured to prevent tipping.

(2) When running production, the in-running nip points on a take-off machine pulling extrusions, except sheets, from the extruder shall be guarded by a barrier adjusted to within ¼ inch of the material.

(3) When running production, sheet and film extrusion machinery shall be guarded by a barrier or enclosure at all in-running pinch points exposed to contact.

(4) An extrusion machine having an open feed screw shall have the feed screw covered by an interlocked gate or cover to prevent the operator from being caught in the point of operation.

History: 1954 ACS 76, p. 75, Eff. Aug. 29, 1973.

R 408.16234 Injection molding machinery.

Rule 6234. (1) An injection molding machine, except 1 with a movable table which is covered in subrule (4), shall be equipped with a safety gate designed and constructed to prevent an employee from reaching into the point of operation, except when the gate is open.

(2) A safety gate on such a machine installed after the effective date of this part shall be interlocked with electrical, hydraulic and mechanical devices.

(3) Such a machine installed before the effective date of this part shall have the safety gate interlocked by any 2 of the following:

(a) Electrical mold closing control.
(b) Hydraulic valves governing mold closing.
(c) Mechanical device preventing molding closing.

(4) Such a machine using a movable table to hold the lower mold shall be provided with a barrier designed and constructed to prevent an employee access to the point of operation.

(5) Such a machine shall be equipped with a fixed or an interlocked removable barrier designed and constructed to prevent an employee from reaching into the clamping mechanism.

(6) When purging such a machine, an employee shall be protected from the purging splatter by a shield that is fixed, portable or worn on the employee. The same guarding shall be used when servicing a heated runner manifold nozzle.

(7) Such a machine using an extruding machine having an exposed feed screw shall have the screw guarded as prescribed in R 408.16233(4).

(8) An electrically interlocked barrier shall be provided to cover the mold area opposite the operator on such a machine purchased after the effective date of this part. Such a machine in operation before the effective date shall be provided with an interlocked or fixed barrier to cover the mold area opposite the operator.

History: 1954 ACS 76, p. 75, Eff. Aug. 29, 1973.

R 408.16235 Expansion molding.

Rule 6235. (1) A ship-lap machine shall have the milling cutters guarded or enclosed at the point of operation to prevent contact with the operator's fingers. A barrier shall be provided in front of the in-running nip points of the feed rollers to within ⅜ inch of the material.

(2) A multiple hot-wire cutter shall have a manual control for setup use only. Any control for the automatic cycle shall be interlocked with the carriage so that the hot-wire cutter is activated before the carriage moves and is shut off when the carriage stops.

(3) A multiple hot-wire cutter shall be equipped on both sides of the moving portion of the machine with a barrier designed to prevent an employee from reaching the hot wires.

(4) An expansion block mold shall have reinforcements necessary to contain the force of the expanding plastic particles. Locking mechanisms shall not be more than 24 inches apart.

(5) A custom expansion block press shall protect the operator by means of an interlocked gate across the mold parting line or 2-hand control devices. When the gate is opened or removed the machine shall cease to function until the gate is closed.

History: 1954 ACS 76, p. 75, Eff. Aug. 29, 1973.

R 408.16236 Vacuum and thermo forming.

Rule 6236. (1) An in-line automatic trim press used to die cut vacuum formed pieces shall have the point of operation and all moving parts enclosed that would otherwise be exposed to contact.

(2) A punch press used to trim or die cut vacuum or thermo formed pieces shall be guarded as prescribed in the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12301 to R 408.12372 of the Michigan Administrative Code.

(3) A trim press using a moving roll to supply pressure to the top die shall be provided with control devices designed to keep both hands of the operator from the point of operation when the die closes.

(4) Toggles on an automatic vacuum or thermo forming press shall be guarded by a barrier to prevent access to the pinch point.

(5) A rotary vacuum forming machine shall be equipped with a 2-hand control device located and timed as prescribed in R 408.16226(7).

(6) The space around a rotary vacuum forming machine below the level of the lower mold shall be enclosed.

(7) An indexing machine shall be equipped with a stop device, such as a paddle switch, interlocked to stop the indexing operation. The stop device shall be located ahead of the first point of operation or pinch point beyond the work station.

History: 1954 ACS 76, p. 76, Eff. Aug. 29, 1973.

R 408.16237 Rotational molding.

Rule 6237. (1) A pinch point created where the revolving drive wheel of a rotational molding machine meets the driving surface shall be guarded.

(2) The perimeter of the patch of travel of the rotating molds shall be guarded by a standard barrier as prescribed in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10231 of the Michigan Administrative Code. Access into the area shall be by a gate or door. If the gate or door is interlocked to the power source, the guarding required in subrule (1) need not be installed. The interlocked gate or door on the standard barrier shall not be used as an operating control.

(3) Such a machine, having each movement of the mold manually controlled by an operator, may substitute a yellow line 4 inches wide for a standard barrier around the perimeter of the patch of travel of the rotating molds, except the perimeter between the heating and cooling chambers. However, movement of the molds shall be preceded by automatic activation of a warning device, such as a flashing light, bell, horn, or siren for 5 seconds before the movement.

(4) The operating controls for a manually operated machine shall be so located that the operator cannot reach into the path of or be struck by the moving mold.

History: 1954 ACS 76, p. 76, Eff. Aug. 29, 1973.

R 408.16241 Guillotine cutter.

Rule 6241. A guillotine plastic cutter shall have the cutter blade guarded on each side by a barrier constructed in such a manner to prevent contact with the cutter by the operator.

History: 1954 ACS 76, p. 76, Eff. Aug. 29, 1973.

R 408.16242 Hopper filling devices.

Rule 6242. A device used to fill a hopper more than 5 feet above the floor or platform of a plasticizer shall be 1 of the following:

(a) A barrel dumping device for use with a hoist.

(b) A barrel dumping device or an enclosed platform on a powered industrial truck.

(c) A portable stair complete with hand rails and wheel locks.

(d) A platform located not more than 5 feet below the hopper opening.

(e) An automatic feed system.

(f) Other means which do not expose the employee to a hazard.

History: 1954 ACS 76, p. 76, Eff. Aug. 29, 1973.

R 408.16243 Processing plastic.

Rule 6243. (1) A heat sealing press shall be equipped with 2-hand controls which shall be pressed concurrently to activate the machine.

(2) A punch press used for die cutting plastic shall be guarded as prescribed in R 408.16236(2).

(3) A printing press used for die cutting shall be equipped with an effective device which restricts or removes the operator's hands from the point of operation at each closing.

(4) A machine using rotary cutters to cut and shape plastic shall have the point of operation enclosed.

History: 1954 ACS 76, p. 77, Eff. Aug. 29, 1973.

R 408.16244 Transfer printer, crush and embossing rolls.

Rule 6244. The in-running rolls of a transfer printer, crush or embossing role shall be guarded by a barrier which will prevent an operator from being caught in the nip point.

History: 1954 ACS 76, p. 77, Eff. Aug. 29, 1973.

R 408.16245 Hot plate, spin and ultrasonic welding.

Rule 6245. (1) The point of operation on a hot plate, spin or ultrasonic welding machine shall be guarded with 1 of the following:

(a) A movable interlocked gate or fixed barrier designed and constructed to prevent an employee from reaching into the point of operation except when the gate is opened.

(b) Two-hand control devices which shall be located so that the operator cannot reach into the point of operation during the cycle.

(2) Moving parts of such a machine which create a pinch point shall be guarded as prescribed in subdivision (a).

(3) The heated plates of a hot plate welding machine shall be guarded when in a retractable position.

(4) A fixed barrier of solid material shall be installed on a spin welding machine when:

(a) A rotating chuck continues to spin when in the retracted position.

(b) Flash is projected and the machine is guarded by 2-hand control devices.

(c) Fixed orientation is accomplished by an indexing device.

History: 1954 ACS 76, p. 77, Eff. Aug. 29, 1973.

R 408.16246 Dielectric sealing.

Rule 6246. (1) An electrical power pack or oscillator cabinet shall have the access doors interlocked in a manner which will cut the power when the doors are opened, and a mechanical shorting bar which will automatically ground out the residual energy.

(2) An employee shall be protected by an interlocked and grounded shield constructed to block direct passage of the stray currents moving out of the intended path.

(3) The point of operation shall also be guarded as prescribed in R 408.16245(1). The movable or fixed barrier and the shield required in R 408.16246(2) may be the same device if it accomplishes both purposes.

History: 1954 ACS 76, p. 77, Eff. Aug. 29, 1973.

R 408.16247 Plastic scrap granulators.

Rule 6247. (1) The opening of a hopper of a plastic scrap granulator shall be of such distance from the cutting knives that the fingers of an employee cannot make contact. A baffle gate shall be installed at the feed entrance of a hopper so that the opening is normally closed except for charging with scrap.

(2) An access opening for maintenance, cleaning or inspection shall be covered with a solid plate, secured by a fastener which requires the use of a tool to unfasten it.

(3) Before a hopper is removed, a plastic scrap granulator shall have the power source disconnected and locked out.

History: 1954 ACS 76, p. 77, Eff. Aug. 29, 1973.

R 408.16251 Other machinery.

Rule 6251. Where woodworking machinery is used in the processing of plastics, the machinery shall be as prescribed in the occupational safety standards commission standard, Part 27. Woodworking Machinery, being R 408.12701 to R 408.12799 of the Michigan Administrative Code.

History: 1954 ACS 76, p. 77, Eff. Aug. 29, 1973.

PART 63. PULP-PAPER-PAPERBOARD MILLS

GENERAL PROVISIONS

R 408.16301 Scope.

Rule 6301. This part sets forth rules to protect the life, limb, and health of the employee in, about, or around places of employment where pulp, paper, and paperboard are manufactured and converted.

History: 1954 ACS 77, p. 136, Eff. Dec. 15, 1973.

R 408.16303 Definitions; A, B.

Rule 6303. (1) "Aisle" means a patch of travel for employees and material handling equipment.

(2) "Barker" means a machine which removes the bark from a log.

(3) "Beater" means a vessel used for blending pulp and additives and preparing the pulp for paper making.

(4) "Blow pit" means a vessel used to receive pulp from a digester.

(5) "Boom crane" means a machine with a rotating superstructure, operating machinery and boom mounted on a base, usually self-propelled, and used to lift, lower and swing loads.

(6) "Broke" means recoverable paper.

(7) "Broke hole" means an opening in a floor into which paper scrap is discharged.

History: 1954 ACS 77, p. 136, Eff. Dec. 15, 1973.

R 408.16304 Definitions; C to E.

Rule 6304. (1) "Calender" means a machine having an assembly of rolls for producing a desired finish on paper.

(2) "Chipper" means a machine which cuts wood into chips of predetermined size.

(3) "Chock" means a wedge or block of such design and construction to hold an object in place and to prevent movement.

(4) "Core notcher" means a machine used to punch notches in ends of paper or metal cores.

(5) "Cutter" means a machine used to cut rags and paper to small pieces.

(6) "Digester" means a pressure vessel used to treat pulpwood, rags, straw or other cellulosic materials with chemicals or steam to produce pulp.

(7) "Embosser" means a machine that applies a pattern to a sheet of paper by running it between engraved rolls.

History: 1954 ACS 77, p. 136, Eff. Dec. 15, 1973.

R 408.16305 Definitions; F to N.

Rule 6305. (1) "Flammable" means to ignite easily and rapidly burn.

(2) "Foot protection" means protective equipment such as, but not limited to, a metal or plastic toe cap or metatarsal device, safety shoes, or boots, worn on an employee's foot and designed to protect against injury.

(3) "Grinder" means a pulpstone wheel for grinding logs to produce wood pulp.

(4) "Guillotine trimmer" means a machine with a shearing knife used to cut sheets to size.

(5) "Hooker" means the employee who hooks the load to the hook.

(6) "Jack ladder" means a conveyor used to transport logs to a barker.

(7) "Knot cleaner" or "woodpecker" means a device used to remove knots from pulpwood.

(8) "Nip point" means that point where a rotating object creates a pinching action with another rotating object.

History: 1954 ACS 77, p. 136, Eff. Dec. 15, 1973; 1954 ACS 89, p. 100, Eff. Nov. 13, 1976.

R 408.16306 Definitions; P.

Rule 6306. (1) "Paperboard mill" means a plant that manufactures paperboard from pulp or recycled paper fibers.

(2) "Paper mill" means a plant that manufactures paper from pulp or recycled paper fibers.

(3) "Pinch point" means a point at which it is possible to be caught between the moving parts of a machine, or between moving and stationary parts of a machine or between material and any part of a machine.

(4) "Pulper" means a machine designed to break up, defiber and dispense dry pulp, mill process broke, commercial waste paper or other fibrous material into slush form for further processing.

(5) "Pulp mill' means a mill which processes pulpwood, wood chips or other such cellulosic material into pulp by cooking, screening and bleaching.

(6) "Pulpwood" means a wood used in making pulp for paper.

History: 1954 ACS 77, p. 136, Eff. Dec. 15, 1973.

R 408.16307 Definitions; R.

Rule 6307. (1) "Rag cooker" means a vessel for reducing rags to pulp by cooking in a liquid.

(2) "Rag duster" means a machine used to remove dust from rags.

(3) "Rider roll" means an idler roll which applies pressure to a roll being rewound.

(4) "Roll splitter" means a guillotine-type cutter used to split rolls of paper parallel to the core.

(5) "Rotary cutter" means a machine with revolving knives which cuts rolled paper into sheets.

History: 1954 ACS 77, p. 137, Eff. Dec. 15, 1973.

R 408.16308 Definitions; S.

Rule 6308. (1) "Shredder" means a machine for reducing rags and paper into fine fibers.

(2) "Slasher saw" means a circular saw through which logs are moved for cutting to length.

(3) "Sole plate" means a base plate on which a machine is mounted.

(4) "Splitter block" means a device used to reduce large wood logs to a smaller size.

(5) "Stock chest" means a vessel for storage of pulp slurry.

(6) "Sulfur burner" means a furnace used to burn sulfur.

(7) "Super calender" means a machine having an assembly of rolls for producing fine finishes on paper.

History: 1954 ACS 77, p. 137, Eff. Dec. 15, 1973.

R 408.16309 Definitions; T to V.

Rule 6309. (1) "Tipple" means a device by which a loaded railcar or truck is emptied.

(2) "Vessel" means a tank or vat used for storage or mixing of pulp or chemicals.

History: 1954 ACS 77, p. 137, Eff. Dec. 15, 1973.

R 408.16311 Employer responsibility.

Rule 6311. An employer shall:

(a) Provide training to each employee regarding the hazards and safeguards before he starts his assigned job.

(b) Provide personal protective equipment necessary to protect the employee from the hazards of the job as required by R 408.16313.

(c) Not allow a machine to be operated which is not guarded according to state standards, has a defective guard or is otherwise unsafe.

(d) Establish and maintain a lockout procedure as prescribed in R 408.16323(4).

History: 1954 ACS 77, p. 137, Eff. Dec. 15, 1973.

R 408.16312 Employee responsibility.

Rule 6312. An employee shall:

(a) Use personal protective equipment furnished by the employer.

(b) Report to his supervisor any machine or safeguard which is defective.

(c) Not remove a guard except for authorized operational or maintenance purposes. The guard shall be replaced or equivalent guarding installed before the machine is returned to production.

(d) Not operate any machine or equipment until he is trained in the operating procedures, hazards and safeguards and has been authorized to do so.

History: 1954 ACS 77, p. 137, Eff. Dec. 15, 1973.

R 408.16313 Personal protective equipment.

Rule 6313. (1) A deluge shower and eye fountain shall be provided within 25 feet of an area where caustics or acids are used or mixed at a strength which could cause injury to an exposed employee.

(2) An approved life jacket shall be provided and worn whenever an employee works above water where a protective standard barrier or lifeline and safety belt is not provided.

(3) Personal protective equipment used by more than 1 employee shall be cleaned or sanitized after each usage where body contact has been made.

(4) Eye protection shall be worn by employees in areas including, but not limited to, maintenance operations, the wood yard, at barking, knot cleaning, digesting, pulp grinding, banding operations and chemical handling as specified in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code.

(5) Head protection shall be worn by employees in areas including, but not limited to, the wood yard and at barking, maintenance, digesting and pulp

grinding operations as specified in the occupational safety standards commission standard, Part 32. Head Protection, being R 408.13201 to R 408.13241 of the Michigan Administrative Code.

(6) Foot protection shall be worn by employees including, but not limited to, the wood yard and at the pulp grinding, maintenance and hazardous chemical handling and mixing operations.

(7) Personal protective equipment such as aprons, gloves, rubber boots and metal or plastic toe or metatarsal foot protection shall be provided by the employer and worn by the employee where the possibility of injury dictates.

(8) Respiratory equipment shall be available and maintained in an operable and sanitary condition where toxic fumes may be encountered above the maximum threshold limits prescribed by the state department of public health.

History: 1954 ACS 77, p. 137, Eff. Dec. 15, 1973.

R 408.16321 Illumination.

Rule 6321. (1) Natural or artificial lighting shall be furnished to provide the following:

(a) A minimum of 25 footcandles intensity at the machine operator's work station.

(b) A minimum of 5 footcandles along a means of egress.

(c) A minimum of 2 footcandles in an inside active storage area.

(2) An employee entering a vessel for the purpose of cleaning or inspecting shall be provided with a safety light approved for that particular environment if the vessel lacks the required illumination.

(3) Emergency lighting shall be provided wherever it is necessary for employees to remain at their machines or stations to shut down equipment in case of power failure. Emergency lighting shall be provided at stairways and passageways or aisleways used by employees for emergency exit in case of power failure. Emergency lighting shall be provided in all plant first aid and medical facilities.

History: 1954 ACS 77, p. 138, Eff. Dec. 15, 1973; 1954 ACS 89, p. 100, Eff. Nov. 13, 1976.

R 408.16322 Floor, aisles, and catwalks.

Rule 6322. (1) An aisle or floor work area shall be free of protruding objects, holes and loose boards.

(2) An aisle shall be 3 feet wider than the widest load transported in the aisle and the outline of the aisle marked.

(3) A slip resistant surface shall be provided on platforms, at work stations, on walk ramps, plank walks and catwalks.

(4) A stair tread leading to a catwalk or platform shall have a slip resistant surface.

(5) A catwalk 4 feet or more above the floor, ground or platform shall be guarded by a standard barrier and toeboard on the open side as prescribed in rules 211, 231, and 233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10211, R 408.10231, and R 408.10233 of the Michigan Administrative Code. However, a catwalk, regardless of height, above or adjacent to dangerous equipment shall be guarded with a standard barrier and toeboard.

History: 1954 ACS 77, p. 138, Eff. Dec. 15, 1973.

R 408.16323 Power controls.

Rule 6323. (1) A machine shall be equipped with an emergency stop device, distinguished by its size or color, which can be activated from the operator's or

crew member's work station. In addition, a rotary cutter, paper machine, and calender shall have an emergency stop device which will provide a braking action to stop the machine quickly in an emergency. This device shall be tested periodically by making use of it when stopping the machine.

(2) A machine attended by more than 1 operator shall be equipped with a control for each operator exposed to a point of operation hazard. These controls shall be interlocked to prevent operation until each operator operates his control concurrently.

(3) A machine control shall be designed and installed to prevent unintentional activation by contact with objects or parts of the body.

(4) A power source of any equipment to be repaired, serviced or set-up shall be locked out by each employee doing the work where unexpected startup would cause injury, except when motion is necessary during set-up or adjustment. Such motion shall be achieved by a manually held constant pressure control device. Residual pressure shall be relieved prior to and during such work when the equipment is locked out.

(5) Upon power failure, provisions shall be made to prevent machines from automatically restarting upon restoration of power.

History: 1954 ACS 77, p. 138, Eff. Dec. 15, 1973; 1954 ACS 89, p. 100, Eff. Nov. 13, 1976.

R 408.16324 Machine installation.

Rule 6324. (1) A machine installed on a bench, table or stand shall be fastened to prevent unintentional movement or tipping.

(2) A machine shall be so placed that it will not be necessary for an employee to stand in an aisle.

(3) An electrically powered machine shall be grounded.

(4) A machine, which because of its type of operation builds up static electricity, shall be equipped with a device to drain the electrical charge away.

(5) A pipe containing surface heat, which can cause burns and which is within 8 feet of a floor or platform or 15 inches of a ladder shall be enclosed by insulation or a barrier to protect an employee from contact.

(6) A sole plate shall have a slip-resistant surface where the plate is crossed by an employee.

History: 1954 ACS 77, p. 139, Eff. Dec. 15, 1973.

R 408.16325 Lubrication.

Rule 6325. (1) Lubrication shall be accomplished by 1 of the following:

(a) Manually, when the machine can be shut off and locked out.

(b) Automatic pressure or gravity feed system.

(c) Extension pipe leading to an area outside of guards or away from any hazard.

(d) A means which would provide equal or greater protection than (a), (b), or (c) for the employee.

(2) In any case, rule 732 of Part 7. Guards for Power Transmission of the occupational safety standards commission standard, being R 408.10732 of the Michigan Administrative Code, shall be followed.

History: 1954 ACS 77, p. 139, Eff. Dec. 15, 1973.

R 408.16326 Hydraulic and pneumatic systems.

Rule 6326. (1) A hydraulic or pneumatic system shall have a designed safety factor of at least 4.

Digitized by Google

(2) When hydraulic, air or steam lines are bled, equipment supported by these systems shall be blocked or otherwise secured to provide for the safety of employees working on or about the equipment.

History: 1954 ACS 77, p. 139, Eff. Dec. 15, 1973.

R 408.16327 Maintenance.

Rule 6327. Machinery and equipment in use shall be maintained in safe order.

History: 1954 ACS 77, p. 139, Eff. Dec. 15, 1973.

R 408.16328 Guarding.

Rule 6328. (1) A lever carrying a weight shall have a bolt put through the extreme end of the lever, a safety chain attached to it or the weight shall be enclosed from its extended height to the floor or platform.

(2) When material such as chunks or cants of wood or logs can be thrown from a barker or chipper, a barrier to contain the material shall be erected and maintained.

(3) A foot switch or control shall be guarded as prescribed in rule 2351 of the occupational safety standards commission standard, Part 23. Power Presses, being R 408.12351 of the Michigan Administrative Code.

History: 1954 ACS 77, p. 139, Eff. Dec. 15, 1973.

R 408.16331 Material handling.

Rule 6331. (1) A mechanical lifting device shall be provided and used to place and remove rolls of paper and paperboard from a machine.

(2) An escape hatch shall be provided where doors on an enclosed cab provided on a powered industrial truck may be blocked by special equipment.

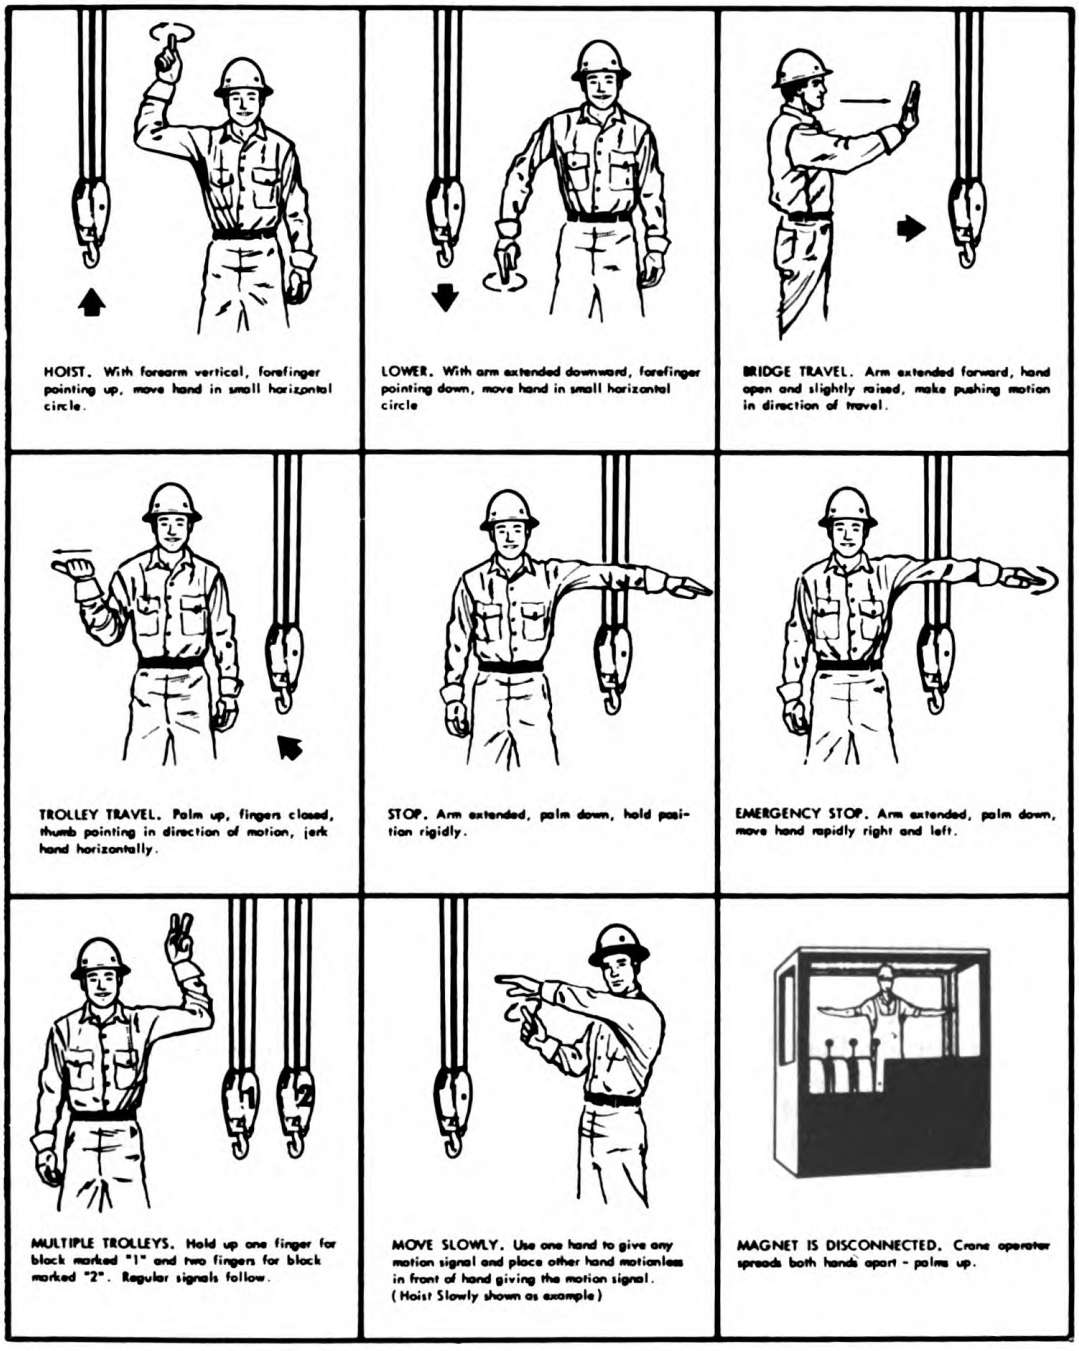
(3) A crane, powered industrial truck, or other wood-handling equipment, except over the road vehicles, having a cab with windows shall have all windows protected by a screen made of steel rods not less than 7/16 inch in diameter with openings not more than 4 by 4 inches or 2 by 6 inches.

(4) Where a hooker or hatch tender is used, the operator of a cab style crane shall respond to his signals. The signals for an overhead crane shall be as prescribed in table 1. The signals for a boom-type crane shall be as prescribed in table 2.

(5) A blower used to transport rags shall be provided a feed hopper with the opening not less than 48 inches from the fan. The blower outlet shall not allow material to fall on an employee.

(6) Railroad cars shall not be spotted on tracks adjacent to the locomotive cranes unless a 24-inch clearance is maintained, as prescribed in R 408.16342(1).

(7) The handling and storage of other materials shall conform to R 408.16342(1) and (2) with respect to clearance.



(8) Handles of wood hooks shall be locked to the shank to prevent them from rotating.

(9) An employee shall not be permitted to ride on a powered hand truck unless it is so designed by the manufacturer. A limit switch shall be on operating handle—30 degrees each way from a 45-degree angle up and down beyond which the drive motor is electrically disconnected and braking action commences.

TABLE 1

Standard Hand Signals for Controlling Overhead and Gantry Cranes

HOIST. With forearm vertical, forefinger pointing up, move hand in small horizontal circle.

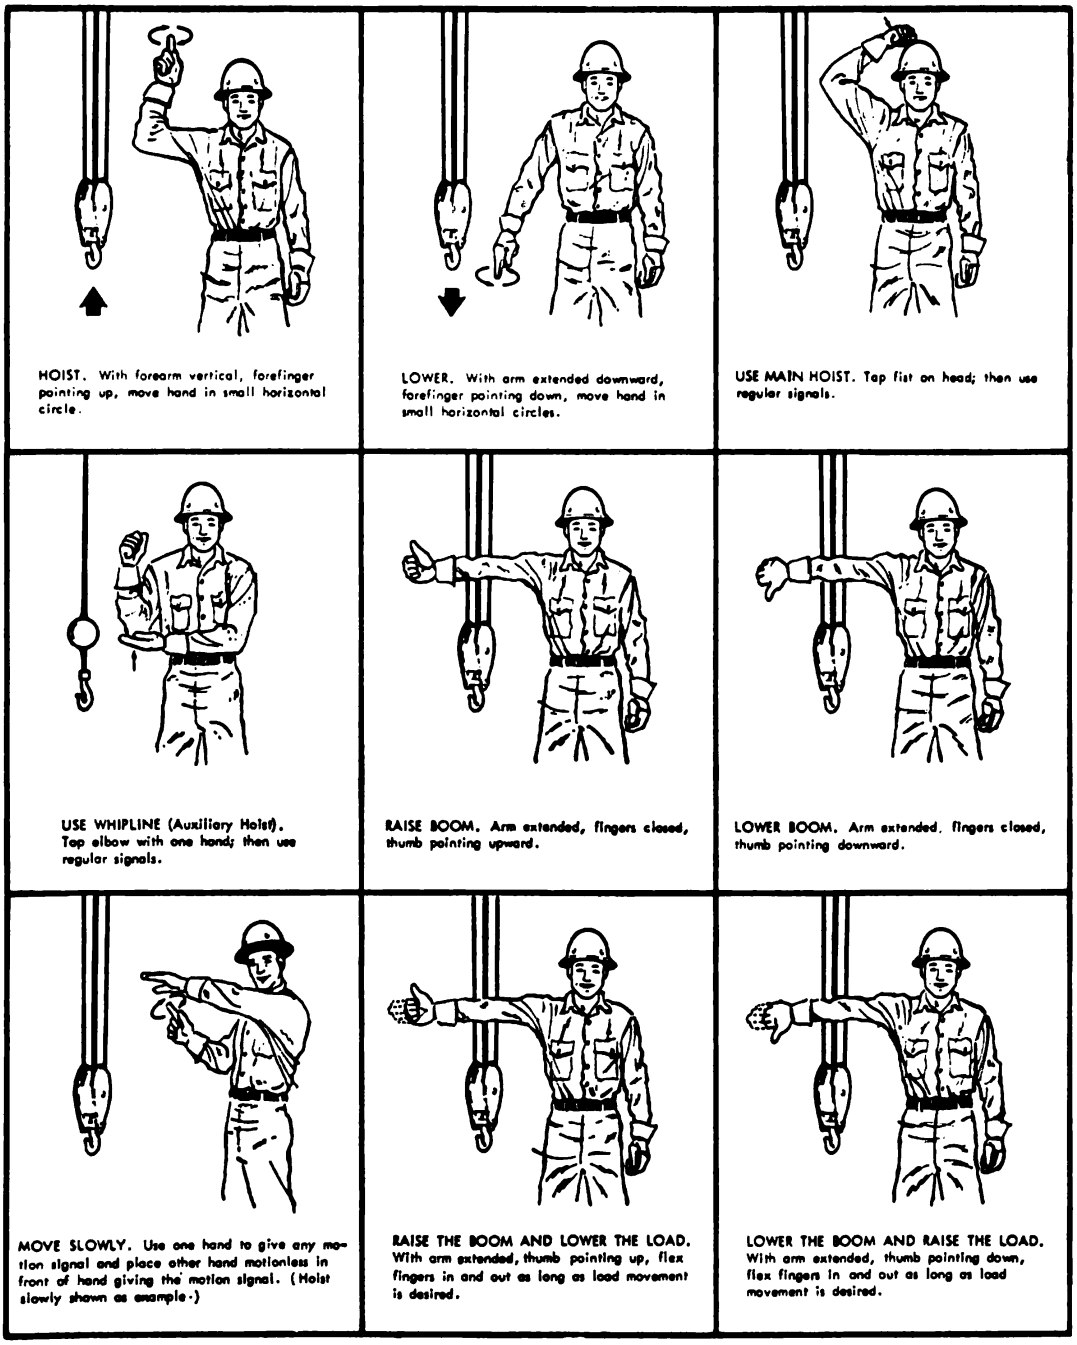
LOWER. With arm extended downward, forefinger pointing down, move hand in small horizontal circle

BRIDGE TRAVEL. Arm extended forward, hand open and slightly raised, make pushing motion in direction of travel.

TROLLEY TRAVEL. Palm up, fingers closed, thumb pointing in direction of motion, jerk hand horizontally.

STOP. Arm extended, palm down, hold position rigidly.

EMERGENCY STOP. Arm extended, palm down, move hand rapidly right and left.



MULTIPLE TROLLEYS. Hold up one finger for block marked "1" and two fingers for block marked "2". Regular signals follow.

MOVE SLOWLY. Use one hand to give any motion signal and place other hand motionless in front of hand giving the motion signal. (Hoist Slowly shown as example)

MAGNET IS DISCONNECTED. Crane operator spreads both hands apart - palms up.

TABLE 2
Hand Signals for Boom-Type Cranes

HOIST. With forearm vertical, forefinger pointing up, move hand in small horizontal circle.

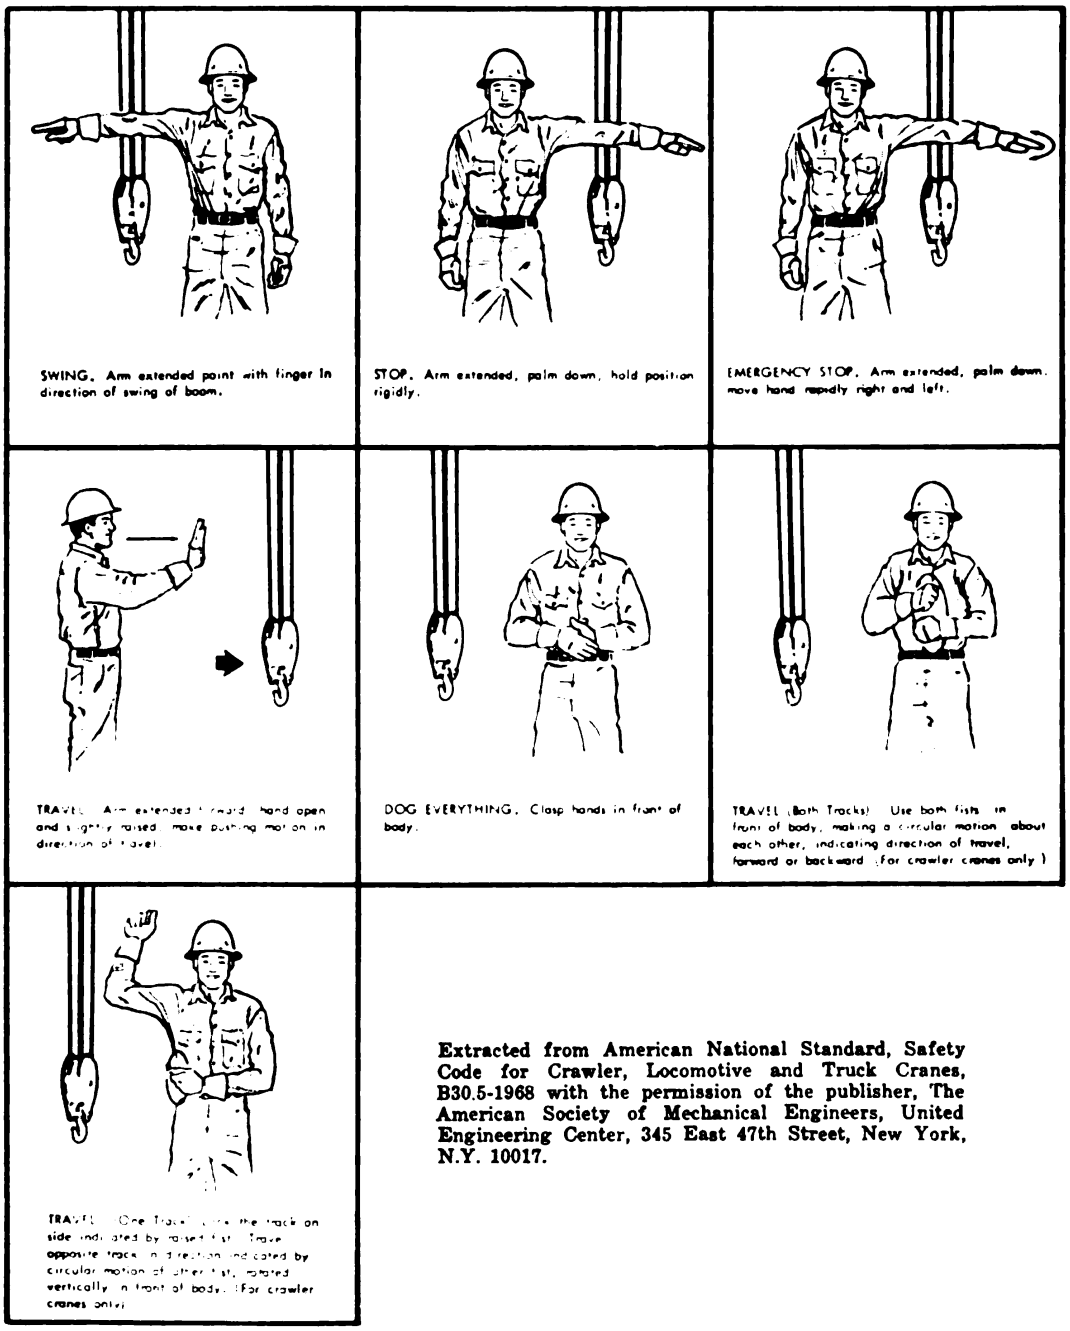
LOWER. With arm extended downward, forefinger pointing down, move hand in small horizontal circles.

USE MAIN HOIST. Tap fist on head; then use regular signals.

USE WHIPLINE (Auxiliary Hoist). Tap elbow with one hand; then use regular signals.

RAISE BOOM. Arm extended, fingers closed, thumb pointing upward.

LOWER BOOM. Arm extended, fingers closed, thumb pointing downward.



MOVE SLOWLY. Use one hand to give any motion signal and place other hand motionless in front of hand giving the motion signal. (Hoist slowly shown as example.)

RAISE THE BOOM AND LOWER THE LOAD. With arm extended, thumb pointing up, flex fingers in and out as long as load movement is desired.

LOWER THE BOOM AND RAISE THE LOAD. With arm extended, thumb pointing down, flex fingers in and out as long as load movement is desired.

History: 1954 ACS 77, p. 139, Eff. Dec. 15, 1973; 1954 ACS 89, p. 100, Eff. Nov. 13, 1976.

R 408.16332 Storage.

Rule 6332. (1) Rolls of paper, finished material, baled paper, or rags stored inside a building shall have a desired clearance of 36 inches but not less than 18 inches from a sprinkler head.

(2) Piles of wet-lap pulp, not palletized, shall be stepped back ½ of the width of a sheet from each end of a pile for each 8 feet of pile height. Pulp shall not be piled over pipelines to jeopardize pipes.

(3) Hand laid-up sheets of wet-lap pulp shall be interlapped to make the pile secure.

(4) Piles of wet-lap pulp shall not be undermined when being unpiled.

(5) The designed floor capacity of a building shall be posted and not be exceeded.

(6) Rolls of paper stock stored horizontally on the floor shall be chocked at the end of each row and between each roll. Where rolls are pyramided 2 or more high, chocks shall be installed between each roll on the floor. The face of each chock should be formed on a radius to conform to the average roll size in use. When rolls are decked 2 or more high, the bottom rolls shall be chocked on each side to prevent shifting in either direction.

(7) Vertically stacked rolls of paper shall be piled in a stable manner.

(8) Where smooth floors are present the chocks shall be rubber based.

History: 1954 ACS 77, p. 143, Eff. Dec. 15, 1973; 1954 ACS 89, p. 104, Eff. Nov. 13, 1976.

R 408.16333 Vessels, bin, and cooker entry.

Rule 6333. (1) A lifeline and safety harness or safety belt shall be worn by an employee entering a vessel, a tank, digester, bin or cooker without an access door at ground or floor level. An employee shall be stationed outside with a self-contained respirator in a position to handle the lifeline and summon assistance.

(2) The air inside the vessel, tank or bin shall be tested prior to entry. Atmospheres containing toxic gas or vapor, or which are deficient in oxygen shall be purged and fresh air forced inside while the tank or vessel is occupied, or a self-contained or a constant-flow type supplied air respirator shall be worn. An employee shall not enter a vessel or tank containing an explosive atmosphere.

(3) Controls to equipment supplying or operating a closed vessel, tank, digester, bin, or cooker shall be locked out prior to entry pursuant to R 408.16323(4).

(4) Valves to supply pipes for a closed vessel, tank, digester, bin, or cooker shall be closed and locked out or blanked prior to entry by an employee.

(5) Tanks shall be free of acid and shall be washed out with water, and fresh air shall be blown into them, before allowing an employee to enter. An employee entering the tanks shall be provided with a supplied air respirator, lifebelt, and attached lifeline.

(6) Any lines to sewers shall be blanked off to protect workers from air contaminants.

History: 1954 ACS 77, p. 143, Eff. Dec. 15, 1973; 1954 ACS 89, p. 105, Eff. Nov. 13, 1976.

R 408.16334 Flammable and hazardous substances.

Rule 6334. (1) When transferring flammable liquids from 1 container to another, both containers shall be grounded or bonded to drain away any static electricity generated.

(2) Flammable and hazardous substances shall be stored in an approved container at the point of usage only in quantities for not more than 1 day's usage.

(3) Chemicals which are not compatible with each other shall be effectively isolated by distance, curbing, or other means.

(4) Nonsparking tools and grounded hose shall be used when pumping out the turpentine tank. The tank shall be surrounded by a berm or moat.

History: 1954 ACS 77, p. 143, Eff. Dec. 15, 1973; 1954 ACS 89, p. 105, Eff. Nov. 13, 1976.

R 408.16335 Skip hoists.

Rule 6335. A skip hoist, unless completely enclosed, shall be equipped with:

(a) A warning device to announce movement.

(b) An interlocking gate across the bucket loading opening.

(c) A standard barrier across any open side.

History: 1954 ACS 77, p. 143, Eff. Dec. 15, 1973.

R 408.16336 Chains; cables; wire ropes.

Rule 6336. (1) A chain used for material handling and its component parts, other than alloy steel chain having a minimum tensile strength of 125,000 pounds per square inch, shall have a designed safety factor of not less than 5. Alloy chain shall not be used in excess of the working load in straight tension for its size as prescribed in table 3.

(2) Chain with bent, twisted or elongated links, or a hook which has been opened more than 15% at the throat from the original set or twisted more than 10% from the plane of the unbent hook, shall not be used until the defective links or hook is replaced.

(3) Cable, wire rope and wire rope slings shall have a designed safety factor of not less than 5.

(4) Wire rope or cable shall be inspected when installed and not less than monthly thereafter, when in use.

(5) Wire rope shall not be used if, in any length of 8 diameters, the total number of visible broken wires exceed 10% of the total number of wires, or if the rope shows other signs of excessive wear, corrosion or defects.

TABLE 3
Working Load

Nominal Size, Chain Bar, in.	Work Load, lb. min.
¼	3,250
⅜	6,600
½	11,250
⅝	16,500
¾	23,000
⅞	28,500
1	38,750
1⅛	44,500
1¼	57,500
1⅜	67,000
1½	80,000
1¾	100,000

History: 1954 ACS 77, p. 143, Eff. Dec. 15, 1973.

R 408.16337 Boom cranes.

Rule 6337. (1) A boom crane shall bear a sign or tag in the cab and on the outside showing the maximum rated capacity in pounds or tons as related to the boom angle. The rated capacity shall not be exceeded.

(2) The designed safety factor for all boom crane parts shall be not less than 5.

(3) A boom crane shall be equipped with a warning device which shall be used during lifting and moving of a load if an employee other than the crane crew is in the loading or unloading path.

(4) A boom crane load shall not pass over the head of any employee.

(5) Only 1 member of a boom crane crew shall be authorized to give signals to the crane operator. The signals shall conform to table 2 of R 408.16331.

(6) A crane boom shall not be operated within 10 feet of overhead power lines unless the power lines have been deenergized. The boom shall be painted a bright yellow from and including the head sheave to a point 6 feet down the boom towards the cab.

History: 1954 ACS 77, p. 144, Eff. Dec. 15, 1973.

R 408.16338 Blue flag warning.

Rule 6338. (1) A locomotive or locomotive crane shall use a blue flag, blue light or derailer when:

(a) An employee may be endangered by railcars being pushed into an area in which they are working.

(b) Loading or unloading railcars, oiling or servicing a railcar, locomotive or locomotive crane.

(2) When it is not possible to place a blue flag or blue light at a switch, it shall be placed at least 50 feet from the end of the last car at both ends of the car or cars. At stub-end tracks a blue flag or blue light is necessary only at the open end.

(3) A blue flag and blue light shall be marked with the name of the department placing it.

(4) A blue flag or blue light shall not be removed except by the person who places it, except if an employee does not remove his blue flag or blue light and cannot be located, his supervisor after making a thorough check of the track area in question, in company with an operating man, may remove the blue flag or blue light.

(5) Where 2 or more groups are working in the same location, a responsible employee or supervisor from each group shall each place a blue flag or blue light as specified in subrules (1) and (2) of this rule.

History: 1954 ACS 77, p. 144, Eff. Dec. 15, 1973.

R 408.16339 Chip and bark piles.

Rule 6339. (1) Mechanical equipment, steam or compressed air lances shall be used to break down overhangs or arches caused by jamming of chips or bark.

(2) Mobile equipment shall not mount a chip or bark pile unless the operator is protected by a rollover protection device.

History: 1954 ACS 77, p. 144, Eff. Dec. 15, 1973.

SPECIFIC PROVISIONS

R 408.16341 Woodyard unloading.

Rule 6341. (1) Where it is necessary to cut stakes holding logs on railway cars and trucks, the stake on the unloading side shall be partially cut through first and then the binder wire cut on the opposite side. The wire cutters shall have long extension handles. No employee shall be permitted on the unloading side after the stakes are cut.

(2) Where steel straps are used without stakes, employees shall stand in a safe area when the straps are cut.

(3) A railcar or truck, except a truck being unloaded or loaded by a locomotive crane, shall have the wheels chocked or the brake set during unloading or loading operations.

(4) Where binder chain and stakes are used, the binder chains shall be released and the stakes tripped from the opposite side of the load spillage.

(5) Where binder chain and crane slings are used, the crane sling shall be in place and taut before the binder chain is released. The hooker shall see that the helper is clear before signaling for the movement of the load.

(6) Before a railcar, truck, or trailer is unloaded by a tipple-type device, it shall be secured in place and all employees removed from the hazardous area.

(7) Where pulpwood is loaded on flatcars, stakes not less than 4 x 4 inches in dimensional nominal size shall be used to contain the load.

(8) A truck driver shall not remain in the truck during unloading operations.

History: 1954 ACS 77, p. 145, Eff. Dec. 15, 1973; 1954 ACS 89, p. 105, Eff. Nov. 13, 1976.

R 408.16342 Woodyard piling.

Rule 6342. (1) Piling of pulpwood shall allow for a clearance of at least 24 inches between the pile and the crane cab turned at any working position.

(2) Piling of pulpwood along a standard-gage track shall allow for a clearance of 8½ feet from the center line of the track to the pile.

(3) Logs shall not project from a pile into a walkway or roadway.

(4) Ends of a woodpile shall be sloped or crosstiered into the pile.

(5) Mechanical equipment shall be used to knock down wood from a woodpile.

History: 1954 ACS 77, p. 145, Eff. Dec. 15, 1973.

R 408.16343 Flumes, runways, and jack ladders.

Rule 6343. (1) A flume or water runway used to transport logs shall have a standard barrier along the exposed sides. The height of the sides of a flume or runway extending above ground, floor or platform level may be counted as part of the 42 inches prescribed for a standard barrier as in rule 231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10231 of the Michigan Administrative Code.

(2) An inclined walkway along an inclined portion of a jack ladder shall have cleats or a slip-resistant surface and the walkway shall be equipped with a stair railing on both sides as prescribed in rule 221 of the occupational stafety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10221 of the Michigan Administrative Code.

History: 1954 ACS 77, p. 145, Eff. Dec. 15, 1973.

R 408.16344 Log jams.

Rule 6344. Where it is necessary for an employee to stand on a conveyor for the purpose of clearing a log jam, the conveyor shall be stopped and locked out as prescribed in R 408.16323(4) before the work is started.

History: 1954 ACS 77, p. 145, Eff. Dec. 15, 1973.

R 408.16345 Saws.

Rule 6345. (1) A guard shall be provided in front of a slasher saw to protect an employee from thrown pieces.

(2) An employee shall not mount a slasher saw table unless the machine is stopped and locked out as prescribed in R 408.16323(4).

(3) The exposed portion of a slasher saw blade below the table shall be enclosed.

(4) A saw and other equipment more commonly found in a sawmill shall be guarded and used as prescribed in the occupational safety standards commission standard, Part 52. Sawmills, being R 408.15201 to R 408.15256 of the Michigan Administrative Code.

History: 1954 ACS 77, p. 145, Eff. Dec. 15, 1973.

R 408.16346 Barker.

Rule 6346. (1) An employee shall not hold or have physical contact with the pulpwood during the barking operation.

(2) Barrier guards or enclosures shall be provided to protect an employee in the area from flying particles from the barker.

(3) Two or more continuous barking drums installed side by side shall be provided with a walkway between each set with a standard barrier pursuant to R 408.1231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights.

(4) When a platform or floor allows access to the sides of a drum barker, a standard barrier shall be installed as prescribed in R 408.1231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights.

(5) In-running nip points exposed to contact of trunnion rollers on a drum barker shall be guarded.

(6) An intermittent barking drum shall be equipped with a device which locks the drum while being loaded or unloaded.

(7) The loading and unloading ends of a hydraulic barker shall be equipped with baffles. The operator shall be protected by a barrier of ½-inch Plexiglas or material of equivalent strength. A high pressure hose to a hydraulic barker shall be secured at the hose connection ends to prevent whipping if a connection fails.

History: 1954 ACS 77, p. 146, Eff. Dec. 15, 1973.

R 408.16347 Chippers.

Rule 6347. (1) An employee feeding a chipper shall not have his work station in direct line with the chipper hopper.

(2) The in-feed conveyor shall be guarded for its entire length by an enclosure or standard barrier as prescribed in R 408.1231 and R 408.1233 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights.

(3) The chipper hopper shall be enclosed not less than 40 inches from the blades to the opening and be baffled to prevent wood from being thrown from the hopper.

(4) An employee feeding a chipper within 42 inches of the hopper shall wear a safety belt and line designed to prevent his falling into the hopper.

(5) Where jam-ups cannot be cleared, the in-feed equipment shall be stopped and locked out. The employee clearing the jam shall wear a safety belt and line which will prevent contact with the blades before additional clearing is done. If it is necessary to remove or loosen a blade hook, the power shall be shut off and locked out.

(6) Chipper knives shall be transported on a carrier.

History: 1954 ACS 77, p. 146, Eff. Dec. 15, 1973.

R 408.16348 Splitter block.

Rule 6348. (1) The block upon or against which the wood is rested shall have a corrugated surface or other means provided so that the wood will not slip. Wood to be split, and also the splitting block, shall be free of ice, snow, or chips.

(2) A clear and unobstructed view shall be maintained between equipment and workers around the block and the workers' help area.

(3) Power to activate the splitter shall be controlled by a clutch or valve and shall be designed for single stroke operation only.

History: 1954 ACS 77, p. 146, Eff. Dec. 15, 1973; 1954 ACS 89, p. 106, Eff. Nov. 13, 1976.

R 408.16349 Knot cleaner.

Rule 6349. A knot cleaner of the woodpecker type shall have the operating area enclosed to protect an employee passing by.

History: 1954 ACS 77, p. 146, Eff. Dec. 15, 1973.

R 408.16351 Acid rooms, acid towers, and acid tanks.

Rule 6351. (1) Personal protective equipment as prescribed in R 408.16313 shall be worn.

(2) Walkways, stairs, and other equipment on acid rooms, acid towers, and acid tanks shall be inspected monthly for corrosion and replaced or repaired where any part shows a defect affecting employee safety.

(3) Where hoops are used on acid tanks, they shall be made of rods rather than flat strip stock and shall be inspected and maintained as prescribed in subrule (2).

(4) Pressure tanks-accumulators shall be inspected semiannually as prescribed in the ASME boiler and pressure vessel code, section VIII, unfired pressure vessels—1968, with addenda, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This code may be purchased at a cost of $40.00 from the American Society of Mechanical Engineers, 345 E. 47th Street, New York, New York, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

History: 1954 ACS 77, p. 146, Eff. Dec. 15, 1973; 1954 ACS 89, p. 106, Eff. Nov. 13, 1976.

R 408.16352 Chlorine, chlorine dioxide, and sodium chlorate.

Rule 6352. (1) Only a trained and authorized employee shall be permitted into a chlorine dioxide generating room.

(2) A room used for storage or generating of chlorine gases shall have not less than 2 exits.

(3) Storage facilities and handling operations shall eliminate possible contact of sodium chlorate and chlorine dioxide with wood or other materials which would cause a fire, explosion or other chemical reaction.

(4) Smoking and other sources of fire and spark-producing equipment shall not be permitted in a chlorine dioxide generating room when it is in operation. Warning signs shall be posted.

(5) Liquid chlorine, when stored inside, shall be stored in an unoccupied ventilated room, and the exhaust pickup shall be at floor level.

(6) A water hose and supply shall be available where spills of chlorine and chlorine dioxide may occur.

(7) A tank car containing chlorine and connected to a pipe or hose line shall be protected by a derail device and the blue flag as prescribed in R 408.16338.

(8) A pipe or hose line carrying chlorine, caustic or acid shall be identified by a sign each valve and yellow color banding.

History: 1954 ACS 77, p. 146, Eff. Dec. 15, 1973.

R 408.16353 Sulfur burning and drying.

Rule 6353. (1) A sulfur burning or drying house shall be provided with an exhaust system as prescribed by the state department of public health to reduce the chance of a dust explosion. In addition, pipes, beams, and other overhead objects shall be cleaned off not less than once a month to remove dust accumulations.

(2) Nonsparking tools and equipment shall be used in handling dry sulfur. Smoking shall be prohibited and "No Smoking" signs shall be posted.

(3) Sulfur melting equipment shall not be located in the burner room.

(4) Explosion proof electric equipment shall be used where dry sulfur burning is done.

History: 1954 ACS 77, p. 147, Eff. Dec. 15, 1973.

R 408.16354 Digesters and blow pits; general.

Rule 6354. (1) A means of egress shall be provided at each end of the room at every floor level of a digester building.

(2) A batch type digester shall have:

(a) A blowoff valve located so it can be operated from another room, remote from safety valve.

(b) Blow valves on rotary digesters pinned or locked in a closed position during the cooking period.

(c) Pipes, valves, and fittings classified as heavy duty between the digester and blow pit. These pipes, valves, and fittings shall be inspected at least semiannually to determine the degree of deterioration, and shall be replaced when necessary.

(d) Through bolts instead of cap bolts on pipe joints.

(3) A side opening to a blow pit is preferred. If the opening is on top, the opening shall be protected by a standard barrier as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights. Access to a blow pit shall be by a ladder designed to keep the door open when the ladder is in place, or an employee is within the pit.

(4) Blow-pit hoops shall be maintained in a safe condition.

(5) Personal protective equipment prescribed in R 408.16313 shall be provided and worn when repairing or removing old brick lining from a digester.

History: 1954 ACS 77, p. 147, Eff. Dec. 15, 1973; 1954 ACS 89, p. 106, Eff. Nov. 13, 1976.

R 408.16355 Blowing a batch type digester.

Rule 6355. (1) A signal device such as a bell, horn, siren, or light shall be installed in a batch type digester or blow pit room and chip bin and used before and during blowing of the digester.

(2) A signal shall be used to warn an employee in a chip bin before loading the batch type digester.

(3) A blow-off valve shall be opened slowly, and the valve shall be left open until the digester cook signals the blow is completed.

(4) A digester cover shall not be removed until the blow has been completed. An employee removing a digester cover shall wear protective equipment to guard against burns from hot stock and steam.

History: 1954 ACS 77, p. 147, Eff. Dec. 15, 1973; 1954 ACS 89, p. 106, Eff. Nov. 13, 1976.

R 408.16356 Safety valves.

Rule 6356. (1) A safety valve shall be installed between the steam regulating valve and the vessel on a separate pipe line for each pressure vessel. The safety device shall conform to paragraph U-2 in the ASME boiler and pressure vessel code, section VIII, unfired pressure vessels—1968, with addenda. See R 408.16351(4) for availability of this referenced code. Also see R 408.4025 of the Michigan boiler rules.

(2) A safety valve shall be checked between each cook to be sure it has not become plugged or corroded to the point of being inoperative.

(3) A safety valve shall be inspected not less than annually and repaired if necessary to insure its ability to operate, and shall be set at not more than the rated capacity of the pressure vessel.

(4) The vent for a safety valve shall discharge into an area which does not create a hazard for an employee.

History: 1954 ACS 77, p. 147, Eff. Dec. 15, 1973; 1954 ACS 89, p. 107, Eff. Nov. 13, 1976.

R 408.16357 Smelt tanks.

Rule 6357. A smelt tank shall be equipped with a cover which will be kept closed except during sampling. A smelt tank shall be equipped with a vent stack explosion door.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973.

R 408.16358 Cutters, dusters, and shredders.

Rule 6358. (1) A cutter, duster, or shredder for rags or old paper shall have the rotating heads or cylinders enclosed, except for an opening large enough only to permit feeding of stock. The enclosure shall extend over the top of the feed rolls and prevent contact with moving parts. The enclosure shall be bolted or locked into place.

(2) An employee shall stand not less than 36 inches from feed rolls on a cutter, duster, or shredder for rags or old paper, or be protected by a smooth pivoted idler roll resting on the stock or feed table, or be restrained by a safety belt and lanyard from placing any part of the body in the opening.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973; 1954 ACS 89, p. 107, Eff. Nov. 13, 1976.

R 408.16359 Tools for rag cutting.

Rule 6359. (1) A hand knife or sharpening steel shall be equipped with a guard between the handle and the blade.

(2) A hand knife or scissors shall have rounded ends on the blade and shall be carried in a sheath or maintained on a table by a cord or chain.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973.

R 408.16360 Pulp grinding and shredding.

Rule 6360. (1) A pulp grinder having a water wheel shall be equipped with a governor to limit the peripheral speed of the grinder to its rated speed.

(2) The cutting heads of a pulp shredder shall be enclosed, except for an opening to permit only the entry of stock. The enclosure shall be made of solid material or mesh with openings not more than ½ inch. The shredder shall be fed from a table extending not less than 36 inches from the opening, or an automatic feeding device shall be used. The enclosure shall be bolted or locked in place.

(3) Doors of pocket grinders shall be arranged so as to keep them from closing accidentally.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973; 1954 ACS 89, p. 107, Eff. Nov. 13, 1976.

R 408.16361 Pulpers and beaters.

Rule 6361. (1) The top of a pulper vessel or beater tub less than 42 inches from the floor or platform shall have a barrier erected around the exposed edge to a height of 42 inches to guard the opening, or a beater or pulper fed from a floor above by a chute shall have the chute extend to a height of 42 inches or the opening guarded by a standard barrier as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights.

(2) Beater rolls shall be provided with covers.

(3) The floor around a beater shall be provided with sufficient drainage to remove wastes.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973; 1954 ACS 89, p. 107, Eff. Nov. 13, 1976.

R 408.16362 Bleaching.

Rule 6362. A bleaching engine, except the Bellmer type, shall have the top covered with the exception of an opening large enough to permit filling but too small to admit a man. This opening shall be covered with a door. The opening and a platform connecting 1 engine with another shall be guarded with standard barriers as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973.

R 408.16363 Guillotine type cutter.

Rule 6363. (1) A guillotine type cutter shall be equipped with controls requiring each operator to use both hands throughout the cutting cycle to operate it.

(2) A guillotine cutter shall be equipped with a nonrepeat device.

(3) A carrier shall be used when transporting a guillotine type cutter knife.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973.

R 408.16371 Paper machine.

Rule 6371. (1) An audible alarm shall be sounded 30 seconds before starting a section of a pulp or paper machine.

(2) A disengaged doctor blade accessible to an employee shall be covered. The sharp edges shall be covered during transportation and storage.

History: 1954 ACS 77, p. 148, Eff. Dec. 15, 1973.

R 408.16372 Dryer.

Rule 6372. (1) A barrier guard or a standard barrier, as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights, shall be installed in front of the first dryer of each section of a paper machine, if the area is accessible to an employee.

(2) In starting a dryer section, steam to heat the drums shall be introduced slowly while the drums are turning.

(3) A broken carrier rope shall not be removed from a dryer while the section is running at operating speed.

(4) The end of a "yankee" type dryer exposed to contact shall be guarded by a barrier to prevent entry to the turning drum.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973.

R 408.16374 Nip points.

Rule 6374. (1) An inrunning nip point on a roll-type embosser, drum winder or rewinder shall be guarded by a barrier interlocked with the drive mechanism in such a manner that the barrier can be raised only when the rolls have stopped. The interlock system may allow the use of a jog switch when the barrier is open. The barrier shall be constructed so that an employee cannot reach over or around it into the nip point.

(2) A nip point, which is not a feeding point, created at calender or dryer rolls shall be guarded by a barrier.

(3) A nip point, which is a feeding point, shall be fed by a device, such as but not limited to a rope carrier, air jet or a tool, or guarded by a barrier which will keep the employee's fingers from the nip point while feeding. A hand-held device capable of going through the nip point shall not be used.

(4) An employee shall be cautioned as to an unguarded nip point by a warning sign.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973.

R 408.16375 Broke hole.

Rule 6375. (1) A broke hole of such dimensions that an employee could fall through shall be guarded on all sides by a standard barrier as prescribed by the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights. Where a broke hole of such dimensions that an employee could fall through is located over a pulper or pulper conveyor system which is manually fed, the employee feeding into the hole shall wear a safety belt and line which will restrict the employee from falling through the hole.

(2) A warning device shall be used to alert an employee working below a broke hole when broke is discharged into the hole.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973.

R 408.16376 Rope carrying system.

Rule 6376. The sheave and support brackets of a rope carrying system shall have a designed safety factor of not less than 3.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973.

R 408.16377 Calenders and platers.

Rule 6377. (1) A calender roll shall be cleaned on the outrunning side. An alloy steel scraper not less than 3 x 5 inches shall be used to remove deposits from the rolls.

(2) Platers. A guard shall be arranged across the face of the rolls to serve as a warning that the operator's hand is approaching the danger zone.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973; 1954 ACS 89, p. 107, Eff. Nov. 13, 1976.

R 408.16378 Reels.

Rule 6378. (1) A clearance of not less than 12 inches between reels of paper shall be maintained on stack reels.

(2) A reel shall not be lifted until it has stopped turning.

(3) A reel shaft having a square block end shall have the end guarded against contact.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973.

R 408.16381 Winder.

Rule 6381. (1) A winder shall have a guide to align the shaft for entrance into the opened rewind bearing housing.

(2) The crane operator shall ascertain that the reel is properly seated at the winder stand or at the reel arm before he disengages the hooks.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973.

R 408.16382 Rider roll.

Rule 6382. A rider roll shall be pinned or secured when it is in the raised position.

History: 1954 ACS 77, p. 149, Eff. Dec. 15, 1973.

R 408.16383 Powered roll ejector.

Rule 6383. A powered roll ejector shall be interlocked to prevent accidental activation until the receiving platform or lowering table is in position to receive a roll.

History: 1954 ACS 77, p. 150, Eff. Dec. 15, 1973.

R 408.16384 Roll splitter.

Rule 6384. (1) A roll splitter shall have an interlocked barrier which will cover the point of operation before the blade will descend.

(2) The blade shall be maintained in the down position when not in use.

History: 1954 ACS 77, p. 150, Eff. Dec. 15, 1973.

R 408.16385 Rotary cutter.

Rule 6385. (1) A single knife rotary cutter shall be guarded to prevent contact with the blade.

(2) On duplex cutters, the protection required for single-knife machines shall be provided for the first knife, and a hood shall be provided for the second knife.

(3) Access to a blade of a rotary cutter shall be provided by means of a catwalk after the machine has been locked out as prescribed in R 408.16323(4).

(4) The nip point at the spreader or squeeze roll shall be guarded as prescribed in R 408.16374(1).

History: 1954 ACS 77, p. 150, Eff. Dec. 15, 1973; 1954 ACS 89, p. 107, Eff. Nov. 13, 1976.

R 408.16386 Slitter knives.

Rule 6386. A slitter knife shall be guarded to prevent unintentional contact. A carrier shall be used when transporting a slitter knife.

History: 1954 ACS 77, p. 150, Eff. Dec. 15, 1973.

R 408.16387 Cores.

Rule 6387. (1) A core notcher shall be guarded pursuant to the occupational safety standards commission standard, Part 23. Power Presses.

(2) A core cutter shall be guarded pursuant to the occupational safety standards commission standard, Part 27. Woodworking Machinery, being R 408.12701 to R 408.12799 of the Michigan Administrative Code.

(3) A set screw for securing a core collar to winding and unwinding shafts shall not protrude above the face of the collar. Sharp corners on the collar shall be beveled.

(4) A core shaft weighing more than 50 pounds shall have a mechanical device such as a dolly to support all or part of the weight when removing the shaft from the set of paper and placing it in the dressing brackets on the winder.

History: 1954 ACS 77, p. 150, Eff. Dec. 15, 1973.

R 408.16391 Carton stitcher.

Rule 6391. A carton stitcher shall be guarded to prevent contact by the operator with the stitching head.

History: 1954 ACS 77, p. 150, Eff. Dec. 15, 1973.

R 408.16392 Paper baler.

Rule 6392. (1) A manually operated paper baler shall be provided with a device, such as a safety dog, to prevent a kickback by the operating lever.

(2) A powered paper baler shall have the hopper door interlocked to the power source to prevent operation when the door is open.

(3) A powered paper baler producing a bale with a compressed dimension of more than 42 inches shall have hook type door locks that permit a restricted pressure relieving opening of not more than 2 inches before the door can be completely opened.

(4) A hopper opening in the floor above shall be guarded with a standard barrier on all sides as prescribed in R 408.16322.

(5) Start controls shall be 2-hand constant pressure devices. A down stroke baler shall require 2-hand pressure only until the pressure block has descended past the pinch point.

(6) Limit switches shall be provided to limit the stroke at both ends. A limit switch shall be provided at the top of an upstroke baler to shut off power when the pressure block is out of position.

History: 1954 ACS 77, p. 150, Eff. Dec. 15, 1973.

PART 65. MILLS AND CALENDERS FOR RUBBER AND PLASTIC

R 408.16501 Scope.

Rule 6501. This part provides for the safe maintenance and operation of mills and calenders used in the rubber and plastics trades by employers and their safe use by employees, in, around, and about places of employment.

History: 1954 ACS 77, p. 150, Eff. Sept. 25, 1973.

R 408.16503 Definitions; A to C.

Rule 6503. (1) "Aisle" means a path of designated travel for employees and vehicles.

(2) "Calender" means a machine equipped with 2 or more metal rolls in vertical frames and revolving in opposite directions used for continuously sheeting or plying up rubber and plastic compounds and for frictioning or coating materials with rubber and plastic compounds.

History: 1954 ACS 77, p. 151, Eff. Sept. 25, 1973.

R 408.16506 Definitions; M to S.

Rule 6506. (1) "Mill" means a machine consisting of 2 adjacent metal rolls, set horizontally, which revolve in opposite directions and which are used for the mechanical working of rubber and plastic compounds.

(2) "Nip point" means the point where a rotating object creates a pinching action with another rotating object.

(3) "Safety device" means a guard such as, but not limited to, a barrier, enclosure, body bar, safety rod or safety cable used to protect an employee from a hazardous condition.

History: 1954 ACS 77, p. 151, Eff. Sept. 25, 1973.

R 408.16511 Employers' responsibilities.

Rule 6511. An employer shall:

(a) Provide training to an employee as to the hazards and safe operation of his assigned job.

(b) Maintain the mills and calenders in a condition free of recognized hazards.

(c) Establish and maintain a lockout procedure as prescribed in R 408.16527.

History: 1954 ACS 77, p. 151, Eff. Sept. 25, 1973.

R 408.16512 Employees' responsibilities.

Rule 6512. An employee shall:

(a) Not use a mill or calender unless authorized and trained in its use.

(b) Not remove a guard or safety device from a mill or calender except when necessary for servicing or where equivalent safety is provided. The guard shall be replaced before restarting the machine. All safety devices shall be replaced and tested before a mill or calender is put back into operation.

(c) Report defective machinery, equipment and hazardous conditions, when detected, to his supervisor.

History: 1954 ACS 77, p. 151, Eff. Sept. 25, 1973.

R 408.16515 Illumination.

Rule 6515. Illumination shall be provided to maintain a minimum of 20 foot-candles intensity at an operator's work station.

History: 1954 ACS 77, p. 151, Eff. Sept. 25, 1973.

R 408.16517 Floors and aisles.

Rule 6517. (1) An aisle or floor area around a mill or calender shall be maintained free of protruding objects, holes, oil, grease, and accumulations of water.

(2) The surface of a platform or floor area at an operator's work station shall be maintained in slip-resistant condition.

(3) An aisle for combined usage of employees and stock moving equipment shall be 3 feet wider than the widest load moved. The outline of the aisle shall be marked or otherwise identified. When an oversized load is moved, pedestrian traffic shall be warned ahead of the load movement. Where stock moving equipment is not used in an aisle, the aisle shall not be less than 3 feet wide.

History: 1954 ACS 77, p. 151, Eff. Sept. 25, 1973.

R 408.16521 Installation.

Rule 6521. (1) A mill or calender shall be secured in a manner to prevent unintentional movement.

(2) Such a machine, except where installed in a laboratory, shall not be so placed as to require an operator to stand in an aisle.

(3) A mill installed or moved after the effective date of this part shall be installed so that the top of the operating rolls is not less than 50 inches above the floor or the operator's working level.

(4) Installation of auxiliary equipment, such as but not limited to feeding and stock removing equipment and blending rolls, shall be guarded by location, barriers, or enclosures so as to not create a hazard. The auxiliary equipment shall not interfere with access or operation of a safety device.

(5) A mill or calender shall be electrically grounded.

History: 1954 ACS 77, p. 151, Eff. Sept. 25, 1973.

R 408.16523 Hot surfaces.

Rule 6523. Steam and hot water pipes and surfaces of machinery exposed to contact, except the mill and calender rolls, which would cause burns, shall be covered with an insulating material or guarded by a barrier.

History: 1954 ACS 77, p. 152, Eff. Sept. 25, 1973.

R 408.16525 Ventilation.

Rule 6525. Materials processed on a mill or calender, which give off noxious or toxic materials that exceed the maximum allowable limits set by the Michigan department of public health, shall be equipped with a ventilation system approved for this use.

History: 1954 ACS 77, p. 152, Eff. Sept. 25, 1973.

R 408.16527 Maintenance.

Rule 6527. (1) A power source of a mill, calender or their auxiliary equipment to be repaired, serviced or set up shall be locked out by each employee doing the work if unexpected start up would cause injury. Residual pressure shall be relieved before and during such work when maintenance is performed on a pressurized system.

(2) A braking or safety device for a mill or calender shall be inspected and tested weekly. The stopping distances shall be measured and recorded. Where the braking action does not meet or exceeds the requirements of R 408.16542 and R 408.16546, repairs or adjustments shall be made before operation is resumed.

History: 1954 ACS 77, p. 152, Eff. Sept. 25, 1973.

R 408.16528 Lubrication.

Rule 6528. (1) Lubrication shall be accomplished by 1 of the following:

(a) Manually when the machine can be shut off and locked out.

(b) An automatic pressure or gravity feed system.

(c) An extension pipe leading to an area outside of guards or away from any hazard.

(d) Other means providing safety equal to or exceeding subdivision (a), (b), or (c).

(2) In any case rule 732 of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10732 of the Michigan Administrative Code, shall be followed.

History: 1954 ACS 77, p. 152, Eff. Sept. 25, 1973.

R 408.16531 Steam pressure procedures.

Rule 6531. (1) Where a pressure reducing valve is used, not less than 1 relief valve, set at not more than the rated pressure of the equipment, shall be provided adjacent to the reducing valve on the low pressure side. The relief valve shall vent to an area which will not create a hazard to an employee.

(2) A steam valve to machinery shall be opened slowly to avoid uneven expansion of a pressure chamber.

(3) A cylinder-type machine shall be in motion before steam is admitted.

(4) The rated operating steam pressure of a machine shall not be exceeded.

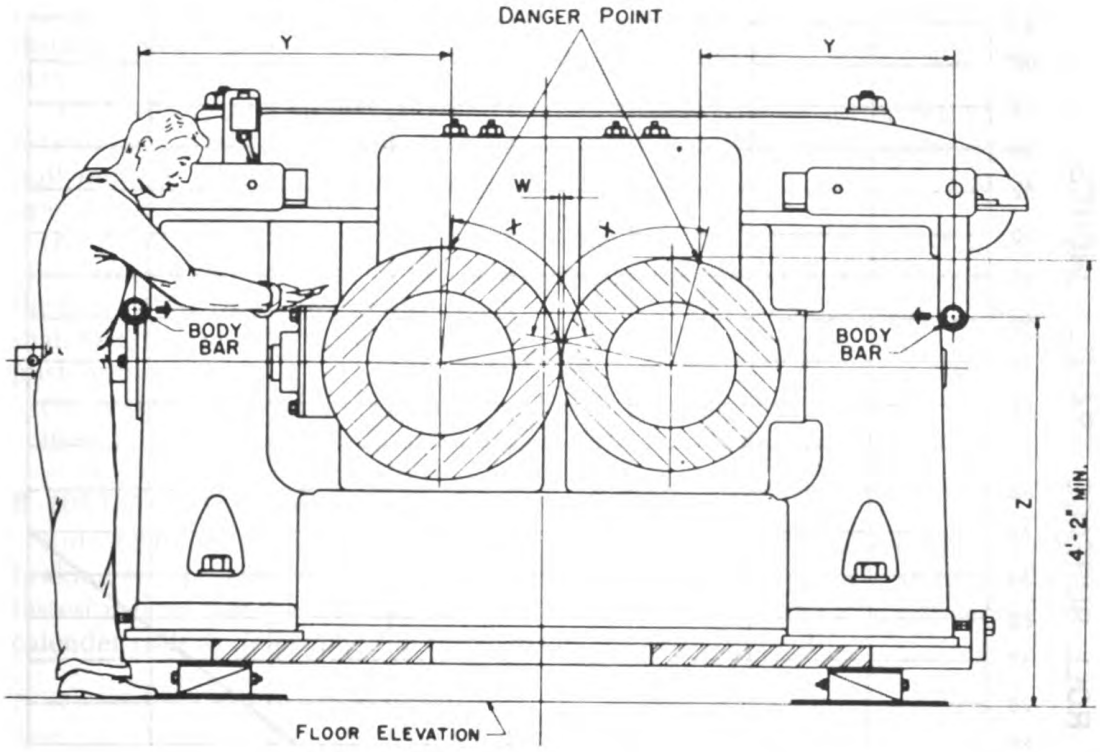
History: 1954 ACS 77, p. 152, Eff. Sept. 25, 1973.

R 408.16541 Mill safety devices.

Rule 6541. (1) Except where an employee cannot come in contact with a roll nip point or be caught between a role and an adjacent object because of a fixed installation, a mill shall be provided with 1 of the following safety trip devices to actuate braking equipment:

(a) A pressure sensitive bar which can be tripped by not more than a 40-pound pressure of an employee's body. The bar shall be installed at the front and back of the mill across the length of the rolls of each mill roll having a height of 46 inches or more. (See figure 1)

(b) A safety rod or safety cable installed at the front and back of a mill and located within 2 inches of a vertical plane tangent to the front and rear rolls. The safety rod or cable shall not be more than 72 inches from the floor of the operator's work level and operate with either a push or pull motion.



(2) A mill having automatic overhead blending rolls shall have the blender interlocked to the mill so that actuation of the mill safety device will stop the blender.

(3) A safety device, after actuation, shall require manual resetting.

(4) A laboratory mill may be guarded by an interlocked barrier in lieu of the requirements of subrule (1).

FIGURE 1
Installation of Pressure-Sensitive Body Bar

This illustration shows relative position of a man to the pressure-sensitive body bar and the working roll. The body bar is positioned so that the man cannot reach the danger point on the face of the roll without tripping the safety switch.

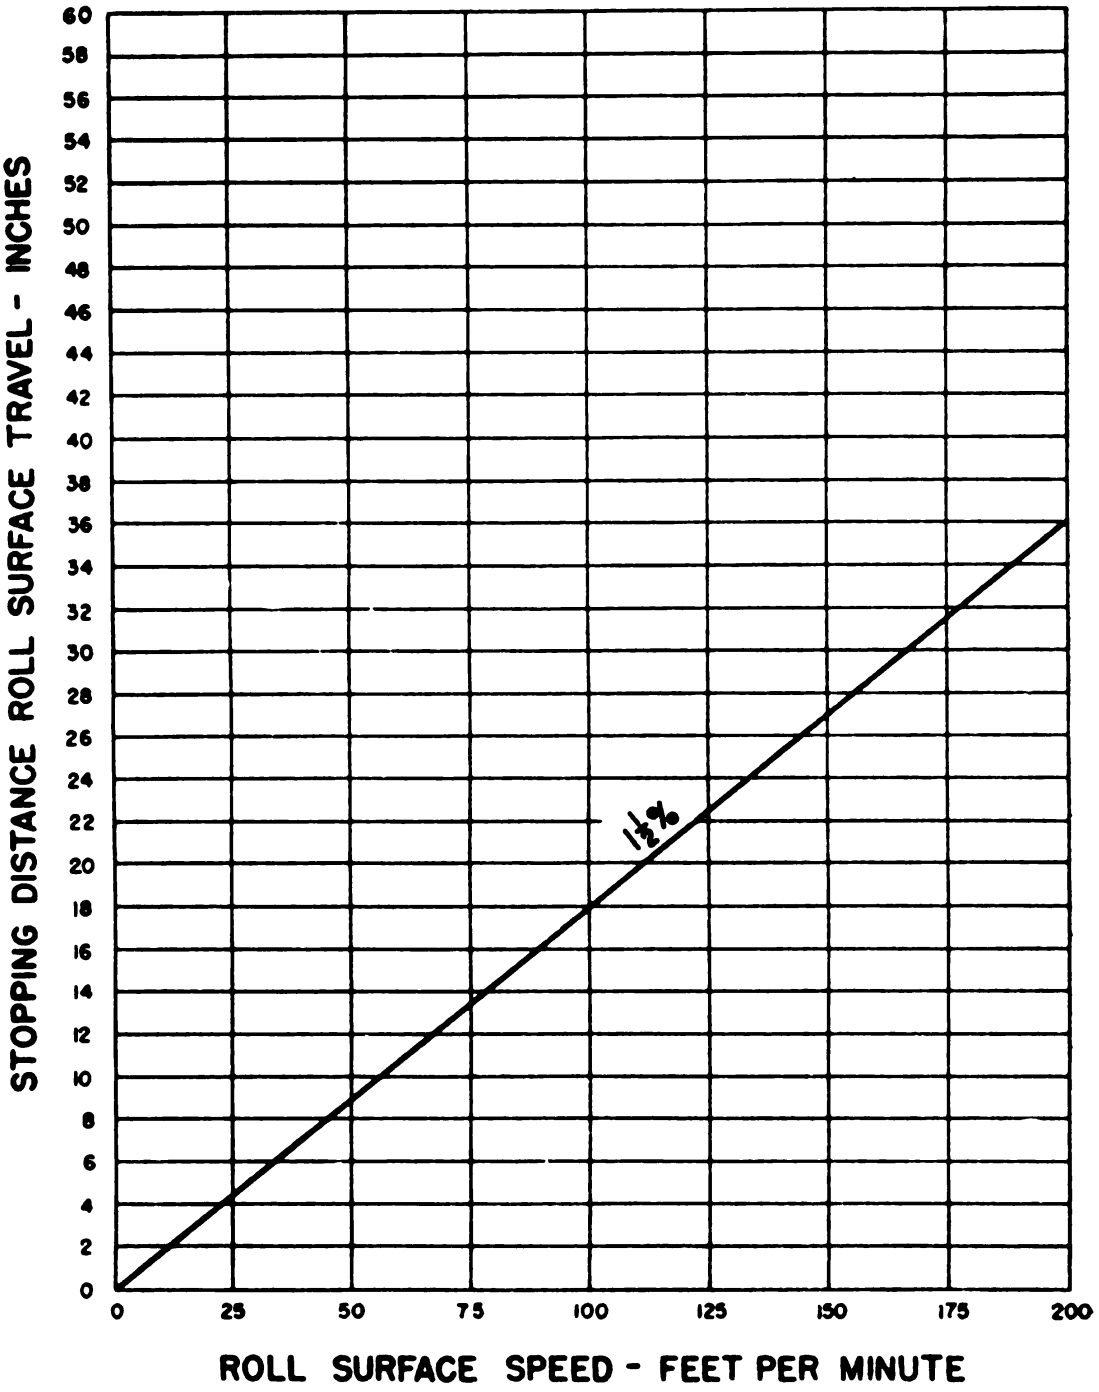
The danger point is determined as follows:

W represents the thickness of a man's fingers.

X represents the maximum allowable stopping distance.

Y and Z dimensions are such that the man cannot reach the danger point.

A force equal to approximately 40 lbs. (in the direction of the arrow) is required to actuate the safety switch.



History: 1954 ACS 77, p. 152, Eff. Sept. 25, 1973.

R 408.16542 Mill stopping limits.

Rule 6542. A mill, regardless of roll size or roll arrangement, shall be stopped by braking equipment within a distance, measured in inches of surface travel of the faster roll, of not more than 1½% of the peripheral no-load surface speed of the roll as determined in feet per minute. (See figure 2)

R 408.16545 Calender safety devices.

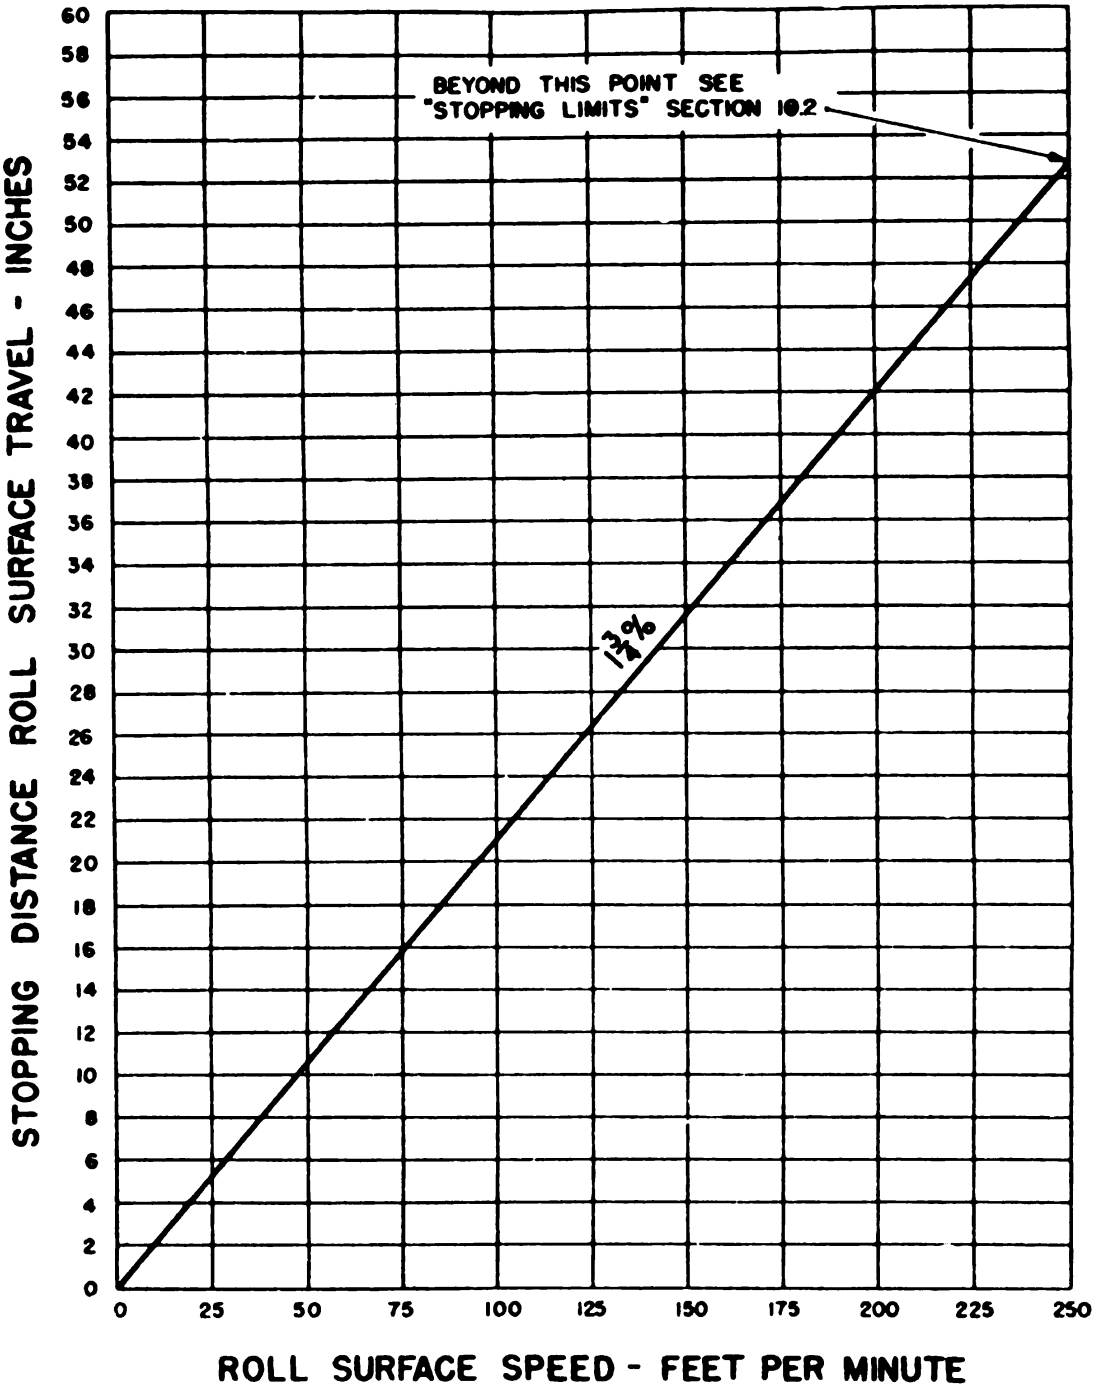
Rule 6545. (1) Except where an employee cannot come in contact with a roll nip point or be caught between a roll and an adjacent object because of a fixed installation, a calender shall be provided with the following safety trip devices to actuate breaking equipment:

(a) A safety rod or cable located across each pair of inrunning rolls and extending the length of the rolls. The device shall operate with either a push or pull motion. The safety tripping devices shall be located within reach of the operator at the bite.

(b) A safety cable shall be run vertically on both sides of the calender and connected to the safety switch. The cable shall be not more than 12 inches from the face of the rolls and not less than 2 inches from the calender frame. The cable shall be anchored not more than 6 inches from the floor and operated with either a push or pull motion.

(2) A safety device, after actuation, shall require manual resetting.

History: 1954 ACS 77, p. 154, Eff. Sept. 25, 1973; 1954 ACS 88, p. 102, Eff. Aug. 18, 1976.



R 408.16546 Calender stopping limits.

Rule 6546. A calender, regardless of size or configuation, shall be stopped by braking equipment within a distance, measured in inches of surface travel of the fastest roll, of not more than 1¾ of the peripheral no-load surface speed of the calender rolls as determined in feet per minute. (See figure 3)

PART 71. LAUNDRY AND DRY CLEANING MACHINERY AND OPERATIONS

GENERAL PROVISIONS

R 408.17101 Scope.

Rule 7101. This part provides for the safe maintenance and operation of laundry and dry cleaning machinery and equipment by the employer and their safe use by an employee in, around, and about a place of employment.

History: 1954 ACS 77, p. 156, Eff. Nov. 21, 1973.

R 408.17103 Definitions; A to E.

Rule 7103. (1) "Aisle" means a path of travel for employees and material handling equipment.

(2) "Beater" means a device for relieving wrinkles in fabrics.

(3) "Centrifugal extractor" means a power driven machine used to remove surplus moisture from fabrics by centrifugal action.

(4) "Dampening machine" means a machine for dampening fabrics.

(5) "Dry cleaning" means the process of cleaning fabrics by use of nonaqueous liquid solvents in machines and may include the drying and pressing of them.

History: 1954 ACS 77, p. 156, Eff. Nov. 21, 1973.

R 408.17104 Definitions; F to H.

Rule 7104. (1) "Fabrics" means clothing, household items and other articles made from textiles.

(2) "Flammable solvent" means a liquid which has a flash point less than 140 degrees Fahrenheit.

(3) "Folding machine" means a machine which folds fabrics.

(4) "Hot patch machine" means equipment which applies a patch or label to fabric by use of heat and pressure.

History: 1954 ACS 77, p. 156, Eff. Nov. 21, 1973.

R 408.17105 Definitions; I to M.

Rule 7105. (1) "Ironer" means a hand or power operated machine with 1 or more rolls or heated surfaces in contact for drying and smoothing fabrics.

(2) "Laundromat" means an establishment having washing machines, drying tumblers, dry cleaning machines, extractors or presses which may be operated by an employee or the public.

(3) "Laundry" means an establishment where the cleaning of fabrics is accomplished by use of water, soaps or detergents in machines and may include the drying, starching and ironing of them.

(4) "Marking machine" means a machine used for marking fabrics.

History: 1954 ACS 77, p. 156, Eff. Nov. 21, 1973.

R 408.17106 Definitions; P.

Rule 7106. (1) "pH" means to express numerically the degree of acidity or alkalinity of a solution with neutrality indicated as 7. A number lower than 7 would mean increasing acidity and a number greater than 7 would mean increasing alkalinity.

(2) "Personal protective equipment" means the apparel worn by the employee to protect his person from injury.

(3) "Pinch point" means a point at which it is possible to be caught between the moving parts of a machine or between moving and stationary parts of a machine.

Digitized by Google

Open Access, Google-digitized / http://www.hathitrust.org/access_use#oa-google

(4) "Point of operation" means the area of a machine where material is actually worked.

(5) "Power wringer" means a machine with 1 or more rolls used for removing surplus moisture from fabrics.

History: 1954 ACS 77, p. 156, Eff. Nov. 21, 1973.

R 408.17107 Definitions; S, T.

Rule 7107. (1) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress when in use.

(2) "Screw conveyor" means a fixed powered rotating device suspended above a floor or platform used to convey fabrics on hangers.

(3) "Squeeze extractor" means a machine which removes excess liquid by a compacting or squeezing action.

(4) "Starching machine" means a power driven machine used for starching fabrics.

(5) "Tying machine" means equipment which automatically ties bundles.

(6) "Tumbler" means a machine used to shake out, condition or dry fabrics by tumbling them in a revolving cylinder.

History: 1954 ACS 77, p. 156, Eff. Nov. 21, 1973.

R 408.17111 Employer responsibility.

Rule 7111. An employer shall:

(a) Provide training to an employee as to the hazards and safe operation of the assigned job.

(b) Maintain machinery, building, ramp, platform and aisles in a condition free of recognized hazards.

(c) Provide face and eye protection, as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569 of the Michigan Administrative Code, aprons, gloves, and other protective equipment where an acid having a pH less than 4.0 and a caustic having a pH greater than 10.0 are handled.

History: 1954 ACS 77, p. 157, Eff. Nov. 21, 1973.

R 408.17112 Employee responsibility.

Rule 7112. An employee shall:

(a) Use personal protective equipment when furnished by the employer.

(b) Not use machinery or equipment unless authorized and trained in its use.

(c) Not remove guards from machinery and equipment except when necessary for servicing. The guard shall be replaced before restarting the machine.

(d) Report defective machinery, equipment and hazardous conditions, when detected, to the employer.

History: 1954 ACS 77, p. 157, Eff. Nov. 21, 1973.

R 408.17121 Illumination.

Rule 7121. Illumination shall be provided at the operator's work station to maintain a minimum of 20 footcandle intensity.

History: 1954 ACS 77, p. 157, Eff. Nov. 21, 1973.

R 408.17122 Floors and aisles.

Rule 7122. (1) An aisle and floor work area shall be maintained free of protruding objects, holes, loose boards, accumulations of water and any slip or trip hazard.

(2) An aisle for combined usage of an employee and powered stock moving equipment, shall be 3 feet wider than the widest load moved. The outline of the aisle shall be marked or otherwise indicated.

History: 1954 ACS 77, p. 157, Eff. Nov. 21, 1973.

R 408.17123 Power controls.

Rule 7123. (1) A procedure for lockout of machinery and equipment shall be established by an employer and used by an employee. A power source of any equipment to be repaired, serviced or set-up shall be locked out by each employee doing such work if unexpected start up would cause injury. Any residual pressure shall be relieved before and during the work.

(2) Provision shall be made to prevent machinery and equipment from automatically restarting upon restoration of power after a power failure.

(3) Control devices shall be so arranged or guarded as to prevent accidental activation.

(4) Where flammable solvents are used as the primary cleaning agent other than for spotting, the controls shall be explosion proof.

(5) If 2-hand control devices are required, they shall require concurrent activation and shall be so located as to prevent bridging or a device such as a cover or ring guard shall be provided. Where more than 1 operator is stationed on a machine at a point of operation, each operator shall have controls which require concurrent activation with the other operators, and an emergency stop device shall also be provided.

History: 1954 ACS 77, p. 157, Eff. Nov. 21, 1973.

R 408.17124 Machinery installation.

Rule 7124. (1) Machinery and equipment shall be electrically grounded.

(2) Machinery and equipment shall be secured to a floor, foundation, bench, table or stand of such strength and design so as to prevent overturning or unintentional movement.

(3) Machinery and equipment shall not be so placed as to require an operator to stand in an aisle.

(4) The employer shall comply with the provisions of the standards referenced in this subrule, which are hereby incorporated by reference, and which are available for inspection at the Lansing office of the department of labor. These standards may be purchased from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926, at the following prices: A13.1-1956—$2.25; B31.1.0-1967—$35.00; and Z21.30-1964—$3.00. In the event of any conflict between this subrule and the other rules of this part, the other rules shall apply. The referenced standards are:

(a) American national standard scheme for the identification of piping systems, ANSI A13.1-1956.

(b) American national standard code for pressure piping—power piping, ANSI B31.1.0-1967. Addenda to the American national standard code for pressure piping—power piping, ANSI B31.1.0a-1969.

(c) American national standard for the installation of gas appliances and gas piping, ANSI Z21.30-1964.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973; 1954 ACS 88, p. 102, Eff. Aug. 18, 1976.

R 408.17125 Lubrication.

Rule 7125. (1) Lubrication shall be accomplished by 1 of the following:

(a) Manually when the machine can be shut off and locked out.

Digitized by Google

(b) An automatic pressure or gravity feed system.

(c) An extension pipe leading to an area outside of guards or away from any hazard.

(d) Other means which provide safety equivalent or exceeding subdivisions (a), (b), or (c).

(2) In all instances of lubrication, rule 732 of the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10732 of the Michigan Administrative Code, shall be followed.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973.

R 408.17126 Hot surfaces.

Rule 7126. Steam and hot water pipes and surfaces of machinery, except those coming into contact with the fabric being processed, which would cause burns if exposed to contact shall be covered with a heat resistive or insulating material or guarded by a barrier.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973.

R 408.17127 Relief valves.

Rule 7127. (1) Where a pressure reducing valve is used, not less than 1 relief valve shall be provided adjacent to the reducing valve on the low pressure side.

(2) The relief valve shall vent to an area which will not create a hazard to an employee. The vent shall be the same size as the relief valve outlet and as short and direct as possible.

(3) The combined discharge capacity of relief valves shall be such that the pressure rating of the lower pressure piping and equipment will not be exceeded if the reducing valve should fail to function.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973.

R 408.17128 Steam pressure procedures.

Rule 7128. (1) Steam valves to machinery shall be cracked open for several minutes and then opened slowly to avoid uneven expansion of a pressure chamber.

(2) The rated operating steam pressure of a machine shall not be exceeded.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973.

R 408.17129 Hydraulic safety.

Rule 7129. A hydraulic system of piping, hose and their component parts shall have a designed safety factor of 4.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973.

R 408.17130 Fire safety.

Rule 7130. (1) Fabrics which contain a combustible vapor or fluid first shall be rinsed in cold water or maintained not less than 25 feet from spark producing equipment or open flame.

(2) Smoking shall be prohibited except in designated areas. "NO SMOKING" signs shall be posted in these prohibited areas.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973.

R 408.17131 Material handling.

Rule 7131. (1) A mechanism used to tilt tote boxes shall be enclosed by a standard barrier on 3 sides.

(2) Where a chain or cable sling or metal bale is used in connection with lifting by a powered hoist, the hook of the hoist shall be equipped with a safety latch.

(3) A screw conveyor less than 8 feet from a floor or platform shall be equipped with a barrier on each side the entire length of the conveyor. The barrier shall project not less than 1½ inches above and below the conveyor to prevent hair entanglement.

History: 1954 ACS 77, p. 158, Eff. Nov. 21, 1973.

SPECIFIC PROVISIONS—LAUNDRY

R 408.17141 Marking machine and label remover.

Rule 7141. A marking machine or label remover with an opening of more than ¼ inch shall be guarded by 1 of the following:

(a) A spring compression device designed to prevent injury if the fingers are caught between the marking plunger and the platen.

(b) A control device requiring concurrent use of both hands to operate the machine.

(c) A barrier designed to prevent contact with the marking plunger.

History: 1954 ACS 77, p. 159, Eff. Nov. 21, 1973.

R 408.17142 Washing machines.

Rule 7142. (1) The outer door of a double cylinder washing machine shall be interlocked to prevent the inside cylinder from moving when the outer door is open and also to prevent opening the outer door when the inside cylinder is in motion. The use of an inch control is permissible.

(2) A single cylinder washing machine shall be guarded as prescribed in R 408.17146.

(3) A washing machine shall have a device for holding the outer and inner doors open for loading and unloading.

History: 1954 ACS 77, p. 159, Eff. Nov. 21, 1973.

R 408.17143 Extractors.

Rule 7143. (1) A rotating extractor shall be equipped with a metal cover interlocked in a manner so as to prevent opening it when the basket is in motion or to prevent power operation of the basket when the cover is open.

(2) A rotating extractor shall not be operated at a speed in excess of the rated speed, which speed shall be permanently marked on the machine. Where the rated speed is not available, table 1 shall be followed.

(3) A rotating extractor shall be:

(a) Equipped with a braking device.

(b) Secured to the floor or foundation to prevent lateral movement.

(c) Loaded in a manner to keep the extractor in balance.

(d) Inspected not less than once a year at points of wear such as, but not limited to, the basket, rings and cover, and repaired where defects that are a hazard are found.

(4) A squeeze extractor shall be equipped with:

(a) A cover interlocked to the compacting mechanism which shall prevent the removal of the cover until the pressure has been relieved.

(b) A 2-hand control device which shall be operated concurrently to activate the cover placement.

(5) A steam, hydraulic or pneumatic type squeeze extractor shall be equipped with a pressure relief valve set to open if the applied pressure is 10% more than the

maximum rated operating pressure. The maximum operating pressure shall be permanently labeled or marked on the machine.

TABLE 1

30-inch diameter extractor—	1,200 r.p.m.
40-inch diameter extractor—	900 r.p.m.
48-inch diameter extractor—	750 r.p.m.
60-inch diameter extractor—	500 r.p.m.

History: 1954 ACS 77, p. 159, Eff. Nov. 21, 1973.

R 408.17144 Combination washer-extractor.

Rule 7144. A combination washer-extractor shall be:

(a) Equipped with a braking device.

(b) Equipped with a steel door interlocked to the drive mechanism which will prevent opening the door while the cylinder is in motion and prevent operation while the door is open. An inch control is permissible for internal door models to aid loading and unloading.

(c) Mounted on a vibration dampening foundation or be equipped with a device which will shut off the power and apply the brake when the machine is out of balance to a hazardous degree.

(d) Equipped to maintain the doors in an open position during loading and unloading.

History: 1954 ACS 77, p. 159, Eff. Nov. 21, 1973.

R 408.17145 Power wringer.

Rule 7145. (1) A power wringer shall be equipped with a safety bar or barrier positioned in front of and across the entire front of the first feed or pressure roll so arranged that if the bar or barrier is struck, either the machine will stop or the pressure on the rolls will be relieved.

(2) The stopping distance of the feed or pressure roll measured on the circumference shall be not more than ½ of the lineal distance measured from the safety bar or barrier to the pinch point.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17146 Starching machine.

Rule 7146. A starching machine shall be guarded by an enclosure or barrier to prevent contact with the moving cylinder or box.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17147 Fans.

Rule 7147. A fan within 8 feet of a floor or platform and exposed to contact shall be guarded on all exposed sides with wire mesh not less than 16 gauge with openings not more than ½ inch.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17148 Tumblers; shake out, conditioning, and drying.

Rule 7148. (1) A tumbler shall be equipped with a safety interlock that will prevent energizing the drive motor unless the door is closed. The interlock shall allow for momentary inching the tumbler cylinder to facilitate loading and unloading.

(2) A tumbler shall be provided with a means to prevent accidental closing of the door during loading and unloading.

(3) A tumbler designed without a door, where the work is continuously loaded and discharged, is excepted from subrules (1) and (2).

(4) A single cylinder tumbler shall be guarded as prescribed in R 408.17146.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17149 Steam drying box and cabinets.

Rule 7149. A steam drying box or cabinet having access doors shall be equipped with both inside and outside latches.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17150 Dampening machine.

Rule 7150. A roll dampening machine shall be guarded in a manner which will enclose the rolls and prevent an employee's fingers from entering the pinch point.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17151 Beaters.

Rule 7151. A beater on a flat work ironer other than 1 using cloth or canvas beater blades, shall be guarded against accidental contact by the operator.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17152 Folding machine.

Rule 7152. (1) A fixed or interlocked removable barrier shall cover the moving parts of a flatwork folding machine.

(2) A small piece folding machine shall have access openings covered and interlocked to the power source, where an employee would be exposed to a hazard such as a chain or belt drive.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17153 Rollers and unrollers.

Rule 7153. (1) A towel roller shall be equipped with a barrier made of plastic or expanded metal electrically interlocked to the power source or interlocked to the clutch and designed to prevent entry into the pinch point created by the 2 inrunning rollers, or it shall be equipped with a 2-hand constant pressure control device.

(2) A towel unroller shall be equipped with a barrier to prevent entry of the operator's fingers into the pinch point created by the 2 inrunning rolls, or it shall be equipped with a 2-hand constant pressure control device.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17154 Ironers.

Rule 7154. (1) A flatwork ironer shall be equipped with a safety bar or barrier positioned in front of and across the entire front of the first feed or pressure rolls so arranged that striking of the bar or barrier will stop the machine. The stopping distance of the feed or pressure roll measured on the circumference shall be not more than ½ of the lineal distance measured from the safety bar or barrier to the pinch point. The ends of the pressure rolls shall be guarded by an enclosure or barrier which will prevent contact by an employee.

(2) A flatwork ironer shall be equipped with an idler roll, sometimes known as a doffer or finger roll, in front of the safety bar or barrier.

(3) A body type roll or shoe type sleeve or band ironer shall be guarded as prescribed in subrule (1). The hot roll or shoe shall be covered as prescribed in R 408.17126 to prevent contact with the heated surfaces.

(4) A rotary body and coat ironer shall be equipped with the safety bar or barrier across the entire front of the feed roll or shoe so arranged that striking the bar or barrier will stop the machine. The hot roll or shoe shall be covered as prescribed in R 408.17126 to prevent contact with the heated surface.

History: 1954 ACS 77, p. 160, Eff. Nov. 21, 1973.

R 408.17155 Laundry press.

Rule 7155. (1) A laundry press shall be equipped with a control device requiring concurrent use of both hands until the press has closed and the locking device has taken effect.

(2) A laundry press shall be provided with an emergency release bar or button which will instantly release the locking device of the laundry press head.

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

R 408.17156 Vertical pants presser.

Rule 7156. A vertical pants presser with a fly clamp, except those manually actuated, shall be equipped with a 2-hand control device for the fly clamp and an interlocked door covering the point of operation.

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

R 408.17157 Vertical coverall or shirt press.

Rule 7157. A vertical coverall or shirt press having shoulder or yoke clamps shall be equipped with a 2-hand control device.

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

R 408.17158 Sewing machines.

Rule 7158. A sewing machine shall be equipped with a permanently attached guard which will prevent a finger from passing between the needle and the pressure foot. The guard design shall allow threading of the needle without removing the guard.

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

R 408.17159 Hot patch machine.

Rule 7159. A hot patch machine shall be equipped with a barrier to enclose the point of operation or it shall be equipped with a 2-hand control device.

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

R 408.17160 Tying machine.

Rule 7160. A tying machine shall be equipped with an enclosure guard around the path of the moving arm so designed as to eliminate any pinching between the table and the guard or the guard and the arm.

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

SPECIAL FOR DRY CLEANING

R 408.17161 Cover or door interlocks.

Rule 7161. (1) An extractor, washer or tumbler used in a dry cleaning operation shall have the covers or doors interlocked to prevent the inside cylinder from

moving when the cover or door is open. On an extractor, the interlock shall also prevent the outer door being opened while the inside cylinder is in motion.

(2) A combination dry cleaning machine, wherein the washing and extraction cycles are completed within the same enclosure, shall be equipped with a splashproof cover or door which shall be interlocked as prescribed in subrule (1).

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

R 408.17162 Extractors.

Rule 7162. An extractor shall not be operated in excess of its rated speed. If the rated speed is unavailable, table 1 of R 408.17143 shall be followed.

History: 1954 ACS 77, p. 161, Eff. Nov. 21, 1973.

R 408.17163 Dry cleaning press.

Rule 7163. (1) A dry cleaning press may be actuated by use of 1 hand, but when pressure is increased or a locking device is actuated, 2-hand controls shall be used concurrently.

(2) A dry cleaning press shall be provided with an emergency release bar or button which will instantly release the ironing press head from its closed position.

History: 1954 ACS 77, p. 162, Eff. Nov. 21, 1973.

PART 72. AUTOMOTIVE SERVICE OPERATIONS

GENERAL PROVISIONS

R 408.17201 Scope.

Rule 7201. This part sets forth rules for safe maintenance and operation of equipment by the employer and their safe use by the employee in, around and about places of employment where vehicles are serviced, repaired and salvaged. Manufacturing, research and development facilities are excluded.

History: 1954 ACS 82, p. 129, Eff. Dec. 31, 1974.

R 408.17204 Definitions; A to E.

Rule 7204. (1) "Automotive lift" means a vehicle lifting device, the purpose of which is to raise an entire vehicle to provide accessibility for convenient under chassis service.

(2) "Class I flammable liquid" means those having a flash point below 100 degrees Fahrenheit. Representative examples of class I liquid are: ether, gasoline, lacquer thinner, acetone, and methyl acetate.

(3) "Combustible" means to be readily ignitible and easily burnable.

(4) "Extractor" means a machine, except a vacuum cleaner, used to remove moisture from fabrics.

History: 1954 ACS 82, p. 129, Eff. Dec. 31, 1974.

R 408.17205 Definitions; F to L.

Rule 7205. (1) "Flammable liquid" means a liquid having a flash point less than 100 degrees Fahrenheit and having a vapor pressure of not more than 40 pounds per square inch (absolute) at 100 degrees Fahrenheit.

(2) "Jack" means a portable mechanical or hydraulic device for lifting or lowering a load by application of a force.

(3) "Lockout" means to lock by key or padlock.

History: 1954 ACS 82, p. 130, Eff. Dec. 31, 1974.

R 408.17206 Definitions; P to S.

Rule 7206. (1) "Pinch point" means a point at which it is possible to be caught between the moving parts of a machine, between moving and stationary parts of a machine or between a moving object and a stationary object.

(2) "Safeguard" means a device or part of a product designed for the protection of equipment or an employee.

(3) "Safety factor" means the ratio of the breaking strength of a piece of material or object to the maximum designed load or stress applied when in use.

(4) "Service" means to adjust, install, repair or replace; to wash or wax; to change or exchange; to polish, sand, grind, refinish, paint or coat.

History: 1954 ACS 82, p. 130, Eff. Dec. 31, 1974.

R 408.17207 Definitions; V to Y.

Rule 7207. (1) "Vehicle" means a powered conveyance operating on 2 or more wheels, including, but not limited to, an automobile, truck or trailer.

(2) "Wet operations" means those operations which involve the drainage, splash or running of liquids such as, but not limited to those found in car washing or dipping of radiators in solutions.

(3) "Yield point" means the point where material begins to take a permanent deformation.

History: 1954 ACS 82, p. 130, Eff. Dec. 31, 1974.

R 408.17211 Employer responsibility.

Rule 7211. (1) An employer shall:

(a) Provide training to an employee as to the hazards, safe operations of the assigned job and applicable rules of this part.

(b) Assure that job required tools, equipment and the work area are maintained in a manner free of recognized hazards which would cause an injury.

(c) Prohibit smoking, flames and sparks within 15 feet of where class I flammable liquids are dispensed or used, unless separated by an approved wall. "No Smoking" signs shall be posted in these restricted areas.

(d) Maintain a copy of this part for employees' review.

(e) Not circumvent, bypass or make inoperative any safeguard unless required during servicing. The safeguard shall be replaced before resuming operation of the equipment.

History: 1954 ACS 82, p. 130, Eff. Dec. 31, 1974.

R 408.17212 Employee responsibility.

Rule 7212. An employee shall:

(a) Use personal protective equipment required by this part.

(b) Use tools and equipment only when authorized and trained in their use.

(c) Report employers' defective tools and equipment and hazardous conditions, when detected, to his supervisor.

(d) Maintain his personal tools, equipment and work area in a manner to prevent a hazardous condition.

(e) Not smoke, create a spark or flame within 15 feet of an exposed flammable liquid or articles which have been wetted by a flammable liquid.

(f) Not circumvent, bypass or make inoperative any safeguard or tie down any control unless required during servicing. The safeguard shall be replaced before resuming operation of the equipment.

(g) Not use any device emitting air or other material in a manner which may inject a foreign material into a human body part.

(h) Use tools and equipment within their rated capacity.

History: 1954 ACS 82, p. 130, Eff. Dec. 31, 1974.

R 408.17213 Personal protective equipment.

Rule 7213. (1) An employer shall provide and an employee shall wear eye protection in accordance with and as prescribed in the occupational safety standards commission standard, Part 35. Face and Eye Protection, being R 408.13501 to R 408.13569, of the Michigan Administrative Code.

(2) Other personal protective equipment such as, but not limited to, rubber gloves, aprons, boots, welding helmets and respirators shall be provided by the employer and worn by the employee to protect against the hazards of wet operations, welding and cutting, radiator cleaning and battery charging and spray painting.

(3) When respiratory and hearing protection is required by a department of public health rule, the protection shall be provided by the employer and used by the employee.

(4) Where corrosive liquids or other liquid materials that would be harmful to an employee are normally used and where an employee is exposed to splash of the materials, a readily accessible means of flushing with water shall be provided.

(5) Cloth shoes, open sandals and exposed rings and necklaces shall not be worn in the work area. A ring may be worn if covered by gloves or tape.

History: 1954 ACS 82, p. 130, Eff. Dec. 31, 1974.

R 408.17221 Illumination.

Rule 7221. When hazardous work is performed where a hazard could be lessened by adequate lighting, a minimum of 25 footcandles intensity shall be provided.

History: 1954 ACS 82, p. 131, Eff. Dec. 31, 1974.

R 408.17222 Machinery and equipment installation.

Rule 7222. (1) Electrically powered machinery or equipment, other than double insulated equipment, shall be grounded.

(2) Nonportable machinery or equipment shall be secured to the floor, platform, table or bench to prevent displacement or tipping.

(3) Machinery or equipment shall be equipped with a disconnect switch which shall be locked in the off position, unless the machinery or equipment is equipped with a plug-in cord which shall be disconnected and tagged, when the machinery or equipment is repaired or serviced if unexpected motion would cause injury.

(4) When electrical equipment is used within a spray booth and flammable materials are applied, the equipment shall be suitable for class I, division I hazards.

(5) Machinery and equipment equipped with a foot control shall be provided with a cover or guard to prevent unintentional operation of the machinery or equipment where such operation would cause injury. The cover or guard shall be capable of withstanding a static load of 200 pounds without permanent deformation. The edges of the cover or guard shall be rolled, broad or covered to prevent injury or discomfort due to contact by the operator's foot or leg.

History: 1954 ACS 82, p. 131, Eff. Dec. 31, 1974.

R 408.17223 Housekeeping.

Rule 7223. (1) Until disposal is made, wiping cloths, when soiled from oil, grease, paints, or solvents, shall be placed in their own covered metal container, which shall be labeled or identified as combustible material.

(2) Rubbish shall be placed in containers. The container for combustible rubbish shall be of metal.

(3) Floors shall be maintained free of water, oil, grease, and paint or other accumulations which would cause a slipping, tripping, or falling hazard.

(4) After a vehicle is serviced, tools, loose parts, materials and general debris shall be cleaned up and placed in their designated places.

History: 1954 ACS 82, p. 131, Eff. Dec. 31, 1974.

R 408.17224 Ventilation and air receivers.

Rule 7224. (1) Ventilation shall be provided and used to exhaust toxic vapors or fumes if such vapors or fumes exceed the maximum allowable limits prescribed by a department of public health rule.

(2) The blades of a fan less than 7 feet from a floor, platform or ground shall be guarded on all sides. Openings in a guard shall be not more than 1 inch and the distance shall be not less than the values in table 1.

(3) A fan shall not be located where fumes of flammable liquids can be induced into an area where sparks or flame may be present.

(4) An air receiver shall be equipped with an operable relief valve set at not more than the working load limit of the receiver.

TABLE 1

Smallest dimension in guard (in):	Minimum distance from from guard to blade
Greater than 0 up to ¼ inclusive.	½ in.
Greater than ¼ up to ⅜ inclusive.	1½ in.
Greater than ⅜ up to ½ inclusive.	2½ in.
Greater than ½ up to ¾ inclusive.	4 in.
Greater than ¾ up to 1 inclusive.	6 times the smallest dimension

History: 1954 ACS 82, p. 131, Eff. Dec. 31, 1974.

R 408.17225 Flammables, painting and coating.

Rule 7225. (1) A class I flammable solvent stored inside a building shall be in an approved safety can with an automatic closing cap and flame arrestor or original unopened container having a capacity of not more than 5 gallons. Quantities in excess of 5 gallons shall be stored as prescribed by flammable liquid regulations of the fire marshal promulgated under Act No. 207 of the Public Acts of 1941, as amended.

(2) When pouring a flammable solvent from 1 container to another, continuous contact between the containers shall be maintained or a bonding or grounding strap shall connect the containers.

(3) A class I flammable solvent shall not be used for cleaning tools, parts, floors, or booths.

(4) Application by spraying of paint or coatings with a flammable ingredient to an area of more than 9 square feet shall be made within a booth or room constructed of noncombustible materials. The booth or room shall be ventilated as prescribed by a department of public health rule. Sparks, flame, and spark

producing equipment and smoking shall be prohibited in the booth or room and the area shall be posted: "No Smoking."

(5) When a flammable liquid is removed from a vehicle tank, an approved pumping device equipped with a ground strap shall be used.

History: 1954 ACS 82, p. 132, Eff. Dec. 31, 1974.

R 408.17226 Belt servicing.

Rule 7226. An employee adjusting or testing the tension of a belt or installing or removing a belt on a vehicle, shall do so when the motor is off and without turning the engine over.

History: 1954 ACS 82, p. 132, Eff. Dec. 31, 1974.

R 408.17227 Air conditioning and refrigeration servicing.

Rule 7227. A check valve shall be used to prevent refrigerant system pressures from flowing back to the refrigerant charging container unless such containers are equipped with a pressure relief valve.

History: 1954 ACS 82, p. 132, Eff. Dec. 31, 1974.

SPECIFICS

R 408.17231 Rescinded.

History: 1954 ACS 82, p. 132, Eff. Dec. 31, 1974; rescinded 1954 ACS 93, p. 36, Eff. Oct. 18, 1977.

R 408.17232 Cranes and winches, hoists, and chain falls.

Rule 7232. (1) A crane, hoist and chain fall or winch, fixed or portable, shall have affixed to it a permanent tag showing the rated capacity and name of manufacturer and, if available, the model and serial numbers.

(2) A crane, hoist and chain fall or winch shall not be used to lift more than its rated capacity.

(3) Wire rope or cable used on a crane, hoist or winch shall be inspected monthly, and shall be replaced if:

(a) In any length of 8 diameters, the total number of visible broken wires exceeds 10% of the total number of wires.

(b) The wire rope or cable has been kinked, crushed or bird caged or sustained other damage which distorts the wire rope structure.

(c) The wire rope or cable shows heat or corrosive damage.

History: 1954 ACS 82, p. 133, Eff. Dec. 31, 1974.

R 408.17233 Wreckers.

Rule 7233. (1) A wrecker cable and boom shall have a designed safety factor of not less than 5.

(2) Wire rope or cable used on a wrecker shall be inspected as prescribed in R 408.17232(3).

(3) A wrecker pulling or lifting a vehicle shall be used within its rated capacity.

(4) When pulling a vehicle with a wrecker cable, the employee shall stand aside from the line of pull.

(5) When towing a boom supported vehicle, safety chains shall be connected between the wrecker and the towed vehicle.

(6) A wrecker boom shall be equipped with a permanent tag showing rated capacity and name of manufacturer and, if available, the model and serial numbers. Where this information is not available, an outside source, knowledgeable in wrecker booms, shall be used to determine the rated capacity which

shall be permanently labeled on the wrecker boom. The boom shall be installed on the vehicle in a manner capable of sustaining the imposed load.

(7) The winch controls shall be located in a manner to prevent accidental contact with cable and winch pinch points or the pinch point shall be guarded.

History: 1954 ACS 82, p. 133, Eff. Dec. 31, 1974.

R 408.17234 Jacking and blocking.

Rule 7234. (1) A vehicle being serviced, adjusted or repaired while the motor is running shall have 2 wheels chocked from front and rear or parking brake set or other vehicle restraint controls provided.

(2) An employee shall not place his body under a vehicle supported only by a jack, overhead hoist or chain fall. Safety stands having a yield point of not less than 1½ times its rated capacity shall be used to support the vehicle.

(3) A jack shall not be used to lift more than its rated capacity.

History: 1954 ACS 82, p. 133, Eff. Dec. 31, 1974.

R 408.17235 Tire changing and repair.

Rule 7235. (1) A split rim wheel shall be inspected for cracks prior to mounting of a tire. A cracked rim shall not be used.

(2) A tire to be inflated on a split rim wheel shall be covered by an enclosure or other safety device of such design and strength to contain the force if a tire or rim should separate.

History: 1954 ACS 82, p. 133, Eff. Dec. 31, 1974.

R 408.17241 Radiators and gas tanks.

Rule 7241. (1) A radiator cap shall not be removed until the pressure has been relieved.

(2) Where radiators are repaired and cleaned by use of caustic solutions, the employee shall be protected by boots, gloves, rubber apron, safety glasses and face shield. A deluge water supply at a fixed location shall be available within 25 feet of the hazard source. This equipment shall be posted: "Emergency Shower."

(3) When the top of an open tank or vat containing a hazardous substance is less than 36 inches from the floor, platform or ground level, a barrier shall be erected to a height of not less than 36 inches on all exposed sides.

(4) Gasoline tanks shall be thoroughly evacuated and maintained free of all explosive vapors or gasoline before commencing welding or soldering repairs.

History: 1954 ACS 82, p. 134, Eff. Dec. 31, 1974.

R 408.17243 Transmissions.

Rule 7243. When removing or replacing a transmission from below a vehicle, a cradle-type device shall be used to hold and carry the transmission.

History: 1954 ACS 82, p. 134, Eff. Dec. 31, 1974.

R 408.17245 Extractors and wringers.

Rule 7245. (1) An extractor shall be equipped with a metal cover interlocked in a manner to prevent opening when the basket is in motion and power operation of the basket when the cover is open.

(2) An extractor shall be equipped with a motor brake.

(3) A power wringer used to remove moisture from fabrics shall be equipped with a safety release bar which shall remove the tension of the wringer rolls when struck.

History: 1954 ACS 82, p. 134, Eff. Dec. 31, 1974.

R 408.17246 Car wash conveyors.

Rule 7246. (1) A conveyance used to move a vehicle along a line of working equipment or moving such equipment along a vehicle, shall have the conveyor, track or chain outlined by a 4-inch strip of yellow zone paint or other warning means located within 8 inches of the hazardous area.

(2) Pinch points exposed to contact shall be guarded as prescribed by the occupational safety standards commission standard, Part 14. Conveyors, being R 408.11403 to R 408.11461 of the Michigan Administrative Code.

History: 1954 ACS 82, p. 134, Eff. Dec. 31, 1974.

R 408.17251 Automotive lift; adoption by reference; auxiliary support device; permanent tag; lifting more than rated capacity prohibited.

Rule 7251. (1) An automotive lift installed, or the modifications made, after the effective date of this subrule, shall be as prescribed in sections 2, 3, and 5, except paragraph 5.7, of the ANSI standard, B153.1-1974, safety requirements for the construction, care and use of automotive lifts, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be purchased at a cost of $3.50 from the American National Standards Institute, 1430 Broadway, New York, New York 10018, or from the Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(2) When an employee is required to work underneath a vehicle supported by a hydraulic lift installed before the effective date of this part, the lift shall be used only when an auxiliary support device is engaged and capable of supporting the rated capacity of the lift.

(3) An automotive lift purchased after December 28, 1974, shall have affixed to it a permanent tag showing the name of the manufacturer, model number, serial number, and rated capacity.

(4) An automotive lift purchased before December 28, 1974, shall be equipped with a permanent tag showing the name of the manufacturer and its rated capacity. Where this information is not available, an outside source knowledgeable in automotive lifts shall be used to determine the rated capacity. This capacity shall be permanently labeled on the lift.

(5) An automotive lift shall not be used to lift more than its rated capacity.

History: 1954 ACS 93, p. 36, Eff. Oct. 18, 1977.

R 408.17252 Automotive lift; inspections.

Rule 7252. (1) Wire rope used on a mechanical-type lift shall be inspected as prescribed in R 408.17232(3).

(2) Effective December 31, 1976, the following items shall be inspected and the inspections shall be repeated not less than annually thereafter: the bolster, bolster connections, lifting arms and pads, lift control devices, oil reservoir level, cylinder packing, and all other critical components. Defects shall be repaired before the hoist is returned to service.

History: 1954 ACS 93, p. 37, Eff. Oct. 18, 1977.

R 408.17253 Automotive lift; color coding obstructions or hazards in work area; vehicle positioning means; corrosive protective methods.

Rule 7253. (1) Fixed obstructions, protrusions, and other tripping or stumbling-type hazards located in the working area of a lift shall be color coded as prescribed in the occupational safety standards commission standard 1910.144,

safety color code for marking physical hazards, which was adopted by reference on January 1, 1975, by Act No. 154 of the Public Acts of 1974, as amended, being §408.1001 et seq. of the Michigan Compiled Laws.

(2) Vehicle positioning means, such as locating ribs, positioning dishes, or floor markings, shall be used with frame or axle engaging lifts.

(3) A hydraulic automotive lift cylinder installed underground in a fixed position after the effective date of this amendment shall be protected from possible catastrophic failure by electrolytic corrosion at the bottom of the cylinder. Not less than 1 effective means, such as the following corrosive protective methods, shall be used to protect the cylinder:

(a) The cylinder bottom shall be imbedded in concrete to a depth of not less than 3 inches and with not less than a 1-inch wall thickness.

(b) A square plate not less than ½ inch greater in diameter than the cylinder bottom and thicker than the cylinder wall shall be continuously welded to the cylinder bottom.

(c) The cylinder shall be encased in a watertight electrical insulating housing, rap, or coating.

(d) The cylinder shall be equipped with a sacrificial anode system sufficient to protect the cylinder.

(4) An electromechanical powered lift shall have all of the following:

(a) A separate dead man-type raise-lower switch mounted on the power column.

(b) A separate power disconnect switch readily accessible to the operator in the lift area.

(c) A device to automatically deenergize the lift when it has reached the limits of its travel.

(5) A screw driven lift shall be provided with a safety nut to follow the main drive nut which shall be capable of sustaining the imposed load in the case of failure of the main drive nut.

(6) The lift control mechanism shall automatically return to neutral or "off" position when released by the operator.

History: 1954 ACS 93, p. 37, Eff. Oct. 18, 1977.

PART 74. FIRE FIGHTING

R 408.17401 Scope.

Rule 7401. This part prescribes rules for training; for the construction, care, and use of equipment; and for the safeguards to be furnished and maintained as it relates to municipal fire service personnel and equipment. The occupation can be permanent or part time, for pay or volunteer status.

History: 1954 ACS 93, p. 37, Eff. Nov. 19, 1977.

R 408.17402 Applicability.

Rule 7402. A person functioning as a fire fighter and exposed to hazards of a structural fire shall comply with this part.

History: 1954 ACS 93, p. 38, Eff. Nov. 19, 1977.

R 408.17403 Definitions; F to L.

Rule 7403. (1) "Fire apparatus" means mobile fire fighting equipment such as, but not limited to, a pumper, an aerial ladder truck, a tanker, or any other similar equipment whose primary use is for fire suppression or rescue. A vehicle not designed, equipped, or utilized for emergency fire fighting is not fire apparatus.

(2) "Fire house" means a structure in which fire service equipment is housed and employees may be quartered.

(3) "Fire service personnel" means all employees engaged in fire suppression, fire inspection, fire investigation, or subjected to the hazards at an emergency scene.

(4) "Ladder pipe" means a large capacity water delivery device attached to an aerial ladder.

(5) "Lower control station" means that work station where the operator of apparatus with an elevating platform is stationed.

History: 1954 ACS 93, p. 38, Eff. Nov. 19, 1977.

R 408.17404 Definitions; O to V.

Rule 7404. (1) "Operator's control station" means that work station where the operator of apparatus, such as an aerial ladder or pumper, is stationed.

(2) "Platform control station" means that work station where the rider of an elevating platform is stationed.

(3) "Roof ladder" means a ladder equipped with folding hooks. These hooks provide a means of anchoring the ladder to the roof ridge or other roof part.

(4) "Stay poles," sometimes called tormenters, means poles attached to the rails of long extension ladders to aid in the raising and supporting of the ladder.

(5) "Structural fire" means any fire other than a vegetative cover fire.

(6) "Turnout" means the outer garments worn by fire service personnel for personal protection.

(7) "Volunteer" means a person permitted to work and is trained as a member of an organized fire department.

History: 1954 ACS 93, p. 38, Eff. Nov. 19, 1977.

R 408.17411 Duties of employer.

Rule 7411. An employer shall:

(a) Provide training to an employee as prescribed in standards promulgated under Act No. 291 of the Public Acts of 1966, being §29.361 et seq. of the Michigan Compiled Laws, which is provided by the Michigan fire fighters training council, or its equivalent training, as to the hazards and safe practices of the assigned job.

(b) Assure that the prospective fire service personnel are physically fit and have the ability to perform assigned fire fighting duties.

(c) Assure that job-required equipment and tools are maintained in a manner free of recognized defects which would cause an injury.

(d) Develop a basic procedure covering the treatment and transport of injured employees from the emergency scene to a medical facility.

History: 1954 ACS 93, p. 38, Eff. Nov. 19, 1977.

R 408.17412 Duties of employee.

Rule 7412. An employee shall:

(a) Use personal protective equipment as prescribed by this part.

(b) Report defective equipment, tools, and hazardous conditions to a supervisor.

(c) Not remove safeguards from equipment except when necessary to service. The safeguard or equivalent shall be replaced before returning the equipment to operation.

(d) Not use equipment and tools unless trained in their use and authorized to do so.

History: 1954 ACS 93, p. 38, Eff. Nov. 19, 1977.

R 408.17415 Slide pole obstructions and mat; emergency lighting system; switches and electrical equipment subject to hazards created by moisture; sleeping quarters.

Rule 7415. (1) The area within 3 feet of the slide pole on all sides shall be maintained free of any obstruction. A floor to ceiling wall shall not be construed to be an obstruction.

(2) It is recommended that a cushioned mat, not less than 3 feet in diameter, be located around the base of the slide pole at all times.

(3) The dormitory and any means of egress from the dormitory, apparatus bay, and aisleways shall be equipped with an emergency lighting system which shall be automatically activated in case of power failure. The system may be operated by battery or generator.

(4) Switches and electrical equipment located in the shower room or other areas subject to hazards created by moisture shall be weatherproof or removed to an area not hazardous.

(5) All sleeping quarters shall be equipped with a smoke detection device.

History: 1954 ACS 93, p. 38, Eff. Nov. 19, 1977.

CONSTRUCTION AND USE OF EQUIPMENT

R 408.17421 Fire apparatus, generally.

Rule 7241. (1) Fire apparatus shall have a braking capability to stop within 30 feet after application of the brakes at 20 miles per hour.

(2) Fire apparatus shall be equipped with:

(a) Windshield wipers.

(b) Head, tail, stop, and backup lights and a backup alarm.

(c) Horn and siren.

(d) Slip-resistant steps, tailboard, and work platforms.

(e) Seat belts for all seated employees and a restraining device such as, but not limited to, a grab bar, arm loop, back bar, or web strap for all other employees. The safety belt or restraining device shall be used when the apparatus is in motion.

(3) New fire apparatus purchased after the effective date of this part shall be as prescribed in NFPA standard 1901-1975, automotive fire apparatus, which is incorporated herein by reference and may be inspected at the Lansing office of the Michigan department of labor. This standard may be purchased at a cost of $4.00 from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210, or the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(4) Fire apparatus using a tillerman or other employees riding on the apparatus remote from the cab shall be equipped with a voice communication or audible signal system at each location of an operating employee. When the audible system is used, the following signals shall be in effect:

(a) One long blast means stop.

(b) Two short blasts mean forward.

(c) Three short blasts mean reverse.

(5) An operator of fire apparatus shall not move the equipment when his vision is obstructed, except on instructions of a designated signalman.

(6) A minimum distance of 10 feet from energized equipment or high voltage transmission lines, as distinguished from low voltage secondary lines, and series street light construction, shall be maintained when using fire apparatus with elevating platforms, aerial ladders, or snorkels. Training of fire service personnel

shall include development of the ability to recognize and identify primary, high voltage transmission lines and series street lighting construction.

History: 1954 ACS 93, p. 39, Eff. Nov. 19, 1977.

R 408.17422 Fire apparatus tires.

Rule 7422. (1) Fire apparatus tires shall be inspected inside and out not less than every 5 years.

(2) A tire shall be replaced if 1 of the following occurs:

(a) The average tread depth is worn to $\frac{2}{32}$ of an inch or less.

(b) The tread depth at any 1 location is $\frac{2}{32}$ of an inch or less.

(c) A cut or crack exposes the cord fabric.

(3) A replacement tire shall meet or exceed the standards of the original tire furnished with the apparatus.

History: 1954 ACS 93, p. 39, Eff. Nov. 19, 1977.

R 408.17423 Fire apparatus with elevating platforms.

Rule 7423. (1) When an elevating platform is used, parking brakes shall be set, and stabilizing jacks or outriggers shall be used. Ground plates shall be used under the jack or outrigger when needed.

(2) An instructional information plate, clearly visible to the operator, shall be located at the operator's control station, the platform control station, and contain the following information:

(a) Rated capacity of the platform.

(b) Operating controls identified for motion.

(c) Cautions or restrictions of operation.

(3) The apparatus operator shall be at the lower control station at anytime the elevating platform is occupied.

(4) Equipment and operations of the elevating platform shall be as prescribed in the occupational safety standards commission standard, Part 58. Vehicle-Mounted Elevating and Rotating Platforms, being R 408.15801 et seq. of the Michigan Administrative Code.

History: 1954 ACS 93, p. 39, Eff. Nov. 19, 1977.

R 408.17424 Aerial ladders.

Rule 7424. (1) An aerial ladder shall not be extended or retracted while an employee is climbing the ladder.

(2) When it is necessary to work from an aerial ladder, the employee shall be secured with a safety belt.

(3) The tip of the aerial ladder shall not be forcefully extended against a solid object, nor used to support the ladder.

(4) The steps and rungs of an aerial ladder shall have a slip-resistant surface.

(5) Jacks and outriggers shall be used as prescribed in R 408.17423(2).

(6) The rated capacity for an aerial ladder shall not be exceeded.

(7) The operator of an aerial ladder shall:

(a) Remain at the turntable whenever the ladder is occupied.

(b) Not move the apparatus unless the ladder is in the bed.

(8) The minimum distances prescribed in R 408.17421(6) shall pertain to aerial ladders.

(9) The controls for the operation of an aerial ladder shall be of a type that returns to a neutral position when released.

(10) Tools or equipment shall not be mounted or installed on the turntable.

(11) A 2-way voice communication system shall be provided between the employee on the raised portion of the equipment and the operator control station.

History: 1954 ACS 93, p. 40, Eff. Nov. 19, 1977.

R 408.17425 Ladder pipes.

Rule 7425. (1) Detachable ladder pipes shall be operated in the direction the ladder is facing.

(2) Ladder pipes shall be secured to the ladder so that the pipe cannot be accidentally dislodged while in operation.

History: 1954 ACS 93, p. 40, Eff. Nov. 19, 1977.

R 408.17426 Portable ladders.

Rule 7426. (1) Except as otherwise prescribed herein, a portable ladder shall be constructed, used, and maintained as prescribed in the occupational safety standards commission standard, Part 4. Portable Ladders, being R 408.10401 et seq. of the Michigan Administrative Code.

(2) The rung spacing shall be not less than 12 inches, nor more than 16 inches.

(3) The rungs of a metal ladder shall have a slip-resistant surface.

(4) A roof ladder assembly shall be capable of supporting a direct load of not less than 500 pounds.

(5) Stay poles or tormenters shall be furnished on any wood ladder extending more than 36 feet. The spikes on stay poles shall not project beyond the end of the ladder when nested. The locking pins on stay poles shall be securely attached to the ladders.

History: 1954 ACS 93, p. 40, Eff. Nov. 19, 1977.

R 408.17427 Line throwing guns.

Rule 7427. (1) A line throwing gun shall:

(a) Be loaded just prior to firing time.

(b) Not be pointed, loaded or unloaded at any person.

(c) Not be left unattended or stored while loaded.

(d) Be stored in a box with the cleaning kit and breakdown tools.

(2) The storage box shall have the words, "Explosive Tool," conspicuously printed on the top of the box.

History: 1954 ACS 93, p. 40, Eff. Nov. 19, 1977.

R 408.17428 Storage of equipment.

Rule 7428. All equipment shall be stored in or on the fire apparatus in a safe manner.

History: 1954 ACS 93, p. 40, Eff. Nov. 19, 1977.

PERSONAL PROTECTIVE EQUIPMENT

R 408.17431 Personal protective equipment.

Rule 7431. (1) Personal protective equipment used by more than 1 employee shall be cleaned or sanitized before reassignment.

(2) An employee assigned to fire fighting tasks shall be provided and shall wear suitable personal protective equipment for the type of exposures involved to provide the following protection during fire fighting activities:

(a) Body protection from moisture, flames, radiant heat, contact with caustic or toxic materials, or other harmful exposures.

(b) Foot protection.

(c) Head protection.
(d) Face and eye protection.
(e) Hand protection.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

R 408.17433 Helmet.

Rule 7433. A fire fighter's helmet shall be of a light-colored, nonconductive material. Dark-colored, nonconductive helmets may be used if reflective tape is applied to the exterior sides of the helmet.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

R 408.17434 Boots.

Rule 7434. (1) Fire fighter boots shall have the following:

(a) A puncture-resistant, slip-resistant sole.

(b) A safety toe prescribed in the occupational safety standards commission standard, Part 31. Personal Protective Equipment, being R 408.13101 et seq. of the Michigan Administrative Code.

(2) Three-quarter length boots may be worn in place of turnout pants.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

R 408.17435 Gloves or mittens.

Rule 7435. A fire fighter shall be provided with heat insulating gloves or mittens which are not readily flammable.

History: 1954 ACS 93, p. 41, Eff Nov. 19, 1977.

R 408.17436 First aid kits.

Rule 7436. A first aid kit, to treat injuries to a fire fighter, shall be approved by the consulting physician and shall be readily available at the fire site.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

TOOLS

R 408.17441 Explosive devices.

Rule 7441. (1) An explosive device shall not be used in an explosive or flammable atmosphere.

(2) A fire service which uses an explosive device shall develop a procedure for protecting the employees and general public.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

R 408.17442 Covering or protecting tools.

Rule 7442. (1) When not in use, the cutting teeth of a chain saw shall be covered to prevent inadvertent contact.

(2) An axe or other sharp-edged or pointed tool shall be protected when stored or carried on the apparatus.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

R 408.17443 Air-moving equipment.

Rule 7443. Air-moving equipment exposed to flammable or explosive fumes, dust, or vapors shall be powered by an explosion proof motor and labeled as such.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

OPERATIONS

R 408.17451 Supervisor or employee in charge of emergency scene.

Rule 7451. A trained supervisor or trained designated employee shall be in charge at all emergency scenes.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

R 408.17452 Fires involving certain materials.

Rule 7452. A fire involving materials such as, but not limited to, radioactive materials, explosives, flammables, and toxics, in quantities, such as rail cars, warehouses, storage tanks, and similar quantities, should be reported to the nearest state police post immediately with the request that the state emergency services, if needed for technical assistance, be notified through the operations office.

History: 1954 ACS 93, p. 41, Eff. Nov. 19, 1977.

INSPECTIONS

R 408.17461 Inspection of fire apparatus and equipment; record of repair or replacement; lifeline guns and explosive devices; apparatus and equipment involved in accident.

Rule 7461. (1) The following items, if the fire apparatus is so equipped, shall be inspected for operation and defects not less than monthly. Where the item does not pass inspection, repairs or replacement shall be made:

(a) Windshield washers and wipers.
(b) Defroster and heater.
(c) Head, tail, backup, stop, and flasher lights.
(d) Backup alarm.
(e) Horn and siren.
(f) Slip-resistant steps and platforms.
(g) Tires and suspension systems.
(h) Steering mechanism.
(i) Braking system.
(j) Operational controls.

(2) Records of repair or replacement shall be maintained for the life of the apparatus.

(3) Life line guns and explosive devices shall be cleaned and made ready for operation after each use.

(4) Apparatus and equipment involved in an accident shall be inspected by a licensed mechanic and tested before subsequent use.

History: 1954 ACS 93, p. 42, Eff. Nov. 19, 1977.

R 408.17462 Inspection of turnout equipment.

Rule 7462. Turnout equipment shall be inspected by the user after each use. Cuts and tears in coats, pants, boots, and hand protection shall be repaired or replaced, if necessary in the judgment of the commanding officer. Head and face and eye protection shall continue to meet the requirements of the occupational safety standards commission standards, Parts 32 and 35, being R 408.13201 et seq. and R 408.13501 et seq. of the Michigan Administrative Code.

History: 1954 ACS 93, p. 42, Eff. Nov. 19, 1977.

R 408.17463 Inspection of fiber ropes.

Rule 7463. (1) A fiber rope shall be inspected visually after each use for the following conditions:

Digitized by Google

(a) Externally for abrasions, cut or broken fibers, decay, burns, lack of strength, softness, variation in size or roundness of the strands, and for mildew or mold.

(b) Inspect internally annually, by separating the strands at 3-foot intervals, for broken fibers, presence of grit, mildew or mold, color change of the fibers, or powdering and short, loose fibers.

(2) A rope having any of these conditions shall be replaced or repaired.

History: 1954 ACS 93, p. 42, Eff. Nov. 19, 1977.

R 408.17464 Inspection of synthetic rope.

Rule 7464. (1) A synthetic rope shall be inspected visually after each use for abrasions, cut or broken fibers, burns, melted fibers, variations in size or roundness of the strands. A rope having any of these conditions shall be replaced or returned to the manufacturer for repair.

(2) All synthetic rope shall be inspected and, if necessary, repaired or replaced as prescribed in R 408.17463(1)(b) and (2).

History: 1954 ACS 93, p. 42, Eff. Nov. 19, 1977.

PART 79. DIVING OPERATIONS

R 408.17901 Scope.

Rule 7901. This part pertains to the safe use and maintenance of equipment and procedures of the occupation of diving and the related support operations as used in general industry. This part does not apply to a diving operation performed solely for recreational instruction purposes using open-circuit compressed-air SCUBA and conducted within the no-decompression limits.

History: 1954 ACS 99, p. 120, Eff. June 16, 1979.

R 408.17903 Adoption by reference.

Rule 7903. Diving operations shall be conducted as prescribed in Part 31. Diving Operations, being R 408.43101 et seq. of the Michigan Administrative Code, a construction safety standards commission standard, which is incorporated herein by reference and may be inspected at the Lansing office of the department of labor. This standard may be obtained, at no cost, from the Standards Division, Michigan Department of Labor, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

History: 1954 ACS 99, p. 120, Eff. June 16, 1979.

PART 81. BAKING OPERATIONS

GENERAL PROVISIONS

R 408.18101 Scope.

Rule 8101. This part provides for the safe maintenance and operation of bakery machinery and equipment by the employer and their safe use by the employee in, around and about a place of employment.

History: 1954 ACS 81, p. 90, Eff. Nov. 19, 1974.

R 408.18102 Definitions; A.

Rule 8102. (1) "Aisle" means a path of designated travel for employees and stock moving equipment.

(2) "Automatic fry machine" means a machine with a power driven unit which deposits donuts, pies or other products into a hot edible oil and conveys them out of the oil after frying.

History: 1954 ACS 81, p. 90, Eff. Nov. 19, 1974.

R 408.18103 Definitions; B.

Rule 8103. (1) "Bag arm conveyor" means an elevating type conveyor with 1 or more chains to which are attached projecting arms for handling objects such as barrels or bags in a vertical or inclined path.

(2) "Bagger" means a machine which receives a bakery product, inserts it into a preformed bag and closes the bag with a recloseable means.

(3) "Bakery" means a place where various ingredients are mixed together and processed to produce frozen or finished bakery products.

(4) "Band bar-type goods cutter" means a cutting device used to cut bakery products to predetermined sizes on an ovenband.

(5) "Bar loader" means a device for pushing pans or products.

(6) "Bun intermediate proofer" means a machine which gives proofing time to dough by conveyance.

History: 1954 ACS 81, p. 91, Eff. Nov. 19, 1974.

R 408.18104 Definitions; C.

Rule 8104. (1) "Cake depositor" means a machine which measures batter for cakes and deposits it into pans.

(2) "Carton closing machine" means a machine which automatically closes rigid hinged cover cartons after a product has been manually or automatically inserted.

(3) "Carton wrapping machine" means a machine which receives and conveys single and grouped products in containers and overwraps them in flexible wrapping material.

(4) "Continuous mixer" means a machine which continuously mixes ingredients to produce a dough product and dispenses the dough automatically.

History: 1954 ACS 81, p. 90, Eff. Nov. 19, 1974.

R 408.18105 Definitions; D.

Rule 8105. (1) "Divider" means a unit which divides a large dough mass into a predetermined size.

(2) "Dough brake" means a machine which rolls dough into a flat shape.

(3) "Dough sheeter" means a machine which takes a piece of dough and, by running it between a series of rolls, produces a sheet of dough.

(4) "Dumpbin" means equipment into which dry ingredients in bags are first emptied for distribution.

History: 1954 ACS 81, p. 91, Eff. Nov. 19, 1974.

R 408.18106 Definitions; F to N.

Rule 8106. (1) "Form, fill, seal pouch or bag machine" means a machine which automatically weighs, counts or measures a product and inserts the product into a formed and partially sealed flexible material pouch.

(2) "Grinder, pulverizer, food chopper and breaker" means machines used to reduce material into small fragments or powder by means of rolls, knives, blades or hammers.

(3) "Horizontal mixer" means a machine which combines ingredients by agitating with beaters rotating in an arc on a horizontal shaft. A horizontal mixer may have a tilting or nontilting bowl.

(4) "Molder" means a unit which forms and shapes a dough piece prior to insertion into a pan.

(5) "Nip point" means that point where a rotating object creates a pinching action with another rotating object.

History: 1954 ACS 81, p. 91, Eff. Nov. 19, 1974.

R 408.18107 Definitions; O to R.

Rule 8107. (1) "Ovenband" means a continuous moving steel conveyor used in ovens in which the ovenband serves as the pan and hearth.

(2) "Overhand bar loader" means a mechanical device consisting of a push bar attached to arms or a conveyor which moves bakery products from a table or platform onto a rack or moving conveyor.

(3) "Pinch point" means a point at which it is possible to be caught between moving parts of a machine or between moving and stationary parts of a machine.

(4) "Rounder" means a machine which rolls the dough, after being divided, to give the dough a desired shape.

History: 1954 ACS 81, p. 91, Eff. Nov. 19, 1974.

R 408.18108 Definitions; S.

Rule 8108. (1) "Scale cut-off switch" means a control device which shuts off the material feed when the scale has been charged with a predetermined amount of dry ingredient.

(2) "Sifter" means fixed, motorized equipment, either oscillating, vibrating or brush type, which sifts dry ingredients.

(3) "Slicing machine" means a machine equipped with moving cutters which slices bakery products.

(4) "Spindle mixer" means a machine with 1 or more retractable heads which combines ingredients in a trough with beaters on a vertical shaft.

History: 1954 ACS 81, p. 91, Eff. Nov. 19, 1974.

R 408.18109 Definitions; T to W.

Rule 8109. (1) "Tray or carton forming machine" means a machine which automatically forms magazine-fed flat die-cut blanks of semi-rigid material into trays or hinged cover cartons.

(2) "Trough" means a tub moved on castors, and used to hold or transport masses of ingredients or dough.

(3) "Vertical mixer" means a machine which combines ingredients in a bowl by agitating with beaters revolving on a vertical shaft.

(4) "Weight hopper and scale" means a device which weighs ingredients before dumping.

(5) "Wrapping machine" means a machine equipped with mechanisms for conveying and wrapping bakery products in flexible wrapping material.

History: 1954 ACS 81, p. 92, Eff. Nov. 19, 1974; 1954 ACS 88, p. 103, Eff. July 16, 1976.

R 408.18111 Employer responsibility.

Rule 8111. An employer shall:

(a) Provide training to an employee as to the hazards and safe practices of the assigned job.

(b) Maintain machinery, buildings, ramps, platforms and aisles free of recognized hazards likely to cause an injury by operation or use.

(c) Establish and maintain an equipment power lockout procedure as prescribed in R 408.18115(1).

History: 1954 ACS 81, p. 92, Eff. Nov. 19, 1974.

R 408.18112 Employee responsibility.

Rule 8112. An employee shall:

(a) Use personal protective equipment as required by this part.

(b) Not use machinery or equipment unless authorized.

(c) Not remove guards from machinery and equipment except when needed for servicing. The guards shall be replaced before returning to production.

(d) Report defective machinery, equipment and hazardous conditions, when detected, to a supervisor.

History: 1954 ACS 81, p. 92, Eff. Nov. 19, 1974.

R 408.18113 Illumination.

Rule 8113. Illumination shall be provided at the work station to maintain a minimum of 20 footcandles intensity.

History: 1954 ACS 81, p. 92, Eff. Nov. 19, 1974.

R 408.18114 Floors, aisles, and platforms.

Rule 8114. (1) An aisle or floor work area shall be maintained free of protruding objects, holes, loose boards, grease, oil, accumulations of water or other objects or material which would create a tripping or slipping hazard.

(2) An aisle for combined usage of an employee and stock moving equipment shall be 2 feet wider than the widest load moved. In a place of employment having less than 10 employees producing hand crafted products in the production area, the aisle shall be not less than 30 inches wide. The aisle shall be defined.

(3) A platform, walkway and stairway where provided, on storage bins and machinery, shall be constructed as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways, and Skylights, being R 408.10201 to R 408.10241 of the Michigan Administrative Code. A fixed ladder used in place of a stairway shall be as prescribed in the occupational safety standards commission standard, Part 3. Fixed Ladders, being R 408.10301 to R 408.10365 of the Michigan Administrative Code.

History: 1954 ACS 81, p. 92, Eff. Nov. 19, 1974.

R 408.18115 Power controls and motors.

Rule 8115. (1) If an unexpected start up would cause an injury, the power source of any equipment to be repaired, serviced or set up shall be locked out by the employee doing the work. Any hazardous residual pressure shall be relieved prior to and during the work.

(2) Provision shall be made to prevent permanently connected machinery and equipment, other than compressors and air moving equipment used for air conditioning and refrigeration, and fire protection and pumps, from automatically restarting upon restoration of power after a power interruption if unexpected start up could cause injury.

(3) A control device, except a stop button, shall be so arranged or guarded as to prevent accidental activation where activation could cause injury.

(4) Where a hazard exists, a machine shall be equipped with an emergency stop device, red in color, which can be activated from an operator's work station.

(5) When a 2-hand control device is required, it shall require the concurrent use of both hands to activate the machine or equipment. The device shall be located in a manner to prevent bridging. Where more than 1 employee is exposed to the point of operation, a 2-hand control device shall be provided each employee and the controls shall operate concurrently.

(6) An electric motor, control and other electrical components used on dry ingredient handling and storage equipment shall be dust ignition tight.

History: 1954 ACS 81, p. 92, Eff. Nov. 19, 1974.

R 408.18116 Machine installation.

Rule 8116. (1) Electrically powered machinery and equipment shall be grounded.

(2) Stationary type machinery and equipment shall be secured to a floor, foundation, bench, table or stand of such strength and design to prevent overturning or unintentional movement.

(3) Permanent machinery and equipment shall not be placed as to require an operator to stand in an aisle. Temporary equipment shall not be placed as to require an operator to stand in an aisle unless the employee is protected with a barrier as prescribed in the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights, being R 408.10231 and R 408.10232 of the Michigan Administrative Code.

(4) Machinery or equipment having an access door for body entry shall be equipped with a means of opening the door inside and out.

History: 1954 ACS 81, p. 93, Eff. Nov. 19, 1974.

R 408.18117 Lubrication and maintenance.

Rule 8117. (1) Lubrication shall be accomplished by 1 of the following:

(a) Scheduling when the machine can be shut off and locked out, except that an oven chain may be lubricated at an oiling door if an emergency stop device is located at the door.

(b) Automatic or manual pressure or gravity feed system.

(c) Extension pipe leading to an area outside of guards or away from any hazard.

(d) A means which would provide equivalent or greater protection than subdivisions (a), (b), or (c) for the employee.

(2) In any case, the occupational safety standards commission standard, Part 7. Guards for Power Transmission, being R 408.10732 of the Michigan Administrative Code, shall be followed.

(3) An employee required to work in an explosive atmosphere shall use nonsparking maintenance and cleaning tools to prevent static and mechanical sparking.

History: 1954 ACS 81, p. 93, Eff. Nov. 19, 1974.

R 408.18118 Hot surfaces.

Rule 8118. Steam pipes, hot water pipes and surfaces of machinery and equipment which would cause burns, if exposed to contact, shall be guarded with a heat-resistive or insulating material or a barrier. If guarding is impractical, the exposed employee shall wear personal protective equipment.

History: 1954 ACS 81, p. 93, Eff. Nov. 19, 1974.

R 408.18119 Housekeeping.

Rule 8119. (1) Flour dust shall be removed not less than monthly from ledges, beams, sills, machinery and equipment in the make up and flour storage areas.

(2) Flour and dough shall be removed from the floor or platform of a work station not less than daily.

History: 1954 ACS 81, p. 93, Eff. Nov. 19, 1974.

SPECIFIC EQUIPMENT

R 408.18121 Dry ingredients conveyors; general.

Rule 8121. (1) A flour-handling system which has the final delivery end out of

Digitized by Google
Original from UNIVERSITY OF MINNESOTA

sight of the beginning point shall have a control at each point, either of which shall stop the flow of flour.

(2) A bag chute with an incline of more than 30 degrees shall be equipped with a stop at the discharge end or the end shall have a means to slow the bags.

(3) Wherever any of the various pieces of apparatus comprising a flour-handling system are run in electrical unity with one another, the control circuits for magnetic controllers shall be so arranged that the opening of any 1 of several limit switches, which may be on an individual unit, shall serve to deenergize all of the motors of that unit.

(4) A screw conveyor shall be constructed of metal or other nonsplintering material.

(5) A dead-end screw conveyor shall be provided with an overflow safety gate which operates an electric limit switch to shut down the conveyor before dangerous pressure of material is built up at the dead end.

History: 1954 ACS 81, p. 93, Eff. Nov. 19, 1974; 1954 ACS 88, p. 103, Eff. July 16, 1976.

R 408.18122 Bag arm conveyors.

Rule 8122. A bag arm conveyor used for transporting bags of flour or sugar with manual takeoff shall be equipped with a device so installed as to stop the conveyor automatically if any bag fails to clear the bar arms at the discharge end. The conveyor shall be equipped with a rollback device as prescribed in the occupational safety standards commission standard, Part 14. Conveyors, being R 408.11429 of the Michigan Administrative Code.

History: 1954 ACS 81, p. 94, Eff. Nov. 19, 1974.

R 408.18123 Storage bins and silos.

Rule 8123. (1) A dry ingredient storage bin or silo shall be equipped with a dust tight cover secured with gaskets and latches or other fasteners. A cover over a point of entry used by an employee shall be interlocked with the loading and unloading motors to prevent their operation when the cover is open. The cover shall be locked open when the bin or silo is occupied by an employee.

(2) When an employee enters a bin or silo, he shall wear a safety belt with spark resistant fittings attached to a lifeline attended by an employee outside the bin. The employee shall be supplied with fresh air during the time work is being performed within a bin or silo.

(3) Illumination provided inside a bin or silo shall be from an explosion-proof light fixture or explosion-proof flashlight.

(4) A storage bin having a side more than 5 feet in depth shall be provided with a standard stationary safety ladder both inside and outside the bin, which shall reach from the floor level to the top of bin, and from the top of bin to the bottom on the inside, with the ladder end kept away from the moving screw conveyor, or shall be provided with some other means of providing equivalent safety for the employee.

(5) A high level indicator interlocked to stop the fill system shall be provided on each bin or silo, or an employee shall be stationed to monitor the level during filling.

(6) A walkway surface shall be maintained in nonslip condition.

History: 1954 ACS 81, p. 94, Eff. Nov. 19, 1974; 1954 ACS 88, p. 103, Eff. July 16, 1976.

R 408.18124 Mechanical dumpbins and blenders.

Rule 8124. (1) An opening in a mechanical dumpbin or blender shall be guarded by 1 of the following:

Digitized by Google

(a) Parallel bars not more than 3 inches apart on centers.

(b) Not less than 11 gauge wire mesh with openings not more than 3 inches in any direction. If an employee can reach the moving parts of the machine through the guard then the 3-inch opening shall be reduced until the hazard is eliminated.

(2) A mechanical dumpbin and blender shall be equipped with a suction type dust hood of such capacity as to prevent dust circulation outside the hood.

(3) When the loading point of a manually filled mechanical dumpbin is more than 24 inches above the floor, a bag rest shall be provided.

(4) A hinged dumpbin cover shall be provided with a means to lock the cover in the open position, so that it cannot accidentally fall down while the dumpbin is in operation.

(5) A dumpbin and blender shall be so constructed that no separate pit in the floor shall be required at the point which connects the final discharge to the usual elevator.

History: 1954 ACS 81, p. 94, Eff. Nov. 19, 1974; 1954 ACS 88, p. 103, Eff. July 16, 1976.

R 408.18125 Sifters.

Rule 8125. (1) A sifter shall:

(a) Have all openings constructed with dust tight closures which are readily accessible for inspection purposes.

(b) Have refuse tailing receptacles for all types of sifters readily accessible and located at a safe distance from unguarded moving parts.

(2) Oscillating and vibrating sifters shall have all moving parts within the outer frame of the sifter or the machine shall be located within a standard barrier as prescribed in R 408.10231 of the occupational safety standards commission standard, Part 2. Floor and Wall Openings, Stairways and Skylights.

History: 1954 ACS 81, p. 94, Eff. Nov. 19, 1974; 1954 ACS 88, p. 104, Eff. July 16, 1976.

R 408.18126 Weighing hoppers and scales.

Rule 8126. (1) A dial cover of a scale shall be made of shatter-proof material.

(2) A trolley flour scale shall be equipped with a bar-type handle not less than ¾ inch in diameter for use in moving the scale.

(3) Trolley wheels on a weigh hopper or scale located less than 8½ feet from a floor or platform shall be guarded with an enclosure on all exposed sides.

(4) A scale cut-off switch shall be totally enclosed and connected to the scale beam in a manner to protect the operator from contact.

(5) A track having more than 1 hopper or discharge point shall be equipped with interlocks so that material cannot be discharged unless a hopper is centered below it.

(6) A handle for an operating device for a trolley switch which hangs less than 6 feet 8 inches from the floor shall be of pliable material.

History: 1954 ACS 81, p. 94, Eff. Nov. 19, 1974; 1954 ACS 88, p. 104, Eff. July 16, 1976.

R 408.18128 Horizontal batch mixers.

Rule 8128. (1) A horizontal batch mixer shall have control devices which require concurrent use of both hands whenever the mixer bowl is opened more than 6 inches and the agitator is energized. The controls shall be located so that the operator has a full view of the mixer bowl.

(2) A horizontal batch mixer with a power dumping device shall have devices which require constant 2-hand control when the bowl closes the final 6 inches.

(3) A horizontal batch mixer shall have a flour gate operating device, ingredient opening and ingredient water inlet which can be operated by the operator from the work area without endangering the operator.

(4) An overhead cover or door on a horizontal batch mixer, which may accidentally close, shall be counterbalanced or provided a device which shall hold the door open until released by the operator.

(5) A horizontal batch mixer shall not be hosed down during cleaning unless all electrical devices are designed for such cleaning.

(6) An ingredient or inspection opening on a horizontal batch mixer shall be not more than 1½ square feet in area. The opening shall have the access limited by a bar-type grating made of not less than 3/16-inch diameter stock, or its equivalent, on 3-inch centers. If it is possible to contact moving parts, a warning sign shall be installed at the opening to caution the employee.

(7) A device or mechanism used to return sponges to a mixer shall be so interlocked with the mixer as to prevent injury to the operator.

History: 1954 ACS 81, p. 95, Eff. Nov. 19, 1974; 1954 ACS 88, p. 104, Eff. July 16, 1976.

R 408.18129 Horizontal tub-type mixers and beaters.

Rule 8129. (1) A horizontal tub-type mixer or beater shall be guarded and have the control devices prescribed in R 408.18128(1) or shall have an interlocked cover which will stop the agitator when the cover is opened.

(2) A bottom outlet of a horizontal tub-type mixer or beater shall be so designed that an employee cannot reach the agitator or come in contact with the pinch point between the agitator and the tub.

(3) When removing the dough from a horizontal tub-type mixer with the agitator in motion, the operator shall use a jog button, so located that the operator cannot reach the point of operation, or 2-hand constant pressure controls.

History: 1954 ACS 81, p. 95, Eff. Nov. 19, 1974.

R 408.18130 Vertical batch mixers.

Rule 8130. (1) A bowl locking device on a vertical batch mixer, including an artofex mixer, shall be designed to require a positive action of the operator to unlock the bowl.

(2) If an employee can reach into a vertical mixing bowl, a warning sign shall be installed to caution the employee.

(3) A mixer with external power application shall have all belts, chains, gears, pulleys, sprockets, clutches, and other moving parts completely enclosed.

(4) A mixer with a built-in power unit shall have all drive elements enclosed in such a manner as to prevent injury to an operator or a maintenance employee performing his normal duties.

(5) A mixer shall be equipped with an individual motor and control, and with a conveniently located manual switch, to prevent the mixer from being started in the usual manner while the machine is being serviced and cleaned.

(6) A loose access door and cover weighing more than 2 pounds shall not be used on a mixer. The door or cover shall be hinged or otherwise held in proximity to the openings which they cover.

(7) An overhead cover or door which is subject to accidental closure shall be counterbalanced to remain in an open position, or shall be provided with a means to hold it open until positively released by the operator.

(8) Provision shall be made to bolt a mixer solidly to the floor to prevent dislocation or excessive vibration, and no open space between a mixer and a platform shall be permitted which may endanger the operator.

(9) A mixer shall be installed only on a substantial foundation which is capable of safely withstanding the live loads incurred in a full-capacity mixing operation.

(10) Access for lubrication at all points shall be provided so as to avoid contact between the lubricating device or the operator's hands and any moving parts.

(11) An electrical pilot or control circuit shall not be employed at a potential in excess of 240 volts.

(12) Positive means shall be provided to prevent application of pressure above the stipulated maximum in a mixer cooling jacket.

(13) A device shall be made available for moving a bowl, weighing more than 80 pounds with contents, into and out of the mixing position on the machine.

History: 1954 ACS 81, p. 95, Eff. Nov. 19, 1974; 1954 ACS 88, p. 105, Eff. July 16, 1976.

R 408.18131 Spindle mixer.

Rule 8131. A vertical spindle mixer shall be equipped with a cover which raises and lowers with the spindle head. The cover or head shall be interlocked so that the spindles cannot start when the cover is raised. A jog switch, so located that the operator cannot reach the pinch point, shall be provided for cleaning the blades in a raised position, or 2-hand constant pressure controls shall be provided.

History: 1954 ACS 81, p. 95, Eff. Nov. 19, 1974.

R 408.18132 Continuous mixers.

Rule 8132. (1) A cover on a continuous mixer shall be interlocked to the power source so that the agitator will not turn when the cover is open.

(2) A continuous mixer which starts automatically shall have a warning device which shall be activated not less than 3 seconds before start-up.

(3) A continuous mixer with a permanent inlet that introduces solids or semi-solids shall be of a configuration which would not permit hands to come in contact with moving parts.

History: 1954 ACS 81, p. 95, Eff. Nov. 19, 1974.

R 408.18133 Dough trough elevator and dump.

Rule 8133. An elevator-type dough trough dump shall be provided with an interlocked gate so that the trough cannot be elevated or lowered until the gate is in position to protect an employee, or the trough shall be controlled constantly by an operator with a full view of the elevator area while dumping and lowering the trough the last 7 feet of travel to the floor.

History: 1954 ACS 81, p. 96, Eff. Nov. 19, 1974.

R 408.18134 Dividers and depositors.

Rule 8134. (1) A divider or depositor attached directly to a continuous mixer shall have any exposed shear or pinch point enclosed.

(2) A guard at the front of a divider or depositor shall be so constructed that the dough weight can be adjusted without removal of the guard.

(3) A guard at the back of a divider or depositor shall enclose all moving parts. The guard shall be hinged and interlocked with the power source so that the machine will not operate when the enclosure is open.

(4) The oil hole for the knife at the back of a divider shall be of such size that a finger cannot enter the hole.

(5) Any elongated hole in the knife-actuating arm on a divider shall be covered with a saddle guard or other protective device.

(6) Start and stop control buttons on a divider or depositor shall be oil tight and other electrical components shall be either oil tight or located to prevent entrance of oil.

History: 1954 ACS 81, p. 96, Eff. Nov. 19, 1974.

R 408.18135 Molders.

Rule 8135. (1) An emergency stop device, as prescribed in R 408.18115(4) shall be provided for the employee feeding and tailing a molder.

(2) A molder shall be so designed or guarded to prevent a shearing action at any clean-out hole.

(3) A hand-fed molder shall have a belt feed device, or the hopper shall be extended high enough or have a barrier to prevent an employee's hand from contact with the in-running rolls. The top edge of such a hopper shall be well rounded to prevent injury when it is struck or bumped by the employee's hand.

(4) A mechanical feed molder shall be provided with a hopper so designed and connected to the proofer that an employee's hands cannot come in contact with the in-running rolls.

(5) Where a removable crank is provided to adjust the molder, brackets shall be provided to hold the crank when it is not in use. The brackets shall be interlocked with the power source so that the molder cannot run until the crank is repositioned on the brackets.

(6) Each molder shall have individual drives and controls.

(7) Electric control buttons and components shall be dust tight.

History: 1954 ACS 81, p. 96, Eff. Nov. 19, 1974; 1954 ACS 88, p.105, Eff. July 16, 1976.

R 408.18136 Manually fed dough brakes.

Rule 8136. (1) The in-running roll of a manually fed dough brake shall be enclosed by a guard of not less than 11 gauge metal or material or equivalent strength extending to within 6 inches of the hopper bottom board and at a horizontal distance from the nip point of the rolls sufficient to prevent an employee's hand from being caught. The enclosure may be expanded metal for visual observation.

(2) An emergency stop bar shall be provided on a manually fed dough brake so located, that if the operator slips and falls toward the rolls, or if the operator's hand is caught in the rolls, the body pressure opens a circuit which deenergizes the drive motor and a magnetic spring-set brake stops the rolls immediately. This device shall be maintained operable.

History: 1954 ACS 81, p. 96, Eff. Nov. 19, 1974.

R 408.18138 Roll-type dough sheeters.

Rule 8138. (1) A roll-type dough sheeter shall be equipped with a barrier guard so located as to prevent fingers from getting into the nip point or an emergency stop bar shall be provided across the length of the rolls so designed that it will stop the rolls on contact with the operator's hand or arm. A material, such as perforated or expanded metal, which allows visual monitoring is preferable for a barrier guard.

(2) A guard, which completely covers the gears, shall be provided and designed to allow adjustment of the gears.

(3) The hopper for a hand-fed sheeter shall be equipped with an emergency stop bar or stopping device readily accessible to the operator or the hopper design shall be such that the operator cannot reach the rolls.

History: 1954 ACS 81, p. 96, Eff. Nov. 19, 1974.

R 408.18139 Bun intermediate proofers.

Rule 8139. (1) A star wheel feeder on a bun intermediate proofer shall be enclosed by a hinged guard on all sides except for an opening to receive the dough. The hinged portion shall be designed to open up when struck by a hand.

(2) The moving parts of a bun intermediate proofer exposed to contact shall be enclosed.

History: 1954 ACS 81, p. 97, Eff. Nov. 19, 1974.

R 408.18141 Oven loaders and unloaders.

Rule 8141. (1) A hand-fed overhand bar oven loader shall be equipped with 2-hand controls wired to operate concurrently with the buttons guarded by covers, rings or by location to prevent bridging, or the oven loader shall be hung in a manner that allows the overhand bar itself to be raised to stop the loader drive. The overhand bar shall be made of aluminum or other equivalent light weight material. Pressure shall be maintained on the controls until the pinch point has passed.

(2) Exposed levers, controls, adjustment knobs and handles shall be recessed, flush or guarded to avoid catching of clothing.

(3) A portable oven loader and unloader shall have a locking or clamping device to prevent movement during operation.

(4) The oven loader and unloader drive shall have overload, instant trip delay, clutch or equivalent means to stop equipment in case of a jam.

History: 1954 ACS 81, p. 97, Eff. Nov. 19, 1974.

R 408.18142 Pan washers and rack washers.

Rule 8142. (1) The safety controls on a pan washer or rack washer shall be inspected and maintained not less than as prescribed in table 1.

(2) A pan washer or rack washer shall have an emergency door latch on the door so an operator may open the door from the inside.

(3) Where the controls of a pan or rack washer are subject to water spray or splash, they shall be the waterproof type.

(4) A pan washer shall be guarded to protect the operator from overspray and the overflow and drain stand pipes shall be arranged to prevent backflow of liquids from hitting the operator.

(5) Sharp corners and edges shall be eliminated.

TABLE 1

the location where stopped or at the main source after the stopped switch has been reset.

(2) Sides of a pan cooling tower not used for loading and unloading shall be enclosed or barrier guarded to a height of 8 feet.

(3) Conveyors bars, flights and attachments of pan cooling tower passing within 6 inches of each other in opposite directions shall have the opposing sections separated by a screen guard with openings not more than ½ inch.

History: 1954 ACS 81, p. 98, Eff. Nov. 19, 1974.

R 408.18144 Coolers.

Rule 8144. (1) Guide rails shall be provided in a rack-type cooler to center racks as they enter and leave the enclosure.

(2) The drive on a mechanical feed rack or tray-type cooler shall be equipped with an overload device designed to cut the power in case of a jam. The device shall not restart the drive automatically when the jam is cleared.

(3) A mechanical feed rack and tray cooler shall actuate a warning device when it enters a dwell condition caused by the backup of production of a unit downstream.

(4) A cooler having an access door for body entry shall be equipped with a means for opening the door from the inside and the outside.

(5) All pinch points shall be eliminated or guarded on a conveyor-type bread cooler.

History: 1954 ACS 81, p. 98, Eff. Nov. 19, 1974; 1954 ACS 88, p. 106, Eff. July 16, 1976.

R 408.18145 Material handling.

Rule 8145. (1) A rack used to transport bake goods within a bakery production area shall be equipped with:

(a) Handles so located that no part of an employee's hand extends beyond the outer edge of the frame when holding the handles.

(b) Castors with an anti-friction bearing swivel arrangement for better control.

(2) Sharp, splintered, or rough corners and edges shall be eliminated on racks.

(3) A trough shall be mounted on anti-friction bearing castors to make it possible for the operator to move and direct the motion of the trough with a minimum of effort.

(4) A lock or other device shall be provided to hold the handle in vertical position when a hand-operated lift truck is not in use.

(5) Castors on hand trucks shall be set back from corners to be out of the way of toes and heels, but not far enough back to cause the truck to be unstable. A lock or other device shall be provided to hold the handle in vertical position when the truck is not in use.

(6) Sharp corners or edges shall be eliminated on a metal skid. Edges and corners shall be protected on skids to prevent exposed splinters.

(7) A chain tackle shall be marked prominently, permanently and legibly with maximum load capacity. Safety latches shall be installed on all hooks.

(8) Trough hoists shall be marked prominently, permanently and legibly with maximum load capacity. Safety devices shall be provided to hold the load in any position. Safety latches shall be installed on all hooks.

(9) Sharp corners and edges on bread and cake boxes and trays shall be eliminated on metal parts. All wooden corners and edges shall be protected to prevent splinters.

History: 1954 ACS 81, p. 98, Eff. Nov. 19, 1974; 1954 ACS 88, p. 106, Eff. July 16, 1976.

R 408.18146 Air conditioner.

Rule 8146. (1) An air conditioner having access doors for body entry shall be equipped with a means of opening the door inside and outside.

(2) All sharp corners and edges shall be eliminated.

History: 1954 ACS 81, p. 98, Eff. Nov. 19, 1974; 1954 ACS 88, p. 107, Eff. July 16, 1976.

R 408.18147 Steam kettles.

Rule 8147. (1) A steam kettle shall have a positive locking device capable of holding the kettle at any desired position.

(2) A kettle with a steam jacket shall be provided with safety valves as prescribed in the ASME pressure vessel code, section VIII, unfired pressure vessels, 1974, which is herein incorporated by reference and may be inspected at the Lansing office of the Michigan department of labor. This standard may be purchased at a cost of $40.00 from the American Society of Mechanical Engineers, 345 E. 47th Street, New York, New York 10017, or from the Michigan Department of Labor, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926.

History: 1954 ACS 81, p. 98, Eff. Nov. 19, 1974; 1954 ACS 88, p. 107, Eff. July 16, 1976.

R 408.18148 Chocolate melting, refining, and mixing kettles.

Rule 8148. A chocolate melting, refining and mixing kettle shall be equipped with an electrically interlocked cover to stop agitation when the cover is opened.

History: 1954 ACS 81, p. 98, Eff. Nov. 19, 1974.

R 408.18151 Slicing machines.

Rule 8151. (1) A slicing machine shall be equipped with a device which shall be used to push the last loaf through the knives without contacting the moving knives.

(2) A slicing machine with reciprocating knives shall have the knife frames guarded by an interlocked cover.

(3) A slicing machine with endless band knives shall have:

(a) The drive motor equipped with an automatic brake which shall be applied when the motor is not energized.

(b) An interlocked cover or door over each point of access which deenergizes the drive motor when the cover or door is opened.

(c) A safety device which deenergizes the drive motor when a knife breaks.

(d) A honing or sharpening device for the knife which shall be so designed as to protect the employee from the knife while doing the work.

(e) Any transparent inspection ports made of shatter-proof material.

(4) An automatically fed slicing machine used in conjunction with a wrapping or bag loading machine shall have starting controls for both machines at 1 location and a stop device at each point of operation.

(5) Where pusher fingers attached to the feed chain enter the bed plate of the crossfeed, the end guard shall be extended to cover the pinch point.

History: 1954 ACS 81, p. 98, Eff. Nov. 19, 1974; 1954 ACS 88, p. 107, Eff. July 16, 1976.

R 408.18152 Wafer cutting machine.

Rule 8152. A wafer cutting machine shall be guarded to prevent the operator's hand from making contact with the saw or knife.

History: 1954 ACS 81, p. 99, Eff. Nov. 19, 1974.

R 408.18153 Cutting, panning, embossing, peeling, and bar machines.

Rule 8153. (1) The manually fed rolls of a cutting, panning, embossing, peeling, and bar machine shall be guarded in front of the rolls by 1 of the following:

(a) A mechanical guard across the rolls to prevent entry of fingers into nip points.

(b) An emergency stop bar designed as prescribed in R 408.18136(2) to stop the rolls when contact is made with the bar.

(2) The blade of a cutting machine shall be guarded to prevent contact of the operator's fingers.

(3) The reciprocating heads of a cutting machine shall be guarded to prevent the operator from being caught between the moving and stationary parts.

(4) The band bar-type goods cutter shall be guarded on each side of the drive mechanism of the ovenband and in the vertical run of the cutter.

History: 1954 ACS 81, p. 99, Eff. Nov. 19, 1974.

R 408.18154 Rotary, pretzel rolling, and pretzel extruding machines.

Rule 8154. (1) The forcing rolls within a dough hopper on a rotary, pretzel rolling and pretzel extruding machine shall be guarded as prescribed for feed hoppers in R 408.18160.

(2) A rotary, pretzel rolling and pretzel extruding machine shall have an emergency stop bar at the operator's station so located that it can be operated by the operator's body.

History: 1954 ACS 81, p. 99, Eff. Nov. 19, 1974.

R 408.18155 Frying machines and vats; construction.

Rule 8155. (1) A frying machine or vat shall be insulated or guarded where burns can result from accidental contact with the outside covering.

(2) A frying machine or vat shall be equipped with an automatic temperature control. In addition, the machine or vat shall have an over temperature control device unadjustable and preset below the flash point of the frying fat which will turn off the heating device.

(3) An automatic frying machine or vat with an internal heating device shall be equipped with a low level frying fat cut off device designed to turn off the heat device when the fat level is less than 1 inch above the heating tubes or elements.

(4) Where forced draft or an automatic damper is used for exhausting combustion fumes, it shall be interlocked with the fuel supply valve of the frying machine or vat.

(5) If the frying machine or vat is designed with a closed combustion chamber, a time delay relay shall be installed, in connection with the exhauster, to purge the chamber before ignition can be made.

(6) The heat transfer piping shall be installed to allow for natural expansion of the pipe.

(7) Where a separate heat exchanger is used in conjunction with a frying machine or vat, subrules (1), (2), and (8) shall be followed for the heat exchanger.

(8) A frying machine or vat shall be equipped with a device which will shut off the fuel supply if the pilot or burner flames out.

History: 1954 ACS 81, p. 99, Eff. Nov. 19, 1974.

R 408.18156 Frying machines and vats; installation.

Rule 8156. (1) A frying machine or vat shall be installed on a noncombustible floor, or a metal pan flanged on 4 sides shall be installed underneath the entire machine. The capacity of the pan shall be not less than the frying tank.

(2) A frying machine or vat shall have not less than 30 inches of work space on all exposed sides, except where other equipment is connected to the machine.

(3) A frying machine or vat shall be protected by a fixed fire extinguishing system as prescribed in the occupational safety standards commission standard, Part 9. Fixed Fire Equipment, being R 408.10901 to R 408.10983 of the Michigan Administrative Code, or portable fire extinguishers as prescribed in the occupational safety standards commission standard, Part 8. Portable Fire Extinguishers, being R 408.10801 to R 408.10839 of the Michigan Administrative Code.

(4) Where a nonpressure type of indirect heat is used with a frying machine or vat the welded seams of the plate coils on the frying kettle shall not make contact with the welded seams of the kettle proper.

History: 1954 ACS 81, p. 99, Eff. Nov. 19, 1974.

R 408.18157 Frying machines and vats; maintenance.

Rule 8157. Not less than every 90 days the following shall be accomplished:

(a) The frying machine or vat shall be washed and boiled out to remove all accumulations of gum.

(b) The controls shall be checked for operability.

(c) The gas and oil burners shall be cleaned and adjusted.

History: 1954 ACS 81, p. 100, Eff. Nov. 19, 1974.

R 408.18158 Icing and topping machines.

Rule 8158. (1) An agitator for an icing and topping machine which is too heavy to lift out shall be hinged to swing up, out of the way, or lifted by mechanical means so the hopper may be removed.

(2) A hot water or steam jacketed hopper for an icing and topping machine shall have a pressure relief valve set at not more than the maximum allowable working pressure of the vessel. The hopper shall be insulated or guarded to prevent burns from accidental contact. The valve shall be vented to an area where the employee is not exposed to the hazard.

(3) Pinch points shall be either eliminated or provided with guards or shields so hands and arms cannot reach these pinch points while the machine is in operation.

History: 1954 ACS 81, p. 100, Eff. Nov. 19, 1974; 1954 ACS 88, p. 107, Eff. July 16, 1976.

R 408.18159 Pulverizers.

Rule 8159. (1) A belt drive used in connection with a pulverizer shall be grounded to remove static electricity.

(2) Pulverizing equipment shall be dust tight. Electrical equipment and motors located in the room or area shall be dust ignition proof, class II, division I type.

(3) A magnetic separator shall be installed at the material inlet to a pulverizer.

(4) When there are multiple pulverizers and the final pulverized material is pneumatically conveyed, each conveyor system shall be independent of the other and electrically grounded to reduce the likelihood of fire or explosion.

History: 1954 ACS 81, p. 100, Eff. Nov. 19, 1974.

R 408.18160 Feed hoppers.

Rule 8160. (1) A feed hopper for a grinder, pulverizer or food chopper shall have a guard over the hopper opening. The guard shall be 1 of the following:

(a) A grid with opening small enough to keep the fingers from touching the feeding knives or worm.

(b) A solid cover interlocked to the operating controls so that the machine will not operate when the cover is open.

(c) A hopper of such length or opening that the fingers cannot touch the knives.

(2) A feed hopper which is removable from a grinder, pulverizer or food chopper shall be interlocked to prevent operation of the machine when the hopper is removed.

History: 1954 ACS 81, p. 100, Eff. Nov. 19, 1974.

R 408.18161 Chocolate and fig breaking machines.

Rule 8161. A chocolate and fig breaking machine shall be guarded as prescribed in R 408.18160.

History: 1954 ACS 81, p. 100, Eff. Nov. 19, 1974.

R 408.18171 Wrapping machines.

Rule 8171. (1) An electric sealing heater on a wrapping machine shall have the exposed heated surfaces guarded to prevent burns from accidental contact.

(2) The in-running nip point of the power driven friction film feed rollers on a wrapping machine shall be guarded.

(3) Where more than 1 operator is feeding a wrapping machine, each operator shall have an emergency stop button, as prescribed in R 408.18115(4), but there shall be only 1 start button station.

(4) A pouch wrapping machine shall be equipped with a trip gate or interlocked enclosure ahead of or over the sealing jaws and wrapper guide.

(5) At the discharge end, or drive side, of the crossfeed conveyor, there shall be either a 1 or 2 piece guard in front of the crossfeed chain.

(6) Electric wiring for the wrapper heaters shall be so arranged that a minimum number of wires are used to connect the movable heaters assembly to the permanent wiring of the machine. This wiring shall be the heat-resisting type, as prescribed in the occupational safety standards commission standards 1910.308 and 1910.309.

History: 1954 ACS 81, p. 100, Eff. Nov. 19, 1974; 1954 ACS 88, p. 107, Eff. July 16, 1976.

R 408.18172 Carton wrapping machines.

Rule 8172. (1) An electric sealing heater on a carton wrapping machine shall be as prescribed in R 408.18171(1).

(2) A hot metal glue pot for a carton wrapping machine shall have the heated surfaces insulated or guarded to prevent burns from accidental contact.

(3) The in-running nip points of power driven rolls shall be guarded.

(4) Pusher bars and pusher fingers of a carton wrapping machine which create a hazard for an employee shall be guarded by a barrier or enclosure.

(5) An end-seal drum on a carton wrapping machine shall be guarded at the pinch point and point of operation.

(6) An access cover or door on a carton wrapping machine shall be interlocked as prescribed in R 408.18151(3).

(7) Where more than 1 operator is feeding a carton wrapping machine, each operator shall be provided controls prescribed in R 408.18115(5).

(8) Where a safety switch is used to detect jams of product flow on a carton wrapping machine, the machine shall have a manual reset to prevent automatic restarting when the jam has been cleared.

History: 1954 ACS 81, p. 100, Eff. Nov. 19, 1974.

R 408.18173 Bag loading machines.

Rule 8173. (1) A bag magazine feed and the funnel section of a bag loading machine shall be guarded by a movable panel or guard equipped with an

interlock which stops the motion of all parts when the panel or guard is in an open position.

(2) A bag loading machine having a tying mechanism for the twist lock shall be guarded in a manner to prevent an employee from reaching the twisting hook.

(3) If more than 1 operator feeds a bag loading machine, an emergency stop within reach of each operator shall be provided as prescribed in R 408.18115(4).

(4) A bread bagger shall have an interlocked enclosure over the top and both sides of the reciprocating pickup arm.

History: 1954 ACS 81, p. 101, Eff. Nov. 19, 1974.

R 408.18174 Form-fill-seal pouch or bag machine.

Rule 8174. (1) A form-fill-seal pouch or bag machine shall have:

(a) The exposed hot long seam sealer parts insulated or guarded as prescribed in R 408.18171(1).

(b) The in-running nip point of the power driven friction film feed rollers guarded.

(c) An emergency stop button within reach of each employee feeding the machine, as prescribed in R 408.18115(4).

(2) Draw bar parts of a form-fill-seal pouch or bag machine shall be guarded by extending the frame structure, or a hinged or movable guard which shall be interlocked to the drive motor.

(3) An overhead extended rotating feed hopper of revolving turrets of a form-fill-seal pouch or bag machine shall have a tray or pan guard installed to protect an employee from falling product or machine parts.

History: 1954 ACS 81, p. 101, Eff. Nov. 19, 1974.

R 408.18175 Tray or carton forming and carton closing machines.

Rule 8175. (1) The former and corner lock section of a tray or carton forming and carton closing machine shall be guarded with interlocked hinged or removable covers or enclosures.

(2) The heated surfaces of a hot melt glue pot shall be insulated or guarded to prevent burns by accidental contact.

History: 1954 ACS 81, p. 101, Eff. Nov. 19, 1974.

R 408.18176 Caddy, cover, and box stitchers.

Rule 8176. A caddy, cover, and box stitcher shall be provided a point of operation guard or device to protect the operator's fingers.

History: 1954 ACS 81, p. 101, Eff. Nov. 19, 1974.

R 408.18177 Carton and lining feeding machines.

Rule 8177. A carton and lining feeding machine shall be equipped with a hinged hood type guard over the cutters which shall be interlocked with the drive motor.

History: 1954 ACS 81, p. 101, Eff. Nov. 19, 1974.

R 408.18181 Ovens.

Rule 8181. (1) Except a range or cabinet type oven without moving parts installed before the effective date of this part, a combustible fueled oven shall be provided devices to protect against the following hazards:

(a) Ignition failure.

(b) Abnormal fuel pressure.

(c) Combustion air failure.
(d) Electrical power failure.
(e) Exhaust system failure.
(f) Excessive temperature.

(2) Preventilation purge shall be arranged in the safety control circuit and set so as to require operation of the exhaust and recirculating fans to provide not less than 4 complete oven heating chamber air changes with fresh air before the burner ignition system may be operated and fuel turned on.

(3) If a combustible fuel is used which is heavier than air, a bottom exhaust system shall be provided and used during the purge cycle.

(4) A direct fired oven installed after the effective date of this part shall be equipped with relief vents for freely relieving internal explosion pressures. The vents shall be proportioned in the ratio of their area to the area of explosion containing volume of the oven which shall be not less than 1 square foot of relief area to 15 cubic feet of oven volume.

(5) All safety controls shall be inspected not less than monthly as prescribed in table 1 of R 408.18142.

History: 1954 ACS 81, p. 101, Eff. Nov. 19, 1974.

R 408.18182 Range and cabinet type ovens.

Rule 8182. (1) A range or cabinet type oven without moving parts installed before the effective date of this part shall be equipped with a fuel failure safety device for the pilot and burner.

(2) A range or cabinet type oven without moving parts installed after the effective date of this part shall be as prescribed in R 408.18181.

History: 1954 ACS 81, p. 102, Eff. Nov. 19, 1974.

BOARD OF SAFETY COMPLIANCE AND APPEALS

GENERAL RULES

(By authority conferred on the board of safety compliance and appeals by section 9 of Act No. 282 of the Public Acts of 1967, as amended, being §408.859 of the Michigan Compiled Laws)

R 408.19901 Board minutes.

Rule 1. Minutes of each business meeting of the board of safety compliance and appeals shall be prepared from the reporter's notes. Minutes shall be signed by the board chairman after approval by board members. Minutes shall be kept by the department of labor for 10 years.

History: 1954 ACS 59, p. 46, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.
Editor's note: R 408.19901 to R 408.19910 formerly appeared as R 408.14901 to R 408.14910.

R 408.19902 Applicability of general administrative hearings statute.

Rule 2. If a hearing procedure is not prescribed by Act No. 282 of the Public Acts of 1967, being §§408.851 to 408.868 of the Michigan Compiled Laws, or by these rules, Act No. 197 of the Public Acts of 1952, as amended, being §§24.101 to 24.110 of the Michigan Compiled Laws, or any other general act relating to administrative agency hearings, is applicable.

History: 1954 ACS 59, p. 46, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19903 Hearing dates and notices.

Rule 3. The chairman of the board of safety compliance and appeals, on receipt of a safety order referred to the board by the director of labor, together with a notice of noncompliance, shall set a date for hearing before the board and shall notify the director of labor and the employer to whom the safety order was directed of the date, hour and place of the hearing by first class mail at least 5 days before the hearing date, unless such time limit has been waived by stipulation of the director of labor and the affected employer in writing.

History: 1954 ACS 59, p. 46, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19904 Presiding officer and appearances.

Rule 4. (1) The chairman of the board of safety compliance and appeals shall preside at all hearings before the board and shall conduct the hearings in such a manner as to protect the rights of the parties. If the chairman is unable to be present at a hearing, a member of the board designated by the chairman shall preside.

(2) An employer who is notified to appear at a hearing may be represented at the hearing by legal counsel or other authorized agents. When an interested party is not represented by legal counsel the board shall advise the party of his rights, aid him in examining and cross-examining witnesses, and give every assistance compatible with an impartial discharge of its official duties.

History: 1954 ACS 59, p. 46, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19905 Order of business at hearings.

Rule 5. Generally the order of business at a hearing will be as follows:

(a) Presentation of the case by the department.

(b) Cross-examination.

(c) Presentation of the case by the employer.

(d) Cross-examination.

(e) Presentation of argument by both parties, if desired.

(f) The board may at any time direct the parties to file briefs relative to the applicable law.

History: 1954 ACS 59, p. 47, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19906 Withdrawal of safety orders; adjournments.

Rule 6. (1) The director of labor may withdraw a safety order and notice of noncompliance referred to the board of safety compliance and appeals at any time before issuance of a decision and order by the board.

(2) The board may adjourn a hearing. An adjourned hearing shall be rescheduled for a time and place which the board deems most convenient for all the parties. Notices of an adjourned hearing shall conform to the requirements for notices of original hearings as set forth in R 408.19903.

History: 1954 ACS 59, p. 47, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19907 Statements, exhibits, and stipulations.

Rule 7. (1) The director of labor and the employer affected by a safety order which is the subject of a hearing may file written statements or exhibits with the board for its consideration before the date set for hearing. However, written statements or exhibits requested by the board may be submitted at the hearing.

(2) The director of labor and an affected employer may stipulate to any of the following:

(a) Withdrawal of a safety order and notice of noncompliance which has been referred to the board at any time before issuance of a decision and order by the board.

(b) Facts; however, the board may make such independent inquiry into the facts as it deems advisable.

History: 1954 ACS 59, p. 47, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19908 Witnesses and evidence.

Rule 8. (1) Witnesses at hearings before the board of safety compliance and appeals shall be sworn or affirmed to tell the truth before testifying in respect to matters on which testimony is to be given. The board shall confine the evidence to the issues and shall not permit extraneous matter, colloquy or testimony not pertinent to the issues to be given on the record. It shall require the evidence to be presented in an orderly manner and the testimony of a witness shall be complete so far as possible without interruption. An interested party may present competent, relevant and material evidence and may cross-examine adverse witnesses.

(2) The testimony of a witness who is unable to appear and testify before the board at a regularly scheduled hearing may be taken at a time and place convenient to the residence of the witness by direction of the board. In proper cases, such testimony may be taken by interrogatories or depositions in accordance with the provisions of the law applicable to depositions in civil actions pending in circuit courts of this state.

History: 1954 ACS 59, p. 47, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19909 Decisions and orders.

Rule 9. (1) The board of safety compliance and appeals shall issue a written decision and order within 60 days after concluding a hearing, which shall set forth both the board's findings of fact and conclusions of law. Copies of the decision and order shall be mailed to or personally served on all interested parties, and certification of the proof of mailing or personal service of the decision and order shall be made by the individual who mailed such copies or made such personal service. The certification of proof of mailing or personal service shall be made a part of the record. Copies of decisions and orders of the board shall be kept on file in the office of the board for a period of 3 years.

(2) A final order of the board which sustains, modifies or extends the time for an employer to establish compliance with a safety order shall specify the date on or before which compliance shall be established.

History: 1954 ACS 59, p. 47, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

R 408.19910 Amendments.

Rule 10. The board may amend these rules by the affirmative vote of a majority of its members.

History: 1954 ACS 59, p. 48, Eff. Aug. 14, 1969; 1954 ACS 61, p. 66, Eff. Feb. 16, 1970.

OFFICE OF DIRECTOR

DEPARTMENT ORGANIZATION AND GENERAL FUNCTIONS

(By authority conferred on the department of labor by sections 33 and 63 of Act No. 306 of the Public Acts of 1969, being §§24.233 and 24.263 of the Michigan Compiled Laws)

Digitized by Google

PART 1. DIRECTOR'S OFFICE

R 408.20001 Director's office.

Rule 1. The chief executive in the department of labor is the director of labor, appointed by the governor. The director's office is the hub of policy making for the department and maintains offices in Lansing and Detroit. His office affects the overall department and its agencies and derives its authority from the constitution, the executive organization act of 1965 (Act No. 380 of the Public Acts of 1965, as amended, being §§16.101 to 16.608 of the Michigan Complied Laws), and the many laws assigned specifically to the director for administration. The director has a small staff assigned to specific responsibilities in program areas that are vital to his responsibility as the chief officer. The director and the various component agencies, boards and commissions within the department of labor cooperate with all state and local agencies in the implementation of their assigned responsibilities and, more specifically, with the department of public health in the promulgation of rules concerning safety, sanitation, and health.

History: 1954 ACS 72, p. 67, Eff. Nov. 14, 1972.

R 408.20003 Requests for promulgation of rules.

Rule 3. A person requesting the department of labor or an agency therein to promulgate a rule shall do so on a department form entitled "Request for Promulgation of Rules." The form will be available at the offices of the director in Lansing and Detroit. The request shall contain the information required on the form and the signature and address of the person making the requests. The request shall be filed either in person or by mail in the office of the director in Lansing or Detroit. After receipt of a correctly filed request, the department or agency shall have 90 days in which to initiate the processing of a rule or to issue a concise written statement of its principal reasons for denial of the request which shall be sent by certified mail to the person who made the request.

History: 1954 ACS 72, p. 67, Eff. Nov. 14, 1972.

R 408.20004 Requests for declaratory rulings.

Rule 4. An interested person requesting a declaratory ruling as to the applicability to an actual state of facts of a statute, rule or order administered or issued by the department of labor shall do so on a department form entitled "Request for Declaratory Ruling." The form will be available from the office of the director in Lansing or Detroit. The request shall contain the information required on the form and the signature and address of the person making the request. The request shall be filed either in person or by mail in the office of the director in Lansing or Detroit. After receipt of a correctly filed request, the department shall have 30 days in which to notify the person who made the request by certified mail whether a declaratory ruling will be issued, and if it is to be issued, the nature and details thereof.

History: 1954 ACS 72, p. 67, Eff. Nov. 14, 1972.

R 408.20006 Michigan economic opportunity office.

Rule 6. The Michigan economic opportunity office was authorized by subsection (e) of section 2 of Act No. 266 of the Public Acts of 1965. In accordance with its terms, the governor issued executive order 1965-7 creating the office. The primary focus of the Michigan economic opportunity office is to identify the major causes and problems of poverty in the state and to establish programs to alleviate the causes.

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

PART 2. BUREAU OF ADMINISTRATIVE SERVICES

R 408.20011 Bureau staff functions and divisions.

Rule 11. The bureau of administrative services contains the major staff functions of the department of labor and consists of 3 divisions. Divisions within the bureau of administrative services are:

(a) Personnel.
(b) Budget.
(c) Planning, programming, and statistics.

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

R 408.20012 Personnel division.

Rule 12. The personnel division's primary responsibility is to fulfill the personnel needs of the department of labor and to work with the civil service commission on personnel matters. This division also has responsibility for departmental training and the supervision of building operations and maintenance in the department's Lansing office. The division maintains offices in Lansing.

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

R 408.20013 Budget division.

Rule 13. The budget division's primary responsibility is to provide day to day liaison with the bureau of the budget and department of administration and to provide financial control of expenditures through its administrative and cost accounting program. This division also has responsibility over departmental receipts accounting and for office services functions such as purchasing, central stock and mail rooms. The division maintains offices in Lansing and Detroit.

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

R 408.20014 Planning, programming, and statistics division.

Rule 14. The planning, programming, and statistics division has the primary responsibility for program planning within the department and for providing staff assistance to the operational agencies for statistical programs. This division also maintains the departmental library and maintains the forms control program. The division maintains offices in Lansing and Detroit.

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

R 408.20015 General information; library and requests.

Rule 15. (1) A library of general department of labor publications and information is maintained in the office of the director and is available to the general public during regular working hours, Monday through Friday, except legal holidays.

(2) A person desiring general information or material from the department of labor or an agency therein shall make a request in person or in writing to the agency involved or to the office of the director.

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

PART 3. BUREAU OF SAFETY AND REGULATION

R 408.20021 Bureau divisions and offices.

Rule 21. The bureau of safety and regulation consists of 9 divisions. Offices are maintained in Lansing and Detroit. Divisions within the bureau are:

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

R 408.20022 Statutes administered by bureau.

Rule 22. The bureau administers and proceeds under the following statutes:

Act No. 285 of the Public Acts of 1909, as amended, being §§408.51 to 408.94 of the Michigan Compiled Laws, department of labor—powers and duties.

Act No. 137 of the Public Acts of 1885, being §§408.401 to 408.405 of the Michigan Compiled Laws, 10-hour working day.

Act No. 224 of the Public Acts of 1935, being §§408.501 to 408.506 of the Michigan Compiled Laws, assignment of wage claims.

Act No. 62 of the Public Acts of 1925, as amended, being §§408.521 to 408.525a of the Michigan Compiled Laws, payment of wages.

Act No. 259 of the Public Acts of 1931, as amended, being §§570.151 to 570.153 of the Michigan Compiled Laws, building contract fund.

Act No. 157 of the Public Acts of 1947, as amended, being §§409.1 to 409.30 of the Michigan Compiled Laws, Hittle juvenile employment act.

Act No. 154 of the Public Acts of 1964, as amended, being §§408.381 to 408.397 of the Michigan Compiled Laws, minimum wage law.

Act No. 166 of the Public Acts of 1965, being §§408.551 to 408.558 of the Michigan Compiled Laws, prevailing wage act.

Act No. 221 of the Public Acts of 1897, being §§408.561 to 408.563 of the Michigan Compiled Laws, issuance of script or order for wages.

Act No. 106 of the Public Acts of 1903, being §§408.581 to 408.583 of the Michigan Compiled Laws, employment away from home locality.

Section 2908 of Act No. 236 of the Public Acts of 1961, being §600.2908 of the Michigan Compiled Laws, stockholder liability for labor debts.

Act No. 199 of the Public Acts of 1962, as amended, being §§408.321 to 408.341 of the Michigan Compiled Laws, ski area safety act.

Act No. 225 of the Public Acts of 1966, as amended, being §§408.651 to 408.667 of the Michigan Compiled Laws, carnival-amusement safety act of 1966.

Act No. 227 of the Public Acts of 1967, being §§408.801 to 408.824 of the Michigan Compiled Laws, elevator safety act of 1966.

Act No. 264 of the Public Acts of 1967, being §§425.131 to 425.145 of the Michigan Compiled Laws, mine safety act of 1967.

Act No. 282 of the Public Acts of 1967, as amended, being §§408.851 to 408.868 of the Michigan Compiled Laws, occupational safety act of 1967.

Act No. 290 of the Public Acts of 1965, as amended, being §§408.751 to 408.776 of the Michigan Compiled Laws, boiler act of 1965.

Act No. 213 of the Public Acts of 1966, being §§408.511 to 408.512 of the Michigan Compiled Laws, debts owing to benefit of employee.

Act No. 89 of the Public Acts of 1963, as amended, being §§408.712 to 408.724 of the Michigan Compiled Laws, construction safety act.

History: 1954 ACS 72, p. 68, Eff. Nov. 14, 1972.

R 408.20023 Administration by bureau.

Rule 23. The objective of the bureau is to eliminate industrial accidents by requiring and assuring the safety, well-being and welfare of Michigan's work

force. The bureau accomplishes its objective through administration and enforcement of laws and safety standards regulating the safeguarding of machines and work processes; control and maintenance of the working environment and standards for safe working conditions and occupations for female workers and minors; and through inspections, educational programs and seminars. The focal point for the administrative implementation of these objectives rests with the director's office and his administrative staff.

History: 1954 ACS 72, p. 69, Eff. Nov. 14, 1972.

R 408.20024 Data processing division.

Rule 24. The data processing division is responsible for establishing data processing programs and services for the other bureau divisions.

History: 1954 ACS 72, p. 69, Eff. Nov. 14, 1972.

R 408.20025 Occupational safety division.

Rule 25. The principal division of the bureau is the occupational safety division. It administers and enforces laws and rules governing industrial safety. The objective of the occupational safety division is to reduce the incidence of occupational injury through inspections.

History: 1954 ACS 72, p. 69, Eff. Nov. 14, 1972.

R 408.20026 Safety education and training division.

Rule 26. The major activity of the safety education and training division is to identify employers with serious accident problems and provide safety counsulting services to them and safety campaigns and training programs for the employer's work force. The division also augments and extends the inspection and regulatory activities of the occupational safety division and provides assistance to each of the other divisions of the bureau through its communications, safety education and safety services.

History: 1954 ACS 72, p. 69, Eff. Nov. 14, 1972.

R 408.20027 Construction safety division.

Rule 27. The construction safety division administers and enforces the construction safety act of 1963 and the rules promulgated by the state construction safety commission under the authority of this act. The act and rules establish minimum standards of safety for construction work operations. Their purpose is to prevent accidents and injuries in the construction industry, a purpose that directly benefits both the employer and the employee. Activities of the division are performed through 3 principal programs: registration, safety rating and inspection and education.

History: 1954 ACS 72, p. 70, Eff. Nov. 14, 1972.

R 408.20028 Boiler safety division.

Rule 28. The boiler safety division administers and enforces the provisions of the boiler act of 1965 and the rules promulgated by the board of boiler rules created by this act. The objective of the division is to assure that all boilers in this state that fall within the jurisdiction of the act and the rules are registered and inspected. The division directs its efforts into 3 principal channels of action: registration and recording, inspection, and licensing. Under the boiler act of 1965, the division is required to keep a complete record of all boilers to which the act applies. The type, dimensions, maximum allowable pressure, age, location, and

date of last inspection is recorded, providing the division with a history of each boiler.

History: 1954 ACS 72, p. 70, Eff. Nov. 14, 1972.

R 408.20029 Elevator safety division.

Rule 29. The elevator safety division administers and enforces Act No. 227 of the Public Acts of 1967 and the rules promulgated thereunder. Lift equipment covered by the provisions of the act includes freight and passenger elevators, dumbwaiters, escalators, incline lifts, workmen's hoists, man lifts, stage lifts and other special elevating devices. Activities of the division include review and approval of specifications submitted by elevator contractors for new construction, final inspection and approval of new installations, annual reinspections of existing installations, accident investigation, consultation with interested parties and the reporting, recording and filing of data generated by these activities.

History: 1954 ACS 72, p. 70, Eff. Nov. 14, 1972.

R 408.20030 Ski-carnival-mine safety division.

Rule 30. (1) The ski-carnival-mine safety division is a 3-part division established to discharge the bureau's obligations and responsibility under the provisions of the mine safety act of 1967, the carnival-amusement safety act of 1966, and the ski area safety act of 1962.

(2) The ski lift and carnival-amusement ride inspection section administers and enforces 2 separate acts, the ski area safety act of 1962 and the carnival-amusement safety act of 1967 and the rules promulgated thereunder. Inspections of both ski lifts and carnival rides are made by an inspection team consisting of technically trained inspectors.

(3) The mine safety act of 1967 provides for the inspection of metal and nonmetallic mines, including sand and gravel operations, to assure the health and safety of persons in and about these mines.

History: 1954 ACS 72, p. 70, Eff. Nov. 14, 1972.

R 408.20031 Wage-hour division.

Rule 31. (1) The wage-hour division is responsible for requiring compliance by employers with the laws relating to the method, timing and amount of payment to be made for work performed. The work of the division is divided into 4 major categories: wage claims, prevailing wage schedules, minimum wage payments and the employment of minors under 18 years of age.

(2) The division issues approvals of occupations for minors. Field personnel may be required to investigate work places requesting approvals. In places of employment where the management has requested a deviation from established standards or a special approval of occupation for an individual minor, inspectors may be required to inspect machinery and the working environment to determine whether or not the best interest of the individual minor or group of minors is served.

History: 1954 ACS 72, p. 70, Eff. Nov. 14, 1972.

PART 4. EMPLOYMENT RELATIONS COMMISSION

R 408.20041 Organization; offices and divisions.

Rule 41. (1) The employment relations commission is composed of 3 commissioners appointed by the governor and has offices in Grand Rapids, Lansing, and Detroit.

(2) The commission consists of 2 divisions:
(a) Labor relations division (Detroit).
(b) Mediation division (Detroit, Lansing, Grand Rapids).

History: 1954 ACS 72, p. 71, Eff. Nov. 14, 1972.

R 408.20042 Responsibilities of the commission.

Rule 42. The employment relations commission is responsible for administering:

(a) The labor mediation act (LMA), Act No. 176 of the Public Acts of 1939, as amended, being §§423.1 to 423.30 of the Michigan Compiled Laws, which established the employment relations commission for the purpose of promoting industrial peace between employers and employees in the private sector.

(b) The public employment relations act, Act No. 336 of the Public Acts of 1947, as amended, being §§423.201 to 423.216 of the Michigan Compiled Laws. This act, known as the Hutchinson act, was passed to provide mediation and fact-finding in the public sector and since it was amended in 1965, it has been known as the public employment relations act (PERA).

History: 1954 ACS 72, p. 71, Eff. Nov. 14, 1972.

R 408.20043 Responsibilities of mediation and labor relations divisions.

Rule 43. (1) The mediation division of the commission is responsible for assisting in the negotiation of contracts and the settlement of grievances between public and private employers and their employees. Mediation may include fact-finding in the public sector and last-offer elections in the private sector.

(2) The labor relations division of the commission is responsible for establishing appropriate bargaining units, ordering and conducting representation and decertification elections and determining by administrative procedures whether unfair labor practices have been committed under LMA or PERA.

History: 1954 ACS 72, p. 71, Eff. Nov. 14, 1972.

PART 5. WORKMEN'S COMPENSATION AGENCIES
BUREAU OF WORKMEN'S COMPENSATION

R 408.20051 Organization, offices, and activities.

Rule 51. (1) The bureau of workmen's compensation is administered by a director appointed by the governor and maintains offices in Lansing, Escanaba, and Detroit. The bureau administers Act No. 317 of the Public Acts of 1969, as amended, being §§418.101 to 418.899 of the Michigan Compiled Laws—workmen's compensation act of 1969.

(2) The director is also a trustee of the second injury fund and the silicosis and dust disease fund.

(3) The bureau is involved in 5 major activities: hearings, insurance service, case management, vocational rehabilitation, and silicosis and dust disease and second injury funds.

History: 1954 ACS 72, p. 71, Eff. Nov. 14, 1972.

R 408.20052 Responsibilities.

Rule 52. The bureau of workmen's compensation administers the workmen's compensation laws of and for the state. It processes all claims involving lost-time injuries, death or specific loss which come under the purview of the workmen's compensation act.

History: 1954 ACS 72, p. 71, Eff. Nov. 14, 1972.

R 408.20053 Second injury and silicosis and dust disease funds.

Rule 53. A second injury fund and a silicosis and dust disease fund were created by the workmen's compensation act of 1969. These funds, which assumed all the rights and liabilities of funds previously established for these purposes, are under the management of 3 trustees. The director of the bureau of workmen's compensation is 1 trustee and the other 2 are appointed by the governor. One appointed trustee represents the insurance industry and the other represents the self-insured industry. The second injury fund pays benefits to employees judged to be totally and permanently disabled as the result of an occupational injury. The silicosis and dust disease fund reimburses insurance companies, self-insureds and the state accident fund for weekly benefits paid in excess of $12,500.00 to an injured workman suffering from a job-related silicosis or dust disease.

History: 1954 ACS 72, p. 71, Eff. Nov. 14, 1972.

WORKMEN'S COMPENSATION APPEAL BOARD

R 408.20055 Organization.

Rule 55. The workmen's compensation appeal board is composed of 7 members, a majority of whom are attorneys at law licensed to practice in the courts of this state. Members are appointed by the governor for terms of 4 years and until their successors are appointed and qualified. The chairman is designated by the governor. The board has offices in Lansing and Detroit.

History: 1954 ACS 72, p. 72, Eff. Nov. 14, 1972.

R 408.20056 Functions.

Rule 56. (1) The board administers the appeal board provisions of the workmen's compensation act of 1969.

(2) The board is an independent body with power and authority to hear and decide all appeals from the orders of the hearing referees and director. The board may make rules on appellate procedure.

(3) The board has the independent right to organize and manage its own work and has authority over the selection, assignment, classification and tenure of its own employees and supervision over its own office space.

History: 1954 ACS 72, p. 72, Eff. Nov. 14, 1972.

R 408.20057 Chairman and board panels.

Rule 57. (1) The chairman of the board has general supervisory control of and is in charge of the assignment of the work of the board and its employees.

(2) Any matter pending on review may be assigned to 4 members of the board for disposition. The composition of panels is alternated so that each member of the board serves on panels with other members of the board with a frequency which is as substantially equal as possible. If the 4 members concur in the result, it is final. If there is disagreement, the matter is reviewed by the full board and its order is final.

History: 1954 ACS 72, p. 72, Eff. Nov. 14, 1972.

PART 6. EMPLOYMENT SECURITY AGENCIES

R 408.20061 Commission.

Rule 61. The Michigan employment security commission created by Act No. 1 of the Public Acts of 1936, extra session, as amended, being §§421.1 to 421.63 of the Michigan Compiled Laws, is composed of 4 members appointed by the

governor. The director of the department of labor serves as an ex officio member without vote or additional compensation. The commission is an autonomous entity in the department of labor.

History: 1954 ACS 72, p. 72, Eff. Nov. 14, 1972.

R 408.20063 Appeal board.

Rule 63. The Michigan employment security appeal board created by Act No. 1 of the Public Acts of 1936, extra session, as amended, is composed of 3 members appointed by the governor. It is an autonomous entity in the department of labor.

History: 1954 ACS 72, p. 72, Eff. Nov. 14, 1972.

R 408.20065 Advisory council.

Rule 65. The Michigan employment security advisory council created by Act No. 1 of the Public Acts of 1936, extra session, as amended, is composed of 8 members appointed by the governor. It is an autonomous entity in the department of labor.

History: 1954 ACS 72, p. 72, Eff. Nov. 14, 1972.

PART 7. OTHER BOARDS AND COMMISSIONS

R 408.20071 Commission on agricultural labor; organization.

Rule 71. The commission on agricultural labor was created by Act No. 353 of the Public Acts of 1968, being §§16.104 to 16.494 of the Michigan Compiled Laws. It is composed of 7 members, 4 of whom are chosen from growers and producers of agricultural products requiring a large number of seasonal workers and 3 from the general public who are interested in the welfare of agricultural workers. Members are appointed by the governor for terms of 3 years. The chairman is designated by the governor. The commission is required to meet at least quarterly but not oftener than 12 times a year. Commission members serve without compensation other than for their necessary and proper expenses.

History: 1954 ACS 72, p. 72, Eff. Nov. 14, 1972.

R 408.20072 Commission on agricultural labor; functions.

Rule 72. (1) The functions of the commission are to:

(a) Cooperate with all government agencies and committees concerned with agricultural labor including but not limited to migratory labor.

(b) Cooperate with private voluntary and community groups having as their prime concern problems involving agricultural labor.

(c) Conduct a continuing program to acquaint people with the importance of agricultural labor and the sources from which it can be recruited to agriculture.

(d) Seek effective methods for the improvement of living, working and related problems affecting agricultural labor of all types.

(e) Formulate policies to effectuate the purposes of the act and make recommendations to agencies and officers of the state or local subdivisions of government on policies and purposes.

(2) The commission is required to render an annual report and also from time to time to submit recommendations to the governor, the legislature, and the director of the department pertaining to agricultural labor, including recommendations for legislation.

R 408.20073 Board of boiler rules.

Rule 73. (1) The board of boiler rules was created by Act No. 290 of the Public Acts of 1965, as amended, being §§408.751 to 408.776 of the Michigan Compiled Laws. It is composed of 11 members, including the director of labor and 10 members appointed by the governor for terms of 4 years. Of the 10 appointed members, each of whom has to have at least 10 years' experience in the design, erection, fabrication, installation, operation, repair or inspection of boilers, 2 are representatives of owners and users of boilers, 1 of whom represents owners and users of power boilers operating at 1,000 p.s.i.g. or more; 2 are representatives of organized labor engaged in the erection, fabrication, installation, operation or repair of boilers; 1 is a representative of water tube boiler manufacturers; 1 is a representative of fire tube boiler manufacturers; 1 is a representative of a licensed boiler insurance company; 1 is a representative of mechanical contractors having experience in the installation, piping or operation of boilers; 1 is a representative of boiler repair contractors in the business of repairing boilers by welding and riveting; and 1 is a representative of the consulting engineers having boiler experience. Board members serve without salary but receive their actual and necessary expenses incurred while in the performance of their duties as members of the board.

(2) The board is required to meet quarterly in Lansing. Annually, at the first meeting, the board elects a chairman, vice chairman and secretary.

(3) The board's functions are to formulate definitions and rules in conjunction with the director of the department of labor for the safe construction, installation, inspection and repair of boilers and to formulate rules for the safe inspection and maintenance of boilers which were in use prior to July 1, 1966.

History: 1954 ACS 72, p. 73, Eff. Nov. 14, 1972.

R 408.20074 Carnival-amusement safety board.

Rule 74. (1) The carnival-amusement safety board was created by Act No. 225 of the Public Acts of 1966, as amended, being §§408.651 to 408.667 of the Michigan Compiled Laws. It is composed of 7 members, including the director of the department of labor, and 6 members appointed by the governor for terms of 4 years. Of the 6 appointed members, 1 represents amusement park operators, 1 represents carnival ride operators, 1 represents the retail merchants association, 1 is a registered professional engineer and 2 represent the general public. Members of the board receive compensation for their services at the rate of $20.00 per day for meeting days and are entitled to actual and necessary expenses while on the business of the board.

(2) The board is required to meet at least twice yearly. The board elects a chairman and such other officers as it deems necessary to perform its duties between meetings.

(3) The board formulates definitions and rules in conjunction with the director of the department of labor for the safe installation, repair, maintenance, use, operation and inspection of all carnival-amusement rides as the board finds necessary for the protection of the general public using carnival and amusement rides. The board determines a schedule of inspection and permit fees.

History: 1954 ACS 72, p. 73, Eff. Nov. 14, 1972.

R 408.20075 Construction safety commission; organization.

Rule 75. (1) The construction safety commission was created by Act No. 89 of the Public Acts of 1963, as amended, being §§408.711 to 408.724 of the Michigan Compiled Laws. The commission is composed of 7 members appointed by the

governor for terms of 3 years. Three members are required to be actively engaged in the construction industry on the management level, 3 are required to be actively engaged in the construction industry on the employee level, and 1 represents the workmen's compensation insurance industry. Members receive no compensation but are entitled to their actual and necessary expenses incurred in the performance of their duties.

(2) The commission meets regularly each month, in Lansing or Detroit. Four members constitute a quorum but commission action requires concurrence of a majority of the members.

History: 1954 ACS 72, p. 74, Eff. Nov. 14, 1972.

R 408.20076 Construction safety commission; functions.

Rule 76. The commission may adopt and promulgate safety rules for the inspection and use of equipment and for safe working conditions, based upon generally accepted nationwide engineering standards and practices. The commission may cooperate with other agencies for the purposes of promoting construction safety and may conduct regional construction safety training programs. The commission establishes safety ratings for all registered contractors, but a registered subcontractor's rate of injuries may not be used in the determination of the safety rating of the contractor. The commission investigates any registered contractor whose safety record fails to meet minimum standards for his classification or may investigate alleged violations of its rules upon notification by an employee or his agent.

History: 1954 ACS 72, p. 74, Eff. Nov. 14, 1972.

R 408.20077 Elevator safety board; organization.

Rule 77. The elevator safety board was created by Act No. 227 of the Public Acts of 1967, being §§408.801 to 408.824 of the Michigan Compiled Laws. The board is composed of 10 members, including the director of labor and 9 members appointed by the governor for terms of 4 years. Of the 9 appointed members, 1 represents owners and lessees of elevators within this state, 2 represent insurance companies authorized to insure elevators in this state, 2 represent the elevator constructors' union, 1 represents a municipality in the state having a population of at least 500,000, 1 represents architects and consulting engineers, and 2 represent manufacturers of elevators used in this state. Members of the board serve without salary but receive their actual travel expenses. The board meets in Lansing and Detroit.

History: 1954 ACS 72, p. 74, Eff. Nov. 14, 1972.

R 408.20078 Elevator safety board; functions.

Rule 78. The board has the following powers and duties:

(a) To make, amend or rescind rules in conjunction with the director of labor for the inspection, design, construction, installation, alteration, maintenance and use of elevators in this state.

(b) To prepare examinations, interview applicants to determine their qualifications and examine qualified applicants for elevator contractor licenses or certificates of competency and to certify to the director the names of persons who successfully pass the examination.

(c) When submitted by the director, to grant exceptions or variations in specific cases from the literal requirements of the act or rules adopted by the board when it is clearly evident that they are necessary to prevent undue hardship

or when existing conditions prevent compliance with the literal requirements, if the board believes reasonable safety will be secured thereby.

(d) To hear and decide appeals referred to the board by the director when requested to do so by any person, firm or corporation aggrieved by an order or act of the department or its authorized representatives and to adopt rules of procedure for such appeals.

(e) To conduct hearings to determine whether an elevator contractor license or certificate of competency or commission should be suspended or revoked and to make recommendation to the director.

(f) To establish fees.

History: 1954 ACS 72, p. 74, Eff. Nov. 14, 1972.

R 408.20079 Mine safety board; organization.

Rule 79. (1) The mine safety board was created by Act No. 264 of the Public Acts of 1967, being §§425.131 to 425.145 of the Michigan Compiled Laws. It is composed of 5 members appointed by the governor for terms of 4 years, 2 of whom represent the mining industry, 2 represent labor organizations concerned with mining, and 1 is the head of the department of mining engineering of Michigan technological university. The director of labor and the director of public health are ex officio members of the board without vote. Members of the board receive no per diem or expenses.

(2) The board is required to meet at least twice yearly. The board elects a chairman and other officers it deems necessary to perform its functions between meetings.

History: 1954 ACS 72, p. 75, Eff. Nov. 14, 1972.

R 408.20080 Mine safety board; functions.

Rule 80. The board has the following powers and duties:

(a) To formulate definitions and rules for the protection of life, promotion of health and safety and the prevention of accidents in mines, subject to Act No. 264 of the Public Acts of 1967.

(b) To establish advisory committees to assist in the development of health and safety standards for mines which are subject to that act and to advise the board on other matters relating to health and safety in such mines.

(c) To determine a schedule of inspection of mines and assure that all mines, other than quarries and sand and gravel pits, are inspected at least once each calendar year.

(d) To establish rules to determine the measures to be followed in securing the public's safety where a mine is idle or abandoned.

History: 1954 ACS 72, p. 75, Eff. Nov. 14, 1972.

R 408.20081 Occupational safety standards commission; organization.

Rule 81. (1) The occupational safety standards commission was created by Act No. 282 of the Public Acts of 1967, as amended, being §§408.851 to 408.868 of the Michigan Compiled Laws. It is composed of 9 members appointed by the governor for terms of 3 years. Three members represent the management of principal industries in the state, 1 of which represents a company with 200 or less employees; 3 represent labor with not more than 1 from any international union; 2 represent insurance organizations doing business in this state with 1 each from stock and mutual interests; and there is 1 member at large. The director of labor is an ex officio member and serves as secretary of the commission. The commission elects from among its members by a concurring vote of not less than 5 members,

such other officers as may be necessary to carry out its duties. With the exception of the secretary, the commission members receive $25.00 for each day or part thereof, not to exceed 25 days in a calendar year and the chairman shall receive $35.00 for each day, not to exceed 50 days in a calendar year, necessarily spent in the discharge of official duties and their reasonable and necessary travel and other expenses.

(2) The commission is required to meet not less than 4 times in a calendar year. Meetings are held in Detroit.

History: 1954 ACS 72, p. 75, Eff. Nov. 14, 1972.

R 408.20082 Occupational safety standards commission; functions.

Rule 82. The commission may adopt reasonable safety standards for prevention of accidents in all places of employment and for protection of the life, health and safety of employees, and it may amend or rescind such standards. Authority to adopt standards is limited to those for which authority is not granted to other state departments, other agencies within the department, and other legally constituted boards or commissions.

History: 1954 ACS 72, p. 75, Eff. Nov. 14, 1972.

R 408.20083 Board of safety compliance and appeals.

Rule 83. (1) The board of safety compliance and appeals was created by Act No. 282 of the Public Acts of 1967, as amended, being §§408.851 to 408.868 of the Michigan Compiled Laws. It is composed of 5 members appointed by the governor for terms of 4 years. Two of the members are affiliated with labor organizations, no more than 1 of whom shall be from the same international union, and 2 of the members shall be representative of employer interests. The chairman of the board is the fifth member and is selected for appointment from a list of nominees containing 1 name each from the full members in good standing of each Michigan chapter of the American society of safety engineers. The board members receive reasonable and necessary travel and other expenses and, in addition, the chairman of the board receives $35.00 for each day or part thereof necessarily spent in the discharge of his official duties, not to exceed 50 days in a calendar year, and the other members of the board receive $25.00 for each day or part thereof necessarily spent in the discharge of their official duties, not to exceed 25 days in a calendar year.

(2) The board is required to hold regular quarterly meetings at its offices in Lansing on the first Wednesday in February, May, August, and November.

(3) The board conducts hearings to determine compliance or noncompliance with safety orders issued as prescribed in section 8 of the act. If an employer fails to comply with a final order of the board, the board notifies the director who proceeds to enforce the order in accordance with the provisions of the act.

History: 1954 ACS 72, p. 75, Eff. Nov. 14, 1972.

R 408.20084 Ski area safety board.

Rule 84. (1) The ski area safety board was created by Act No. 199 of the Public Acts of 1962, as amended, being §§408.321 to 408.341 of the Michigan Compiled Laws. It is composed of 7 members appointed by the governor for terms of 4 years. The board consists of 3 ski area managers with 1 from the upper peninsula and 2 from the lower peninsula; 1 engineer with skiing experience; 1 member of the central United States ski association, a nonprofit corporation; 1 person with skiing experience from the upper peninsula; and 1 person with skiing experience from the lower peninsula. The director of labor and an officer of the

Michigan tourist council are ex officio members of the board without vote. The board members receive no compensation but receive their actual and necessary expenses within the legislative appropriation.

(2) The board is required to meet at least once yearly on the call of the chairman or by written request of at least 3 members. The board elects a chairman and such other officers as it deems necessary to perform duties between meetings.

(3) The board formulates definitions and rules for the safe construction, installation, repair, use, operation, maintenance and inspection of all ski areas and ski lifts as the board finds necessary for protection of the public while using ski areas and ski lifts. The definitions and rules are to be reasonable and based upon generally accepted engineering standards, formulas and practices. The board or the director of labor may order, in writing, a temporary cessation of operation of a ski lift if it has been determined after inspection to be hazardous or unsafe.

History: 1954 ACS 72, p. 76, Eff. Nov. 14, 1972.

R 408.20085 Wage deviation board; organization.

Rule 85. The wage deviation board was created by Act No. 154 of the Public Acts of 1964, as amended, being §§408.381 to 408.397 of the Michigan Compiled Laws. It is composed of 9 members appointed by the governor for terms of 3 years. Three members represent employers, 3 represent employees and 3 represent the public. The chairman is designated by the governor from among the public members. The director of labor is secretary. Members receive compensation of $25.00 a day for not more than 75 days a year, and the chairman receives $35.00 a day for not more than 150 days a year, and may be reimbursed for actual and necessary expenses while on official duty. The board meets monthly in Lansing and Detroit.

History: 1954 ACS 72, p. 76, Eff. Nov. 14, 1972.

R 408.20086 Wage deviation board; functions.

Rule 86. On petition of a party of interest or on its own motion, the wage deviation board:

(a) Determines the amount of the gratuities and the value to an employee of board and lodging and apparel or other items or services customarily furnished to an employee for his benefit and establishes therefrom a reasonable deduction from the minimum wage fixed in the act to be paid by the employer. In no case may the total deduction allowed by more than 25% of the hourly wage rate. The board may grant a stay of a present employment situation until such determination.

(b) Establishes a suitable scale of rates for apprentices, learners, and physically and mentally handicapped persons who are clearly unable to meet the normal production standards, which may be less than the regular minimum wage for experienced and nonhandicapped workers.

(c) Establishes a piece rate scale for use in harvesting agricultural crops which is equal to the statutory minimum when applied to a worker of average ability and diligence.

History: 1954 ACS 72, p. 76, Eff. Nov. 14, 1972.

BOARD OF HEALTH AND SAFETY COMPLIANCE AND APPEALS

OCCUPATIONAL SAFETY AND HEALTH

(By authority conferred on the board of health and safety compliance and appeals by section 46 of Act No. 154 of the Public Acts of 1974, as amended, and section 33

of Act No. 306 of the Public Acts of 1969, as amended, being §§408.1046 and 24.233 of the Michigan Compiled Laws)

PART 4. PROCEDURES

GENERAL PROVISIONS

R 408.21401 Scope.

Rule 401. (1) These rules shall govern proceedings in contested cases before the board or a hearings officer.

(2) Proceedings in a hearing before the board or a hearings officer shall also be governed by chapter 4 of Act No. 306 of the Public Acts of 1969, as amended, being §24.271 et seq. of the Michigan Compiled Laws, and the act.

History: 1954 ACS 89, p. 108, Eff. Nov. 24, 1976.

R 408.21403 Definitions; A to D.

Rule 403. (1) "Act" means the Michigan occupational safety and health act, Act No. 154 of the Public Acts of 1974, as amended, being §408.1001 et seq. of the Michigan Compiled Laws.

(2) "Board" means the board of health and safety compliance and appeals.

(3) "Bureau" means the bureau of safety and regulation or the bureau of environmental and occupational health.

(4) "Citation" means a written communication issued by the department to an employer pursuant to section 33 of the act.

(5) "Day" means a calendar day.

(6) "Department" means the department of labor or the department of public health.

(7) "Director" means the director of the department of labor or his authorized representative, or the director of the department of public health or his authorized representative.

History: 1954 ACS 89, p. 108, Eff. Nov. 24, 1976.

R 408.21405 Definitions; E to P.

Rule 405. (1) "Executive secretary" means secretary to the board.

(2) "Party" means the employer cited, the employee or employees affected by the citation, or their legal representative, and the department.

(3) "Person" means 1 or more individuals, partnerships, associations, corporations, business trusts, representatives, an organized group of individuals, or the state or a political subdivision of the state, or an agency, instrumentality, or authority thereof.

History: 1954 ACS 89, p. 108, Eff. Nov. 24, 1976.

R 408.21411 Computation of time.

Rule 411. In the computation of the period of time within which an act shall be performed or appeal filed, the calendar day from which the act shall be performed or appeal filed shall be excluded in the computation of time. The calendar day on which a compliance therewith is required shall be included. If the last day within which the act shall be performed or appeal filed is a Saturday, Sunday, or a legal holiday, that day shall be excluded and the period shall run until the end of the next day which is neither a Saturday, Sunday, or legal holiday.

History: 1954 ACS 89, p. 108, Eff. Nov. 24, 1976.

R 408.21412 Extension of time.

Rule 412. Requests for an extension of time for the filing of any document or application shall be received in advance of the date on which document or application is due to be filed.

History: 1954 ACS 89, p. 109, Eff. Nov. 24, 1976

R 408.21413 Filing.

Rule 413. (1) All documents, with the exception of the notice of appeal, shall be filed with the Board of Health and Safety Compliance and Appeals, State Secondary Complex, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909. The notice of appeal shall be filed with the division of the department that issued the citation.

(2) Delivery for filing may be accomplished by registered, certified, or first class mail or by personal delivery at the Board of Health and Safety Compliance and Appeals, State Secondary Complex, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

(3) Filing is deemed effective at the time of mailing or at the time of personal service at the board. The mailing date shall be presumed to be the postmark date appearing on the envelope if postage was prepaid and the envelope was properly addressed.

History: 1954 ACS 89, p. 109, Eff. Nov. 24, 1976; 1954 ACS 99, p. 121, Eff. May 23, 1979.

R 408.21414 Protection of trade secrets.

Rule 414. Upon application of a party, the board or a hearings officer shall issue such orders as may be appropriate to protect the confidentiality of trade secrets obtained in connection with an inspection, investigation, or proceedings conducted pursuant to the act.

History: 1954 ACS 89, p. 109, Eff. Nov. 24, 1976.

R 408.21415 Responsibility of employers to notify employees of proceedings.

Rule 415. (1) The employer shall, upon filing an appeal at the place where citations are required to be posted, post a copy of the notice of appeal and serve, by prepaid postage, first class mail, or by personal delivery, a copy of the notice of appeal on an authorized employee representative. The notice shall inform the affected employees of their right to party status and of the availability of all pleadings for their inspection and copying at reasonable times. The notice shall remain posted until the notice of hearing is received and posted. The employee rights statement made in the following form shall be deemed to comply with this rule:

"(name of employer) Your employer has been cited by the (Michigan Department of Labor or Michigan Department of Public Health) for violation of an occupational safety or health standard. The citation (or penalty) has been contested and will be the subject of a hearing before the Board of Health and Safety Compliance and Appeals. Affected employees are entitled to participate as parties under the terms and conditions established by the Board of Health and Safety Compliance and Appeals in its rules of procedure. Notice of intent to participate should be sent to the Board of Health and Safety Compliance and Appeals, Secondary Complex, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909. All documents filed relative to this matter and a copy of the board rules, may be inspected at (place reasonably convenient to employees, preferably at or near work place)."

(2) Where appropriate, the second sentence of the above notice shall be deleted and the following sentence shall be substituted: "The reasonableness of the period prescribed by the (department of labor or department of public health) for the abatement of the violation has been contested and will be the subject of a hearing before the Board of Health and Safety Compliance and Appeals."

History: 1954 ACS 89, p. 109, Eff. Nov. 24, 1976; 1954 ACS 99, p. 121, Eff. May 23, 1979.

R 408.21416 Responsibility of employee to notify employer and other employees of proceedings.

Rule 416. Where an employee petition relating to the reasonableness of the abatement period is filed by an employee or an authorized employee representative, a copy of the employee petition shall be provided to the employer by the department for posting at or near the place where the citation is required to be posted.

History: 1954 ACS 89, p. 109, Eff. Nov. 24, 1976.

R 408.21417 Parties and representatives.

Rule 417. (1) Employees may elect to participate as parties at any time before the commencement of a hearing, unless, for good cause shown, the board allows an election at a later time.

(2) Where an employee appeal is filed with respect to the reasonableness of a period of abatement of a violation, the employer charged with the responsibility of abating the violation may elect party status at any time before the commencement of the hearing, unless, for good cause shown, the board allows an election at a later time.

(3) An authorized employee representative who files an appeal shall be responsible for serving a copy of the appeal with an authorized employee representative whose members are affected.

(4) The department shall be a party to all proceedings before the board.

History: 1954 ACS 89, p. 109, Eff. Nov. 24, 1976; 1954 ACS 99, p. 121, Eff. May 23, 1979.

R 408.21418 Representative of parties.

Rule 418. (1) A party may appear in person or by a representative.

(2) Nothing contained herein shall be construed to require a representative to be an attorney-at-law.

History: 1954 ACS 89, p. 110, Eff. Nov. 24, 1976.

DOCUMENTS

R 408.21421 Form of documents.

Rule 421. (1) There are no specific requirements relative to the form of documents.

(2) A document shall contain:

(a) A caption sufficient to identify the parties.

(b) The board's docket number, if assigned.

(c) A clear, plain statement of the relief sought, together with the grounds therefor.

(d) A signature by the party involved or by his representative.

History: 1954 ACS 89, p. 110, Eff. Nov. 24, 1976.

R 408.21422 Notice of hearing.

Rule 422. (1) The board shall, immediately upon receiving a notice of hearing from the department, send the notice of hearing to all parties. The employer shall post a copy of the notice of hearing at the place where the notice of appeal was required to be posted, and serve by prepaid postage, first class mail, or by personal delivery, a copy of the notice on an authorized employee representative. Notice of hearing shall remain posted until the conclusion of the hearing.

(2) The notice of hearing, which has been prepared by the department, shall have endorsed thereon prior to the mailing to the parties, a date of hearing.

(3) The notice of hearing shall comply with the requirements of section 71 of Act No. 306 of the Public Acts of 1969, as amended, being §24.271 of the Michigan Compiled Laws, as follows:

(a) The parties shall be given an opportunity for a hearing without undue delay.

(b) The parties shall be given a reasonable notice of the hearing. The notice shall include:

(i) A statement of the date, hour, place, and nature of the hearing. Unless otherwise specified in the notice, the hearing shall be held at the principal office of the agency.

(ii) A statement of the legal authority and jurisdiction under which the hearing is to be held.

(iii) A reference to the particular sections of the statutes and rules involved.

(iv) A short and plain statement of the matters asserted. If the agency or other party is unable to state the matters in detail at the time the notice is given, the initial notice may state the issues involved. Thereafter, on application, the agency or other party shall furnish a more definite and detailed statement of the issues.

History: 1954 ACS 89, p. 110, Eff. Nov. 24, 1976; 1954 ACS 99, p. 122, Eff. May 23, 1979.

R 408.21423 Intervention.

Rule 423. (1) A petition for leave to intervene may be filed at any stage of a proceeding before commencement of the hearing.

(2) The petition shall set forth the interest of the petitioner in the proceeding and show that the participation of the petitioner shall assist in the determination of the issues in question, and that the intervention shall not unnecessarily delay the proceeding.

(3) The board or the hearings officer may grant a petition for intervention to such an extent and upon such terms as the board or the hearings officer determines.

History: 1954 ACS 89, p. 110, Eff. Nov. 24, 1976.

R 408.21424 Statement of position and oral participation.

Rule 424. At any time prior to the commencement of a hearing, a person entitled to appear as a party or an intervenor may file a statement of position with respect to any issue to be heard.

History: 1954 ACS 89, p. 110, Eff. Nov. 24, 1976.

R 408.21425 Withdrawal of notice of appeal.

Rule 425. At any stage of the proceeding, a party may withdraw his appeal or petition.

History: 1954 ACS 89, p. 110, Eff. Nov. 24, 1976.

R 408.21426 Prehearing conference.

Rule 426. (1) At any time before a hearing, the board or hearings officer, on its own motion or on motion of a party, may direct the parties to exchange information or to participate in a prehearing conference for the purpose of considering matters which will tend to simplify the issues or expedite the proceedings.

(2) The hearings officer shall issue a prehearing statement which shall include the agreements reached by the parties. This statement shall be served on the parties and shall be a part of the record.

History: 1954 ACS 89, p. 111, Eff. Nov. 24, 1976.

R 408.21427 Issuance of subpoenas; petitions to revoke or modify subpoenas; right to inspect or copy data.

Rule 427. (1) The board shall, on the written application of a party, issue subpoenas requiring the attendance and testimony of witnesses and the production of any evidence, including relevant books, records, correspondence, or documents, in his possession or under his control. An application for a subpoena may be made ex parte. The subpoena shall show on its face the name and address of the party at whose request the subpoena was issued.

(2) Witness fees shall be paid to subpoenaed witnesses by the party who sought the subpoena. Witnesses ordered to appear in a proceeding pending before the board shall be entitled to the same fees as paid for like services in the circuit court.

History: 1954 ACS 89, p. 111, Eff. Nov. 24, 1976.

R 408.21428 Failure to appear.

Rule 428. (1) If a party fails to appear in a contested case after proper notice, the hearing may proceed in the absence of the party.

(2) The hearings officer, upon request filed within 10 days after the scheduled hearing date and upon a showing of good cause, may excuse the failure to appear. In that event, the hearing shall be rescheduled.

History: 1954 ACS 89, p. 111, Eff. Nov. 24, 1976.

R 408.21429 Transcript of testimony.

Rule 429. A hearing shall be recorded verbatim. A transcript of the testimony shall be prepared upon request of a party or the board. A transcript shall be duly certified by the reporter. Parties requesting a transcript shall pay for the transcript.

History: 1954 ACS 89, p. 111, Eff. Nov. 24, 1976.

HEARINGS

R 408.21431 Duties and powers of hearings officer.

Rule 431. (1) The hearings officer shall conduct a fair and impartial hearing, assure that the facts are fully elicited, adjudicate all issues, and avoid delay.

(2) The hearings officer shall have authority, with respect to cases assigned to him between the time he is designated and the time he issues his report and subject to the rules of the board and the provisions of chapter 4 of Act No. 306 of the Public Acts of 1969, being §24.271 et seq. of the Michigan Compiled Laws, to do the following:

(a) Administer oaths and affirmations.

(b) Sign and issue subpoenas in the name of the agency and require the attendance and giving of testimony by witnesses and the production of books, papers, and other documentary evidence.

(c) Provide for the taking of testimony by deposition.

(d) Regulate the course of the hearings, set the time and place for continued hearings, and fix the time for filing of briefs and other documents.

(e) Direct the parties to appear and confer to consider simplification of the issues by consent of the parties.

History: 1954 ACS 89, p. 111, Eff. Nov. 24, 1976.

R 408.21432 Report of hearings officer.

Rule 432. (1) The report of the hearings officer shall include findings of fact, conclusions of law, and a determination.

(2) The hearings officer shall sign and date the report. Upon filing of the report with the executive secretary and the parties, jurisdiction shall rest solely in the board. All motions, petitions, and other pleadings filed subsequent to the filing of the report shall be addressed to the executive secretary.

(3) The report of the hearings officer shall become the final order of the board 30 days after filing with the board and parties, unless a board member directs that the report be reviewed and acted upon by the board.

(4) A party may file with the board exceptions, including written arguments, to the report of the hearings officer. Exceptions shall be received by the board within 20 days of the filing of the report.

History: 1954 ACS 89, p. 111, Eff. Nov. 24, 1976.

R 408.21433 Authority of board.

Rule 433. (1) In reviewing a report of a hearings officer, the board, by a vote of not less than a majority of its members, may:

(a) Dismiss or modify the citation.

(b) Modify the abatement time of the citation.

(c) Issue a final order sustaining the citation, the abatement time, or the assessed penalty.

(d) Vacate or modify assessed penalties.

(e) Remand the case for the taking of additional evidence or for correction of proceedings.

(f) Direct other appropriate relief.

(2) Upon a showing by an employer that a good faith effort has been made to comply with the abatement requirements of a citation that has become a final order of the board as provided in the act, and that the abatement has not been completed because of circumstances beyond the reasonable control of the employer, the board, after a hearing if requested by the employer, affected employees, or the department, shall issue an order affirming or modifying the abatement requirements in the citation.

History: 1954 ACS 89, p. 112, Eff. Nov. 24, 1976.

R 408.21434 Oral argument before the board; briefs; remand by board.

Rule 434. (1) Oral argument before the board shall not ordinarily be allowed.

(2) The board, upon request, may permit a party to submit a brief relative to an issue raised in the matter before it. The board may request briefs from the parties.

(3) In the event the board finds that the record is inadequate, the board may order the matter remanded to a hearings officer for a rehearing.

History: 1954 ACS 89, p. 112, Eff. Nov. 24, 1976.

PETITIONS

R 408.21441 Petition for modification of abatement period.

Rule 441. (1) An employer may file a petition for modification of abatement date when the employer has made a good faith effort to comply with the abatement requirements of a citation, that has become a final order of the board, but the abatement has not been completed because of the factors beyond the employer's reasonable control.

(2) A petition for modification of abatement date shall be in writing and shall include the following information:

(a) Steps taken by the employer, and the dates of those steps in an effort to achieve compliance during the prescribed abatement period.

(b) The specific additional abatement time needed in order to achieve compliance.

(c) The reasons the additional time is necessary, including the unavailability of professional or technical personnel or of materials and equipment, or because necessary construction or alteration of facilities cannot be completed by the original abatement date.

(d) Available interim steps being taken to safeguard the employees against the cited hazard during the abatement period.

(e) A certification that the petition for modification of abatement date has been filed and posted in accordance with subrule (4).

(3) A petition for modification of abatement date shall be filed with the board no later than the close of the next working day following the date on which abatement was originally required. A petition filed later shall be accompanied by the employer's statement of exceptional circumstances explaining the delay.

(4) On the same day that the petition is filed with the board, a copy of the petition shall be filed with the department that issued the citation and a copy shall be posted by the employer in a conspicuous place at or near the place where the citation was required to be posted and remain so posted for a period of 10 working days.

(5) The department, affected employees, or their representatives may file written objection to the petition with the board setting forth the reasons for opposing the petition. An objecting party shall also file a copy of the written objection with the other parties. Failure to file an objection within 10 working days of the date of filing the petition shall constitute a waiver of any further right to object to the petition.

(6) The board may approve without a hearing a petition for modification of an abatement date to which an objection has not been filed.

(7) Where a petition is objected to by the department or affected employees, the petition shall be processed as follows:

(a) The board shall process the petition in the same manner as any other contested case, except that a hearing on the petition shall be handled in an expeditious fashion.

(b) An employer petitioning for a modification of an abatement period shall have the burden of proving by a preponderance of the evidence that he has made a good faith effort to comply with the abatement requirements of the citation and that abatement has not been completed because of factors beyond his control.

History: 1954 ACS 89, p. 112, Eff. Nov. 24, 1976.

MISCELLANEOUS PROVISIONS

R 408.21442 Settlement.

Rule 442. (1) Settlement is encouraged at any stage of the proceedings where the settlement is consistent with the provisions and objectives of the act.

R 408.21443 Ex parte communication.

Rule 443. There shall not be ex parte communication, with respect to the merits of a case not concluded, between the board, including a member, officer, employee or agent of the board who is employed in the decisional process, and a party.

History: 1954 ACS 89, p. 113, Eff. Nov. 24, 1976.

R 408.21444 Restriction as to participation by investigative or prosecuting officers.

Rule 444. In a proceeding noticed pursuant to the rules, the director shall not participate or advise, except as a party to the proceeding, with respect to the report of the hearings officer or the board decision.

History: 1954 ACS 89, p. 113, Eff. Nov. 24, 1976.

R 408.21445 Inspection and reproduction of documents.

Rule 445. (1) Subject to the provision of law restricting public disclosures of information, a person may, at the offices of the board, inspect and copy a document filed in a proceeding.

(2) Actual costs of reproduction shall be borne by the person seeking the document.

History: 1954 ACS 89, p. 113, Eff. Nov. 24, 1976.

R 408.21446 Restriction with respect to former employee.

Rule 446. (1) A former employee of the board or of the director, including a member of the board or the director, shall not appear before the board as an attorney or other representative for a party in a contested case in which that person participated personally and substantially during the period of that person's employment.

(2) A former employee of the board or of the director, including a member of the board or the director, shall not appear before the board as an attorney or other representative for a party in a proceeding or other matter, formal or informal, for which that person was personally responsible during the period of that person's employment, unless 1 year has elapsed since the termination of the employment.

(3) The prohibition against participation as an attorney or other representative as specified in subrules (1) and (2) applies to the attorney general and the assistants of the attorney general who serve the department.

History: 1954 ACS 89, p. 113, Eff. Nov. 24, 1976.

R 408.21447 Amendment to rules.

Rule 447. The board may at any time upon its motion or initiative, or upon written suggestion of an interested person setting forth reasonable grounds

DEPARTMENTS OF LABOR AND PUBLIC HEALTH

OCCUPATIONAL SAFETY AND HEALTH

(By authority conferred on the departments of labor and public health by section 69 of Act No. 154 of the Public Acts of 1974, being §408.1069 of the Michigan Compiled Laws)

PART 11. RECORDING AND REPORTING OF OCCUPATIONAL INJURIES AND ILLNESSES GENERAL PROVISIONS

R 408.22101 Scope.

Rule 1101. These rules provide for recordkeeping and reporting by employers covered under the act as necessary or appropriate for enforcement of the act, for developing information regarding the causes and prevention of occupational injuries and illnesses, and for maintaining a program of collection, compilation, and analysis of occupational safety and health statistics.

History: 1954 ACS 86, p. 75, Eff. Mar. 12, 1976.

R 408.22102 Intent.

Rule 1102. (1) These rules are substantially identical to the federal occupational safety and health act (OSHA) recordkeeping and reporting requirements, as contained in 29 C.F.R. Part 1904 (1971, 1972), to assure that employers maintaining records pursuant to these rules are in compliance with the federal requirements and need not maintain additional records or submit additional records pursuant to the federal regulations. See R 408.22119 of this part on the use of OSHA forms.

(2) This part shall not negate the recordkeeping and reporting requirements as prescribed by sections 18 and 24 of Public Law 91-596, 29 U.S.C. sections 667 and 673.

History: 1954 ACS 86, p. 75, Eff. Mar. 12, 1976.

R 408.22103 Applicability; exceptions; compilation and processing of petitions.

Rule 1103. (1) An employer who had not more than 7 employees at any one time during the calendar year immediately preceding the current calendar year need not comply with the requirements of this part, except R 408.22117 concerning fatalities, or multiple hospitalization accidents or exposures.

(2) Subrule (1) does not apply when an employer has been notified in writing by the department that he has been selected to participate in a statistical survey of recordable occupational injuries and illnesses. If selected, an employer shall maintain a log of recordable occupational injuries and illnesses, form MIOSHA 100, pursuant to R 408.22111, and shall make reports pursuant to R 408.22141 for the period of time which is specified in the notice.

(3) The department of labor shall supply copies of the forms provided for in these rules and shall compile, correct, and analyze data obtained pursuant to these rules. It shall process petitions for exceptions to these rules from public employers. The bureau of labor statistics of the U.S. department of labor shall process petitions for exceptions from private employers to insure uniformity between federal and state rules.

History: 1954 ACS 86, p. 75, Eff. Mar. 12, 1976; 1954 ACS 99, p. 123, Eff. May 23, 1979.

R 408.22104 Definitions; A to D.

Rule 1104. (1) "Act" means Act No. 154 of the Public Acts of 1974, as amended, being §408.1001 et seq. of the Michigan Compiled Laws.

(2) "Affected employee" means an employee who would be affected by the granting or denial of an exception, or an authorized representative as defined by the act.

(3) "Department" means the department of labor or the department of public health.

(4) "Director" means the director of the department of labor or the director of the department of public health.

History: 1954 ACS 86, p. 76, Eff. Mar. 12, 1976.

R 408.22105 Definitions; E, F.

Rule 1105. (1) "Employer" means an individual or organization, including the state or a political subdivision, which employs 1 or more persons.

(2) "Establishment" means a single physical location where business is conducted or where services or operations are performed, including a factory, mill, store, hotel, restaurant, movie theater, farm, ranch, bank, sales office, warehouse, central administrative office, a single school within a school district, a city garage within the department of public works, a branch office of the department of state, or a police station within the police department of a city. Where distinctly separate activities are performed at a single physical location, such as contract construction activities operated from the same physical location as a lumberyard, each activity shall be treated as a separate establishment.

(3) "First aid" means one-time treatment, and any follow-up visit for the purpose of observation of minor scraches, cuts, burns, and splinters which do not ordinarily require medical care. This one-time treatment, and follow-up visit for the purpose of observation, is considered first aid even though provided by a physician or registered professional personnel.

History: 1954 ACS 86, p. 76, Eff. Mar. 12, 1976.

R 408.22106 Definitions; H to M.

Rule 1106. (1) "Hospitalization" means to be admitted to a hospital, clinic, or infirmary as a bed patient.

(2) "Lost workdays" means the number of workdays, consecutive or not, on which the employee would have worked, but could not because of occupational injury or illness; or any day of restricted work activity because of occupational injury or illness during which the employee could not perform all or any part of the normal work assignment. The number of lost workdays does not include the day of injury or onset of illness or days on which the employee would not have worked even though able to work.

(3) "Medical treatment" means treatment administered by a physician or by registered professional personnel under the standing orders of a physician. Medical treatment does not include first aid treatment even though provided by a physician or registered professional personnel.

History: 1954 ACS 86, p. 76, Eff. Mar. 12, 1976.

R 408.22107 Definitions; O to R.

Rule 1107. (1) "Occupational illness" means an abnormal condition or disorder, other than 1 resulting from an occupational injury, caused by exposure to environmental factors associated with employment. It includes acute and chronic illnesses or diseases which may be caused by inhalation, absorption, ingestion, or direct contact.

(2) "Occupational injury" means an injury such as a cut, fracture, sprain, or amputation, which results from a work accident or from an exposure involving a single incident in the work environment.

(3) "Recordable occupational injuries or illnesses" means any of the following:

(a) Occupational deaths, regardless of the time between injury and death, or the length of the illness.

(b) Occupational illnesses.

(c) Occupational injuries which involve 1 or more of the following: loss of consciousness, restriction of work or motion, transfer to another job, or medical treatment other than first aid.

(d) A case which involves lost workdays.

History: 1954 ACS 86, p. 76, Eff. Mar. 12, 1976.

R 408.22111 Log and summary of recordable occupational injuries and illnesses; maintenance; location; recording injuries and illnesses; completing forms.

Rule 1111. (1) An employer shall maintain, for each establishment, a log and summary of recordable occupational injuries and illnesses for that establishment. An employer may maintain the log and summary of recordable occupational injuries and illnesses at a central administrative office or at another location under the circumstances described in subrule (4).

(2) An employer shall enter each recordable occupational injury and illness in the log and summary as early as practicable, but not later than 6 working days after receiving information that a recordable case has occurred. For this purpose, form MIOSHA No. 200 or its equivalent shall be used.

(3) Form MIOSHA No. 200 or its equivalent shall be completed in the detail required by the form and the instruction contained in form MIOSHA No. 200. If a form equivalent to form MIOSHA No. 200 is used, such as a print-out from data processing equipment, the information shall be as readable and comprehensible to a person not familiar with the data processing equipment as the form MIOSHA No. 200 itself is readable and comprehensible.

(4) An employer may maintain the log and summary of recordable occupational injuries and illnesses at a place other than the establishment or by means of data processing equipment, or both, under the following circumstances:

(a) When there is available, at the place where the log and summary is maintained, sufficient information to complete the log and summary to a date within 6 working days after receiving information that a recordable case has occurred, as required by subrule (2).

(b) When there is available, at each of the employer's establishments, a copy of the log and summary that reflects separately any recordable occupational injury and illness experience of that establishment, complete and current to a date within 45 calendar days.

History: 1954 ACS 86, p. 77, Eff. Mar. 12, 1976; 1954 ACS 99, p. 123, Eff. May 23, 1979.

R 408.22112 Periods covered.

Rule 1112. A log and summary shall be established on calendar year basis. The initial log and summary shall include recordable occupational injuries and illnesses occurring on and after the effective date of these rules.

History: 1954 ACS 86, p. 77, Eff. Mar. 12, 1976; 1954 ACS 99, p. 123, Eff. May 23, 1979.

R 408.22113 Supplementary record; completing forms.

Rule 1113. (1) In addition to the log and summary of recordable occupational injuries and illnesses prescribed in R 408.22111, an employer shall have available

for inspection at each establishment, within 6 working days after receiving information that a recordable case has occurred, a supplementary record for each recordable occupational injury or illness for that establishment.

(2) The record shall be completed in the detail prescribed in the instructions accompanying form MIOSHA No. 101, Michigan workmen's compensation form 100, revised on or after 8-72, insurance, or other reports are acceptable alternative records if they contain the information required by form MIOSHA No. 101. If an acceptable alternative record is not maintained for other purposes, form MIOSHA No. 101 shall be used, or the necessary information shall be otherwise maintained.

History: 1954 ACS 86, p. 77, Eff. Mar. 12, 1976; 1954 ACS 99, p. 123, Eff. May 23, 1979.

R 408.22114 Annual summary; posting; contents; time completed; certification by employer; posting and mailing copies; exemption from posting.

Rule 1114. (1) An employer shall post an annual summary of occupational injuries and illnesses for each establishment. This summary shall consist of a copy of the year's totals from the form MIOSHA No. 200 and the following information from that form: calendar year covered, company name, establishment name, establishment address, certification signature, title, and date. A form MIOSHA No. 200 shall be used in presenting the summary. If no injuries or illnesses occurred in the year, zeros shall be entered on the totals line, and the form shall be posted.

(2) The summary shall be completed not later than 1 month after the close of each calendar year beginning with that part of the calendar year covered by the effective date of these rules.

(3) The employer, or the officer or employee of the employer who supervises the preparation of the annual summary of recordable occupational injuries and illnesses, shall certify that the annual summary of recordable occupational injuries and illnesses is true and complete. The certification shall be accomplished by affixing the signature of the employer, or the officer or employee of the employer who supervises the preparation of the annual summary of recordable occupational injuries and illnesses, to the lower right-hand corner of the annual summary or by appending a separate statement to the annual summary certifying that the annual summary is true and complete to the best of his knowledge.

(4) The employer shall post a copy of the establishment's summary in each establishment in the same manner that notices are required to be posted pursuant to section 67(1) of the act, that is, in a central and conspicuous location, or for normal observation by employees. The summary covering the previous calendar year shall be posted not later than February 1, and shall remain in place until March 1.

(5) For employees who do not primarily report or work at a single establishment or who do not report to a fixed establishment on a regular basis, an employer shall satisfy this posting requirement by presenting or mailing a copy of the summary during the month of February of the following year to each such employee who receives pay during that month.

(6) For multi-establishment employers where operations have closed down in some establishments during the calendar year, it is not necessary to post summaries for those establishments.

History: 1954 ACS 86, p. 77, Eff. Mar. 12, 1976; 1954 ACS 99, p. 124, Eff. May 23, 1979.

R 408.22115 Retention of records.

Rule 1115. Records provided for in R 408.22111, R 408.22113, and R 408.22114 shall be retained in each establishment for 5 years following the end of the year to which they relate.

History: 1954 ACS 86, p. 78, Eff. Mar. 12, 1976.

R 408.22116 Access to records.

Rule 1116. Records provided for in R 408.22111, R 408.22113, and R 408.22114 shall be available for inspection and copying by safety officers of the department of labor and industrial hygienists of the department of public health during an occupational safety or health inspection or investigation provided for pursuant to section 29 of the act.

History: 1954 ACS 86, p. 78, Eff. Mar. 12, 1976.

R 408.22117 Reporting of fatality or multiple hospitalization accident; contents; additional reports.

Rule 1117. An employer shall, within 48 hours after the occurrence of a fatality arising from an employment accident or illness, or the hospitalization of 5 or more employees suffering injury from the same accident, or illness from exposure to the same health hazard associated with their employment, report the incident, either orally or in writing to the Department of Labor, Bureau of Safety and Regulation, State Secondary Complex, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909, phone (517) 322-0333. The report may be made by telephone or telegraph. The report shall include the name and address of employer, date and time of accident, address of accident, name of employee affected, nature of work, nature of injuries, and a description of the occurrence. The director may require such additional reports, in writing or otherwise, as deemed necessary concerning the accident or exposure.

History: 1954 ACS 86, p. 78, Eff. Mar. 12, 1976; 1954 ACS 99, p. 124, Eff. May 23, 1979.

R 408.22118 Falsification, or failure to keep records or reports.

Rule 1118. (1) Whoever knowingly makes a false statement, representation, or certification in an application, record, report, plan or other document filed or required to be maintained pursuant to the act, or fails to maintain or transmit records or reports as required under the act, shall be subject to the provisions of section 35(7) of the act.

(2) Failure to maintain records or file reports required by this part, or in the details required by forms and instructions issued under this part, is a violation of the act and may result in the issuance of citations and assessment of penalties as provided for in sections 33, 35, 41, and 42 of the act.

History: 1954 ACS 86, p. 78, Eff. Mar. 12, 1976.

R 408.22119 Recordkeeping on federal OSHA forms.

Rule 1119. Records maintained by an employer pursuant to this part on the federal recordkeeping forms OSHA 101 and OSHA 200 shall be regarded as in compliance with the state requirements as provided in this part.

History: 1954 ACS 86, p. 78, Eff. Mar. 12, 1976; 1954 ACS 99, p. 124, Eff. May 23, 1979.

R 408.22120 Change of ownership.

Rule 1120. When an establishment has changed ownership, the employer shall be responsible for maintaining records and filing reports only for that period of the year during which he owned the establishment. The employer shall preserve those records of the prior ownership which are required to be kept under this part. These records shall be retained at each establishment to which they relate, for the period, or remainder thereof, required in R 408.22115.

History: 1954 ACS 86, p. 78, Eff. Mar. 12, 1976.

R 408.22121 Employees not in fixed establishments.

Rule 1121. An employer of employees engaged in physically dispersed operations such as occur in construction, installation, repair, or service activities, who do not report to any fixed establishment on a regular basis but are subject to common supervision, may satisfy R 408.22111, R 408.22113, and R 408.22114 with respect to those employees by:

(a) Maintaining the required records for each operation or group of operations at a place to which employees report each day.

(b) Maintaining the required records for each operation or group of operations which is subject to common supervision, such as a field superintendent or field supervisor, in an established central place:

(i) Having the address and telephone number of the central place available at each worksite.

(ii) Having personnel available at the central place during normal business hours to provide information from the records maintained there by telephone and by mail.

(c) Maintaining the required records for personnel who do not primarily report or work at a single establishment, and who are generally not supervised in their daily work, such as traveling salesmen, technicians, and engineers, at the location from which personnel operate to carry out their activities, including a district branch office or central administrative office from which supplies, assignments, or paychecks are issued.

History: 1954 ACS 86, p. 79, Eff. Mar. 12, 1976.

R 408.22122 Exceptions for employer having fewer than 10 employees; obligations.

Rule 1122. An employer who had no more than 10 employees at any time during the calendar year immediately preceding the current calendar year need not comply with any of the requirements of this part, except the employer shall comply with the following:

(a) Obligation to report under R 408.22117 concerning fatalities or multiple hospitalization accidents.

(b) Obligation to maintain a log and summary of occupational injuries and illnesses under R 408.22111 and to make reports under R 408.22142 upon being notified in writing by the U.S. department of labor, bureau of labor statistics, that the employer has been selected to participate in a statistical survey of occupational injuries and illnesses.

History: 1954 ACS 99, p. 124, Eff. May 23, 1979.

PETITIONS FOR EXCEPTIONS TO RECORDKEEPING

R 408.22131 Employer petition for alternate record maintenance.

Rule 1131. A public employer who wishes to maintain records in a manner different from that required by this part shall submit a petition containing the information prescribed in R 408.22133 to the Department of Labor, Bureau of Safety and Regulation, State Secondary Complex, 7150 Harris Drive, Box 30015, Lansing, Michigan 48909.

History: 1954 ACS 86, p. 79, Eff. Mar. 12, 1976; 1954 ACS 99, p. 125, Eff. May 23, 1979.

R 408.22132 Opportunity for comment.

Rule 1132. Affected employees or their representatives shall have an opportunity to submit written data, views, or arguments concerning the petition to the

director within 10 working days following the receipt of notice prescribed in R 408.22133(e).

History: 1954 ACS 86, p. 79, Eff. Mar. 12, 1976.

R 408.22133 Contents of petitions.

Rule 1133. A petition filed by a public employer shall include:

(a) The name and address of the applicant.

(b) The address of the place or places of employment involved.

(c) Specifications of the reasons for seeking relief.

(d) A description of the different recordkeeping procedures which are proposed by the applicant.

(e) A statement that the applicant has informed his affected employees of the petition by giving a copy thereof to them, or to their authorized representative, and by posting a statement giving a summary of the petition. A statement posted pursuant to this subdivision shall be posted in each establishment in the same manner that notices are required to be posted under section 67(1) of the act, that is, in a central and conspicuous location or for normal observation by employees. The applicant shall state that he has informed his affected employees of their rights as prescribed in R 408.22132.

History: 1954 ACS 86, p. 79, Eff. Mar. 12, 1976.

R 408.22134 Additional notices and conferences.

Rule 1134. (1) In addition to the actual notice provided for in R 408.2133(e), the director may provide or cause to be provided such additional notice of the petition as he deems appropriate.

(2) The director may afford an opportunity to interested parties for informal conference or hearing concerning the petition.

History: 1954 ACS 86, p. 79, Eff. Mar. 12, 1976.

R 408.22135 Action.

Rule 1135. After review of the petition and of comments submitted in regard thereto, and upon completion of any necessary appropriate investigation concerning the petition, if the director finds that the alternative procedure proposed shall not hamper or interfere with the purposes of the act and shall provide equivalent information, he may grant the petition subject to such conditions as he may determine appropriate, and subject to revocation for cause.

History: 1954 ACS 86, p. 79, Eff. Mar. 12, 1976.

R 408.22136 Notice of exception; publication.

Rule 1136. Notice that an exception has been granted as prescribed by this part shall be published in the LABORegister, a monthly publication of the department of labor. This notice may summarize the alternative to the rules involved which the particular exception permits.

History: 1954 ACS 86, p. 80, Eff. Mar. 12, 1976; 1954 ACS 99, p. 125, Eff. May 23, 1979.

R 408.22137 Revocation.

Rule 1137. The director may revoke an exception granted under this part for failure to comply with the conditions of the exception. An opportunity for informal hearing or conference shall be afforded to the employers and affected employees, or their representatives. Except in cases of wilful noncompliance or where employee safety or health requires otherwise, before the commencement of an informal proceeding, the employer shall be:

(a) Notified in writing of the facts or conduct which may warrant the action.

(b) Given an opportunity to demonstrate or achieve compliance.

History: 1954 ACS 86, p. 80, Eff. Mar. 12, 1976.

R 408.22138 Compliance after submission of petition.

Rule 1138. The submission of a petition, or a delay by the director in acting upon a petition, shall not relieve an employer from any obligation to comply with this part. The director shall give notice of the denial of a petition within a reasonable time.

History: 1954 ACS 86, p. 80, Eff. Mar. 12, 1976.

STATISTICAL REPORTING

R 408.22141 Description of statistical program.

Rule 1141. (1) The department of labor and the department of public health shall develop and maintain a program of collection, compilation, and analysis of occupational safety and health statistics. The program shall consist of periodic surveys of occupational injuries and illnesses. An employer covered by the act may be chosen to participate in the surveys.

(2) The sample design encompasses probability procedures, detailed stratification by industry and size, and a systematic selection within strata. Some industries shall be sampled more heavily than others depending on the injury rate level based on previous experience. The survey should produce adequate estimates for most 4-digit standard industrial classification (SIC) industries in manufacturing and for 3-digit SIC classification in nonmanufacturing.

History: 1954 ACS 86, p. 80, Eff. Mar. 12, 1976.

R 408.22142 Duties of employer; submission of survey form.

Rule 1142. Upon receipt of an occupational injuries and illness survey form, pursuant to R 408.22141 of this part, the employer shall promptly complete the form pursuant to the instructions contained therein, and return it in accordance with those instructions. Nothing in these rules shall affect the duties of employers to submit statistical report forms under this part.

History: 1954 ACS 86, p. 80, Eff. Mar. 12, 1976; 1954 ACS 99, p. 125, Eff. May 23, 1979.

PART 12. VARIANCES

GENERAL PROVISIONS

R 408.22201 Purpose and scope.

Rule 1201. (1) This part pertains to the practice and procedure for administrative proceedings to grant variances under sections 27(1), (2), and (4) of the Michigan occupational safety and health act.

(2) These rules shall be construed and applied to secure a prompt and just conclusion of the proceedings subject hereto.

(3) These rules shall not apply to experimental variances which may be granted pursuant to section 27(3) of the act. Whenever experimental variances are sought or requested, the procedures for granting the variances shall be in accordance with the intent of the procedures of these rules, but shall be adapted to the circumstances of the request.

History: 1954 ACS 86, p. 80, Eff. Mar. 12, 1976.

R 408.22203 Definitions; A to E.

Rule 1203. (1) "Act" means Act No. 154 of the Public Acts of 1974, as amended, being §408.1001 et seq. of the Michigan Compiled Laws.

(2) "Administrative procedures act" means Act No. 306 of the Public Acts of 1969, as amended, being §24.201 et seq. of the Michigan Compiled Laws.

(3) "Affected employee" means an employee who would be affected by the issuance or denial of a variance or any of his authorized representatives, such as his collective bargaining agent.

(4) "Department" means the department of labor or the department of public health.

(5) "Director" means the director of the department of labor or the director of the department of public health.

(6) "Experimental variance" means a written order issued by a department authorizing an employer to deviate from the requirements of an occupational safety or health standard while conducting or participating in an experiment to demonstrate or validate techniques to safeguard the health or safety of workers.

History: 1954 ACS 86, p. 81, Eff. Mar. 12, 1976.

R 408.22204 Definitions; I to T.

Rule 1204. (1) "Interim order" means a written order issued by the department authorizing an employer to continue to operate equipment, or to carry on processes, procedures, or practices which do not meet the requirements of a standard pending a determination on the merits of a variance application.

(2) "Party" means a person admitted to participate in a hearing conducted pursuant to these rules. An applicant for relief and any affected employee shall be entitled to be named parties. A department shall be deemed to be a party without the necessity of being named.

(3) "Permanent variance" means a written order issued by a department authorizing an employer to deviate from the requirements of an occupational safety or health standard when protection is provided to employees equal to that which would be provided by compliance with the requirements of the standard.

(4) "Person" means an individual, partnership, association, corporation, business trust, legal representative, or organized group of individuals, or an agency, authority, or instrumentality of the state or a political subdivision thereof.

(5) "Temporary variance" means a written order issued by a department authorizing an employer to deviate from the requirements of an occupational safety or health standard prior to the effective date of the standard for the specific period of time necessary for the employer to achieve compliance with the standard.

History: 1954 ACS 86, p. 81, Eff. Mar. 12, 1976; 1954 ACS 99, p. 125, Eff. May 23, 1979.

R 408.22212 Effect of variance.

Rule 1212. A variance granted pursuant to this part shall have only future effect. In his discretion, a director may decline to entertain an application for a variance on a subject or issue concerning which a citation has been issued to the employer involved, and a proceeding on the citation or a related issue concerning a proposed penalty or period of abatement is pending before a department or the board of health and safety compliance and appeals, until the completion of that proceeding.

History: 1954 ACS 86, p. 81, Eff. Mar. 12, 1976.

R 408.22213 Notice of granted variance; publication.

Rule 1213. Notice that a variance has been granted under this part shall be published in the LABORegister, a monthly publication of the department of labor.

History: 1954 ACS 86, p. 81, Eff. Mar. 12, 1976; 1954 ACS 99, p. 125, Eff. May 23, 1979.

R 408.22214 Notice to applicant and affected employees.

Rule 1214. (1) A department, upon granting a variance, shall notify by mail the applicant and affected employees, if known, of the granting of the variance, including the terms and conditions thereof.

(2) An employer, upon receiving notice that a variance has been granted, shall notify affected employees of the granting of the variance by giving to them a copy of the variance and posting a statement containing a summary of the variance. A summary of the variance shall specify where a copy of the variance may be examined. The posting shall be at the area in which the affected employees work.

History: 1954 ACS 86, p. 81, Eff. Mar. 12, 1976.

R 408.22215 Form of documents, subscriptions, copies.

Rule 1215. A particular form is not prescribed for applications and other papers which may be filed in proceedings under these rules. However, an application and other papers shall be clearly legible, comply with the provisions of section 27 of the act, and be signed by the person filing them.

History: 1954 ACS 86, p. 82, Eff. Mar. 12, 1976.

APPLICATION FOR VARIANCE

R 408.22221 General.

Rule 1221. (1) An employer desiring a temporary or permanent variance from a standard, or a portion thereof, shall file a written application containing the information prescribed in this rule and R 408.22222 or R 408.22223 with the appropriate department, either the Michigan Department of Labor, Bureau of Safety and Regulation, State Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48909, or the Michigan Department of Public Health, Bureau of Industrial Health, 3500 N. Logan St., Lansing, Michigan 48914.

(2) An application for a variance shall include:

(a) The name and address of the firm, and the name and title of the person filing the application.

(b) The address of the place of employment involved.

(c) A specification of the standard, or portion thereof, from which the applicant seeks a variance.

(d) A request for a hearing, as provided in these rules.

(e) A statement that the applicant has informed affected employees of the application, at the time the application for a variance was filed, by giving a copy thereof to their authorized representative, if any, and by posting a copy of the application or a statement containing a summary of the application. A summary of the application shall specify where a copy of the application may be examined. Posting shall be at the area in which the affected employees work.

(f) A description of how affected employees have been informed of the variance application, and of their right to petition the director for a hearing.

(3) An interim order may be issued subject to the following conditions:

(a) An application for an interim order may be made to be effective until a decision is rendered on the application for the variance. An application for an interim order shall include a statement of facts and reasons as to why the applicant believes that the requested order should be granted. The department may rule ex parte upon the application for an interim order.

(b) The department may grant an interim order on its own motion.

(c) If an application for an interim order filed pursuant to subdivision (a) is denied, the applicant shall be given prompt written notice of the denial. This notice shall include a statement of the grounds for denial.

(d) If an interim order is granted, a copy of the order shall be served upon the applicant and other parties. The terms of the interim order may specify necessary or appropriate conditions. The order shall provide that the applicant shall give notice of the granting of the order and its terms to affected employees by the same means used to inform them of an application for a variance.

(4) Where the application for a variance concerns a state standard or a portion thereof, identical in requirements and substance to a federal standard, the applicant shall:

(a) Identify the identical federal standard.

(b) Certify whether the applicant has filed for a variance, on the same facts, with the assistant secretary for occupational safety and health, U.S. department of labor.

(c) Certify whether citations for violations of the identical federal standard, or portion thereof, have been issued to the applicant by the federal government. If a citation has been issued, identification shall be included.

(5) Variances granted by the U.S. department of labor to multistate employers pursuant to 29 C.F.R. 1905.13(c), (1975) shall be deemed as an authoritative interpretation of the employers' compliance obligation with the state standard.

History: 1954 ACS 86, p. 82, Eff. Mar. 12, 1976.

R 408.22222 Application for temporary variance.

Rule 1222. An employer submitting an application for a temporary variance shall include in the application, in addition to the information required in R 408.22221, the following:

(a) A statement that the applicant is unable to comply with the standard, or portion thereof, and a detailed explanation of the reason why.

(b) A statement of the steps the applicant has taken and shall take, with specific dates where appropriate, to protect employees against the hazard covered by the standard.

(c) A statement indicating when the applicant shall comply with the standard, and what steps the applicant has taken and shall take, with specific dates where appropriate, to comply with the standard.

(d) A statement of the facts establishing that the applicant is unable to comply with a standard by its effective date because of the unavailability of professional or technical personnel, because of the unavailability of materials needed to come into compliance with the standard, or because necessary construction or alteration of facilities cannot be completed by the effective date.

History: 1954 ACS 86, p. 83, Eff. Mar. 12, 1976.

R 408.22223 Application for permanent variance.

Rule 1223. An employer submitting an application for a permanent variance shall include in the application, in addition to the information required in R 408.22221, the following:

(a) A description of the conditions, practices, means, methods, operations, and processes used or proposed to be used by the applicant.

(b) How the conditions, practices, means, methods, operations, and processes used or proposed to be used would provide employment to employees which is as safe and healthful as those required by the standard for which a variance is sought.

History: 1954 ACS 86, p. 83, Eff. Mar. 12, 1976.

R 408.22224 Application for modification, revocation, and renewal of variance; contents; informing affected employees; furnishing copy of application to employer; notice of intent to revoke or modify a variance; publication of notice.

Rule 1224. (1) An employer or an affected employee may apply in writing to

the department for a modification, revocation, or renewal of a variance issued under section 27 of the act. The application shall contain:

(a) The name and address of the firm, and the name and title of the applicant.

(b) A description of the relief, whether modification, revocation, or renewal, which is sought.

(c) A statement setting forth with particularity the grounds for the modification, revocation, or renewal.

(d) Any request for a hearing as provided in these rules.

(2) If the applicant is the employer, a certification shall be made that the applicant has informed his affected employees of the application by:

(a) Giving a copy thereof to their authorized representative.

(b) Posting a copy of the application or a statement containing a summary of the application. If a summary of the application is posted, it shall specify where a copy of the full application may be examined. Posting shall be at the area in which the affected employees work.

(3) If the applicant is an affected employee, a certification shall be made that a copy of the application has been furnished to the employer.

(4) A department may, on its own motion, proceed to modify or revoke a variance. In that event, the department shall give actual notice of its intention to revoke or modify to the employer and affected employees. The notice shall inform the employer and affected employees of their right to request a hearing. A request for a hearing shall include a short and plain statement of the following:

(a) How the proposed modification or revocation would affect the requesting party.

(b) What the requesting party seeks to show on the subjects or issues involved.

(5) A notice of the department's own intention to modify or revoke a variance shall be published in the LABORegister in the same manner as required by R 408.22227.

History: 1954 ACS 86, p. 83, Eff. Mar. 12, 1976; 1954 ACS 99, p. 126, Eff. May 23, 1979.

R 408.22225 Action on defective variance application.

Rule 1225. (1) If an application filed pursuant to these rules is defective by not conforming to the applicable requirements, a department shall promptly return the application to the applicant with a brief statement indicating the reason for its return.

(2) The return of an application because it is defective shall be without prejudice to the filing of another application.

History: 1954 ACS 86, p. 83, Eff. Mar. 12, 1976.

R 408.22226 Requests for hearing on application.

Rule 1226. (1) Within 10 days after the time the employer gives notice to employees of the filing of an application for a variance in accordance with employee notice requirements of these rules, the applicant or affected employee may file with the department a request for a hearing on the application.

(2) A request for a hearing filed pursuant to subrule (1) shall include the following:

(a) A concise statement of facts showing how the applicant or employee would be affected by the relief applied for.

(b) A specification of any statement or representation in the employer's application which is in dispute, and a concise summary of the facts that would be presented.

(c) Views or arguments on any issue of fact or law presented.

(3) The department, on its own motion or that of a party, may consolidate or contemporaneously consider 2 or more proceedings which involve the same or closely related issues.

History: 1954 ACS 86, p. 84, Eff. Mar. 12, 1976.

R 408.22227 Application for variance; interim order; publication of summary; opportunity for public response; informal hearing; notice; issuance of denial or variance.

Rule 1227. (1) Upon receipt of a valid application for a variance, and if the application has not been denied pursuant to this part, the department may issue an interim order and shall cause to be published in the LABORegister a summary of the application. The published notice shall include a statement outlining the opportunity for public response and an informal hearing. This informal hearing is separate from the formal hearing that is provided for in R 408.22226 and R 408.22231 to R 408.22251 of this part.

(2) Upon request for an informal hearing resulting from the published application for a variance, the department shall notify the person requesting the hearing, the employer applying for the variance, the employer's employees, or the authorized employee representative of the following:

(a) The time, date, place, and the subject matter of the hearing.

(b) The authority under which the hearing is to be held.

(3) The department shall consider the views expressed by the participants at the informal hearing, if held, and shall issue a denial of the application or shall issue the variance.

History: 1954 ACS 99, p. 126, Eff. May 23, 1979.

HEARINGS

R 408.22231 Notice of hearing; contents; referral to hearing officer.

Rule 1231. (1) Upon request for a hearing as provided in R 408.22226 or upon its own initiative, a department shall serve or cause to be served on the parties a reasonable notice of hearing.

(2) A notice of hearing served under subrule (1) shall include the following:

(a) The time, date, place, and nature of the hearing.

(b) The legal authority and jurisdiction under which the hearing is to be held.

(c) A reference to the section of the act and rules involved.

(d) A brief statement of the issues involved.

(3) The matter shall be referred to a hearing officer or another department official designated by the department who shall serve as the hearing officer at the hearing on a variance.

History: 1954 ACS 86, p. 84, Eff. Mar. 12, 1976; 1954 ACS 99, p. 126, Eff. May 23, 1979.

R 408.22232 Manner of service.

Rule 1232. Service of a document upon any party shall be made by personal delivery or mailing by certified mail to the last known address of the party. The person serving the document by personal delivery shall certify to the manner and the date of the service.

History: 1954 ACS 86, p. 84, Eff. Mar. 12, 1976.

R 408.22233 Hearing officers or other officials; powers and duties.

Rule 1233. (1) A hearing officer designated to preside over a hearing shall have all powers necessary or appropriate to conduct a fair, full, and impartial hearing, including the power to:

(a) Administer oaths and affirmations.

(b) Rule upon offers of proof and receive relevant evidence.

(c) Provide for the taking of testimony by deposition.

(d) Regulate the course of the hearings, set the time and place for continued hearings, and fix the time for filing of briefs and other documents.

(e) Consider and rule upon procedural requests.

(f) Hold conferences for the settlement or simplification of the issues by consent of the parties.

(g) Make, or to cause to be made, an on-site visit to the place of employment involved.

(h) Prepare proposed decisions.

(2) Except to the extent required for the disposition of ex parte matters, a hearing officer shall not consult a person or a party on any fact at issue, unless upon notice and opportunity for all parties to participate.

(3) When a hearing officer deems himself disqualified to preside over a particular hearing, he shall withdraw therefrom by notice on the record directed to the director. A party who deems a hearing officer for any reason to be disqualified to preside, or to continue to preside, over a particular hearing, may file with the director, a motion to disqualify and remove the hearing officer. The motion shall be supported by affidavits setting forth the alleged grounds for disqualification. The director shall rule upon the motion.

History: 1954 ACS 86, p. 84, Eff. Mar. 12, 1976.

R 408.22234 Pre-hearing conference.

Rule 1234. (1) Upon his own motion or the motion of a party, the hearing officer may request the parties or their counsel to meet with him for a conference to consider the following:

(a) Simplification of the issues.

(b) Necessity or desirability of amendments to documents for purposes of clarification, simplification, or limitation.

(c) Stipulations, admissions of fact, and of contents and authenticity of documents.

(d) Limitation of the number of parties and of expert witnesses.

(e) Other matters as may tend to expedite the disposition of the proceeding, and to assure a just conclusion thereof.

(2) The hearing officer shall state on the record the stipulations, agreements, and other matters agreed to by the parties at the conference.

History: 1954 ACS 86, p. 85, Eff. Mar. 12, 1976.

R 408.22235 Consent findings and orders.

Rule 1235. (1) At any time before the hearing or before the reception of evidence in a hearing, or during a hearing, a reasonable opportunity may be afforded to permit negotiation by the parties of an agreement containing consent findings and an order disposing of the whole or a part of the proceeding. The allowance of this opportunity and the duration thereof shall be in the discretion of the hearing officer, after considering the nature of the proceeding, the representations of the parties, and the probability of an agreement which would result in a just disposition of the issues involved.

(2) An agreement containing consent findings and an order disposing of a proceeding shall also provide the following:

(a) That the consent finding and order shall have the same force and effect as if made after a full hearing.

(b) That the record on which an order may be based shall consist solely of the application and the agreement.

(c) A waiver of any further procedural steps before the hearing officer and the director.

(d) A waiver of any right to challenge or contest the validity of the consent findings and order made in accordance with the agreement.

(3) On or before the expiration of the time granted for negotiations, the parties or their counsel may:

(a) Submit the proposed agreement to the hearing officer for his consideration.

(b) Inform the hearing officer that agreement cannot be reached.

(4) In the event an agreement containing consent findings and an order is submitted within the time allowed therefor, the hearing officer shall accept the agreement by issuing his decisions based upon the agreed findings.

History: 1954 ACS 86, p. 85, Eff. Mar. 12, 1976.

R 408.22236 Depositions.

Rule 1236. (1) For reasons of unavailability or for other good cause shown, the testimony of any witness may be taken by deposition. Depositions shall be taken before a person designated by the hearing officer having the power to administer oaths.

(2) A party desiring to take the deposition of a witness shall make application in writing to the hearing officer, setting forth the following:

(a) The reasons why the deposition should be taken.

(b) The time and date when, the place where, and the name and post office address of the person before whom the deposition is to be taken.

(c) The name and address of the witness.

(3) A notice, as the hearing officer may order, shall be given by the party taking the deposition to every other party.

(4) Taking and receiving in evidence shall be as follows:

(a) Each witness testifying upon deposition shall be sworn, and the parties not calling him shall have the right to cross-examine him.

(b) The questions propounded and the answers thereto, together with objections made, shall be reduced to writing, read by the witness, subscribed by the witness, and certified by the person before whom the deposition is taken.

(c) The person designated by the hearing officer, before whom the deposition is taken, shall mail 2 copies of the deposition by certified mail to the hearing officer.

(d) Subject to such objections to the questions and answers as were noted at the time of taking the deposition, and those objections would be valid were the witness personally present and testifying, the deposition may be read and offered in evidence by the party taking it as against a party who was present, represented at the taking of the deposition, or who had due notice thereof.

(e) Except for purposes of impeachment, a deposition shall not be admitted in evidence if the witness is available.

History: 1954 ACS 86, p. 85, Eff. Mar. 12, 1976.

R 408.22237 Hearings.

Rule 1237. (1) Except as may be ordered otherwise by the hearing officer, the party applicant for relief shall proceed first at a hearing.

(2) The party applicant shall have the burden of proof.

(3) A party shall be entitled to present his case or defense by oral and documentary evidence, to submit rebuttal evidence, and to conduct such cross-examination as may be required for a full disclosure of the facts. Any oral and documentary evidence of a type commonly relied upon by reasonably prudent persons in the conduct of their affairs may be received, but a hearing officer may exclude evidence which is irrelevant, immaterial, or unduly repetitious.

(4) The testimony of a witness shall be upon oath or affirmation administered by the hearing officer.

(5) If a party objects to the admission or rejection of any evidence or to the limitation of the scope of an examination or cross-examination or to the failure to limit the scope, he shall state briefly the grounds for the objection. Rulings on objections shall appear in the record.

(6) A formal exception to an adverse ruling is not required.

(7) Official notice may be taken of any material fact not appearing in evidence in the record, which is among the traditional matters of judicial notice or concerning which the departments by reason of their functions are presumed to be expert, if the parties are given adequate notice, at the hearing or by reference in the hearing officer's proposed decision, of the matters so noticed, and, upon timely request, are given adequate opportunity to show the contrary before the final decision.

(8) Hearings shall be recorded, but need not be transcribed, unless requested by a party. The party requesting the transcript shall pay for the transcription. Copies of the transcript may be obtained by the parties upon written application filed with a department and upon the payment of fees at the rate provided on notice by the department.

History: 1954 ACS 86, p. 86, Eff. Mar. 12, 1976.

R 408.22238 Proposed decision of the hearing officer; service; contents; exception; inoperative while on referral; filing proposed order.

Rule 1238. (1) Within 10 days of the conclusion of a hearing or within 5 days of the receipt of the transcript, if any, or such additional time as allowed by the hearing officer, each party may file with the hearing officer a proposed order, including proposed findings of fact and conclusions of law, with such supporting argument and reasoning as are necessary to support the proposed order.

(2) Within 20 days of the conclusion of a hearing or within 15 days of the receipt of the transcript, if any, the hearing officer shall serve upon parties by certified mail or personal service a proposed decision which shall include the following:

(a) A statement of the reasons for the proposed decision.

(b) Issues of fact and law necessary for the proposed decision.

(3) Unless a party, within 10 days of the receipt of the proposed decision, files exceptions thereto with supporting reasons, the proposed decision shall become a final decision of the director. Exceptions shall refer to the specific issues of fact and law, or terms of the proposed decision excepted to. If the testimony was transcribed, reference shall be made to specific pages of the transcript, and shall suggest modified issues of fact and law, and terms of the proposed decision.

(4) The decision of the hearing officer shall be based upon consideration of the whole record and shall be made on the basis of a preponderance of reliable and probative evidence.

(5) A hearing officer's proposed decision under this rule shall not be operative while that decision is being referred to the director.

History: 1954 ACS 86, p. 86, Eff. Mar. 12, 1976; 1954 ACS 99, p. 127, Eff. May 23, 1979.

R 408.22239 Transmission of record.

Rule 1239. (1) If exceptions and objections thereto are filed, the hearing officer shall transmit the record of the proceeding to the director.

(2) The record shall include the following:

(a) Notices, pleadings, motions, and intermediate rulings.

(b) Questions and offers of proof, objections, and rulings thereon.

(c) Evidence presented.

(d) Matters officially noticed, except matters so obvious that a statement of them would not serve a useful purpose.

(e) Proposed findings of fact and conclusions of law and exceptions and objection thereto.

(f) Any proposed decision, opinion, order, or report by the hearing officer.

R 408.22240 Decision of director.

Rule 1240. (1) Upon receipt of the record transmitted pursuant to these rules, the director shall, within a reasonable time, render his decision.

(2) The decision may affirm, modify, or set aside, in whole or in part, the findings, conclusions, and the rule or order contained in the proposed decision of the hearing officer, and shall include a statement of reasons which shall provide for each conclusion of law, supporting authority, or reasoned opinion.

(3) The director shall serve or cause to be served, a copy of his decision upon all parties and the hearing officer.

History: 1954 ACS 86, p. 87, Eff. Mar. 12, 1976.

JUDICIAL REVIEW

R 408.22251 Request for rehearing or reconsideration.

Rule 1251. (1) An aggrieved party may file a petition for rehearing or reconsideration with the director within 60 days of the mailing of the notice of the director's decision. The request shall be in writing and include specific reasons in support of the request.

(2) Upon receipt of a petition for a rehearing, the director shall, within 10 days, grant or deny the request and provide notice of the decision to the parties.

(3) If the request for reconsideration or rehearing is denied, notice of the denial, along with the director's decision on the variance application, shall be deemed to be final department action for purposes of judicial review.

History: 1954 ACS 86, p. 87, Eff. Mar. 12, 1976.

PART 13. INSPECTIONS AND INVESTIGATIONS, CITATIONS, AND PROPOSED PENALTIES

R 408.22301 Purpose.

Rule 1301. The purpose of this part is to prescribe rules and set forth general policies for enforcement of the inspection and investigation, citation, and proposed penalty provisions of the act. In situations where this part sets forth general enforcement policies, rather than substantive or procedural rules, such policies may be modified in specific circumstances where the department director or his designee determines that an alternative course of action would better serve the objectives of the act.

History: 1954 ACS 89, p. 114, Eff. Nov. 13, 1976.

R 408.22303 Scope.

Rule 1303. (1) The act requires that every employer covered under the act furnish to his employees employment and a place of employment which are free from recognized hazards that are causing, or are likely to cause, death or serious physical harm to his employees. The act also requires that employers comply with occupational safety and health standards promulgated under the act, and that employees comply with standards, rules, regulations, and orders issued under the act which are applicable to their own actions and conduct.

(2) The act authorizes the departments of labor and public health to conduct inspections and investigations and to conduct tests and gather samples of materials and substances as are necessary to aid in the evaluation of the place of employment, and to issue citations and proposed penalties for alleged violations, and to question employers and employees in connection with research and other related activities.

(3) The act contains provisions for adjudication of violations, periods prescribed for the abatement of violations, and proposed penalties if appealed by an employer or by an employee or authorized representative of employees.

History: 1954 ACS 89, p. 114, Eff. Nov. 13, 1976.

R 408.22305 Definitions; A to C.

Rule 1305. (1) "Act" means the Michigan occupational safety and health act, Act No. 154 of the Public Acts of 1974, as amended, being §408.1001 et seq. of the Michigan Compiled Laws.

(2) "Authorized employee representative" or "representative of employee" means a person designated by a labor organization certified by the national labor relations board or employment relations commission as defined in section 2(c) of Act No. 176 of the Public Acts of 1938, being §423.2 of the Michigan Compiled Laws, as the bargaining representative for the affected employees. In the absence of certification, it shall be a person designated by the organization having a collective bargaining relationship with the employer and designated as having a collective bargaining relationship with the employer by the affected employees. If a labor organization is not certified or if no organization has a collective bargaining relationship with the employer, "authorized employee representative" or "representative of employee" means a person designated by the affected employees to represent them for the purpose of proceedings under this act.

(3) "Board" means the board of health and safety compliance and appeals created in section 46 of the act.

(4) "Citation" means a written communication issued by the department to an employer pursuant to section 33 of the act.

History: 1954 ACS 89, p. 114, Eff. Nov. 13, 1976.

R 408.22307 Definitions; D, E.

Rule 1307. (1) "Department" means the Michigan department of labor or the Michigan department of public health.

(2) "Director" means the director of the Michigan department of labor or the director of the Michigan department of public health.

(3) "Employee" means a person permitted to work by an employer.

(4) "Employer" means an individual or organization, including the state or a political subdivision, which employs 1 or more persons.

(5) "Establishment" means a single physical location where business is conducted or where services or operations are performed; for example, a factory, mill, store, hotel, restaurant, movie theater, farm, ranch, bank, sales office, warehouse, central administrative office, a single school within a school district, a city garage within the department of public works, a branch office of the department of state, or a police station within the police department of a city. Where distinctly separate activities are performed at a single physical location, such as contract construction activities operated from the same physical location as a lumberyard, each activity shall be treated as a separate establishment.

History: 1954 ACS 89, p. 114, Eff. Nov. 13, 1976.

R 408.22309 Definitions; I to W.

Rule 1309. (1) "Imminent danger" means a condition or practice in a place of employment which is such that a danger exists which could reasonably be expected to cause death or serious physical harm, either immediately or before the imminence of the danger can be eliminated through the enforcement procedures otherwise provided.

(2) "Inspection" means the examination or survey of a place of employment to detect the presence of an existing or potential occupational safety or health hazard or to determine compliance with the act, rules, or standards promulgated, or orders issued, pursuant to the act.

(3) "Investigation" means the detailed evaluation or study of working conditions, including equipment, processes, substances, air contaminants, or physical agents, with respect to the actual or potential occurrence of occupational accidents, illnesses, or diseases.

(4) "Trade secret" means a confidential process, formula, pattern, device, or compilation of information which is used in the employer's business and which gives the employer an opportunity to obtain an advantage over competitors who do not know or use it.

(5) "Working day" means any day other than a Saturday, Sunday, or state legal holiday. (In computing 15 working days, the day of receipt of any notice shall not be included, and the last day of the 15 working days shall be included.)

History: 1954 ACS 89, p. 115, Eff. Nov. 13, 1976.

R 408.22311 Posting of notice; availability of the act, rules, and applicable standards.

Rule 1311. (1) Each employer shall post a notice to be furnished by the department, informing employees of the protections and obligations provided for in the act, and informing them that, for assistance and information, including copies of the act and of specific safety and health standards, employees may contact the department. The notice shall be posted by the employer in each establishment in a conspicuous place where notices to employees are customarily posted. Each employer shall take steps to insure that the notice is readable and is not altered or defaced.

(2) A separate notice shall be posted in each establishment. Where employers are engaged in activities which are physically dispersed (such as agriculture, construction, transportation, communications, and electric, gas, and sanitary services) the notice required by this rule shall be posted at the location to which employees report each day. Where employees do not usually work at, or report to, a single establishment (such as traveling salesmen, technicians, engineers, etc.), such notice shall be posted at the location from which the employees operate to carry out their activities. In all cases, the notice shall be posted pursuant to subrule (1) of this rule.

(3) Copies of the act, all procedural rules promulgated pursuant to the act, and all applicable standards shall be available from the department. If an employer has obtained copies of these materials, he shall make them available upon request to an employee or his authorized representative for review in the establishment where the employee is employed at the earliest time mutually convenient to the employee or his authorized representative and the employer.

(4) An employer failing to comply with the provisions of this rule shall be subject to citation and penalty pursuant to section 35 of the act.

(5) Reproductions or facsimiles of the state poster shall constitute compliance with the posting requirements of this rule where the reproductions or facsimiles are at least 8½ inches by 14 inches and the printing size is at least 10 point. The caption or heading on the poster shall be in large type, not less than 36 point.

History: 1954 ACS 89, p. 115, Eff. Nov. 13, 1976.

R 408.22321 Authority for inspection or investigation.

Rule 1321. (1) The department representatives, upon presenting appropriate credentials, may enter, without delay and at reasonable times, any factory, plant, establishment, construction site, or other area, workplace, or environment where work is performed by an employee of an employer to inspect and investigate, during regular working hours and at other reasonable times and within reasonable limits and in a reasonable manner, any such place of employment, and all pertinent conditions, structures, machines, apparatus, devices, equipment, and materials therein; to question privately any employer, owner, operator, agent, or employee; and to review records required by the act and rules promulgated pursuant to the act, and other records which are directly related to the purpose of the inspection or investigation.

(2) Prior to inspecting areas containing information which is classified by an agency of the federal government in the interest of national security, departmental representatives shall obtain the appropriate security clearance.

History: 1954 ACS 89, p. 116, Eff. Nov. 13, 1976.

R 408.22322 Objection to inspection or investigation.

Rule 1322. (1) Upon a refusal to permit a department representative, in the exercise of his official duties, to enter, without delay and at reasonable times, any place of employment or any place therein to inspect, to investigate, to review records, or to question any employer, owner, operator, agent, or employee pursuant to R 408.22321, or to permit a representative of employees to accompany the department representative during the physical inspection or investigation of any workplace pursuant to R 408.22326, the department representative shall terminate the inspection or investigation or confine the inspection or investigation to other areas, conditions, structures, machines, apparatus, devices, equipment, materials, records, or interviews concerning which no objection is raised.

(2) The department representative shall endeavor to ascertain the reason for such refusal, and he shall immediately report the refusal, and the reason therefor, to the department director or authorized representative. The department director or authorized representative shall take appropriate action and, if necessary, apply to the proper judicial officer for a warrant commanding the sheriff or a peace officer to aid the department in the conduct of an inspection or investigation as provided in section 29 of the act.

History: 1954 ACS 89, p. 116, Eff. Nov. 13, 1976.

R 408.22323 Entry not a waiver.

Rule 1323. Permission to enter, inspect, investigate, review records, or question a person shall not imply or be conditioned upon a waiver of any cause of action, citation, or penalty under the act. Department representatives are not authorized to grant any such waiver.

History: 1954 ACS 89, p. 116, Eff. Nov. 13, 1976.

R 408.22324 Advance notice of inspection or investigation.

Rule 1324. (1) Advance notice of inspections or investigations shall not be given except in the following situations:

(a) In cases of apparent imminent danger, to enable the employer to abate the danger as quickly as possible.

(b) In circumstances where the inspection or investigation can most effectively be conducted after regular business hours, or where special preparations are necessary for an inspection or investigation.

(c) Where necessary to assure the presence of representatives of the employer and employees or the appropriate personnel needed to aid in the inspection or investigation.

(d) In other circumstances where the department director or his designee determines that the giving of advance notice would enhance the probability of an effective and thorough inspection or investigation.

(2) In the situations described in subrule (1) of this rule, advance notice of inspections or investigations may be given only if authorized by the department director or his designee.

(3) When advance notice is given, it shall be the employer's responsibility promptly to notify the authorized representative of employees of the inspection or investigation, if the identity of such representative is known to the employer. Upon the request of the employer, the department representative shall inform the authorized representative of employees of the inspection or investigation, pro-

vided that the employer furnishes the department representative with the identity of such representative and with such other information as is necessary to enable him promptly to inform such representative of the inspection or investigation. An employer who fails to comply with his obligation under this rule promptly to inform the authorized representative of employees of the inspection or investigation, or to furnish such information as is necessary to enable the department representative promptly to inform such representative of the inspection or investigation, is subject to citation and penalty under section 35(3) of the act.

(4) Advance notice in any of the situations described in subrule (1) of this rule shall not be given more than 24 hours before the inspection or investigation is scheduled to be conducted, except in apparent imminent danger situations and in other unusual circumstances.

(5) A person who gives advance notice of an inspection or investigation to be conducted under the act, without authority from the department director or his designees, shall, upon conviction, be punished by a fine of not more than $1,000.00 or by imprisonment for not more than 6 months, or by both, as provided in section 35(8) of the act.

History: 1954 ACS 89, p. 116, Eff. Nov. 13, 1976.

R 408.22325 Conduct of inspections or investigations.

Rule 1325. (1) Subject to the provisions of R 408.22321, inspections and investigations shall take place at such times and in such places of employment as the department director or his designee may direct. At the beginning of an inspection or investigation, the department representatives shall present their credentials to the owner, operator, or an agent in charge at the establishment; explain the nature and purpose of the inspection or investigation; and indicate generally the scope of the inspection or investigation and the records specified in R 408.22321 which they wish to review. However, such designation of records shall not preclude access to additional records specified in R 408.22321.

(2) Department representatives may take air, environmental, and material samples; take or obtain photographs related to the purpose of the inspection or investigation; employ other reasonable investigative techniques; and question privately any employer, owner, operator, agent, or employee of an establishment (See R 408.22331 on trade secrets).

(3) In taking photographs and samples, the department representatives shall take reasonable precautions to insure that such actions with flash, spark-producing, or other equipment are not hazardous. Department representatives shall comply with all employer safety and health rules and practices at the establishment being inspected, and they shall wear and use appropriate protective clothing and equipment.

(4) The conduct of inspections or investigations shall be such as to preclude unreasonable disruption of the operations of the employer's establishment.

(5) Following the completion of an inspection or investigation by the department representative, an opportunity for a conference shall be afforded the employer or his representative and the employee or employee representative to informally advise them of any apparent safety or health violations disclosed by the inspection or investigation. During such conference, the employer or employee shall be afforded an opportunity to bring to the attention of the department representative any information regarding conditions in the workplace pertinent to the apparent safety or health violations.

(6) Inspections or investigations shall be conducted pursuant to the requirements of this part.

History: 1954 ACS 89, p. 117, Eff. Nov. 13, 1976.

R 408.22326 Representatives of employers and employees.

Rule 1326. (1) Department representatives shall be in charge of conducting inspections or investigations, and may question persons affected by the inspection or investigation. A representative of the employer and a representative authorized by employees shall be given an opportunity to accompany the department representative during the physical inspection or investigation of a workplace for the purpose of aiding the inspection or investigation. A department representative may permit additional employer representatives and additional representatives authorized by employees to accompany him when it is determined that the additional representatives may further aid the inspection or investigation. A different employer and employee representative may accompany the department representative during each different phase of an inspection or investigation if this does not interfere with the conduct of the inspection or investigation.

(2) Department representatives may resolve all disputes as to who is the representative authorized by the employer and employees for the purpose of this rule. If there is no authorized representative of employees, or if the department representative is unable to determine with reasonable certainty who is such representative, the department representative shall consult with a reasonable number of employees concerning matters of safety and health in the workplace.

(3) If, in the judgment of the department representative, good cause is shown why accompaniment by a third party who is not an employee of the employer (such as an industrial hygienist or a safety engineer) is reasonably necessary to the conduct of an effective and thorough physical inspection or investigation of the workplace, the third party may accompany the department representative during the inspection or investigation.

(4) Department representatives may deny the right of accompaniment under this rule to a person whose conduct interferes with a fair and orderly inspection or investigation. The right of accompaniment in areas containing trade secrets shall be subject to the provisions of R 408.22331(4). With regard to information classified by an agency of the federal government in the interest of national security, only persons authorized to have access to the information may accompany a department representative in areas containing such information.

History: 1954 ACS 89, p. 117, Eff. Nov. 13, 1976.

R 408.22331 Trade secrets.

Rule 1331. (1) Information reported to, or otherwise obtained by, a department representative in connection with an inspection, investigation, or proceeding under the act, which contains or which might reveal a trade secret, shall be considered confidential. Such information may be disclosed only to other department representatives concerned with carrying out the act or when relevant in any proceeding under the act. In any such proceeding, the department shall issue such orders as may be appropriate to protect the confidentiality of trade secrets.

(2) Information which contains, or which might reveal, a trade secret is not subject to public inspection and copying.

(3) At the commencement of an inspection or investigation, the employer may identify areas in the establishment which contain, or which might reveal, a trade secret. If the department representative has no clear reason to question the identification, information obtained in such areas, including all negatives and prints of photographs, and environmental samples, shall be labeled "confidential—trade secret" and shall not be disclosed except in accordance with the provisions of section 63 of the act.

(4) Upon the request of an employer, any authorized representative of employees accompanying the department representative in an area containing trade

secrets shall be an employee in that area or an employee authorized by the employer to enter that area. Where there is no such representative, the department representative shall consult with a reasonable number of employees who work in that area concerning matters of safety and health.

History: 1954 ACS 89, p. 118, Eff. Nov. 13, 1976.

R 408.22333 Consultation with employees.

Rule 1333. Department representatives may consult with employees concerning matters of occupational safety and health to the extent they deem necessary for the conduct of an effective and thorough inspection or investigation. During the course of an inspection or investigation, an employee shall be afforded an opportunity to bring any violation of the act which he has reason to believe exists in the workplace to the attention of the department representative.

History: 1954 ACS 89, p. 118, Eff. Nov. 13, 1976.

R 408.22338 Complaints by employees.

Rule 1338. (1) Any employee or representative of employees, who believes that a violation of the act which threatens physical harm exists in a workplace where the employee is employed, may request an inspection or investigation of the workplace by giving notice of the alleged violation to the department. The notice shall be reduced to writing, shall set forth with reasonable particularity the grounds for the notice, and shall be signed by the employee or representative of employees. A copy shall be provided the employer or his agent by the department or department representative no later than at the time of inspection or investigation, except that, upon the request of the person giving the notice, his name and the names of individual employees referred to therein shall not appear in the copy or on any record published, released, or made available by the department.

(2) If, upon receipt of such notice, the department determines that the complaint meets the requirements set forth in subrule (1) of this rule, and that there are reasonable grounds to believe that the alleged violation exists, the department shall cause an inspection or investigation to be made as soon as practicable to determine if the alleged violation exists. Inspections or investigations under this rule need not be limited to matters referred to in the complaint.

(3) If the department determines that an inspection or investigation is not warranted because the written complaint does not meet the provisions of subrule (1) of this rule, the department shall notify the complaining party, in writing, of such determination. The determination shall be without prejudice to the filing of a new complaint meeting the requirements of subrule (1) of this rule.

(4) Prior to or during an inspection or investigation of a workplace, an employee or representative of employees employed in the workplace may notify the department representative, in writing, of any violation of the act, or of any rule promulgated under the act, which he has reason to believe exists in such workplace. Any such notice shall comply with the requirements of subrule (1) of this rule.

(5) When an employee or a representative of employees believes that a condition exists which may present an imminent danger to an employee, he may notify either department in the most expedient manner without regard to a written notice. Upon notification of an alleged imminent danger, the department shall cause an immediate inspection to be made or take other action that it finds necessary to abate the danger as provided by R 408.22342 of this part.

(6) If a citation is issued for a violation alleged in a request for inspection under subrule (1) of this rule or a notification of violation under subrule (4) of this rule, a copy of the citation issued shall be sent to the employee or representative of employees who made such request or notification.

(7) A person shall not discharge, or in any manner discriminate against, an employee because the employee filed a complaint or instituted, or caused to be instituted, a proceeding under, or regulated by, the act; or because the employee testified, or is about to testify, in any such proceeding; or because of the exercise by such employee, on behalf of himself or others, of any right afforded by the act.

History: 1954 ACS 89, p. 118, Eff. Nov. 13, 1976.

R 408.22339 Informal review of complaints by employees.

Rule 1339. (1) The department shall notify a complaining party, in writing, when any of the following determinations are made regarding a complaint under R 408.22338:

(a) There are no reasonable grounds to believe that an inspection or investigation should be conducted.

(b) Based on an inspection or investigation conducted pursuant to the complaint there are no reasonable ground to believe that the alleged violation exists.

(2) The department shall notify the employer, in writing, of any determination made pursuant to subrule (1)(b) of this rule.

(3) The complaining party may obtain informal review of a determination made pursuant to subrule (1) by submitting a written statement of position to the department. The department may hold an informal conference in which the complaining party may orally present his views. The employer may attend the informal conference at the discretion of the department.

(4) After considering all written and oral views presented, the department shall do either of the following:

(a) Affirm, modify, or reverse the determination made in subrule (1)(a) of this rule.

(b) Order a reinspection or reinvestigation, issue a citation if it is believed that the inspection or investigation disclosed a violation, or affirm the determination made in subrule (1)(b) of this rule.

(5) The department shall furnish the complaining party with a written notification of the final disposition of the complaint and the reasons therefor. The final disposition of the complaint by the department shall not be subject to further departmental review.

History: 1954 ACS 89, p. 119, Eff. Nov. 13, 1976.

R 408.22342 Imminent danger; cease operation order.

Rule 1342. (1) When a department representative concludes, on the basis of an inspection or investigation, that conditions or practices exist in a place of employment which could reasonably be expected to cause death or serious physical harm immediately or before the imminence of such danger can be eliminated through the enforcement procedures otherwise provided by the act, the department representative shall inform the employer and affected employee of the danger and afford the employer the opportunity to voluntarily eliminate the danger.

(2) If the employer does not immediately take steps to eliminate the imminent danger, the department representative shall recommend to the department director that a cease operation order be issued pursuant to section 31(1) of the act to require that steps be taken as may be necessary to avoid, correct, or remove the imminent danger. Appropriate citations and notices of proposed penalties may be issued with respect to violations associated with an imminent danger, even though, after being informed of such danger by the department representative, the employer immediately eliminates the imminence of the danger and initiates steps to abate such danger.

(3) Upon the failure of the employer to promptly comply with a cease operation order issued pursuant to subrule (2) of this rule, the department shall

petition the circuit court having jurisdiction to restrain any condition or practice in a place of employment which the department determines causes the imminent danger to exist.

History: 1954 ACS 89, p. 120. Eff. Nov. 13, 1976.

R 408.22344 Citations.

Rule 1344. (1) The inspection or investigation report of the department representative shall be reviewed by a department designee. If, on the basis of the report, the department designee believes that the employer violated a requirement of section 11 of the act, a requirement of any standard or rule promulgated pursuant to the act, or a requirement of any order issued pursuant to the act, he shall issue to the employer a citation by registered mail. An appropriate citation shall be issued even though, after being informed of an alleged violation by the department representative, the employer immediately abates, or initiates steps to abate, the alleged violation. A citation shall be issued with reasonable promptness after termination of the inspection or investigation. A citation shall not be issued under this rule after the expiration of 90 days from the completion of the physical inspection or investigation of the establishment.

(2) A citation shall be in writing and describe with particularity the nature of the alleged violation, including a reference to the provision of the act, standards, rule, regulation, or order alleged to have been violated. A citation shall also fix a reasonable time for the abatement of the alleged violation.

(3) A citation shall contain, on its face, a statement that it is an allegation of a violation. The issuance of a citation does not constitute a finding that a violation of the act has occurred unless there is a failure to appeal, either initially to the department or subsequently to the board as provided in R 408.22351 and R 408.22354 of this part, or, if appealed to the board, unless the citation is affirmed by the board.

History: 1954 ACS 89, p. 120. Eff. Nov. 13, 1976.

R 408.22346 Proposed penalties.

Rule 1346. (1) After, or concurrent with, the issuance of a citation, and within a reasonable time after the termination of the inspection or investigation, the department shall notify the employer by registered mail of the proposed penalty as provided by section 35 of the act, or that no penalty is being proposed. The notice of the proposed penalty shall include statements informing the employer that the proposed penalty shall become a final order of the board and not subject to review by any court or agency unless, within 15 working days from the date of receipt of such notice, the employer notifies the department in writing that he intends to appeal the citation or the notification of proposed penalty (see R 408.22351). Payment of the penalty shall be made to the department, payable to the "State of Michigan," within 5 working days of the date the penalty became a final order of the board.

(2) The department shall determine the amount of a proposed penalty, giving due consideration to the appropriateness of the penalty with respect to the size of the business, the seriousness of the violation, and the history of previous citations, pursuant to section 36 of the act.

(3) Appropriate penalties may be proposed with respect to an alleged violation, even though, after being informed of the alleged violation by the department representative, the employer immediately abates, or initiates steps to abate, the alleged violation. Penalties shall not be proposed for violations which have no direct or immediate relationship to safety or health.

History: 1954 ACS 89, p. 120. Eff. Nov. 13, 1976.

R 408.22348 Posting of citations.

Rule 1348. (1) Upon receipt of a citation issued under the act, the employer shall immediately post the citation, or a copy thereof, unedited, at or near the place of each alleged violation referred to in the citation, with the following exceptions:

(a) Where, because of the nature of the employer's operations, it is not practicable to post the citation at or near the place of alleged violation, the citation shall be posted, unedited, in a prominent place where it is readily observable by all affected employees. For example, where employees are engaged in activities which are physically dispersed, the citation may be posted at the location to which employees report each day.

(b) Where employees do not primarily work at, or report to, a single location, the citation may be posted at the location from which the employees operate to carry out their activities.

(2) The employer shall take steps to ensure that the citation is readable and not altered or defaced. The citation may be reproduced for posting purposes if more than 1 location is cited on a single citation.

(3) A citation, or a copy thereof, shall remain posted until the violation is abated, or for 3 working days, whichever is later. The filing by the employer of an appeal, either initially with the department or subsequently with the board as provided in R 408.22351 and R 408.22354 of this part, shall not affect the employer's posting responsibility under this rule, unless the citation is vacated.

(4) An employer failing to comply with subrules (1) and (2) of this rule shall be subject to citation and penalty pursuant to sections 33 and 35 of the act.

History: 1954 ACS 89, p. 121, Eff. Nov. 13, 1976.

R 408.22349 Notification of compliance with citations.

Rule 1349. (1) An employer to whom a citation is issued shall notify the department, in writing, immediately upon compliance with each item of the citation. Upon compliance with an item of the citation, notification to the department shall not exceed 3 working days from the final abatement date on the citation of such item.

(2) Notification, as required in subrule (1) of this rule, may be accomplished by either of the following:

(a) Submitting to the department, signed and dated, the "notification of abatement" copy of the citation, or a copy thereof.

(b) Submitting a document, in writing, to the department certifying compliance.

History: 1954 ACS 89, p. 121, Eff. Nov. 13, 1976.

R 408.22351 Employer appeal petitions of citations.

Rule 1351. (1) An employer to whom a citation or notice of proposed penalty is issued may, under section 41 of the act, petition the department in writing for a modification or dismissal of the citation and any proposed penalty, or for a grant of additional time for compliance. The petition shall be postmarked within 15 working days of the receipt by the employer of a citation or proposed penalty. The petition shall specify which item on the citation is being petitioned, and whether it is directed to the violation, proposed penalty, or abatement date.

(2) An employer shall post a copy of the petition near the location of the violation where the subject citation is posted, or give a copy of the petition to the affected employees or their employee representative.

(3) An employer shall include in the petition to the department a certification that a copy of the petition was posted or given to the affected employees or their employee representative pursuant to subrule (2) of this rule. The certification shall include the date and method of transmittal of the petition.

R 408.22352 Employee appeal petitions of citations.

Rule 1352. Within 15 working days after the employer receives a citation, an employee or employee representative may petition the department, in writing, alleging that the period of time fixed in an item of the citation for abatement of such item is unreasonable. The petition shall specify which item on the citation is being petitioned. The department, upon receipt of the petition, shall promptly submit a copy of the petition to the employer, deleting the name of the employee or employee representative if so requested.

History: 1954 ACS 89, p. 121, Eff. Nov. 13, 1976.

R 408.22353 Department decision on an appeal petition.

Rule 1353. (1) Upon receipt of a petition, the department may:

(a) Modify or dismiss the citation or proposed penalty.

(b) Modify the time period fixed for compliance.

(c) Affirm the citation, including the abatement date and proposed penalty.

(2) The department shall notify the employer by registered mail of the decision regarding a petition within 15 working days of receipt of the petition by the department. The employer shall promptly post the department's decision, together with the appropriate citation, at the location of the posting of the subject citation. The decision shall remain posted until the violation is abated or for 3 working days, whichever is later.

History: 1954 ACS 89, p. 122, Eff. Nov. 13, 1976.

R 408.22354 Employer and employee notices of appeal to the board.

Rule 1354. (1) Within 15 working days after receipt by the employer of the department's decision regarding an appeal petition of a citation:

(a) The employer may appeal the decision to the board.

(b) The employee or employee representative may appeal the decision, with respect to the date fixed for abatement, to the board.

(2) The notice of appeal of the department's decision shall be submitted to the department. The department shall immediately transmit the notice of appeal to the board in accordance with the procedure prescribed by the board.

History: 1954 ACS 89, p. 122, Eff. Nov. 13, 1976.

R 408.22355 Petition for modification of abatement period.

Rule 1355. (1) An employer may file a petition for modification of an abatement date when the employer has made a good faith effort to comply with the abatement requirements of a citation which has become a final order of the board, but the abatement has not been completed because of factors beyond the employer's reasonable control.

(2) A petition for modification of an abatement date shall be in writing and shall include the following information:

(a) Steps taken by the employer, and the dates of those steps, in an effort to achieve compliance during the prescribed abatement period.

(b) The specific additional abatement time needed in order to achieve compliance.

(c) The reasons the additional time is necessary, including the unavailability of professional or technical personnel or of materials and equipment, or because necessary construction or alteration of facilities cannot be completed by the original abatement date.

(d) Available interim steps being taken to safeguard the employees against the cited hazard during the abatement period.

(e) A certification that the petition for modification of an abatement date has been filed and posted in accordance with subrule (4).

(3) A petition for modification of an abatement date shall be filed with the board no later than the close of the next working day following the date on which abatement was originally required. A petition filed later shall be accompanied by the employer's statement of exceptional circumstances explaining the delay.

(4) On the same day that the petition is filed with the board, a copy of the petition shall be filed with the department that issued the citation and a copy shall be posted by the employer in a conspicuous place at or near the place where the citation was required to be posted and remain so posted for a period of 10 working days.

(5) The department, affected employees, or their representatives may file written objection to the petition with the board setting forth the reasons for opposing the petition. An objecting party shall also file a copy of the written objection with the other parties. Failure to file an objection within 10 working days of the date of filing the petition shall constitute a waiver of any further right to object to the petition.

(6) The board may approve without a hearing a petition for modification of an abatement date to which an objection has not been filed.

(7) Where a petition is objected to by the department or affected employees, the petition shall be processed as follows:

(a) The board shall process the petition in the same manner as any other contested case, except that a hearing on the petition shall be handled in an expeditious fashion.

(b) An employer petitioning for a modification of an abatement date shall have the burden of proving by a preponderance of the evidence that he has made a good faith effort to comply with the abatement requirements of the citation and that abatement has not been completed because of factors beyond his control.

History: 1954 ACS 89, p. 122, Eff. Nov. 13, 1976.

R 408.22356 Citation for failure to correct a previously cited violation.

Rule 1356. (1) If an inspection or investigation discloses that an employer failed to correct an alleged violation, for which a citation was issued, within the period permitted for its correction, the department may notify the employer, by registered mail, of the failure and of any additional penalty proposed under section 35(2) of the act by reason of such failure.

(2) The period for the correction of a violation for which a citation was issued shall not begin to run until the date of the final order of the board if a review proceeding before the board is initiated by the employer in good faith and not solely for delay or avoidance of penalties. The period of correction shall not be delayed by a review proceeding initiated by the employer only with respect to the proposed penalty.

(3) An employer receiving a citation for failure to correct a violation and a proposed additional penalty may notify the department, in writing, that he intends to petition for a dismissal of the citation or the proposed additional penalty, or both, pursuant to R 408.22351 of these rules. An appeal petition regarding a citation for failure to correct a violation shall be limited to the subject matter of the failure to correct citation.

(4) Within 15 working days after receipt of the department decision relative to an appeal petition of a citation for failure to correct a violation or a proposed additional penalty, or both, an employer may appeal the decision to the board pursuant to R 408.22354.

R 408.22358 Cease operation order for failure to correct a previously cited violation.

Rule 1358. (1) If an inspection or investigation discloses that an employer failed to correct a violation within the period permitted for its correction by a citation which became a final order of the board, the department may issue a cease operation order directing the employer to cease operating or render inoperable, pursuant to such order, as much of the operation as is necessary to eliminate the hazard which is the subject of the cease operation order.

(2) If an employer fails to obey a cease operation order issued pursuant to subrule (1) of this rule, the department shall refer the matter to the prosecuting attorney of the county in which the violation exists, who shall promptly institute proceedings in the circuit court to enforce the department's order.

History: 1954 ACS 89, p. 123, Eff. Nov. 13, 1976.

R 408.22361 Informal conference.

Rule 1361. At the request of an affected employer, employee, or employee representative, the department may hold an informal conference for the purpose of discussing any issues raised by an inspection or investigation, citation, notice of proposed penalty, or appeal petition. If the conference is requested by the employer, an affected employee or employee representative shall be afforded an opportunity to participate, at the discretion of the department. If the conference is requested by an employee or employee representative, the employer shall be afforded an opportunity to participate, at the discretion of the department. A party may be represented by counsel at the conference. No conference or request for conference shall operate as a stay of the 15 working day period for filing an appeal petition to the department or notice of appeal to the board as prescribed in R 408.22351, R 408.22352, and R 408.22354.

DEPARTMENT OF LABOR

CONSTRUCTION CODE COMMISSION

GENERAL RULES

(By authority conferred on the construction code commission by section 6 of Act No. 230 of the Public Acts of 1972, being §125.1506 of the Michigan Compiled Laws)

PART 1. ADMINISTRATION AND ENFORCEMENT

R 408.30101 Definitions.

Rule 101. (1) "Act" means Act No. 230 of the Public Acts of 1972, as amended, being §§125.1501 to 125.1531 of the Michigan Compiled Laws.

(2) The terms defined in the act have the same meaning when used in these rules.

History: 1954 ACS 79, p. 91, Eff. Nov. 6, 1974.

R 408.30111 Application of rules.

Rule 111. These rules shall apply to all parts of the state except in those areas where governmental bodies have exempted themselves from the act and code, as provided in section 8 of the act, except as required by section 8(2) of the act.

History: 1954 ACS 79, p. 91, Eff. Nov. 6, 1974; 1954 ACS 89, p. 124, Eff. Nov. 13, 1976.

R 408.30113 Rescinded.

History: 1954 ACS 79, p. 91, Eff. Nov. 6, 1974; rescinded 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

R 408.30114 Application for state services.

Rule 114. Where a county or 1 or more of its governmental subdivisions can substantiate a claim that administering and enforcing these rules will cause certain hardships and undue burdens on the county or governmental subdivision, it may apply to the commission for the services to be provided by the state. The commission may arrange for a procedure for applications for permits, plan reviews, issuance of permits, inspection services, issuance of certificates of use and occupancy and an appropriate system for fee collection.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974; 1954 ACS 89, p. 124, Eff. Nov. 13, 1976.

R 408.30115 Commission's powers when providing services.

Rule 115. When providing services to a county or other governmental subdivision, the commission shall have the same powers as given to the enforcing agency defined in the act.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974.

R 408.30121 Effective date for enforcement.

Rule 121. The effective date for enforcement shall be 6 months following the date of initial rules promulgation, unless otherwise stipulated at the time of promulgation of subsequent rules.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974; 1954 ACS 89, p. 124, Eff. Nov. 13, 1976.

PART 2. PERMITS, INSPECTIONS, AND FEES

R 408.30201 Plan review service.

Rule 201. (1) Where a township, village, city, or county is enforcing the state construction code, it may provide its own plan review service or may send the plans to the commission for review for code compliance. When plans are submitted to the commission, the enforcing agency shall indicate prior review and approval of local zoning and environmental controls which may include, without limitation, zoning district, fire district, floodplain, air and water pollution, noise and soil erosion.

(2) When the commission is the enforcing agency, the municipality in whose area a structure is to be built shall forward the necessary plans, specifications and application to the commission for processing. Plans submitted for review shall indicate prior approval of local zoning and environment controls as stated in subrule (1).

(3) Where a township, village or city is enforcing another nationally recognized model construction code, it shall be responsible for providing plan review services.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974.

R 408.30221 Fees.

Rule 221. (1) All fees charged by townships, villages, cities, counties and the commission for application for permit, examination of plans, issuance of permits, inspection of construction and issuance of certificates of use and occupancy shall bear a reasonable relationship to all costs, including overhead of services rendered.

(2) A construction board of appeals of a county, or of a governmental subdivision, or the commission and its boards shall establish fees for hearing appeals in accordance with section 22 of the act.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974.

PART 3. APPEAL BOARDS AND HEARINGS

R 408.30301 Construction board of appeals.

Rule 301. Each county or each governmental subdivision enforcing the code shall establish a construction board of appeals as prescribed in section 14 of the act. Each governmental subdivision shall notify the commission of the establishment of the board and furnish the names of the members and their qualifications for serving on the board of appeals.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974.

R 408.30311 Commission as board of appeals.

Rule 311. The commission shall act as a whole to serve as a board of appeals for those governmental subdivisions or areas where the commission shall provide services.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974.

R 408.30315 Plumbing or electrical appeals.

Rule 315. Appeals referred to the commission and involving matters of plumbing or electrical in nature shall be directed first to the respective boards for a hearing. A person aggrieved by the decision of a board may then petition the commission to review the decision.

History: 1954 ACS 79, p. 92, Eff. Nov. 6, 1974.

R 408.30316 Barrier free design board; appeals.

Rule 316. Appeals with regard to barrier free design rules shall be directed to the barrier free design board on an appropriate form through the plan review division of the commission.

History: 1954 ACS 89, p. 124, Eff. Nov. 13, 1976.

PART 4. BUILDING CODE

R 408.30401 Applicable code.

Rule 401. Rules governing the construction, alteration, relocation, demolition, use, and occupancy of buildings and structures shall be those contained in the BOCA basic building code, 1978 edition, except sections 107.5, 107.6, 107.8, 108.6, 117.3, 117.3.1, 117.4, 117.5, 126.2.1, 126.2.2, 126.2.3, 126.2.4, 126.4, 126.5, 126.6, the definitions of building, degree heating day, exterior envelope, heated space, mobile unit, resistance thermal (R), structure, and thermal transmittance (Uo) in sections 201.3, 403.0 to 403.3, 406.2 to 406.8, 415.3, 419.4, 424.0 to 424.3.1, 1100.0 to 1104.1, 1301.2 to 1303.3, 1305.0 to 1305.4, 1306.0 to 1306.6, 1307.0 to 1307.1.4, 1310.2, 1310.3, 1311.0, 1311.1, 1313.0 to 1318.9, 1320.0 to 1321.1, 1500.0 to 1506.5, 1600.2 to 1606.2, 1607.1, 1607.3 to 1608.4, 1611.0 to 1612.1, 1614.0 to 1618.5, 1700.0 to 1705.4.3, 1800.5 and 2000.0 to 2003.2; and, with exceptions noted, it is incorporated herein by reference. The code is available for inspection at the Lansing office of the department of labor, bureau of construction codes. The code may be purchased from the Building Officials and Code Administrators International, Incorporated, 17926 South Halsted, Homewood, Illinois 60430, or from the Michigan Department of Labor, Bureau of Construction Codes, Michigan Secondary Complex, 7150 Harris Drive, P.O. Box 30015, Lansing, Michigan 48909, at a cost of $18.00 each.

History: 1954 ACS 79, p. 93, Eff. Nov. 6, 1974; 1954 ACS 89, p. 124, Eff. Nov. 13, 1976; 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

AMENDMENTS AND ADDITIONS TO BASIC CODE

R 408.30411 Title.

Rule 411. Section 100.1 of the code is amended to read as follows:

100.1. Title: These rules shall be known as the Michigan building code hereinafter referred to as the basic code. They shall control all matters concerning the construction, alteration, addition, repair, removal, demolition, use, location, occupancy and maintenance of all buildings and structures and their service equipment as herein defined and shall apply to existing or proposed buildings and structures in the state.

History: 1954 ACS 79, p. 93, Eff. Nov. 6, 1974.

R 408.30412 Continuation of existing use.

Rule 412. Section 105.1 of the code is amended to read as follows:

105.1. Continuation of existing use: The legal use and occupancy of any structure existing on the effective date of enforcement or for which it had been heretofore approved, may be continued without change, except as may be specifically covered in the basic code or as may be deemed necessary by the building official for the general safety and welfare of the occupants and the public.

History: 1954 ACS 79, p. 93, Eff. Nov. 6, 1974.

R 408.30413 Building official.

Rule 413. Section 107.1 of the code is amended to read as follows:

107.1. Building official: The administration and enforcement of the basic code shall be the responsibility of the enforcing agency in accordance with the act.

History: 1954 ACS 79, p. 93, Eff. Nov. 6, 1974.

R 408.30414 Approval.

Rule 414. Sections 109.1 and 109.4 of the code are amended to read as follows:

109.1. Approved materials and equipment: These items shall be approved or disapproved in accordance with section 21 of the act, and rules for use of these items shall be promulgated in accordance with section 6 of the act.

109.4. Alternate materials and equipment: The provisions of this code are not intended to prevent the use of any material or method of construction not specifically prescribed by this code, provided any such alternate has been approved.

History: 1954 ACS 79, p. 93, Eff. Nov. 6, 1974; 1954 ACS 89, p. 124, Eff. Nov. 13, 1976; 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

R 408.30415 Jurisdictional cooperation.

Rule 415. Sections 110.5 and 111.3 of the code are amended to read as follows:

110.5. Jurisdictional cooperation: The building official may avail himself of the assistance and cooperation of police, fire, and health departments and all other officials as may be required in the performance of inspections.

111.3. Jurisdictional cooperation: The building official may avail himself of the assistance and cooperation of police, fire, and health departments and all other officials as may be required in securing a right of entry.

History: 1954 ACS 79, p. 93, Eff. Nov. 6, 1974; 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

R 408.30416 Permits.

Rule 416. Section 113.1 of the code is amended to read as follows:

113.1. Action on application: The enforcing agency shall examine and issue a building permit in accordance with section 11 of the act.

History: 1954 ACS 89, p. 125, Eff. Nov. 13, 1976; 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

R 408.30417 Fees.

Rule 417. Section 117.1 of the code is amended to read as follows:

117.1. General: A permit to begin work for new construction, alteration, removal, demolition, or other building operation shall not be issued until the fees prescribed by section 22 of the act have been paid to the enforcing agency or other authorized agency of the jurisdiction, nor shall an amendment to a permit necessitating an additional fee, due to an increase in the estimated cost of the work involved, be approved until the additional fee has been paid.

History: 1954 ACS 89, p. 125, Eff. Nov. 13, 1976; 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

R 408.30418 Certificate of use and occupancy.

Rule 418. Sections 119.1 and 119.2 of the code are amended to read as follows:

119.1. New buildings: A building or structure hereafter erected shall not be used or occupied, in whole or in part, until the certificate of use and occupancy is issued by the building official in accordance with section 13 of the act.

119.2. Buildings hereafter altered: A building or structure hereafter enlarged, extended, or altered to change from one use group to another or to a different use within the same use group, in whole or in part, shall not be used or occupied until the certificate of use and occupancy is issued by the building official in accordance with section 13 of the act.

History: 1954 ACS 89, p. 125, Eff. Nov. 13, 1976; 1954 ACS 101, p. 81, Eff. Nov. 21, 1979.

R 408.30419 Violations.

Rule 419. Sections 121.1 and 121.4 of the code are amended to read as follows:

121.1. Unlawful acts: A person, firm, or corporation shall not erect, construct, alter, extend, repair, remove, demolish, use, or occupy any building or structure or equipment regulated by this code, or cause same to be done, contrary to, in conflict with, or in violation of, any of the provisions of this code or the act.

121.4. Violation penalties: Prohibited acts and penalties shall be in accordance with section 23 of the act.

History: 1954 ACS 89, p. 125, Eff. Nov. 13, 1976; 1954 ACS 101, p. 81, Eff. Nov. 21, 1979.

R 408.30420 Stop-work order.

Rule 420. Sections 122.1 and 122.2 of the code are amended to read as follows:

122.1. Notice to owner: Upon notice from the building official that work on any building or structure is being prosecuted contrary to the provisions of this code or in an unsafe and dangerous manner, such work shall be stopped in accordance with section 12 of the act.

122.2. Unlawful continuance: Any person who shall continue any work in or about the structure after having been served with a stop-work order, except such work as he is directed to perform to remove a violation or unsafe conditions, shall be subject to penalty provisions under section 23 of the act.

History: 1954 ACS 89, p. 125, Eff. Nov. 13, 1976; 1954 ACS 101, p. 81, Eff. Nov. 21, 1979.

R 408.30421 Responsibilities.

Rule 421. Section 127.1 of the code is amended to read as follows:

127.1. Responsibilities: The provisions of this section shall define the construction controls required for all buildings involving professional architecture or engineering services and delineate the responsibilities of such professional services, together with those services that are the responsibility of the contractor during construction.

Exception: Residential construction less than 3,500 square feet, and public buildings whose construction, alterations, additions, or repairs do not exceed $5,000.00.

History: 1954 ACS 79, p. 93, Eff. Nov. 6, 1974; 1954 ACS 89, p. 125, Eff. Nov. 13, 1976; 1954 ACS 101, p. 81, Eff. Nov. 21, 1979.

R 408.30422 Scope.

Rule 422. Section 300.1 of the code is amended to read as follows:

300.1. Scope: The provisions of this article shall control the division of the local municipality into fire limits as determined by the governing body of each locality within the state and the general limitations of height and area of all buildings hereafter erected, and extensions to existing buildings hereafter altered or enlarged as affected by the fire and life hazard incident to type of construction, use group, density of development, exterior exposure, and accessibility of buildings and structures to fire fighting facilities and equipment.

History: 1954 ACS 79, p. 94, Eff. Nov. 6, 1974; 1954 ACS 89, p. 125, Eff. Nov. 13, 1976; 1954 ACS 101, p. 81, Eff. Nov. 21, 1979.

R 408.30423 Fire limits.

Rule 423. Section 301.2 of the code is amended to read as follows:

301.2. Fire limits: The fire limits shall comprise the areas containing congested business, commercial, manufacturing, and industrial uses or in which such uses are developing, and the limits of such areas are as determined by the governing body of the locality.

History: 1954 ACS 101, p. 81, Eff. Nov. 21, 1979.

R 408.30427 Accessibility for use by the physically handicapped and aged.

Rule 427. Section 315 of the code is amended to read as follows:

315.0. Provisions for barrier free design: This section applies to all levels and areas used by the general public, employees, persons visiting or on the premises for any reason, and to all use groups except R-3, R-4, and T. Areas of a building or structure, such as mechanical equipment rooms, machine rooms, and penthouses housing equipment, may be excluded from the requirements.

Buildings and structures, and facilities within buildings and structures, meeting the requirements for barrier free design shall be clearly identified with the international symbol of accessibility for the handicapped.

315.1. Special requirements:

315.1.1. Use group R-1: At least 1 bedroom unit for every 25 bedroom units or fraction thereof in use group R-1 buildings shall be made accessible to, and usable by, physically handicapped persons. The bedroom units allocated for the physically handicapped shall be proportionately distributed throughout the range of size and price of the total bedroom units.

315.1.2. Use group R-2: In addition to multiple dwellings in this use group, the requirements for barrier free design shall apply to complexes and group housing. The requirements shall not apply to dormitories, lodging houses, and boarding houses having accommodations for less than 20 individuals. At least 1 dwelling unit for every 25 dwelling units, or fraction thereof, shall be accessible to, and usable by, physically handicapped persons, and shall be proportionately distributed throughout the ranges of sizes of the total dwelling units.

315.2. Building approaches: At least 1 primary entrance at a grade floor level of a building or structure shall be accessible by means of a walk uninterrupted by steps or abrupt changes in levels and with a width of not less than 5 feet and a gradient of not more than 1 foot in 20 feet. When practical difficulties are involved in carrying out this section, the gradient may be changed, but not to exceed the requirements for ramps. In this case, the walk shall comply with all of the requirements for ramps in section 615.0.

315.3. Off-street parking: Off-street parking facilities required for buildings under separate ordinances or zoning laws shall be provided in accordance with the following table and identified by signs as being reserved for physically handicapped persons. Signs shall be located approximately 6 feet above grade. Each reserved parking space shall be not less than 12 feet wide. Where a curb exists between a parking lot surface and sidewalk surface, an inclined approach or a curb cut with a gradient of not more than 1 foot in 12 feet and a width of not less than 4 feet shall be provided for wheelchair access. Parking spaces for the physically handicapped shall be located as close as possible to walkways and entrances. Signs shall be provided when necessary, indicating the direction of travel to an accessible entrance.

Total parking in lot	Required number of accessible spaces
Up to 25	1
26 to 50	2
51 to 75	3
76 to 100	4
101 to 150	5
151 to 200	6
201 to 300	7
301 to 400	8
401 to 500	9
501 to 1,000	2% of total
Over 1,000	20 plus 1 for each 100 over 1,000

315.4. Interior access: Interior access to all levels required to be accessible to handicapped persons shall be provided by ramps meeting the requirements of section 615.0 or elevators. In addition, access to all points on each level shall be provided by means of passageways, corridors, and doorways meeting the requirements of sections 610.0 and 612.0. In R-2 structures, laundry and storage facilities shall be accessible from the handicapped units.

315.5. Access to electrical switches, controls, fire alarms, and convenience outlets: Light switches, controls, and fire alarms shall be located not more than 48 inches above the floor. Convenience outlets located within living units shall be located not less than 18 inches above the floor.

315.5.1. Where a public or pay phone is installed, the following shall apply:

(a) Five percent or not less than 1 telephone shall be accessible to, and usable by, physically handicapped persons.

(b) The telephones shall have the coin slot not more than 54 inches above the floor.

(c) Telephones shall be equipped to assist persons with a hearing disability and so designated.

315.6. Elevators: Elevators that are installed in multi-story buildings in order to provide interior access for physically handicapped individuals shall meet the following requirements:

(a) The elevator cab shall have a clear area of not less than 25 square feet, with a minimum dimension of 55 inches. Elevators serving not more than 3 stops may have a clear area of 22 square feet, with minimum dimensions of 48 inches from rear cab wall to inside face of car doors.

(b) The elevator door shall have a minimum clear opening width of 36 inches.

(c) The corridor landing buttons shall be located not more than 55 inches above the floor.

(d) Metal braille numbers shall be provided adjacent to cab control buttons and switches and shall be located not more than 60 inches above the floor.

(e) Metal tactile numbers shall be provided for floor designation on each floor, 60 inches above the floor, on the fixed point at the open side of the elevator door or on both sides, when center opening doors are used.

(f) At least 1 handrail shall be provided and located at normal handrail height within the elevator car.

(g) Elevator doors shall operate automatically, and the leading edge of car doors shall be equipped with a door safety shoe reversing device and a light ray door reversing device or other type proximity sensing reversing device.

(h) An audible gong shall sound when the elevator arrives at the ground floor landing where access to the building for the physically handicapped has been provided.

315.7. Access to plumbing fixtures and kitchens: All toilet rooms with group facilities shall meet the requirements of sections 315.7.1, 315.7.2, 315.7.3, 315.7.4, and 315.7.5. Other toilet rooms shall meet the requirements of sections 315.7.2, 315.7.3, 315.7.4, 315.7.5, 315.7.6, and subdivisions (a), (d), and (e) of section 315.7.8. In all required toilet rooms, a minimum of 2% of toilet fixtures, but not less than 1 fixture of each type, shall meet these requirements.

315.7.1. (1) Where water closet stalls are provided, stalls for physically handicapped persons shall be not less than 42 inches wide by 72 inches deep. If the stall has a door, it shall swing out or slide and shall provide a clear opening of not less than 32 inches. When it is necessary to install the opening on the side instead of the front of the stall, the depth of the stall shall be a minimum of 84 inches. There shall be a minimum clear floor space of 48 inches by 48 inches in the front of the stall opening.

(2) Handrails shall be provided on each stall side wall. Handrails shall be not less than 48 inches long and 33 inches above and parallel to the floor, with the front end position 24 inches in front of the water closet. Each handrail shall be 1½ inches outside diameter, with 1½ inch clearance between rail and wall, and shall be anchored so as to withstand a force of 300 pounds.

315.7.2. At least 1 water closet shall have a narrow understructure that recedes sharply from the front and is centered at the rear wall, with the seat 17 inches above the finished floor. The trap shall not extend in front of, or be flush with, the lip of the bowl. The flush control shall be mounted no higher than 36 inches above the floor. The toilet paper holder shall be mounted within arm's reach of a person using the water closet, and shall not impede operation of the wheelchair.

315.7.3. When urinals are provided, there shall be at least 1 wall-mounted urinal, with the opening of the lip a maximum of 15 inches above the finished floor or shall be floor-mounted and level with the finished floor. Urinal shields shall not extend beyond the lip. If the urinal is enclosed in a stall, the width of the stall shall be a minimum of 36 inches and meet the depth and opening requirements of subsection (1) of section 315.7.1.

315.7.4. There shall be at least 1 lavatory that projects a minimum of 18 inches from the wall and is wall-mounted, with the bottom edge not less than 28 inches above the finished floor and with an opening not less than 26 inches wide. Maximum water temperature to outlets shall not exceed 120 degrees Fahrenheit. Faucets shall be lever or push-button type. When mounted in a counter, the rim shall be not more than 3 inches from the front.

315.7.5. Toilet room accessories, such as shelf, towel dispenser, electric hand dryer, sanitary napkin dispenser, disposal unit, and clothes hook, shall be mounted so that the bottom edge is no higher than 40 inches above the floor. The towel dispenser shall be mounted within arm's reach of a handicapped individual seated in a wheelchair in front of the lavatory. At least 1 mirror shall be full length or shall be mounted with the lower edge no more than 36 inches above the floor.

315.7.6. Handrails, water closets, lavatories, and accessories for small children, such as elementary school children, shall meet the requirements for their use.

315.7.7. Drinking fountains or other water dispensing means shall be accessible to, and usable by, handicapped persons. Drinking fountains shall be wall-mounted or semi-recessed. Fully recessed drinking fountains are not acceptable. If a drinking fountain is set in an alcove, the width of the recess shall be not less than 3 feet. Drinking fountains shall have the bottom edge of the apron not less than 28 inches above the finished floor, shall be mounted with an upper edge of the fountain base 36 inches above the floor, and shall be hand operated, with spout and controls at the front. The controls shall be push-button or lever type. A

floor-mounted drinking fountain shall have a side-mounted fountain meeting the above requirements.

315.7.8. Bathroom for use group R-1 and R-2 structures. Each unit designated for the physically handicapped, as specified in sections 315.1.1 and 315.1.2, shall contain 1 bathroom that complies with the following requirements:

(a) A minimum of 5 feet by 5 feet clear floor space shall be provided. When the fixtures and controls of the bathtub, water closet, and lavatory, in that order, are located on the same wall, the clear space from the front of the water closet to the opposite wall may be reduced to 4 feet. The entrance door shall open out or slide, with a minimum clear opening of 32 inches.

(b) Bathtub water and waste controls shall have lever handles. Maximum water temperatures to water outlets shall not exceed 120 degrees Fahrenheit. The bathtub rim shall be no higher than 20 inches and no lower than 16 inches, and the interior length shall not exceed 5 feet 6 inches. A handrail, not less than 48 inches long, 5 inches above the rim, and centered on the back wall, shall be 1¼ inches in outside diameter, with 1½ inches clearance between rail and wall, and shall be fastened at ends and center so as to withstand a force of 300 pounds. The handrail and floor of the tub shall be nonslip when wet. Fixed tub enclosures are not allowed.

(c) A duplex electrical receptacle shall be provided within easy reach of a person seated in a wheelchair in front of the lavatory. The water closet, lavatory, and accessories shall otherwise conform to sections 315.7.2, 315.7.4, and 315.7.5.

(d) When a bathtub or water closet is in a separate room from the lavatory, the clear space between the front edge of the fixtures and the opposite wall shall be no less than 48 inches.

(e) When water closets do not have walls on each side for mounting handrails, a handrail shall be placed on the existing side wall space, if there is one, that is 42 inches long or no less than the wall length, and 1 handrail shall be placed on the wall behind the water closet 3 inches above the tank top or 33 inches above the finished floor for water closets without tanks. The design of handrails shall meet the requirements of subsection (2) of section 315.7.1.

(f) Where showers only are provided, the shower cubicle shall measure 3 feet by 3 feet inside dimensions. The threshold shall be no higher than 2 inches. The soap dish shall be mounted on the back wall and centered at 36 inches above the floor. The floor inside and outside the cubicle shall have a nonslip surface when wet. There shall be a clear floor space of not less than 5 feet by 5 feet outside of the cubicle.

315.7.9. Kitchens for use group R-1 and R-2 structures. Each unit containing kitchens, and designated for physically handicapped as specified in sections 315.1.1 and 315.1.2, shall contain 1 kitchen that shall comply, or be adjustable to comply, with the following requirements:

(a) A minimum of 5 feet clear floor space shall be provided between opposite cabinets or cabinets and walls, except that, where a toe space of 8¾ inches high by 6 inches deep is provided on each side, the clear space may be reduced to 4 feet.

(b) Counter height shall be 34 inches, if fixed, or may be adjustable.

(c) The sink shall be a maximum of 6 inches in depth, with lever-type controls. There shall be a space not less than 28 inches above the finished floor, 26 inches wide and 12 inches deep under the sink. Maximum water temperatures to water outlets shall not exceed 120 degrees Fahrenheit.

(d) A work space shall be provided that is not less than 26 inches wide, and has a clear opening 26 inches wide, 28 inches high, and 24 inches deep. This work space may be provided by an adjustable counter or pull-out sections.

315.8. Seating accommodations: Places of assembly with fixed seating arrangements shall provide viewing positions for persons in wheelchairs in accordance with the following schedule:

Capacity of assembly space	Number of viewing positions
Up to 25	1
26 to 50	2
51 to 75	3
76 to 100	4
101 to 150	5
151 to 200	6
201 to 300	7
301 to 400	8
401 to 500	9
501 to 1,000	2% of total
Over 1,000	20 plus 1 for each 100 over 1,000

Viewing positions for wheelchair persons shall be provided in a reasonable and convenient section or sections of the facility by providing level clear space, devoid of any fixed seating arrangements.

These positions shall be located so as not to interfere with egress from any row of seats, and shall not infringe upon aisle requirements.

There shall be no steps in the aisles or in the access route used by the physically handicapped to reach the performance viewing positions, but the aisles may be inclined.

315.9. Checkout lanes and turnstiles: Buildings which include checkout lanes shall provide, on each floor, at least 1 checkout lane which is not less than 36 inches wide.

Buildings which utilize turnstiles to control pedestrian traffic shall provide a clearly marked alternate and independent access route which is not less than 36 inches wide.

R 408.30428 Special historical buildings and districts.

Rule 428. Section 316.2 of the code is added to read as follows:

316.2. Repairs, alterations, and additions necessary for the preservation, restoration, or continued use of an existing building or structure may be exempt, provided both of the following conditions are satisfied:

(a) The building or structure has been designated by the Michigan history division, department of state, as being on the national register of historic places or the state register of historic sites, or the building or structure is eligible for either register.

(b) Sufficient evidence is presented to the barrier free design board to establish the fact that adherence to the barrier free design provisions of the general rules or any provisions thereof would destroy or diminish a significant feature of the building's or structure's historical character or integrity, or both.

R 408.30430 Liquefied petroleum gas.

Rule 430. Section 406.1 of the code is amended to read as follows:

406.1. General: Requirements for liquefied petroleum gas shall conform to the requirements of the liquefied petroleum gases rules, being R 28.3801 to R 28.3806 of the Michigan Administrative Code, as promulgated pursuant to Act No. 207 of the Public Acts of 1941, as amended, being §29.1 et seq. of the Michigan Compiled Laws, and administered by the department of state police, fire marshal division.

History: 1954 ACS 101, p. 85, Eff. Nov. 21, 1979.

R 408.30431 Dry cleaning establishments.

Rule 431. Section 412.1 of the code is amended to read as follows:

412.1. General: Dry cleaning establishments shall conform to the requirements of the dry cleaning act, being Act No. 327 of the Public Acts of 1947, as amended, being §29.201 et seq. of the Michigan Compiled Laws, and administered by the department of state police, fire marshal division.

History: 1954 ACS 89, p. 129, Eff. Nov. 13, 1976; 1954 ACS 101, p. 86, Eff. Nov. 21, 1979.

R 408.30432 Gasoline storage and distribution.

Rule 432. Section 415.2 of the code is amended to read as follows:

415.2. Gasoline storage and distribution shall conform to the flammable liquids rules, being R 28.601 to R 28.740 of the Michigan Administrative Code, as promulgated pursuant to Act No. 207 of the Public Acts of 1941, as amended, being §29.1 et seq. of the Michigan Compiled Laws, and administered by the department of state police, fire marshal division.

History: 1954 ACS 101, p. 86, Eff. Nov. 21, 1979.

R 408.30433 High rise buildings.

Rule 433. Sections 431.1 and 431.3 of the code are amended to read as follows:

431.1. Applicability: The provisions of this section apply to all buildings of the following use groups when such buildings have floors used for human occupancy located more than 40 feet above the lowest level of fire department vehicle access:

1. Use group B (business).
2. Use group R-1 (residential, hotel).
3. Use group R-2 (residential, multi-family).

431.3. Options: All buildings and structures more than 40 feet in height shall be provided with either an approved automatic fire suppression system in accordance with section 431.3.1 or safe areas of refuge (compartmentation in accordance with section 431.3.2). Buildings more than 75 feet in height shall be designed in accordance with section 431.3.1.

History: 1954 ACS 101, p. 86, Eff. Nov. 21, 1979.

R 408.30442 Unit of egress width.

Rule 442. Section 608.1 of the code is amended to read as follows:

608.1. Unit of egress width: The unit of egress width for all approved types of means of egress parts and facilities shall be 22 inches with a credit of ½ unit for each 12 inches width in addition to 1 or more 22-inch units. Fractions of a unit of

width less than 12 inches shall not be credited. A door 40 inches in width shall be deemed the equivalent of 2 full units of exit width. Each opening shall be computed separately in determining the number of required units of exit width.

History: 1954 ACS 101, p. 86, Eff. Nov. 21, 1979.

R 408.30443 Means of egress doorways.

Rule 443. Section 612.8 of the code is amended, and section 612.9 of the code is added, to read as follows:

612.8. Door arrangement: (1) Single-acting doors in series may be operated by time delay closing devices, or shall be spaced 7 feet apart in a closed position to allow for use by persons in wheelchairs.

Exception: Power-operated doors, 1- and 2-family dwellings (use groups R-3 and R-4) and use group T.

(2) Double-acting doors shall be spaced not less than 5 feet apart when in a closed position.

612.9. Entrance doorway grading: All entrance doors designed to provide access for the physically handicapped shall have the surfaces at the inside and outside face of the doors at the same elevation. A hard surfaced area shall be provided at the exterior, that shall be not less than 5 feet in depth, measured from the face of the door, and shall extend not less than 3 feet beyond the latch side of the door. The floor and exterior surface shall not have a grade of more than ¼ inch per foot for a distance of 5 feet from either face of the door.

History: 1954 ACS 79, p. 98, Eff. Nov. 6, 1974; 1954 ACS 89, p. 129, Eff. Nov. 13, 1976; 1954 ACS 101, p. 86, Eff. Nov. 21, 1979.

R 408.30445 Ramps.

Rule 445. Sections 615.2.1 and 615.3 of the code are amended, and section 615.7 of the code is added, to read as follows:

615.2.1. Width: The minimum width of an egress ramp shall be not less than that required for corridors by section 610.3. Ramps used to provide access for the physically handicapped, but not as an egress ramp, shall be not less than 44 inches wide.

615.3. Landings: Landings shall be provided at all ramp points of turning, entrance, exiting, and doors, and the distance of travel shall not be more than 30 feet between landings. All landings shall be of such length as to provide a minimum of 42 inches clear from any door swing to the ramp. Minimum landing length shall be 42 inches, and the bottom landing of any ramp or set of ramps and landings of a straight run shall be not less than 72 inches.

615.7. Guards: Guards shall be provided at the open sides of ramps and shall conform to the requirements of section 616.5.2.

History: 1954 ACS 79, p. 98, Eff. Nov. 6, 1974; 1954 ACS 89, p. 130, Eff. Nov. 13, 1976; 1954 ACS 101, p. 86, Eff. Nov. 21, 1979.

R 408.30446 Rescinded.

History: 1954 ACS 79, p. 98, Eff. Nov. 6, 1974; 1954 ACS 89, p. 129, Eff. Nov. 13, 1976; rescinded 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

R 408.30448 Hazards in means of egress.

Rule 448. Section 625.5 of the code is added to read as follows:

625.5. Floor coverings: Where carpets are used as floor coverings in the means of egress or on ramps that provide access for the physically handicapped, they shall be high density, flat pile, and securely anchored.

History: 1954 ACS 79, p. 99, Eff. Nov. 6, 1974; 1954 ACS 89, p. 130, Eff. Nov. 13, 1976; 1954 ACS 101, p. 87, Eff. Nov. 21, 1979.

R 408.30449 Frost protection.

Rule 449. Section 724.1 of the code is amended to read as follows:

724.1. Frost protection: Except when erected upon solid rock or otherwise protected from frost, foundation walls, piers, and other permanent supports of all buildings and structures, except those of use group T, shall extend below the frost line of the locality and spread footings of adequate size shall be provided when necessary to properly distribute the load within the allowable bearing value of the soil, or such structures shall be supported on piles or ranging timbers when solid earth to rock is not available. Footings shall not be founded on frozen soils unless such frozen condition is of a permanent character.

History: 1954 ACS 101, p. 87, Eff. Nov. 21, 1979.

R 408.30456 Human impact loads.

Rule 456. Section 857.5.6.1 of the code is amended to read as follows:

857.5.6.1. Specific hazardous locations: The following shall be considered specific hazardous locations for purposes of glazing:

1. Glazing in doors.
2. Glazing in fixed and sliding panels of sliding-type doors (patio and mall type).
3. Glazing in storm doors or combination doors.
4. Glazing in bathtub doors and enclosures.
5. Glazing in shower doors and enclosures.
6. Glazing in operable and nonoperable openings in residential buildings within 12 inches horizontally of the nearest vertical edge of door in a closed position, and whose bottom edge is below the level of the top of the door.
7. Glazing in operable and nonoperable openings in nonresidential buildings within 48 inches of the nearest vertical edge of door in a closed position, and whose bottom edge is below the level of the door.
8. Glazing in nonresidential buildings, not covered above, that meet all the following conditions:

(a) The lowest edge of the glazing material is less than 18 inches above any floor or any walking surface.

(b) Exceeds 9 square feet.

(c) There is a walking surface on both sides either of which is within 36 inches of such panel and the horizontal planes of such walking surfaces are within 12 inches of each other.

Exceptions in all buildings:

1. Glazing panels where an intervening interior permanent wall is between the door and panel.
2. Glazing panels that have a horizontal framing or permanent chair rail not less than 1¼ inches in width, which is located between 24 and 36 inches above the walking surface.
3. Louvers of jalousie doors.
4. Openings in doors through which a 3-inch diameter sphere is unable to pass.
5. Leaded glass panels where no individual piece of glass has an area greater than 30 square inches.
6. Glazing materials used as curved glazed panels in revolving doors.
7. Commercial refrigerated cabinet glazed doors.

History: 1954 ACS 79, p. 99, Eff. Nov. 6, 1974; 1954 ACS 89, p. 131, Eff. Nov. 13, 1976; 1954 ACS 101, p. 87, Eff. Nov. 21, 1979.

R 408.30457 Fire protection.

Rule 457. Section 1106.4 of the code is amended to read as follows:

1106.4. Fire protection: Drying rooms designed for high hazard materials and processes shall be protected by approved automatic sprinkler or fog systems, manually controlled steam smothering system, or other approved fire-extinguishing equipment conforming to the provisions of article 12 and the mechanical code listed in appendix B.

History: 1954 ACS 101, p. 88, Eff. Nov. 21, 1979.

R 408.30458 Rescinded.

History: 1954 ACS 89, p. 131, Eff. Nov. 13, 1976; rescinded 1954 ACS 101, p. 80, Eff. Nov. 21, 1979.

R 408.30459 Rescinded.

History: 1954 ACS 79, p. 100, Eff. Nov. 6, 1974; rescinded 1954 ACS 89, p. 131, Eff. Nov. 13, 1976.

R 408.30460 Automatic fire alarm systems.

Rule 460. Section 1216.9.2 of the code is amended to read as follows:

1216.9.2. Alarms: Audible and visual alarms of an approved type shall be provided. The operation of any detection device shall cause all audible and visual alarms to operate. Alarm-sounding devices shall be an approved type, shall provide a distinctive tone, and shall not be used for any other purpose than that of a fire alarm. They shall be located so as to be effectively heard above all other sounds by all the occupants in every occupied space within the building. Visual alarm devices shall be mounted in, and be visible from, all points of any exitway. The bottom of the alarm shall not be mounted lower than 6 feet 8 inches above the floor.

History: 1954 ACS 89, p. 131, Eff. Nov. 13, 1976; 1954 ACS 101, p. 88, Eff. Nov. 21, 1979.

R 408.30461 Manual fire alarm systems (pull stations).

Rule 461. Section 1217.7.2 of the code is amended to read as follows:

1217.7.2. Alarms: Audible and visual alarms of an approved type shall be provided. The operation of any fire alarm device shall cause all audible and visual alarms to operate. Alarm-sounding devices shall be of an approved type, shall provide a distinctive tone and shall not be used for any other purpose than that of a fire alarm. They shall be of such character and so located as to be effectively heard above all other sounds by all the occupants in every occupied space within the building. Visual alarms shall be mounted in, and visible from, all points of any exitway. The bottom of the alarm shall not be mounted lower than 6 feet 8 inches above the floor.

History: 1954 ACS 89, p. 131, Eff. Nov. 13, 1976; 1954 ACS 101, p. 88, Eff. Nov. 21, 1979.

R 408.30495 Rescinded.

The unclassified miscellaneous category of appendix B (accepted engineering practice standards) shall include the 1- and 2-family dwelling code, BOCA, AInA, SSBC, ICBO 1975 edition, with 1976 supplement thereto, except section R-209, part IV, and part V; and with exceptions noted, is incorporated herein by reference together with section 857.5.6 of the basic building code, 1978 edition. The 1- and 2-family dwelling code is available for inspection at the Lansing office of the department of labor, bureau of construction codes; the code may be purchased from the Building Officials and Code Administrators International, Incorporated, 17926 South Halsted, Homewood, Illinois 60430, or from the Michigan Department of Labor, Bureau of Construction Codes, 7150 Harris Drive, P.O. Box 30015, Lansing, Michigan 48909, at a cost of $9.00.

History: 1954 ACS 89, p. 132, Eff. Nov. 13, 1976; 1954 ACS 101, p. 88, Eff. Nov. 21, 1979.

PART 6. MOBILE HOME CODE

R 408.30601 Applicable code.

Rule 601. (1) Rules governing the body and frame design and construction requirements, and installation of plumbing, heating and electrical systems in mobile homes shall be those contained in the standard for mobile homes, NFPA No. 501B-1973, ANSI No. A119.1-1974, incorporated herein by reference.

(2) The code may be examined at the office of the construction code commission in Lansing.

(3) The code may be purchased from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210 or from the Construction Code Commission, 414 North Larch Street, Lansing, Michigan 48926 for a fee of $2.50 plus mailing.

History: 1954 ACS 84, p. 54, Eff. June 27, 1975.

AMENDMENTS AND ADDITIONS TO THE MOBILE HOME CODE

R 408.30611 Interior walls, partitions, and ceilings.

Rule 611. Part B, section 7.3 is amended to read as follows:

7.3. Interior walls, partitions and ceilings. The interior finish of habitable rooms and hallways (excluding molding, doors, trim, cabinets and splash panels) shall be of materials whose flame spread classification shall not exceed 200 when tested by the standard method of test for surface burning characteristics of building materials (ANSI A2.5-1970; ASTM E84-70; UL 723-1971; NFPA No. 255-1972). A

door or doors serving a closet with an opening exceeding 21 square feet shall comply with this requirement. The interior finish of enclosures for furnaces and water heaters (including doors) shall be of materials whose flame spread rating shall not exceed 25.

History: 1954 ACS 84, p. 54, Eff. June 27, 1975.

R 408.30616 Exit facilities.

Rule 616. Part B, section 8.3.1, paragraph (c) is amended to read as follows:

8.3.1(c). Every room designed expressly for sleeping purposes, unless it has an exit door (see par. 8.3.1(b)), shall have at least 1 outside window which can be opened from the inside without the use of tools to provide a clear opening of not less than 22 inches in least dimension and 5 square feet in area with the bottom of the opening not more than 3 feet above the floor. Where a screen or storm window is required to be removed from this window to permit emergency egress, it shall be readily removable without requiring the use of tools.

History: 1954 ACS 84, p. 54, Eff. June 27, 1975.

R 408.30621 Glass and glazed openings.

Rule 621. Part B, section 8.5.1.1, is amended to read as follows:

8.5.1.1. Glazing in hazardous locations shall comply with table B-2.

TABLE B-2

Glazing in the Following Specific Hazardous Locations Shall Meet the Following Requirements:

Specific Hazardous Locations	Size of Individual Glazed Area	Requirements
Glazing in exit and entrance doors	All sizes	Each glazed area shall pass the requirements of ANSI Standard Z97.1-1972.
Fixed glazed panels	Fixed glazed panels over 300 sq. in.	Each glazed area shall pass the requirements of ANSI Standard Z97.1-1972.
Glazing in storm doors	All sizes	Each glazed area shall pass the requirements of ANSI Standard Z97.1-1972.
Glazing in sliding doors (both fixed and sliding panels)	All sizes	Each glazed area shall pass the requirements of ANSI Standard Z97.1-1972.
Glazing in all unframed doors (swinging)	All sizes	Each glazed area shall be fully tempered glass and pass the requirements of ANSI Standard Z97.1-1972.
Glazing in shower doors and tub enclosures	All sizes	Each glazed area shall pass the test requirements of ANSI Standard Z97.1-1972.

History: 1954 ACS 84, p. 54, Eff. June 27, 1975.

R 408.30626 Plans for physically handicapped.

Rule 626. Part B, section 8, is amended to read as follows:

8.6. Plans for physically handicapped. All manufacturers shipping into or building in the State of Michigan shall have mobile home floor plans available

providing barrier free design for persons with physical limitations. These plans shall conform with the following sections of part 4 of the Michigan construction code, if and as required by the purchaser:

Section 318.5.

Section 318.78, parts (a), (b), (c) except 318.74 and 318.75, (d), (e) and (f).

Section 318.79 except first sentence and reference to 318.11 and 318.12, (a), (b), (c) and (d).

Sections 614.2, 617.1, 617.2, 617.3, 627.1, 627.2, 627.3 and 627.4.

History: 1954 ACS 84, p. 55, Eff. June 27, 1975.

R 408.30631 Mobile home fire protection equipment.

Rule 631. Part B, section 9, is amended to read as follows:

9. Mobile home fire protection equipment.

9.1. General. At least 1 listed smoke detector (which may be a single station alarm device) shall be installed in each mobile home. Detectors shall operate from an AC or combination AC/battery power source.

9.2. Smoke detector location. Smoke detector(s) shall be located outside of bedrooms, in a hallway or space communicating thereto, surface-mounted on or near the ceiling, and shall be installed in accordance with the manufacturer's instructions. Mobile homes having bedrooms separated by any 1 or combination of common use areas, such as kitchen, dining room, living room, or family room (but not a bathroom or utility room) shall have at least 2 detectors.

9.3. Alarm sounding device. Every detecting device shall cause the operation of an alarm signaling device or devices which shall be clearly audible in all bedrooms with all intervening doors closed.

9.3.1. All alarm sounding devices shall be rated not less than 85 decibels at 10 feet.

9.4. Detector trouble signals. Detectors requiring a light source for operation shall have an audible trouble signal on failure of the light source, but such failure shall not cause an alarm. Detectors not requiring a light source for operation shall have either a visible light to indicate operability or an audible trouble signal. Audible trouble signals shall be designed to operate at least every minute for 7 consecutive days.

9.5. Testing. The mobile home manufacturer should provide instructions (supplied by the device manufacturer) for the periodic testing of the detector(s).

9.6. Fire extinguisher. The manufacturer shall provide a listed 2A-10B-C portable fire extinguisher, as is set forth in NFPA No. 10-1974, standard for the installation, maintenance and use of portable fire extinguishers, which standard is incorporated herein by reference.

9.7. This standard may be examined at the office of the construction code commission in Lansing.

9.8. This standard may be purchased from the National Fire Protection Association, 470 Atlantic Avenue, Boston, Massachusetts 02210 or from the Construction Code Commission, 414 North Larch Street, Lansing, Michigan 48926 for a fee of $3.00 plus mailing.

9.9. The extinguisher shall be positioned in the kitchen area, in a convenient location, readily accessible but not necessarily visible.

History: 1954 ACS 84, p. 55, Eff. June 27, 1975.

R 408.30636 Water connection.

Rule 636. Part C, section 11.2.1, is amended to read as follows:

11.2.1. Water connection. Each mobile home with a water distribution system shall be equipped with a ¾-inch inlet coupling located within the rear half of the

length of the mobile home. This inlet should be located as near as possible to a point 30 feet from the front of the mobile home, and left (road side) of the center line. This connection shall be tagged or marked "Fresh Water Connection" (or "Fresh Water Fill"). A matching cap or plug shall be provided to seal the water inlet when it is not in use, and shall be attached with a substantial chain. When supplied, heat tape shall be of the listed type, tested and labeled.

History: 1954 ACS 84, p. 56, Eff. June 27, 1975.

(By authority conferred on the construction code commission by section 4 of Act No. 230 of the Public Acts of 1972, being §125.1504 of the Michigan Compiled Laws)

PART 7. PLUMBING CODE

R 408.30701 Applicable code.

Rule 701. Rules governing the installation, replacement, alteration, relocation, and use of plumbing systems or plumbing materials shall be those contained in the BOCA basic plumbing code, 1975 edition, except sections P-102.0, P-105.0, P-302, P-501.2, P-908.2, P-912.2, P-914.2, P-915.0, P-1101.5, P-1205.2, P-1400.0 to P-1404.0, P-1500.0 to P-1511.4, P-1605.8, P-1605.11.6, and P-1700.0 to P-1705.2; and with exceptions noted, they are incorporated herein by reference. The code is available for inspection at the Lansing office of the Michigan department of labor. The code may be purchased from the Building Officials and Code Administrators, International, Incorporated, 1313 East 60th Street, Chicago, Illinois 60637 or from the Michigan Department of Labor, Bureau of Construction Codes, Michigan Secondary Complex, 7150 Harris Drive, Lansing, Michigan 48926 at a cost of $9.50 each plus mailing costs.

History: 1954 ACS 81, p. 102, Eff. May 19, 1975; 1954 ACS 91, p. 45, Eff. June 16, 1977.

R 408.30709 Rescission.

Rule 709. Rules 1 to 141 of the rules of the state plumbing board, being R 338.901 to R 338.914 of the Michigan Administrative Code and appearing on pages 3801 to 3818 of the 1954 volume of the Code, are rescinded.

History: 1954 ACS 81, p. 102, Eff. May 19, 1975.

AMENDMENTS AND ADDITIONS TO BASIC PLUMBING CODE

R 408.30711 Title.

Rule 711. Section P-100.3 of the code is amended to read as follows:

P-100.3. Title. This part shall be known as the Michigan plumbing code and is hereinafter referred to as the plumbing code or this code.

History: 1954 ACS 81, p. 102, Eff. May 19, 1975; 1954 ACS 91, p. 46, Eff. June 16, 1977.

R 408.30712 Violations.

Rule 712. Section P-117.0 of the code is amended to read as follows:

P-117.0. Violations. Written notice of any violation of this code shall be given by the administrative authority to the violator within 7 days thereof, upon his failure to remove the violation within a reasonable time, prosecution for violation of this code shall be commenced against him.

History: 1954 ACS 81, p. 103, Eff. May 19, 1975; 1954 ACS 91, p. 46, Eff. June 16, 1977.

R 408.30714 Definition of plumbing terms.

Rule 714. Section P-201.0 of the code is amended to read as follows:

P-201.0. Definition of plumbing terms. Administrative authority. The individual official, board, department, or agency established and authorized by a state, county, city, or other political subdivision created by law to administer and enforce the provisions of the plumbing code as adopted or amended; except when used in sections P-301.3.1, P-301.3.2, P-401.1, P-405.2.2, P-405.2.8, P-405.3.3, P-405.5.1, P-406.8, P-502.6, P-502.7, P-602.3.3, P-602.5.1, P-602.5.4, P-916.0, P-1002.3.1, P-1216.2, P-1605.11.4; it means the state administrative authority and not a local authority.

(All other definitions within the section remain the same.)

History: 1954 ACS 91, p. 46, Eff. June 16, 1977.

R 408.30715 Plans; prior approval required.

Rule 715. Section P-112.31 of the code is added to read as follows:

P-112.31. Plans, prior approval required. Plans submitted for approval for hospitals, nursing homes, and homes for the aged shall be approved by the department of health or the licensing or certifying agency having jurisdiction, or both, prior to submission to the administrative authority.

History: 1954 ACS 91, p. 46, Eff. June 16, 1977.

R 408.30721 Rescinded.

History: 1954 ACS 81, p. 103, Eff. May 19, 1975; rescinded 1954 ACS 91, p. 45, Eff. June 16, 1977.

R 408.30722 New buildings.

Rule 722. Section P-301.1 of the code is amended to read as follows:

P-301.1. New buildings. All plumbing materials and plumbing systems or parts thereof installed hereafter shall meet the provisions of this code.

History: 1954 ACS 81, p. 103, Eff. May 19, 1975; 1954 ACS 91, p. 46, Eff. June 16, 1977.

R 408.30723 Existing buildings.

Rule 723. Section P-301.2 of the code is amended to read as follows:

P-301.2. Existing buildings. In existing buildings or premises in which plumbing installations are to be altered, renovated, or replaced, such new materials and work shall meet the provisions of this code. Where the administrative authority shall find that the full performance of bringing such work into compliance with all requirements of this code would result in exceptional or undue hardship by reason of excessive structural or mechanical difficulty, or impracticability, a deviation may be granted by the administrative authority only where, and to the extent, necessary to relieve such exceptional or undue hardship, and only where, and to the extent, such deviation can be granted without impairing the intent and purpose of this code. A record, open to inspection by the public, shall be maintained by the administrative authority of each and every deviation allowed under the terms of this section.

History: 1954 ACS 81, p. 103, Eff. May 19, 1975; 1954 ACS 91, p. 46, Eff. June 16, 1977.

R 408.30724 Public systems available.

Rule 724. Section P-308.2 of the code is amended to read as follows:

P-308.2. Public systems available. A public water supply system or public sewer system, or both, shall be deemed available to premises used for human occupancy if such premises are within 200 feet, measured along a street, alley, or

R 408.30725 Industrial-commercial chemical waste information.

Rule 725. Section P-309.3 of the code is added to read as follows:

P-309.3. Industrial-commercial chemical waste information. When plans of plumbing installations that involve industrial or commercial type wastes are submitted for approval, complete process information shall accompany the plans. The information shall include without limitation the following:

(a) Description of process yielding the waste.

(b) Composition and concentration of chemical mixtures in the process.

(c) Composition of wastes and concentration of constituents.

(d) Quantities of wastes to be treated and rates of discharge to treatment equipment.

(e) Capacity of largest process tank or tanks that will be simultaneously discharged.

(f) Water demands of the industrial waste producing process.

(g) Description of waste treatment equipment to be used, including capacities, methods of treatment, quality of effluent, nature and disposition of products resulting from treatment.

History: 1954 ACS 81, p. 103, Eff. May 19, 1975; 1954 ACS 91, p. 47, Eff. June 16, 1977.

R 408.30725a Radioactive material.

Rule 725a. Section P-309.4 of the code is added to read as follows:

P-309.4. Radioactive material. Possession of radioactive material is regulated by state or federal license. The disposal of radioactive material shall not create a hazard to operational or maintenance personnel of the institution or to the public. Radioactive waste disposal is controlled by the Michigan department of public health by conditions for disposal in a radioactive material license issued under authority of Act No. 305 of the Public Acts of 1972, being §325.451 et seq. of the Michigan Compiled Laws and the ionizing radiation rules, being R 325.5001 et seq. of the Michigan Administrative Code, or is controlled by the U.S. nuclear regulatory commission by conditions for disposal in a license issued under authority of the atomic energy act of 1954 and 10 C.F.R. Part 20.

History: 1954 ACS 91, p. 47, Eff. June 16, 1977.

R 408.30726 Freezing.

Rule 726. Section P-313.3 of the code is amended to read as follows:

P-313.3. Freezing. Water service piping and sewers shall be installed below recorded frost penetration. In climates with freezing temperatures, plumbing piping in exterior building walls shall be adequately protected against freezing by insulation or heat or both.

History: 1954 ACS 81, p. 104, Eff. May 19, 1975; 1954 ACS 91, p. 47, Eff. June 16, 1977.

R 408.30731 Water service pipe.

Rule 731. Section P-405.1.2 of the code is amended to read as follows:

P-405.1.2. Water service pipe. Water service pipe shall be made of asbestos cement pipe, brass pipe, copper pipe, copper tube, cast iron water pipe, open-hearth iron pipe, plastic pipe, or steel pipe. Copper tube when used underground shall have a weight not less than copper water tube type L. All threaded ferrous

R 408.30733 Glass pipe.

Rule 733. Section P-501.12 of the code is added to read as follows:

P-501.12. Glass pipe. Joints in glass piping shall be made with couplings or gasket with corrosion resistant compression clamp, and installed in accordance with the manufacturer's instructions.

History: 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30734 Grooved joints, rubber gasket, and clamp.

Rule 734. Section P-501.19 of the code is added to read as follows:

P-501.19. Grooved joints, rubber gasket, and clamp. Grooved joints shall consist of 2 properly prepared, grooved, ends of pipe or fittings sealed by an elastomeric gasket, and secured in place by a specially designed clamp for potable water and storm water.

History: 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30736 Prohibited connections on water systems.

Rule 736. Section P-506.0 of the code is added to read as follows:

P-506.0. Prohibited connections on water systems. Branch connections to water distribution piping shall only be made with fittings meeting the appropriate material standard. So-called saddle fittings and connections are prohibited.

History: 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30738 Short sweeps permitted.

Rule 738. Section P-602.2.2 of the code is amended to read as follows:

P-602.2.2. Short sweeps permitted. Short sweeps not less than 3 inches in diameter may be used in soil and waste lines where the change in direction of flow is from either the horizontal to the vertical or from the vertical to the horizontal, and may be used for making necessary offsets between the ceiling and the next floor above. Short sweep quarter bends shall not be used at the base of stacks.

History: 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30741 Prohibited fittings.

Rule 741. Section P-602.3.1 of the code is amended to read as follows:

P-602.3.1. Prohibited fittings. A tee branch shall not be used as a drainage fitting. A fitting or connection which has an enlargement chamber or recess with a ledge or shoulder, or reduction in pipe area shall not be used. Running threads, bands, or saddles shall not be used. Drainage or vent piping shall not be drilled, tapped, or welded.

History: 1954 ACS 81, p. 104, Eff. May 19, 1975; 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30741a Drainage piping in food storage areas.

Rule 741a. Section P-602.34 of the code is added to read as follows:

P-602.34. Drainage piping in food storage areas. Refer to department of health regulations which prohibit the installation of exposed soil or waste piping above any working, storage, or eating surfaces in kitchens, dining rooms, or food storage areas in food service establishments.

History: 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30741b Building sumps in single- and 2-family dwellings.

Rule 741b. Section P-602.5.3 of the code is amended to read as follows:

P-602.5.3. Building sumps in single- and 2-family dwellings. A sump which receives only sub-soil discharge or other clear water wastes, such as condensate or cooling water, shall not be required to have either a gas-tight cover or a vent. Laundry wastes shall be excluded from such sumps.

If a basement or cellar water closet discharges into the building sump of a single- or 2-family dwelling, the sump shall be individually vented by means of 2-inch vent.

If no water closet is connected to the building sump, the sump shall be vented either by means of a 2-inch underground fixture waste, terminating in a stack, or a separate 2-inch underground vent changed to a 1½-inch stack at floor level and increased to a 3-inch at the roof, or a 2-inch vent shall be led outside the structure to terminate not less than 1 foot above grade and not less than 3 feet from a door, window or air duct. The vent shall not terminate in an unventilated space under a porch or terrace, nor in an inaccessible place. The vent terminal shall be equipped with a vent cap.

History: 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30741c Food handling establishments.

Rule 741c. Section P-701.1.1 of the code is amended to read as follows:

P-701.1.1. Food handling establishments. Establishments or institutions, other than private dwellings, shall have the drains from all fixtures, appliances, counters, compartments, storage rooms, refrigerator receptacles, appurtenances, or devices, which are used, designed, or intended to be used in the manufacture, preparation, processing, storage, or handling of food, ice, or drinks, connected to appropriately located indirect waste pipes which, in turn, shall discharge atmospherically over an indirect waste sink or other acceptable receptacle, except that dishwashing sinks, dishwashing machines, or culinary sinks not used for soaking or washing ready-to-serve foods, are excluded from the foregoing requirement.

The waste from dishwashing sinks and machines, or culinary sinks directly connected to the drainage system shall have a properly vented floor drain connected into the same branch, within 3 feet of the fixture.

History: 1954 ACS 91, p. 48, Eff. June 16, 1977.

R 408.30742 Swimming pools.

Rule 742. Section P-701.1.6 of the code is amended to read as follows:

P-701.1.6. Swimming pools. Pipes carrying waste water from swimming or wading pools, including pool drainage, back wash from filters, and water from floor drains which serve walks around pools, may be installed as piping for an indirect waste. Where the recirculation pump is used to discharge waste pool water to the drainage system, the pump discharge line shall be installed to convey an indirect waste to the sewer.

History: 1954 ACS 81, p. 104, Eff. May 19, 1975; 1954 ACS 91, p. 49, Eff. June 16, 1977.

R 408.30743 Air gap or air break required.

Rule 743. Section P-701.2 of the code is amended to read as follows:

P-701.2. Air gap or air break required. All indirect waste piping shall discharge into the building drainage system through an air gap or air break, as set forth in section P-701.1 of this code.

History: 1954 ACS 81, p. 104, Eff. May 19, 1975; 1954 ACS 91, p. 49, Eff. June 16, 1977.

R 408.30743a Automatic laundry machines.

Rule 743a. Section P-701.3.6 of the code is amended to read as follows:

P-701.3.6. Automatic laundry machines. All automatic laundry machines shall be indirectly wasted. An automatic laundry machine waste shall not discharge into a bathroom fixture, kitchen sink, or other fixture used for culinary, utensil, or body cleansing.

History: 1954 ACS 91, p. 49, Eff. June 16, 1977.

R 408.30743b Water supply required.

Rule 743b. Section P-701.6 of the code is added to read as follows:

P-701.6. Water supply required. Water shall be individually supplied to all indirect waste receptors so as to maintain trap seal and cleansing facilities.

History: 1954 ACS 91, p. 49, Eff. June 16, 1977.

R 408.30744 Supermarket indirect waste system.

Rule 744. Section P-703.0 of the code is added to read as follows:

P-703.0. Supermarket indirect waste system. In supermarkets which have no basements, instead of discharging all branches from indirect waste sinks, air-gapped standpipes, and similar waste piping to a sanitary system, it will be permissible to assemble all such wastes into an underground system which discharges to an interceptor.

The interceptor shall be of watertight construction at least 4 feet deep, of vitrified clay pipe or equal. It shall have a minimum discharge pipe of 3 inches in diameter to the sanitary system, with a cleanout at floor level, on the outlet leg. The interceptor shall be a minimum of 24 inches in diameter. There shall be a 12 inch dirt pocket at the base, the water seal shall be 4 inches, the top shall have a solid cover and the interceptor shall be vented by a fresh air vent or stack whose diameter is 3 inches.

The drains on the fixture side of the interceptor shall discharge above the liquid level of the interceptor. The underground drain shall be not less than 3 inches in diameter and shall terminate in a vent stack the minimum size of which is 3 inches. All floor sinks, fixtures, or other trapped receptacles the waste from which must discharge with a vertical branch connected to the underground drain, shall be vented. A vent from the indirect waste system shall not be connected with a vent on the regular system of the premises.

History: 1954 ACS 91, p. 49, Eff. June 16, 1977.

R 408.30745 Scope.

Rule 745. Section P-900.1 of the code is amended to read as follows:

P-900.1. Scope. This article shall control the selection of piping, tubing, and fittings for venting systems and their proper installation. It shall also control the minimum diameter of vent pipe, individual vents, relief vents, and shall contain a table setting forth the size and length of vents and other items covering vent stacks and stack vents. In addition, vent grades and connections, height above fixtures, hydraulic gradient, relief vents for stacks, and fixture traps are included.

History: 1954 ACS 91, p. 50, Eff. June 16, 1977.

R 408.30745a Bathroom fixture venting.

Rule 745a. Section P-906.3 of the code is amended to read as follows:

P-906.3. Bathroom fixture venting. One complete bathroom, consisting of a water closet, bathtub, with or without overhead shower, and lavatory, or a

substitution of a shower compartment for the bathtub may be vented by a 1½-inch revent, provided the connections of these fixtures are made to a 3-inch or larger stack by means of an approved "tee wye" or "F and W" type of fitting. If the bathroom fixtures are connected to a 4-inch or larger stack, such connections may also be made by means of a 4-inch tapped closet bend. The tappings of a closet bend or "tee wye" fitting shall not be greater than 2 inches in diameter. The revent may be washed by a lavatory in this type of installation.

Heel inlet closet bends are permitted only in cases where the fixtures connecting thereto are vented, and in no case shall the inlet be used to vent a bathroom group without being washed by a fixture.

The inverts of auxiliary openings in closet bends or other special fittings shall not be below the center line of the major horizontal opening.

History: 1954 ACS 91, p. 50, Eff. June 16, 1977.

R 408.30746 One bathroom group.

Rule 746. Section P-907.1 of the code is amended to read as follows:

P-907.1. One bathroom group. A group of fixtures consisting of 1 bathroom group and a kitchen sink or combination fixture, may be installed without individual fixture vents, in a 1-story building or on the top floor of a building, if each fixture drain connects independently to the stack and the water closet and bathtub or shower stall drain enters the stack at the same level.

History: 1954 ACS 91, p. 50, Eff. June 16, 1977.

R 408.30746a Waste stacks serving fixtures at different levels.

Rule 746a. Section P-907.2 of the code is amended to read as follows:

P-907.2. Waste stacks serving fixtures at different levels. Combinations of fixtures, each combination of which is rated at not more than 2 fixture units, may be connected to waste stacks at different floor levels without reventing as indicated in the following schedule:

1½ inch waste stack	2 fixture units
2 inch waste stack	4 fixture units
3 inch waste stack	8 fixture units
4 inch waste stack	36 fixture units

(a) The fixtures shall be within the specified 8 feet developed length from the trap seal to the stack and all other requirements fulfilled.

(b) Any fixture branch shall be vented if it is connected within 3 feet of a waste stack base, and above which, into the stack, other fixtures with a combined discharge of 4 fixture units or more are connected.

History: 1954 ACS 91, p. 50, Eff. June 16, 1977.

R 408.30747 Where individual venting required.

Rule 747. Section P-908.1 of the code is amended to read as follows:

P-908.1. Where individual venting required. When fixtures other than water closets discharge into only a 3-inch horizontal branch downstream from a water closet, each fixture connecting downstream shall be individually vented.

History: 1954 ACS 91, p. 50, Eff. June 16, 1977.

R 408.30748 Battery venting.

Rule 748. Section P-910.1 of the code is amended to read as follows:

P-910.1. Battery venting. A branch soil or waste pipe to which not less than 2 but not more than 8 water closets, other than blow-out type water closets, pedestal

urinals, fixtures having floor outlet trap standards, shower stalls, or floor drains are connected in a battery, shall be vented by not less than a circuit or loop vent which shall be taken off downstream from the fixture most distant from the stack or vented line. In addition, lower floor branches serving more than 3 water closets shall be provided with a relief vent installed downstream from the fixture nearest the soil stack.

If more than 8 of the above fixtures are connected in a battery, an additional vent shall be provided for each 8 or fraction thereof.

History: 1954 ACS 91, p. 50, Eff. June 16, 1977.

R 408.30748a Fixtures back-to-back in battery.

Rule 748a. Section P-910.2 of the code is amended to read as follows:

P-910.2. Fixtures back-to-back in battery. When fixtures are connected to 1 horizontal branch through a double wye or a sanitary tee in a vertical position, a common vent for each 2 fixtures back-to-back or double connection shall be provided. The common vent shall be installed in a vertical position as a continuation of the double connection.

In back-to-back installations in which fixtures discharge into the horizontal branch through double wyes or special soil or waste fittings and the individual fixture traps are otherwise not too high, every other double connection shall be vented, being sure the most distant double connection is vented.

History: 1954 ACS 91, p. 51, Eff. June 16, 1977.

R 408.30748b Exceptions.

Rule 748b. Section P-910.3 of the code is amended to read as follows:

P-910.3. Exceptions. Drainage branches serving single fixtures which are connected on the main drain at intervals in excess of 54 inches shall not be considered a battery, and are not required to be vented or battery vented unless prohibited by other pertinent sections of this code which govern venting.

History: 1954 ACS 91, p. 51, Eff. June 16, 1977.

R 408.30748c Fixture groups discharging to a common horizontal branch.

Rule 748c. Section P-910.4 of the code is amended to read as follows:

P-910.4. Fixture groups discharging to a common horizontal branch. Groups of fixtures of several types, such as might be found in bathrooms, toilet rooms, utility rooms, or combinations thereof, are not to be classified as a battery unless 2 or more of the fixtures are similar and adjacent. However, if several types of fixtures discharge into a common horizontal branch and 1 or more of the fixtures has an individual rating of not less than 4 fixture units, then all connections downstream from that fixture shall be vented as a battery unless the fixture drain connections with the horizontal branch are 54 inches or more apart. Fixtures upstream from the water closet, or fixture with equivalent rating, shall have an intervening vent or be individually vented and otherwise comply with other venting requirements of this code.

History: 1954 ACS 91, p. 51, Eff. June 16, 1977.

R 408.30749 Maximum distance of fixture trap from vent.

Rule 749. Section P-912.1 of the code is amended to read as follows:

P-912.1. Maximum distance of fixture trap from vent. Single fixtures, which are within 8 feet in developed length from the seal of the trap to a main vented line, may be installed without additional venting, if the vertical drop does not exceed 3 feet. "S" traps are prohibited.

History: 1954 ACS 91, p. 51, Eff. June 16, 1977.

R 408.30750 Venting of free standing fixtures.

Rule 750. Section P-914.1 of the code is amended to read as follows:

P-914.1. Venting of free standing fixtures. Single free standing fixtures such as island sinks, sinks in laboratory tables, etc., may be vented by increasing the vertical branch waste to the fixture trap to a minimum of 3 inches. The 3-inch vertical waste branch shall be equipped with a full size cleanout and shall be connected to a vented horizontal branch of not less than 3-inch size. However, fixtures whose rating is not more than 1 fixture unit may discharge into a vertical branch of 2-inch diameter.

History: 1954 ACS 91, p. 51, Eff. June 16, 1977.

R 408.30751 Building traps.

Rule 751. Section P-1001.7 of the code is amended to read as follows:

P-1001.7. Building traps. The use of building or house traps is optional except where specifically required by the administrative authority. Each building trap, when installed, shall be provided with a cleanout and with a relieving vent or fresh air intake on the inlet side of the trap which need not be larger than ½ the diameter of the drain to which it connects. The relieving vent or fresh air intake shall be carried above grade and terminate in a screened outlet located outside the building.

History: 1954 ACS 81, p. 104, Eff. May 19, 1975; 1954 ACS 91, p. 51, Eff. June 16, 1977.

R 408.30752 Recesses for trap connections.

Rule 752. Section P-1001.9 of the code is added to read as follows:

P-1001.9. Recesses for trap connection. A recess provided for connection of the underground trap such as one serving a bathtub in slab-type construction shall have sides and bottom of corrosion resistant, insect and vermin proof construction.

History: 1954 ACS 81, p. 104, Eff. May 19, 1975; 1954 ACS 91, p. 52, Eff. June 16, 1977.

R 408.30752a Fixture branches below grade in municipal systems only.

Rule 752a. Section P-1003.2 of the code is amended to read as follows:

P-1003.2. Fixture branches below grade in municipal systems only. In municipal systems only, backwater valves shall be installed in the building drain branch which receives only the discharge from fixtures located below ground level and subject to backflow or back pressure.

History: 1954 ACS 91, p. 52, Eff. June 16, 1977.

R 408.30753 Base of stacks.

Rule 753. Section P-1101.3 of the code is amended to read as follows:

P-1101.3. Base of stacks. An accessible cleanout shall be provided at or near the foot of each vertical waste or soil stack.

History: 1954 ACS 81, p. 104, Eff. May 19, 1975; 1954 ACS 91, p. 52, Eff. June 16, 1977.

R 408.30754 Building drain and building sewer junction.

Rule 754. Section P-1101.4 of the code is amended to read as follows:

P-1101.4. Building drain and building sewer junction. There shall be a cleanout near the junction of the building drain and the building sewer. This cleanout may be either inside or outside the building wall. If outside, the cleanout shall not be installed in public property nor more than 5 feet from the outside face of the wall or other permanent obstruction or foundation. If inside, the cleanout opening shall be not more than 24 inches from the inside face of the wall, except that buildings with unusually wide footings shall have the cleanout installed as close to the

finished wall as possible, without encasement of the cleanout extension in the foundation.

History: 1954 ACS 81, p. 105, Eff. May 19, 1975; 1954 ACS 91, p. 52, Eff. June 16, 1977.

R 408.30755 Underground drainage.

Rule 755. Section P-1102.1 of the code is amended to read as follows:

P-1102.1. Underground drainage. Cleanouts, when installed on an underground drain, shall be extended vertically to or above the finished grade level.

History: 1954 ACS 81, p. 105, Eff. May 19, 1975; 1954 ACS 91, p. 52, Eff. June 16, 1977.

R 408.30757 Manholes for larger pipes.

Rule 757. Section P-1106.1 of the code is amended to read as follows:

P-1106.1. Manholes for larger pipes. For underground piping over 10 inches in diameter, manholes shall be provided and located at every major change of direction, grade, elevation, or size of pipe or at intervals of not more than 400 feet. Metal covers shall be provided for the manholes and shall be of sufficient weight to meet local traffic and loading conditions.

Within buildings, manhole covers shall be gas-tight and the manhole shall be vented with not less than a 4-inch pipe.

History: 1954 ACS 91, p. 52, Eff. June 16, 1977.

R 408.30758 Minimum number of plumbing fixtures; elementary and secondary schools.

Rule 758. Section P-1202.1 of the code is amended to read as follows:

P-1202.1. Minimum number of plumbing fixtures; elementary and secondary schools. The minimum number of plumbing fixtures to be installed in elementary and secondary schools shall be as follows:

R 408.30759 Separate facilities.

Rule 759. Section P-1202.2 of the code is amended to read as follows:

P-1202.2. Separate facilities. In other than residential installations, where toilet and bathing facilities are provided to serve members of both sexes and are designed for use by more than 1 person at a time, separate facilities shall be installed for each sex. However, when total occupancy is 15 or less, 1 toilet room may suffice, if the room is designed for 1 person only and the door can be locked from the inside.

History: 1954 ACS 91, p. 56, Eff. June 16, 1977.

R 408.30761 Plastic connections.

Rule 761. Section P-1204.5.5 of the code is amended to read as follows:

P-1204.5.5. Plastic connections. Plastic water closet bends may be used when provided with a suitable 4-inch by 3-inch flange used to receive the fixture horn.

History: 1954 ACS 81, p. 105, Eff. May 19, 1975; 1954 ACS 91, p. 56, Eff. June 16, 1977.

R 408.30762 Urinals; stall type; watertight pans required.

Rule 762. Section P-1205.4.1 of the code is added to read as follows:

P-1205.4.1. Urinals, stall type, watertight pans required. Urinals of stall type shall be constructed so as to have a watertight pan of lead or other approved materials approved by the construction code commission installed beneath them. The drain for the urinal shall be made with a drainable clamping ring assembly to the watertight pan.

History: 1954 ACS 81, p. 105, Eff. May 19, 1975; 1954 ACS 91, p. 56, Eff. June 16, 1977.

R 408.30763 Floor drains; public toilet rooms.

Rule 763. Section P-1217.6 of the code is added to read as follows:

P-1217.6. Floor drains, public toilet rooms. In all public toilet rooms hereafter created containing 2 or more water closets, or 1 water closet and 1 urinal or more, not less than 1 approved floor drain shall be installed connecting to the soil system; however, stall urinals may serve as floor drains if the entire floor area may be drained to the urinals.

History: 1954 ACS 91, p. 56, Eff. June 16, 1977.

R 408.30763a Floor drains; according to floor area.

Rule 763a. Section P-1217.10 of the code is added to read as follows:

P-1217.10. Floor drains, according to floor area. In all toilet rooms in which floor drains are required there shall be not less than 1 floor drain for each 400 square feet of floor area or major fraction thereof.

History: 1954 ACS 91, p. 56, Eff. June 16, 1977.

R 408.30764 Hospital plumbing; scope of article 14.

Rule 764. Section P-1401.0 of the code is added to read as follows:

P-1401.0. Hospital plumbing; scope of article 14. The special devices and equipment which are installed and maintained in hospitals are also found in some degree in all of the following types of institutions and establishments: nursing homes, homes for the aged, orphanages, infirmaries, first aid stations, psychiatric facilities, clinics, professional offices of dentists and doctors, and many other care institutions or establishments, whether enumerated or not; also mortuaries, educational facilities, surgery, dentistry, research and testing laboratories, and
